## Browse the Catalog

# Services

Search among ARIADNE services

## Web Services

ARIADNE visual media service  
Create your online showcase for 3D models, images and RTI.

The ARIADNE Visual Media Service provides easy publication and presentation on the web of complex visual media assets. It is an automatic service that allows to upload visual media files on an ARIADNE server and to transform them into an efficient web format, making them ready for web-based visualization.

**3D models**  
3D representations produced with 3D scanners or photogrammetry are extremely high-resolution and hard to visualize at interactive rate. This service produces a web page that supports interactive visualizations of your data, after converting it into an efficient multiresolution encoding.

**RTI images**  
Integrable images called Reflectance Transformation Images, RTI, or Polynomial Texture Maps, PTM, are becoming an increasingly used media. This service offers a content gap, giving support for easy publication on the web and interactive visualization of RTI images.

**High-resolution images**  
High-resolution images are a commonly resource in archaeology. Unfortunately, they are most often downloaded and published on the web by using low-resolution versions (a large 4096x4096 images is 122KB in uncompressed format and around 10KB when lossy compressed).

February 2016, new release!  
We added new functionalities, check the help pages for details.

- 3D model compression
- more images

### Visual Media Service

The ARIADNE Visual Media Service provides easy publication and presentation on the web of complex visual media assets. It is an automatic service that allows to upload visual media files on an ARIADNE server and to transform them into an efficient web format, making them ready for web-based visualization.

<http://visual.ariadne-infrastructure.eu>

Landscape Services for ARIADNE are a set of responsive web services that include large terrain dataset generation, 3D landscape composing and 3D model processing, leveraging on powerful open-source frameworks and toolkits such as GDAL, OSGs, OpenSceneGraph and ownCloud. Here a few examples of 3D datasets produced by the services:

**Cloud Service**  
This is the main service to access, manage and eventually share your online data. This includes ODBs, point data, Geo-images, 3D models, etc.

**3D Terrain Service**  
You can use this service to process ODBs, geo-images and shapefiles to produce large 3D terrain Datasets optimized for real-time visualization and web streaming.

**Terrain Gallery**  
View, download or delete your generated 3D Terrain datasets. You can also interactively explore a 3D dataset online and present it in your web site, through desktop browsers, smartphones or tablets.

### Landscape Factory

Landscape Services for ARIADNE are a set of responsive web services that include large terrain dataset generation, 3D landscape composing and 3D model processing, leveraging powerful open-source frameworks and toolkits such as GDAL, OSGs, OpenSceneGraph and ownCloud. The main components include: the cloud service, the terrain generation service, the terrain gallery and the front-end web component for interactive visualization.

<http://landscape.ariadne-infrastructure.eu>

### iDAI.gazetteer

The German Archaeological Institute together with the Cologne Digital Archaeology Laboratory is developing the iDAI.gazetteer - a web service connecting toponyms with coordinates. It was initially built as an authority file/controlled vocabulary for any geo-related information in information systems of the DAI. Furthermore it is meant to link these data with other worldwide gazetteer-systems.

<http://gazetteer.dainst.org/>

### Heritage Data: Linked Data Vocabularies for Cultural Heritage

National cultural heritage thesauri and vocabularies have acted as standards for use by both national organizations and local authority Historic Environment Records but until now have lacked the persistent Linked Open Data (LOD) URIs that would allow them to act as vocabulary hubs for the Web of Data. The AHRC funded SENESCHAL project aims to make such vocabularies available online as Semantic Web resources. SENESCHAL will start with major vocabularies as exemplars and project partners will continue to make other vocabularies available. Other organizations are welcome to make use of the data and services which will be open licensed.

<http://www.heritagedata.org/blog/services>

### Heritage Data: Vocabulary matching tool

The Vocabulary Matching Tool was developed for aligning Linked Data vocabulary terms with Getty Art & Architecture Thesaurus concepts. The source code for the Vocabulary Matching Tool is also available for local download and installation <https://github.com/cbinding/VocabularyMatchingTool> - in which case it might then be classed as "stand alone services" (tools to be downloaded and installed on one's machine).

[Catalog](#)[Services](#)[About](#)

## Ariadne project and the registry

ARIADNE brings together and integrates existing archaeological research data infrastructures so that researchers can use the various distributed datasets and new and powerful technologies as an integral component of the archaeological research methodology. There is now a large availability of archaeological digital datasets that all together span different periods, domains and regions; more are continuously created as a result of the increasing use of IT. They are the accumulated outcome of the research of individuals, teams and institutions, but form a vast and fragmented corpus and their potential has been constrained by difficult access and non-homogenous perspectives.

## Ariadne Metadata Registry

The ARIADNE metadata registry will survey currently used data standards and metadata schemas, and will compile a registry of those in use in different fields/regions of archaeological research, including important related domains of research, together with any available bilateral mapping.

