Data Service

ADS and Community Archaeology:

An Introduction to Archaeology Data Service Resources

Becky Hirst, Digital Archives Assistant

Archaeology Data Service

Who we are...

- Based at the University of York
- Established in 1996
- Currently a staff of 19
- Digital repository for archaeology and heritage
- Open Access data from industry, higher education and general public
- Supporting access, innovation, and research

Professor Julian Richards
julian@york.ac.uk

Julian has overall responsibility for the ADS digital repository, representing the ADS and internet Archaeology to the wider community and developing key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

Dr Tim Evans
tim@york.ac.uk

Tim has responsibility for all day-to-day operations of the ADS and internet Archaeology. He also maintains and develops key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

Dr Katie Green
katie@york.ac.uk

Katie is responsible for promoting the ADS digital repository to the wider community, providing expert advice and developing strategies and content for marketing and business development. She is also responsible for maintaining the ADS website.

Teagan Zoldoski
teagan@york.ac.uk

Teagan is responsible for coordinating the ADS digital repository, providing expert advice and developing strategies and content for marketing and business development. She is also responsible for maintaining the ADS website.

Jamie Geddes
jamie@york.ac.uk

Jamie is responsible for all day-to-day operations of the ADS and internet Archaeology. He also maintains and develops key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

Dr Holly Wright
holly@york.ac.uk

Holly manages and manages the ADS digital repository, representing the ADS and internet Archaeology to the wider community and developing key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Dr Nicky Garland
nicky@york.ac.uk

Nicky manages the design and delivery of training for the ADS digital repository, representing the ADS and internet Archaeology to the wider community and developing key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Judith Winters
judith@york.ac.uk

Judith is the ADS for the open access digital repository, representing the ADS and internet Archaeology to the wider community and developing key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Becky Irlott
becky@york.ac.uk

Becky is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Jen Wilson
jen@york.ac.uk

Jen is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Jamie Bradley
jamie@york.ac.uk

Jamie is responsible for all day-to-day operations of the ADS and internet Archaeology. He also maintains and develops key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

Dr Paul Young
paul@york.ac.uk

Paul is responsible for all day-to-day operations of the ADS and internet Archaeology. He also maintains and develops key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

Jo Gilham
jo@york.ac.uk

Jo is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Valeria Corallo Garza
valeria@york.ac.uk

Valeria is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Ewryn Curi
ewryn@york.ac.uk

Ewryn is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Kieran Nolan
kieran@york.ac.uk

Kieran is responsible for all day-to-day operations of the ADS and internet Archaeology. He also maintains and develops key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

Jenny O'Brien
jenny@york.ac.uk

Jenny is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Gillie Foster
gillie@york.ac.uk

Gillie is responsible for all day-to-day operations of the ADS and internet Archaeology. She also maintains and develops key partnerships for funding, marketing and business development. She is also responsible for maintaining the ADS website.

Adam Fox
adam@york.ac.uk

Adam is responsible for all day-to-day operations of the ADS and internet Archaeology. He also maintains and develops key partnerships for funding, marketing and business development. He is also responsible for maintaining the ADS website.

ABBAY FIELDS ABBEYMEAD

 **Historic England NRHE Excavation Index for England**

 Followed by excavation 14/86 (Event 652905). Observation of sewer trench.

GLOUCESTERSHIRE

AINSBRONK SITE

 **Historic England NRHE Excavation Index for England**

 Evaluation and excavation of the site of a Viking period hoard recorded a disturbed burial with grave goods and a large Bronze Age enclosure. Metal detectorists had previously removed '7000' artefacts from the site, the location of which is kept secret. County location data applied to aid retrieval 2018.

NORTH YORKSHIRE

APPLEGARTH WEST OF ST ANDREWS CHURCHYARD

 **Historic England NRHE Excavation Index for England**

 Two small trial trenches in the garden of a 1960s bungalow adjacent to the churchyard boundary wall on the west side of St Andrew's Church revealed traces of the Roman road from the Mendips to the River Avon, possibly RR540. There were also indications of a possible Roman roadside settlement, as well as earlier medieval activity pre-dating the laying out of the market place.

