# BEADS, FOSSILS AND CRYSTALS FROM DUN AONGHASA [92E102] 

## Amber Beads Catalogue (C. Feeney-Johnson and C. Sandes) [Appendix 1.18 in Vol.3]

| Beads |  |  |  |
| :---: | :---: | :---: | :---: |
| Find no. | Feature | Description | Dimensions |
| 86 | 14 | Incomplete. Half bead of weathered dark orange coloured amber. Slightly irregular disc shape with rounded edges and scratched surface. Large circular perforation, 7.5 mm in diameter. | D. 21.5 mm ; T. 11 mm |
| 1053 | 85 | Incomplete. Three small fragments from at least two tiny amber beads. The fragments are in very poor condition, with brittle dull brown surfaces. Original thickness preserved on one fragment. | T.6mm |
| 1157 | 88 | Complete. Small disc-shaped bead of pale orange coloured amber. Good condition. Signs of wear on one side. The perforation is 3 mm in diameter. | $\begin{aligned} & \hline \text { D. } 17 \mathrm{~mm} ; \\ & \text { W. } 31 \mathrm{~mm} \text {; } \\ & \text { H. } 2.5 \mathrm{~mm} \end{aligned}$ |
| 1312 | 220 | Complete. Small, abraded amber bead in poor condition. Bead is rectangular with rounded edges in section. The cylindrical perforation is slightly off-centre and has a diameter of 4 mm . | D. 10 mm ; H. 4.5 mm |
| 1762 | 239 | Incomplete. Slightly less than half a bead of weathered reddish brown amber. Disc-shaped with rounded edges and incomplete perforation through the short axis. A V-shaped channel extending the width of one of the broken edges is possibly all that remains of an additional perforation through the long axis. | $\begin{gathered} \hline \text { D. }>18.5 \mathrm{~m} ; \\ \text { H. } 7.5 \mathrm{~mm} \end{gathered}$ |
| 2044 | 76 | Complete. Small bead of semi-translucent dark orange amber. Flattened spherical shape. Slightly off-centre circular perforation, 5.5 mm in diameter. On one face, the perforation is flattened around the circumference, as a result of friction from an adjoining bead. | D. $14 \mathrm{~mm} ;$ H.9mm |
| 2150 | 267 | Complete. Bead of semi-translucent dark orange amber. Flattened spherical shape. Slightly off-centre circular perforation, drilled from both sides and measuring 4.5 mm in diameter. | D. 24 mm ; <br> H. 15 mm |
| 2390 | 70 | Complete. Disc-shaped bead with rounded edges. Heavily crazed, dull brown surface. Slightly off-centre circular perforation, 4 mm in diameter. | D. 17.5 mm ; H. $8.5-9 \mathrm{~mm}$ |
| 2392 | 70 | Complete. Disc-shaped bead with rounded edges. Poor condition, with cracked and brittle dull brown surface. Slightly off-centre circular perforation, drilled from both sides and measuring 5.5 mm in diameter. | $\begin{aligned} & \text { D. } 22.5 \mathrm{~mm} ; \\ & \text { H. } 10 \mathrm{~mm} \end{aligned}$ |
| 2401 | 253 | Complete. Disc-shaped bead with rounded edges. Heavily crazed, dull brown surface. Slightly off-centre, circular perforation, 6 mm in diameter. Both faces have single opposing depressions, which are probably natural. | $\begin{array}{r} \hline \text { D. } 22 \mathrm{~mm} ; \mathrm{H} .9- \\ 7 \mathrm{~mm} \end{array}$ |
| 2608 | 911 | Complete. Bead of opaque dull, reddish-brown amber, with a 'squashed' barrel-like appearance. Oval outline and flattened oval section. Circular perforation, 3 mm in diameter, drilled though the long axis. | H.19mm; W.16mm; T .7 mm |

| 2634 | 918 | Complete. Bead of opaque, dull, reddish-brown amber. Slightly <br> flattened barrel shape with tapered ends. Oval section. Circular <br> perforation, 3mm in diameter, drilled through the long axis. | H.19mm; <br> W.11mm; <br> T.8mm |
| ---: | :---: | :--- | :--- |
| 2758 | 1801 | Incomplete. Tiny amber fragment with one curved edge. Possibly <br> part of a bead. L.5mm; W.4.5mm; T.3mm) | H.4.5mm |
| 2850 | 1225 | Incomplete. Possible bead fragment of weathered, dark orange <br> amber, with D-shaped section. | D $>.9 \mathrm{~mm} ;$ <br> T .5 mm |
| 2853 | 1212 | Incomplete. Tiny scraps of amber. Dimensions not possible. |  |
| 4011 | 290 | Complete. Amber stud. Plano-convex in section. Poor condition. | D. $10 \mathrm{~mm} ;$ <br> T .4 mm |

