THE LOST ARMOURY OF THE GONZAGAS

By JAMES G. MANN

It is sad to think that very few of the armouries of Renaissance Italy have survived. The arsenals of the Visconti and the Sforza at Milan which was at that time the undisputed capital of the armourers’ craft, have long since vanished. No trace at all is left of the armouries of the tyrants of the smaller city states of Ferrara, Rimini and Urbino. There is only a residue now remaining of the armour of the Medici, preserved in the Bargello at Florence. The Doge’s Palace at Venice contains a small but interesting collection, to which can be added the relics of the Venetian garrisons in the Levant at Chalcis and Rhodes. There is a little armour in the Vatican Palace and at Capo di Monte, Naples. The Royal Armoury at Turin is based on the old armoury of the House of Savoy, but in its present form is largely a modern collection, brought together by Count Seyssel d’Aix for Charles Albert, King of Sardinia, in the ‘thirties and ‘forties of the last century.

This is a modest total compared with what has survived in Germany, where many of the ruling houses retained their Rüstkammer until recent times. The House of Saxony alone can show three large armouries at Dresden, Eisenach and Coburg, and the Hapsburgs the two great displays at Vienna and Madrid.

That fatal century and a half, which elapsed between the disuse of armour in the seventeenth century and its return to favour as a subject of antiquarian curiosity at the end of the eighteenth, saw the well-filled arsenals of the Italian cities scattered by the hazards of war and peace. The humanistic sentiment of Italian culture was perhaps less concerned to conserve them than was the more feudal spirit of Germany. Not that all this armour can actually have been destroyed. By its nature armour is less perishable than pictures or tapestries, and drastic measures must be taken to dispose of it. It is said that a quantity of retainers’ armour at Wilton House was buried in the
The lost armoury of the Gonzagas

garden to get rid of it; while the town armour at Baldock was thrown down a well. Nevertheless much of the contents of the old Italian arsenals must have passed from hand to hand and be with us still, forming part of the mass of anonymous armour which fills the galleries of modern museums and private collections on both sides of the Atlantic.

The history of Mantua and the great military traditions and wealth of its ruling family, the Gonzagas, invest their armoury with a special interest. They seized power from the Bonacolsi in 1328 by a coup d'état, commemorated in Morone’s painting in the Palazzo Ducale (Pl. i), and retained it until their line ended in 1708 after nearly four hundred years of rule. Mantua, a state no larger than a small English county, was able to maintain her independence through the military capacity of the ruling house. In successive generations the lords of Mantua lent their services professionally as commanders in the field to their more powerful neighbours. By this means Mantua was able to survive the rivalry of Venice and Milan in the fifteenth century, and the struggle for supremacy of France and Spain in the next. Meanwhile the court of the Gonzagas lacked neither material wealth nor intellectual riches, and its fame as a centre of art and learning spread far beyond the confines of Italy.

The situation of Mantua is one of great natural strength. The river Mincio spreads out on three sides of the town forming a wide lake, traversed by two causeways. It is not surprising that this city became one of the famous quadrilateral of forts by which the Austrians held northern Italy until 1866. Twice it was stormed; by the Germans in 1630 and the French in 1797, and on each occasion it fell only after tremendous assaults. It is with the first of these sieges that we are particularly concerned, because in the sack which followed, the great armoury of the Gonzagas was destroyed, together with their treasure, their museum of minerals and many priceless works of art.¹

It is to be expected that a dynasty which lived

¹ By good fortune, Mantegna’s cartoons of the Triumphs of Petrarch escaped. They had been sold to Charles I of England with other paintings some months before, and now form one of the major ornaments of Hampton Court.

by war in a strictly professional way should possess a fine armoury. It was only natural that a house which also cultivated the politer arts of peace should ensure that their arms were something more than utilitarian. The discriminating patronage which attracted artists of the rank of Pisanello and Mantegna, Alberti and Giulio Romano to live and work for them, was extended to the artist-armourers of the Renaissance.