**Pepper Pot Folly approx 150 metres east of Sorrelsykes House Burton cum Walden****Yorkshire Dales National Park Historic Environment Record**

 Folly. Early-mid C19th. Rubble. Circular in plan, 2 stages, the lower stage slightly tapering, the upper stage concave, each with projecting top course of stones; conical cap. In west side, very small doorway. Interior: circular in plan. (1) North Yorkshire

Rocket Ship Folly approximately 200 metres north east of Sorrelsykes House Yorkshire Dales National Park Historic Environment Record

 Folly. Early-mid C19. Rubble. Base in the form of a cube with tapering diagonal buttresses, and in the west side a narrow doorway with a blind oculus above. The top of the base has flagged coping about the tapering circular obelisk which rises from it, with 2 blind round-headed vents in the west side, and flagged capping. Interior: circular in plan, tapering towards the top, with beams across. The appearance of the folly has given it in recent times the nickname "rocket ship". (1) North Yorkshire

March 2023: [Digital Archive from an Archaeological Evaluation at Above Hedges, Pitton, Wiltshire, April 2017 \(Archive released\)](#)
This digital archive contains images, GIS, site records and a report from an archaeological evaluation at Above Hedges, Pitton, Wiltshire. The work was undertaken by Oxford Archaeology (South) on 22nd April 2017. The evaluation consisted of a single trench measuring 20m by 1.8m which ran through the centre of the site in a NW-SE direction. The trench represented a c 2% sample of the development area, and it was positioned to investigate one of the linear features seen on the aerial photographs. The trench was dug by a mechanical excavator fitted with a toothless bucket in spits down to the f...

March 2023: [Digital Archive from a Series of Archaeological Excavations and Investigations at Aylesbury Berryfields, Buckinghamshire, 2007-2016 \(Archive released\)](#)
This digital archive contains site records, images, reports, GIS and an excel database on skeletal data from a series of investigations between 2007 and 2016, undertaken by Oxford Archaeology, at Aylesbury Berryfields. This comprised an excavation undertaken in 2007 and 2010-12 across the main areas of the MDA (AYLBER07 and AYLBER10), a watching brief in 2012/13, which monitored development work in the same area (also under code AYLBER10), an excavation in 2013 along the Western Link Road (again AYLBER10), an excavation at the District Centre site in 2014 (AYLBER14), and, most recently, excav...

March 2023: [Digital Archive from an Archaeological Evaluation at Shrivenham Townsend Road, Oxfordshire 2017 \(Archive released\)](#)
This digital archive contains spreadsheets, site records, CAD and images from an archaeological evaluation comprising 20 trenches on land off Townsend Road, Shrivenham, Oxfordshire (NGR SU 23100 88510). The work was undertaken by Oxford Archaeology between January and February 2017, as required by a planning condition for a proposed new housing development at the site. The trenching programme comprised 20 trenches, each measuring 50m x 1.8m in plan, as shown on Figure 2. The trenches were numbered in a continuous sequence from 1-20. Prior to excavation, each trench was located and marked by an...

March 2023: [Digital Archive from an Archaeological Evaluation North-East of Bury St Edmunds, Great Barton, Suffolk, 2014 and 2015 \(Archive released\)](#)
This collection comprises reports, images, a site plan, spreadsheets and site records from an archaeological evaluation of Land North-East of Bury St Edmunds, Great Barton, Suffolk undertaken by Archaeology South-East in two stages: 24 November to 15 December 2014 and 16 to 27 March 2015. Archaeological features and deposits were recorded in thirty-seven of the evaluation trenches; these were concentrated on the higher ground in the northern part of the site and were principally of Iron Age and Roman date. Some post-medieval features (field ditches, a possible track and at least one quarry) were...