## Blue Glass Beads Catalogue (M. Fitzgerald) [Appendix 1.19 in Vol. 3]

| Group 1 |  |  |  |
| :---: | :---: | :---: | :---: |
| Find No. | Feature | Description | Dimensions |
| 1560 | 112 | Complete; good condition. Small turquoise green glass bead. | D. 3 mm ; |
|  |  | Rectangular with rounded sides in section. Central, cylindrical | H. 2 mm |
|  |  | perforation with 2 mm diameter. Glass is turquoise green to pale |  |
|  |  | blue in colour. Traces of wear, and chipping around perforation. |  |
|  |  | Comparanda: Mallory 1991, 22-23. ÓRíordáin 1949, 95, fig.19; |  |
|  |  | Ó'Ríordáin 1954, 354-358, 383, 410; Raftery 1969, 83; |  |
|  |  | Henderson 1988, 442. |  |

## Group 2

Find No. Feature Description

## Dimensions

| 833 | 77 | Incomplete; good condition. Half of a tiny blue glass bead. Flattened oval in section. Cylindrical perforation of 0.5 mm in diameter. Surfaces appear slightly worn. Comparanda: Mallory 1991, 22-23. | $\begin{array}{r} \text { D. } 2.5 \mathrm{~mm} ; \\ \text { H. } 2 \mathrm{~mm} \end{array}$ |
| :---: | :---: | :---: | :---: |
| 961 | 82 | Complete; good condition. Tiny blue glass bead. Oval section; slightly flattened on surfaces. Cylindrical perforation of 1 mm in diameter. Damage in the form of a vertical groove is evident in one side. Comparanda: Mallory 1991, 22-23. | D. 2.5 mm ; H.1.5mm |
| 2103 | 269 | Complete; good condition. Tiny blue glass bead. Disc-like bead with rounded sides. Central cylindrical perforation of 0.5 mm in diameter. Surfaces are worn. Comparanda: Mallory 1991, 22-23. | D. 3 mm ; H. 1 mm |
| 2803 | 1200 | Complete; good condition. Tiny blue glass bead. Flattened spherical section. Central cylindrical perforation of 1.5 mm diameter. Surfaces of bead are slightly scratched. Comparanda: Mallory 1991, 22-23. | D. 3 mm ; H. 2 mm |
| 3005 | 309 | Complete; good condition. Tiny blue glass bead. Flattened oval section. Central cylindrical perforation with diameter of 0.5 mm . Comparanda: Mallory 1991, 22-23. | D. 3 mm ; H. 1 mm |

