

Catalogue of York Archaeological Trust Photographs from the Heslington East Excavations (Site code 5112) Deposited with the Archaeological Data Service

A total of 2939 photographs were taken by York Archaeological Trust (YAT) on archaeological excavations at Heslington East (YAT project code 5112). The photographs are a mixture of photographs taken during the course of the excavation and photographs of the artefacts recovered both before and after conservation. The bulk of the excavation photographs are record shots of individual contexts, but a smaller number were of groups of contexts or phases. Photographs were also taken depicting the working conditions on site, including the weather conditions. The photographic archive is stored at York Archaeological Trust under the project code 5112 and it is backed up at a remote server to prevent data loss. Access to the collection can be made on application to YAT at archaeology@yorkat.co.uk.

Because the photographic archive is already stored at YAT it would have been inappropriate to duplicate the collection with the Archaeological Data Service (ADS). The Heslington East site was, however, excavated by three archaeological units, the Archaeology Department of the University of York (the lead unit with regards to final publication), YAT, and On Site Archaeology, creating a need for consistency between the archives deposited with the ADS by all three units. It was therefore agreed between YAT and the Archaeology Department of the University of York that a sub-set of photographs from the YAT collections would be chosen for deposition with the ADS so as to give a sense of the work undertaken for the project as a whole.

To this end, a selection of 227 photographs was made for deposition, these are split into four categories namely artefacts (largely during or after conservations, but with a few shots of artefacts *in situ* during excavation), contexts (photographs of individual contexts), group or phase shots (for photographs of the excavation depicting multiple contexts) and working shots (depicting the working conditions and staff undertaking excavation work). The table below is a catalogue of the photographs deposited by YAT with the ADS, listed in terms of the category, the PID number (used as a reference within YAT's internal database called IADB, where thumbnail and medium format photographs are stored), the Photo Number (which is the reference number for the YAT large format photographic collection) and the Caption (as recorded on IADB and in word documents on the YAT computer system). The photographs are listed below in category then photo number.