March 2023: [Digital Archive from an Archaeological Excavation at Braintree Road, Felsted, Essex 2015 \(Archive released\)](#)
This collection comprises images, reports, a site plan, spreadsheet data and a survey statement from an archaeological excavation of a greenfield site in advance of residential development on the north edge of Felsted, Essex. Work was undertaken by Archaeology South-East between June and July 2015. Archaeological trial-trenching and excavation of the site discovered mainly medieval features, most of which consisted of 12th to 14th century enclosure ditches. The artefacts included sherds of Late Saxon and medieval pottery, a medieval chess piece, and numerous fragments of medieval roof tile.

March 2023: [Digital Archive from Analytical Buildings Recording Work at Kingsmead School, Hartswell, Wiveliscombe, Somerset, July 2022 \(Archive released\)](#)
This collection comprises images, site records and reports from an Analytical Buildings Record (Level 3) at Block A, Kingsmead School, Hartswell, Wiveliscombe, Somerset West and Taunton, Somerset, England, United Kingdom. This work was undertaken by Bristol & Bath Heritage Consultancy Ltd 28th to 29th July 2022. The recording comprised a primarily photographic record and inspection of Block A, Kingsmead School, which was completed shortly before demolition, and an analysis of the chronological development of the building, using map and documentary evidence in combination with the photographic r...

UNIVERSITY of
BRADFORD

Introduction

Wetwang/Garton Slack is an internationally renowned archaeological site located on the Wolds of East Yorkshire. It encompasses extensive settlement and burial evidence which dates from the Neolithic through to the Romano-British period, with a particularly important large scale Iron Age cemetery (including several associated chariot burials) and contemporary settlement and land division.

Excavations were funded in advance of gravel quarrying by English Heritage's predecessor organisations from the early 1960s to the early 1980s (later work was funded by Humberside County Council), and directed by Dr John Dent and his predecessor, the late Tony Brewster. The Wetwang Project incorporates the whole 'site', straddling the adjoining parishes of Wetwang and Garton Slack. Although some progress was made towards publication and archiving of the results, the lack of a suitable infrastructure and adequate support prevented completion. As a result, this hugely important site has not had the impact on Iron Age research that it deserves.

To address this problem, English Heritage agreed to fund a period of archive collation and digitisation, with the central objective to locate and catalogue the entirety of the material produced from all work that has been undertaken at Wetwang/Garton Slack, and to establish this as a publicly accessible, consolidated digital archive.

Beginning with the dissemination of this data, the ultimate aim is to realise the research potential of the Wetwang/Garton Slack archives to advance understanding of the British and European Iron Age and to enhance and promote public understanding of the prehistoric landscapes of East Yorkshire.

Archaeologia Aeliana:

Archaeologia Aeliana is the journal of the Society of Antiquaries of Newcastle upon Tyne, which is the oldest provincial antiquarian society in the country, founded in 1813. Its particular focus, is the North East of England (the historic counties of Northumberland and Durham), centred on Newcastle upon Tyne.

Title:	Archaeological Investigations at Eye of York
Series:	York Archaeology unpublished report series
Downloads:	yorkarch3-504626_189248.pdf (16 MB) Download
Licence Type:	 Creative Commons Attribution 4.0 International Licence
DOI:	https://doi.org/10.5284/1099407
Publication Type:	Report (in Series)
Abstract:	<p>The methodology followed the WS1 (Appendix 3), with the works taking place in included three phases that were monitored by YAT staff members. The first phase included five small percussive boreholes (WS01 - 05) and one borehole one (BH01) that were not monitored by an archaeologist; monitored works were to comprise. It initially included five machine dug trial pits/slit trenches to around 3m in depth (TP01, TP03, TP05-07 and ST01) and two CBR test locations, but TP07 and TP07 were not carried out. The second phase involved two small percussive boreholes (WS06 and WS07). The third phase included a small percussive borehole (WS08), another CBR test, a cable percussive borehole, and four out of the initially seven machine dug trial pits/slit trenches originally proposed, but only four were actually done. Phase 1 Phase one was located mainly on the north portion of the site. The three two test pits (TP01, TP05) and the slit trench (ST01) observed were machine excavated up to a maximum depth of 2.00m BGL and measured c.2.00m long and 0.60m wide. Full recording of slit trench one of ST01 was not carried out due to the presence of asbestos. The California Bearing Ratio (CBR) tests to measure the strength of the subgrade of the road, did not need any archaeological monitoring as they were not deeper than 0.20m. Phase 2 Phase two took place at a thin strip of land in the north-east of the site behind the former female prison now a Castle Museum building adjacent with River Foss. The two window samples were hand-cored held due to limited space and reached approximately 2.80m depth BGL. Phase 3 Phase three was carried out on the south of the site, near the counts on the circular grassed area and around it. Window sample 8 (WS08) was excavated to 5.00m BGL. The four test pits (TP02, TP08-10) were machine excavated to 2.40m, 2.60m, 1.80m and 0.20m BGL respectively. The borehole BH02 was done with a Cable Percussion drilling rig (CPD) up to 10.00m BGL, thus it could not be archaeologically recorded. Slit trench two (ST02) was not carried out due to a tree being within the vicinity of it. The sandstones seen in TP05 are possibly reused stones from the original castle building that probably were once part of the wall surrounding Clifford's Tower. The brick seen on the northend of the TP05 are most likely part of the foundations for the 19th century Felon's Prison</p>