| 3011 | 313 | Complete; good condition. Tiny blue glass bead. Flattened spherical section. Cylindrical, slightly off-centre, perforation of 0.5 mm diameter. Comparanda: Mallory 1991, 22-23. | D. 2 mm ; H. 1 mm |
| :---: | :---: | :---: | :---: |
| 3015 | 313 | Complete; good condition. Tiny blue glass bead. Flattened spherical section. Central cylindrical perforation, 1 mm in diameter. Evidence of wear to one side of perforation - gives it appearance of being slightly off-centre. Comparanda: Mallory 1991, 22-23. | D. 3 mm ; H. 2 mm |
| Group 3 |  |  |  |
| 16 | 1 | Incomplete; good condition. One third of a blue glass bead. Rectangular section. Cylindrical perforation; had a diameter of at least 5 mm . Traces of wear on surface. Comparanda: Ó'Ríordáin 1949, 89-90, fig.19; Raftery 1969, 83, fig.30; Raftery 1981, 180. | D. $>6.5 \mathrm{~mm}$; H. 4 mm |
| 82 | 14 | Incomplete; good condition. Half of a blue glass bead. Rounded section. Slightly flattened on surfaces. Cylindrical perforation of 5 mm diameter. Surface slightly pocked. Evidence of surface wear and scratching. From bead identical to 92E102:00158. Comparanda: Hencken 1938, 40, fig.24. Ó'Ríordáin 1949, 89-90, fig. 19. | $\begin{aligned} & \text { D. } 8.5 \mathrm{~mm} ; \\ & \text { H. } 7 \mathrm{~mm} \end{aligned}$ |
| 158 | 21 | Complete; good condition. Globular blue glass bead in two halves. Rounded section. Slightly flattened on surfaces. It has central, cylindrical perforation, 5 mm in diameter. The glass is 'pocked' in places and there is evidence of wear around the perforation. Identical to 92E102:00082. Comparanda: Hencken, 1938, 40, fig.24. Ó'Ríordáin 1949, 89-90, fig. 19. | D. $9.5 \mathrm{~mm} ;$ ; |
| 552 | 41 | Complete; good condition. Blue glass bead. Rectangular with slightly rounded sides in section. Slightly off-centre, cylindrical perforation with diameter of $c a .4 \mathrm{~mm}$. Glass is opaque. Comparanda: Hencken, 1938, 40, fig.24. Ó'Ríordáin, 1949, 8990 , fig. 19. | D.9mm; H.7mm |
| 2863 | 1227 | Complete; poor condition. Medium-sized dark blue glass bead. Flattened spherical in section; slightly off-centre, cylindrical perforation, 4 mm in diameter. At edge of perforation, on one surface, is a tiny hole of $c a .0 .5 \mathrm{~mm}$ diameter which holds small, round metallic-looking object - may possibly be a stud? One side of bead is worn thin, with a crack in glass at this point. Edges of perforation are worn and chipped. Bead is a darker shade of blue than other Dún Aonghasa glass beads. Comparanda: Ó'Ríordáin 1949. 89-90, fig.19; Raftery 1969, 83; Raftery 1981, 180 ; Hencken 1938, 40, fig. 24. | D. 8 mm ; H. 6 mm |
| 2949 | 1226 | Incomplete; good condition. One third of a small blue glass bead. Rectangular section with rounded sides. Cylindrical perforation of $c a .5 \mathrm{~mm}$ in diameter. Surfaces are scratched and bead is worn. Traces of wear around the perforation. Comparanda: Ó'Ríordáin 1949, 89-90, fig.19; Raftery 1969, 83; Raftery 1981, 180 ; Hencken 1938, 40, fig. 24. | D. $>6 \mathrm{~mm}$; H. 4.5 mm |

| 4020 | 1201 | Complete; good condition. A dark barrel-shaped blue glass bead. <br> Opaque. Central cylindrical perforation measuring 3 mm in <br> diameter. | D. $8 \mathrm{~mm} ;$ <br> H. 5 mm |
| :--- | :--- | :--- | :--- | ---: |

## Shell Beads \& Objects Catalogue (M. FitzGerald) [Appendix 1.20 in Vol. 3]

Beads
Find No. Feature Description

## Dimensions

| 1119 | 216 | Perforated limpet shell. Fragile condition. Edge along one side <br> has broken off. | D.31-26mm; <br> T. 1 mm |
| :--- | :---: | :--- | ---: |
| 1422 | 22 | Tiny, rounded circular object of shell. Hollow semi-circular <br> section with perforation in flat surface. Possibly natural, or a pin <br> head? | D.4mm; <br> T. 3 mm |
| 2747 | 949 | Small, complete cowrie shell with a small perforation (2mm by <br> 1 mm ), probably natural, in one end. No signs of modification. | L.9mm; <br> W. $7 \mathrm{~mm} ;$ <br> T. 6 mm |
| 1131 | 82 | Tiny cowrie sea shell. Semi-circular cross-section with opening <br> in base. Identical to 92E102:01340. | L. $10 \mathrm{~mm} ;$ <br> W.7.5mm |
| 1340 | 220 | Tiny cowrie sea shell Semi-circular cross-section and opening in <br> base. Identical to 92E102:01131. | L.9mm; <br> W.7mm |

