Wellington Quarry (PNUM2590): ADS submission

The following files/folders are submitted:

Wellington Summary for ADS.doc	Project summary
Wellington 86-96 Assessment and UPD.pdf	Project Design
Wellington 86-96.mdb	Project database
Database structure.doc	Documentation of database structure and terminology
1986-96 Combined areas.dwg	Digitised plan of all features, areas of investigation, etc
Folder (Site images) containing 20 x .tiff images	Selection of images from project

Please note:
The database and digitised drawing supplied were established from site records created before the advent of regular use of databases and digital site drawings. As a result these represent tools created to support the post-excavation and reporting process rather than formal digital components of the fieldwork archive. As a result associated documentation and use of terminologies and established conventions is not as rigorous as would normally be expected of elements of a modern digital project archive.

The digital site images provided are scanned copies of a selection of site archive black and white photographs and colour slides.

Microsoft Access database (Wellington 86-96.mdb)

Four data tables are incorporated in the database:

1. Drawing register – Index to original site drawings. Lists all contexts drawn by Drawing number.
2. Finds register – Summary index of all finds recovered.
3. Specialist ceramic data (excl Early Prehistoric) – Detailed records of all Iron Age, Romano-British and later pottery and tile.
4. Structural data – Summary data on all recorded contexts