1 Title:	Craft, industry and everyday life
1 Subtitle:	leather and leatherworking in Anglo-Scandinavian and medieval York
1 Series:	The Archaeology of York
1 Volume:	17 (16)
1 Number of Pages:	398
1 Downloads:	AY17-16-Leather_and_leatherworking.pdf (11 MB) : Download
1 Licence Type:	 CC BY-NC-SA ADS Terms of Use and Access
1 Publication Type:	Monograph (in Series)
1 Abstract:	<p>Volume presenting the surviving evidence for the manufacture and use of leather artefacts, based around the Anglo-Scandinavian leatherwork from 10-22 Coppergate with a smaller amount of medieval material recovered from the site, supplemented by groups recovered from the Coppergate watching brief, excavations at 22 Piccadilly, and at the site of the Foundry and College of Vicars Choral at Berdorm. Over 5,000 items of leather dating from the later ninth century through to the fifteenth century are represented and some 550 are fully catalogued. A summary of the excavations is given, followed by a description of the leather-bearing deposits which attempts to identify possible workshop waste. A report is given on the conservation of the leatherwork and changes in conservation techniques. The surviving evidence for leatherworking in the city during the Anglo-Scandinavian and medieval periods is summarised. Leatherworking tools and a wooden shoe-maker's last were found. Environmental evidence for tanning and leatherworking is considered and an attempt made to correlate animal bone evidence with the leather recovered. Among the evidence found for the processing of hides and the manufacture of items were waste leather; discarded unusable parts of animal hides; flesh shavings; trimmings from cutting of pattern pieces; shoe parts showing signs of repair and shoes made from recycled parts. There is also evidence for the refurbishment of knife sheaths. A general outline of manufacturing methods and decorative techniques is given. Items described in detail include shoes, knife sheaths, sword scabbards, straps, purses, elliptical panels, balls, an archer's wrist guard and miscellaneous items. A correlation between shoe styles and sizes was studied and foot abnormalities as seen in the footwear are described. Several kinds of knife and seax sheaths and sword scabbards were recovered and identified. The context of the Anglo-Saxon background and contemporary material from elsewhere in the British Isles is summarised; differences in technology which might reflect the cultural mix of the population are explored, and similarities with leather assemblages recovered throughout north-west Europe are noted. Includes French and German summaries.</p>

