What's in a name? Controlled vocabularies for European Research in the ARIADNE RI

Julian Richards

Director ADS; ARIADNE RI Deputy Chair

The Challenges we face

- Multiple datasets
- Multiple repositories
- Multiple languages
- Multiple vocabularies and time periods
- Cross border searching

$=$

- Valence (Drôme), Plateau de Lautagne, Réservoir ville de Valence, rapport de fouilles

Le projet de construction par la ville de Valence d'un réservoir d'eau sur le plateau de Lautagne, dont le riche passé antique et médiéval n'est plus à démontrer, induit la réalisation d'une opération de diagnostic en février 2017 (Ronco, 2017), laquelle s'est avérée positive avec la découverte de fosses et de fours médiévaux. Une opération de fouille d'une durée de six semaines a donc été menée e..

Original subject: Acquisition de ressource naturelle, Artisanat, Céramique médiévale, Exploitation, Faune domestiquée

## Le Hameau de Haut, Digosville, (Manche), rapport de diagnostic

Le diagnostic archéologique réalisé à Digosville sur $4790 \mathrm{~m}^{2}$ voués à laréalisation d'un lotissement a uniquement révélé la présence de fosséscorrespondant à différents états du parcellaire. Trois d'entre eux sesuccèdent, adoptant les mêmes orientations, depuis la fi in du Moyen âgejusqu'à nos jours en passant par la période moderne. Trois segmentsde fossés, semblent indiquer la présence d'une trame.

F- Poitiers (86), Rue de l'Université, rue des Vieilles-Boucheries, entre la rue de l'Université et la rue Savatier - Suivi de travaux en contexte urbain 2015-2016, rapport de diagnostic
Une série de surveillances de travaux, prescrites sous la forme de diagnostic archéologique, a débuté en 2015, dans le secteur de la rue de l'Université à Poitiers. Ces travaux de réfection, déviation et enfouissement profond des réseaux (eau, gaz, électricité, téléphone) sont réalisés en prévision du projet de Modernisation du réseau de transport public, lancé par la communauté d'agglomération Gr..

Colossus Dive Trail Maintenance and Wheel Wreek Dating 2019
This project undertook maintenance of the Colosssus dive trail and the collection of further dating evidence trom the Wheel Wreck to aid the
identification of this wreck. Both sites are protected historic wrecks and are only about six kilometres apart. The rationale behind combining these two projects was that considerable financial savings can be made by combining the fieldwork into a single event.

## Lessons learned

- Consistent use of an ontology is essential
- CIDOC-CRM was broad enough to cover all domains involved - but it is important to map to it consistently
- Vocabulary control is also essential
- Getty AAT - very powerful - but needs oversight to ensure consistency in partner mappings
- Can't make everything interoperable
- Focus on key themes
- What, When, Where; maybe Who?
- Requirement for archaeologists to work closely with IT specialists
- Always think about how the data will be used
- Granularity and scale are important
- Collection level vs item level
- Be driven by research questions