Unperforated shells (red cowrie only)

| 2932 | 985 | Small, complete cowrie shell. No signs of modification. | L. $10 \mathrm{~mm} ;$ <br> W. $8 \mathrm{~mm} ;$ |
| :--- | :--- | :--- | ---: |
|  |  | T. 7 mm |  |

Modified and unmodified scallop shells

| 2545 | 297 | Two almost complete scallop shells and $c a$. three fragments. Unmodified. | D. $98 \mathrm{~mm} ;$ T. $2 \mathrm{~mm} ;$ D. $111 \mathrm{~mm} ;$ T .2 mm |
| :---: | :---: | :---: | :---: |
| 2930 | 985 | Fragment of a scallop shell. No signs of modification. Reddening of shell on the interior is natural. | L. 84 mm ; W. 46 mm ; T. 2 mm |
| 2931 | 985 | Fragment of a scallop shell. Slight reddening on interior natural? | L. 38 mm ; <br> W.30mm; <br> T. 2.5 mm |
| 2933 | 983A | Fragment of a scallop shell. Reddening on interior - natural? | $\begin{gathered} \text { L. } 37.5 \mathrm{~mm} ; \\ \text { W. } 32 \mathrm{~mm} ; \\ \text { T. } 2.5 \mathrm{~mm} \\ \hline \end{gathered}$ |
| 2934 | 983B | Almost complete valve of a scallop shell. No definite signs of working but could have been used as a lamp. | $\begin{array}{r} \hline \text { D. } 111 \mathrm{x} \\ 91 \mathrm{~mm} ; \\ \text { T. } 1.5 \mathrm{~mm} \\ \hline \hline \end{array}$ |

## Pumice and Stone Beads and Rock Crystals Catalogue (M. FitzGerald; petrological identifications by D. Harper) [Appendix 1.21 in Vol. 3]

## Pumice

| Find No. | Feature | Description | Dimensions |  |
| :--- | :---: | :--- | :--- | :--- |
| 70 | 19 | Incomplete. Circa half of a circular pumice bead, dark brown in <br> colour with a gritty surface. Flat upper and lower surfaces with <br> rounded sides. Approximately half of the hour-glass perforation | D.19mm; <br> remains; original diameter $c a .5 \mathrm{~mm}$. The broken edges appear to |  |

| Quartz | 244 | Complete. Cylindrical bead made from brown quartz siltstone. <br> Smooth polished surfaces. One surface is slightly rounded and in <br> section the object is square with rounded sides. There is an <br> attempt at a perforation; this is 3mm in diameter and very much <br> "off-centre". It is possible that this bead is a reworked bracelet <br> fragment. | L.13mm; <br> 1839 | 244 |
| :--- | :---: | :--- | ---: | ---: |
| 1886 | Complete. Finely-made, polished, disc-like stone bead made from <br> brown quartz siltstone. In section the bead is rectangular with <br> rounded sides; slightly off-centre hour-glass perforation, 7mm in <br> diameter. | D.17mm; <br> T. 6 mm |  |  |
| 2706 | 941 | Complete. White bead of milky quartz, oval in section with <br> cylindrical perforation 2mm in diameter. There are slight traces <br> of wear around the edges of the perforation. | D.8.5mm; <br> T. 4 mm |  |
| 2824 | 965 | Incomplete. Tiny quartz bead. D-shaped in section with one <br> slightly curved surface. This surface is also slightly smoothed. <br> The opposing surface is rough and has a shallow off-centre <br> groove, possibly the remains of a perforation. It is possible that <br> the bead may have been broken during manufacture. | D.1.5mm; |  |

| Limestone |  |  |  |  |  |  |
| :--- | :---: | :--- | ---: | :---: | :---: | :---: |
| 33 | 9 | lomplete. Circular, perforated bead made from crinoidal <br> limestone of local provenance. Very finely made with highly <br> decorative crinoids that occur as white and brown spots. The bead <br> is rectangular with rounded sides and the slightly off-centre, <br> hour-glass perforation is 5.5mm in diameter. There are traces of <br> wear around the perforation. | D.17mm; <br> T. 6 mm |  |  |  |
| 591 | 47 | Complete. Small geoid shaped stone consisting of a limestone <br> pebble with corallites, no doubt picked up on the shore. This may <br> have been raw material for a similar bead to no.33. It is abraded <br> and may have been worked to some extent. | D.19mm by |  |  |  |