Publication Type:	Journal
Abstract:	<p>This article discusses the post-excavation analysis and archiving of data generated by fieldwork undertaken at Heslington East near York in the UK. This project, stretching over two decades, involved two commercial companies and a student training and local community element, and recently concluded with a thematic publication (Roskams and Neal 2020). The article has twin objectives. First, on a theoretical level, it reflects on the complex challenges that arise when attempting to combine diverse stratigraphic, spatial and assemblage data from different sources to reach meaningful interpretations of an extensive, multi-period landscape. Second, on a practical level, it aims to act as an introduction to the project's archives to make them accessible to future audiences, something that is essential if we are to enable any re-interpretation of the site. I suggest that such archives embody a series of transformations. These comprise first the interpretation of reconnaissance and evaluation procedures, converted to generate an excavation strategy, something briefly summarised here. I then discuss at greater length: the processes of post-excavation analysis of stratigraphic and spatial data, and their relationship with the MoRPHE requirement (Historic England 2008) to select particular assemblages for detailed analysis; linking the latter, specialist reports on selected assemblages to preliminary interpretations of site evidence, an iterative process that creates more soundly based understanding; and the recasting of summaries of the most significant evidence in these secondary interpretations to fit the thematic organisation of the published report. I argue that each of these hierarchically ordered transformations needs to be understood if we are to facilitate effective re-use of site archives.</p>

ARIADNE plus

The screenshot displays the ARIADNE PORTAL website. At the top left, the logo consists of a stylized 'A' made of overlapping squares in yellow, orange, and teal, followed by the text 'ARIADNE PORTAL'. To the right of the logo are navigation links: 'Catalogue' with a magnifying glass icon, 'Browse' with a globe icon, 'Services' with a gear icon, and 'About' with a question mark icon. The main background features a close-up photograph of several smooth, dark reddish-brown amber beads. In the center, the 'ARIADNE plus' logo is prominently displayed, with 'ARIADNE' in large orange letters and 'plus' in a smaller teal font. Below the logo is a search bar containing the text 'Search in 3,811,712 resources...'. Above the search bar are filter options: 'All fields' (selected), 'Time period', 'Place', 'Title', and 'Getty AAT Subject', each with a radio button. A help icon is also present. Below the search bar, a search result card is visible, titled 'Amber necklace' and showing a page indicator '< 16 / 38 >'. The card contains a short paragraph of text describing the artifact.

Amber necklace < 16 / 38 >

The middle part of an amber necklace is complemented by two beads with canaliculi drilled from the inside. These channels have a "zebra-striped" decorative effect. Novo mesto, Slovenia, barrow cemetery at Kapiteljska njiva, Grave V/35 (5th–4th centuries BC). Kept by Dolenjski muzej Novo mesto. Photo: Borut Krž.

City of Limerick (2417)

The Eighth Dragoons, in crossing the Irish Channel, in a transport called the City of Limerick, were unfortunately stranded on some rocks adjacent to the Isle of Man during early April 1794. The vessel was for some time in the most imminent danger, and the men, amounting to about thirty, and one adjutant, were, after having some of their horses drowned, and most of them well washed with sea water,...

Publication Type:	Report (in Series)
Abstract:	Eight timber samples from the lining of the pit, and an artifact which may have been deposited at the same time as the helmet, were examined. No relative dating was obtained, but one of the lining timbers was dated; it was felled some time after AD 586. A new non-destructive method of measuring the rings of wooden artifacts was tested with encouraging results.

Additional resources

The screenshot shows the top navigation bar of the Archaeology Data Service website. The navigation items are: **ads** Archaeology Data Service, **Search data**, **ADS EASY Deposit data**, **Help & guidance**, **News & events**, **Blog**, and **About**. The main content area has a dark green background with the heading **Help & guidance** and a sub-heading: *The ADS is a world leader in promoting good practice in the use of digital data and provides high quality technical advice to the archaeological and historic environment sector.* Below this is a yellow banner with three columns of links: **Data management** →, **Instructions for Depositors** →, and **Data access and reuse** →.

Data management →

The ADS offers detailed Data management advice and guidance

Instructions for Depositors →

Our Instructions for Depositors detail the ADS requirements for depositing data, including how to structure your dataset, name your files and compile your metadata.

Data access and reuse →

All resources archived with the ADS are Open Access and delivered through our website to facilitate reuse

ADS-easy instructions for use →

User instructions and further information on specific areas of the ADS-easy system.

Advice for grant applicants →

The long-term preservation of data to enable its discovery and re-use is now a recognised and desired outcome...

Advice for HER uploads to the Heritage Gateway →

The ADS can build a bespoke Heritage Gateway loader for most HERs. What does an ADS heritage gateway loader include? ...