Through this portal, data gathered in the Ariadne registry will become searchable and useful to other researchers

## Ariadne Dataset Catalogue Model (ACDM)

ACDM is an extension of the [Data Catalog Vocabulary \(DCAT\)](#), a quasi-recommendation of the W3C Consortium that "is well-suited to representing government data catalogues such as Data.gov and data.gov.uk." The reason for adopting the DCAT Vocabulary (apart from re-use) is that DCAT is proposed as a tool for publishing datasets as Open Data. Its adoption places therefore ARIADNE in an ideal position for publishing datasets as Open Data as well. To this end, ARIADNE will be following the recommendations made in the "DCAT Application Profile for data portals in Europe" concerning the use of the terms of the DCAT ontology. These recommendations establish which attributes or classes are mandatory; for the moment, we will not strictly adhere to these recommendations because we are using DCAT for internal purposes. ACDM makes usage of the following namespaces:

- dcat: <http://www.w3.org/ns/dcat#>
- dct: <http://purl.org/dc/terms/>
- dctype: <http://purl.org/dc/dcmitype/>
- foaf: <http://xmlns.com/foaf/0.1/>
- rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#>
- rdfs: <http://www.w3.org/2000/01/rdf-schema#>
- skos: <http://www.w3.org/2004/02/skos/core#>
- xsd: <http://www.w3.org/2001/XMLSchema#>

Class structure of the model

# Scalloway: A Broch, Late Iron Age Settlement and Medieval Cemetery

Access resource on the web

The Scalloway archive consists of stratigraphic reports and lists, finds catalogues and additional specialist reports resulting from excavations undertaken between 1989 and 1990 on a ridge overlooking Scalloway, on the island of Shetland. The excavations revealed evidence of occupation between the 1st century BC and the medieval period.

## Santa Vittoria 2007 Bibliography

### Summary (English)

The enclosure of Santa Vittoria di Esterzili has long been cited as a prime example of this type of monument, whose chronological-cultural attribution oscillates between the "Monte Claro" and the Nuragic period.

New excavations inside the Santa Vittoria enclosure have provided important information regarding the understanding of questions linked to this category of monument and have revealed a structure that is very different from that known in archaeological publications.

The Santa Vittoria enclosure wall stands on the northern end of the hill of the same name, abutting a rocky outcrop that was partially cut to fit the wall facings and was used as a source of building material. The structure is roughly oval in plan (N-S axis 42 m, E-W axis 26 m), and originally had two entrances (east and west) on the same axis.

The enclosure wall was circa 2 m wide with a double facing. A bench ran around its base (completely excavated on the west side) made up of a series of large slabs of different lengths and resting on an irregular mass of material, to a height of 0.35 m above floor level and a width of 0.30 m.

The floor surface, of beaten kaolin clay, rested on a loose foundation of irregular stones used to level the bedrock below. A circular hut (overall diameter 9 m) was built on top of this loose foundation. This was partially demolished in later occupation phases, in particular during the construction of the church of Santa Vittoria, which exploited the walls of the nuragic building.

The nuragic hut is mainly preserved on the north side, where the four courses of the perimeter wall are still standing, the paved floor is intact, and five blocks survive from a bench that must have originally run all round the interior.

The structure's plan falls within the category of circular buildings with perimeter bench interpreted as being political and cult meeting places.

The dating of the Esterzili monument is based on a patch of deposit (US 22) that had remained undisturbed despite the radical transformations that took place in the various occupation phases. The context was recorded outside the hut, on the east side of the old church and close to the suggested entrance to the circular building. The materials dated to the

# Plangebied Bleumerweg en Duinvallei, gemeente Castricum; archeologisch vooronderzoek: een inventariserend veldonderzoek proefsleuven

[Access resource on the web](#)

CABW3RAAP Archeologisch Adviesbureau heeft een inventariserend veldonderzoek in de vorm van proefsleuven uitgevoerd in verband met voorgenomen bodemingrepen in de gemeente Castricum. De bodemingrepen zullen bestaan uit de aanleg van een duiker in deelgebied Duinvallei en een langwerpige poel in deelgebied Bleumerweg. Tijdens het proefsleuvenonderzoek zijn in beide deelgebieden twee proefsleuven aangelegd. Op basis van het vondstmateriaal en de landschappelijke ligging van het sporenniveau kunnen in deelgebied Duinvallei twee vindplaatsen worden onderscheiden. Vindplaats 1 In het westen van het deelgebied zijn in de strand(wal)afzettingen een greppelsysteem en diverse kuilen aangetroffen. Uit de strand(wal)afzettingen en uit één van de greppels zijn fragmenten handgevormd aardewerk verzameld die dateren uit de periode Late IJzertijd-Romeinse tijd. Het greppelsysteem bestaat uit greppels die variëren in breedte van 0.2 m tot 1.5 m en die noordnoordwest- zuidzuidoost aeoriënteerd zijn. De arepels 2. 4 en 8 staan daar min of meer haaks
