

Appendix A: Unit Log

compiled by

Denis Miles

Unit

501-575 are graves. In these entries “Alt” refers to a unit number initially assigned to all or part of the feature, before it was identified as a grave. “D” means that the burial has been disturbed, but not the structure of the grave.

1500-1682 are exclusively in the Upper Terrace.

CC (Class Codes)

Class codes have been retained although the full class description has been introduced. The complete list is shown below.

?

Question marks refer to items to their left except in Comments where they belong to the nearest text.

POS

Part of Structure - is used to indicate where a unit is part of a building or some other feature such as the fill of a pit.

For units that are part of buildings, see Appendix A2 - Building Contexts: General Analysis.

POG

Part of Grave - is used to indicate a unit which is part of a grave, ie. its fill.

Status

OK refers to *in situ* deposits. Note that a pit is usually structurally OK, but its fill is almost certainly M. A slighted pit may be M or C. Structural features rating an M or C have not been used for typological studies.

M (Mixed) refers to the majority of deposits, which in any multi-period site, almost always includes earlier material. Upper grave pits, for example, are normally backfilled, hence their fills are M and material in such fills is contemporary with, or usually earlier than, the actual interment. Material associated with the burial is treated OK.

D (Disturbed) refers to a very ill-defined feature, animal action etc, which may well be contemporary with the level in which it was found.

C (Contaminated) refers to modern disturbance or to ancient units affected by the latter or to units contaminated or suspected of being contaminated by later material.

Period

There are seven periods, 1 earliest (neolithic), 5 latest (Philia). See § 2, § 14 and Table 14.8.

Comment

These are mostly relational.

“CA” (Ceremonial Area): see *LAP* II.2 Chapter 1 for fuller descriptions and treatment.
