Gazetteer of Archaeological Sites : Explanatory Notes

The gazetteer records the sites and findspots/scatters identified during the archaeological Desk-Based Assessment, listed by archaeological constraint map number (Volume III). Since there is a slight overlap from one map to another, some sites are repeated, both on the maps themselves, and in the gazetteer.

The only sites not listed in the gazetteer are a fairly large number of areas of ridge and furrow, all found in North Yorkshire, none of which have SMR reference numbers (though there are examples of ridge and furrow in this county which do have reference numbers).

Below is an explanation of some of the abbreviations and conventions used in the gazetteer.

For the 'Data Source' and 'Source Location' columns:

PRN site.	Public Record Number, reference for a Sites and Monuments Records (SMR) site.
NAR	National Archaeological Record Centre, Swindon.
DBA*	Site identified during the present assessment (largely from aerial photographs).
YT	Site identified during construction of Yafforth-Towton gas pipeline in 1979.
RCHME*	Aerial photograph site plotted by the Royal Commission.
SAM	Scheduled Ancient Monument.
AP	Aerial Photograph site reference from North Yorkshire SMR.
SI*	'Site Index' site from North Yorkshire SMR.
LINCS*	Card Index site from Lincolnshire SMR.
A1*	Site discovered during A1-widening scheme in North Yorkshire.
CUCAP	Aerial Photograph evidence from Cambridge University Committee for Aerial Photography.
1996 British Gas*	Site identified from collection of vertical aerial photographs commissioned by British Gas for the proposed pipeline.

*These conventions were adopted for ease of reference during the assessment; they are not terms used by the respective data-holding bodies.

For the 'Proximity to Proposed Route' column:

0	a site crossed by the proposed pipeline route (Aug 96).
1	a site lying within the 1km study corridor.
3	a site within the 3km data-collection area.
3+	a site outside the 3km data-collection area.
3*	a site within the 3km data-collection area but not on the constraints maps.

Column five records the category (A-E) into which a site was; details of the criteria for categorisation are dealt with in the report (Volume I, 3.3). In the final column, sites are given a 'reliability of source' rating: H (high), M (medium) or L (low). The reasons for ascribing a site a particular rating are also discussed in the report (3.4).