Cryptocrystalline quartz,
flint, chert or agate

| 175 | 10 | Complete. Small perforated stone bead made from cryptocrystalline quartz, flint or agate. Slightly oval-shaped and thin and disc-like in appearance. The cylindrical perforation is slightly off-centre and 2 mm in diameter. The surfaces of the bead are uneven and there are traces of polish evident. |  |
| :---: | :---: | :---: | :---: |
| 178 | 14 | Incomplete. Half of a stone bead (original diameter 12 mm ) similar to but larger than 175 . Of cryptocrystalline quartz, flint or agate. The broken edges appear to have been smoothed down so the bead is crescent-shaped and has a wedge-shaped section. One surface is smooth and flat, almost as if it has been cut. The other is rounded. The bead is polished. The perforation is cylindrical but tapers slightly towards the flat surface and is 3 mm in diameter. | $\begin{gathered} \overline{\text { D. } 12 \mathrm{~mm} ;} \\ \text { T. } 6 \mathrm{~mm} \end{gathered}$ |
| 224 | 51 | Complete. Small, perforated circular bead made from chert or flint. The bead is flat and disc-shaped bead thinning out slightly at one edge from 2 mm to 1.5 mm . It has an off-centre cylindrical perforation 2 mm in diameter. | $\begin{array}{r} \text { D. } 6 \mathrm{~mm} ; \\ \text { T. } 1.5 \mathrm{~mm}- \\ 2 \mathrm{~mm} \end{array}$ |
| Crinoid ossicle |  |  |  |
| 216 | 52 | Complete. Minuscule bead made from a single crinoidal ossicle or limestone fossil, of local provenance. Rectangular in section. The central cylindrical perforation is 0.5 mm in diameter and there are faint incisions from the perforation to the edge of the bead. | D.3mm; T. 1 mm |
| 612 | U/S | Complete. Bead made from tiny circular fossil from local limestone. The bead is flat and disc-like, rectangular in section with faint traces of incisions towards the edge. The star-shaped central perforation is 1 mm in diameter and probably an enhancement of a natural depression. | D. 5 mm , T. 2 mm |
| 1335 | 228 | Complete. Small fossil bead from local limestone. The bead is thin and disc-like with a relatively large rectangular perforation. Faint incisions visible towards the edges, which are extremely thin ( $1-1.5 \mathrm{~mm}$ ). The cylindrical perforation is 2.5 mm in max. width. | D. 4.45 mm ; T. 1.5 mm |
| 2713 | 1704 | Complete. Tiny bead made from limestone crinoid ossicle of local provenance. Circular disc-shaped fossil with central, cylindrical perforation, 1 mm in diameter. | D. 2mm; T. 1 mm |
| 2725 | 1204 | Complete. Tiny bead made from limestone crinoid ossicle of local provenance. Disc-like with a central perforation 1.5 mm in diameter. Thins slightly to one side. | D. 4 mm ; T. 1 mm |
| Unknown rock type |  |  |  |
| 1561 | 112 | Incomplete. Tiny circular brown polished bead, of unknown rock type, identical to 92E102:03010. In section the bead is wedgeshaped with a rounded side. The bead thins out towards an offcentre perforation, 0.5 mm in diameter, which has now partly broken away. | D. 3 mm ; T. 1 mm 2 mm . |

| 890 | 82 | Small irregular-shaped rock quartz crystal. Surfaces of some faces are chipped and have striations or scratch marks. | L. 16 mm <br> W. 11.5 mm <br> T. 9.5 mm |
| :---: | :---: | :---: | :---: |
| 1096 | 217 | Elongated rock quartz crystal. It tapers to a point. Some faces are flat and angular, while some faces are chipped and have striations or scratch marks. | L. 26.5 mm ; <br> W10mm <br> T. 11.5 mm |
| 2730 | 1202 | Faceted rock quartz crystal. Pointed at one end, but broken or damaged at the opposite end. | L. 15 mm W. 7 mm T. 6.5 mm |