To assist in reconstructing the contents of their lost armoury there are open to us four possible sources of information. Firstly, there is in existence the correspondence of the Gonzagas, from which one can learn whence and how they obtained their arms. Secondly, there are available four\(^1\) unpublished inventories of their armour, preserved in the Archivio Notarile and Archivio del Stato at Mantua. Thirdly, there exists in other lands armour which the Gonzagas presented to foreign princes, and which can provide some idea of their taste and resources in this respect. Lastly, in default of the actual armours surviving, one can learn much from the portraits of members of the family portrayed in armour. Thanks to the admirable custom of the time, this is often painted with sufficient accuracy for us to be able to recognize its nature.

THE GONZAGA CORRESPONDENCE

The first source need not detain us long as it has already been explored by the late Dr. Bertolotti. In 1888 he published in the *Archivio Storico Lombardo* under the title ‘*Le Arte Minori alla corte di Mantova*’ many valuable extracts from documents and letters that had passed between the Gonzagas and their armourers, which he found in the Archivio Gonzaga at Mantua. They show that the Lords of Mantua maintained their own armourers, whom they usually imported from the headquarters of the craft in Milan. One also learns from these papers that the armourers in their service were allowed to execute orders for outsiders, especially for the neighbouring House of Este, Lords of Ferrara. Thus in 1436 the latter are recorded as having bought an armour

\(^1\) Three are the subject of this paper and are published here for the first time. The fourth, which is contained in the Libro d’Aquila, will be printed in a later volume.
from Pietro da Milano, armourer of Mantua. Nearly thirty years later, in 1464, Borso d’Este, first Duke of Ferrara, was still using the services of ‘Maestro Piedro’ (possibly the same), and wrote to say that he could not let him return to the Marquess Lodovico at Mantua as he was still at work on an armour for him.

Pietro da Milano was followed in 1475 by Giovanni da Lodi, presumably from his name another Milanese, and in 1479 the Gonzagas obtained the services of Maestro Michaletto, called ‘delle Corazzine,’ from Brescia. In 1489 Giacomo da Capua is described as head of the workshops at Mantua. In 1494 Ercole I d’Este (1471–1505) was again employing the services of the armourer of his brother-in-law, Francesco Gonzaga. His portrait by Dosso Dossi at Modena (Pl. ii) was painted in the middle of the sixteenth century, but faithfully portrays an Italian harness of Ercole’s time. The details (note especially the clasp at the top of the neck of the mail collar) are rendered with great exactitude. The breast is covered with brocaded velvet of black and gold. In 1503 Nicolao da Azano wrote from Brescia that he could not come to Mantua until he had completed an order from Alfonso d’Este, and that he was proving every piece with strong crossbows. The Gonzagas, in their turn, made use of the services of the Jewish goldsmith, Ercole de’ Fideli, who worked for the court of Ferrara, and whose skill in the etching of cinquedeas is attested by the existence of several blades bearing his signature.

In March 1498 Bernardino Missaglia entered the service of the Gonzagas as master of the workshops. He was a member of the most famous of all armour-producing families, but this did not prevent the Marquess from putting him in irons for not having finished an armour in time for the King of France. Missaglia wrote asking to be released, promising to complete the order in three or four months and excusing his delay on the grounds of his parents’ illness. He even went so far as to guarantee that he would produce something finer than had ever been seen before, such as would greatly enhance the Marquess’s prestige, and that he would render account of all moneys received.

1 Bertolotti, op. cit. p. 238. Cf. infra, p. 245.
It is instructive to learn that from 1503 onwards the Marquess Francesco Gonzaga was in touch through Missaglia with the well-known German armourers, the Colmans of Augsburg, in the territory of the Duke of Bavaria, who was related to the Gonzagas by marriage. In 1511 Bernardino Missaglia was sent to show the new German armour to the Duke of Urbino who had expressed a desire to see it. One wonders what Bernardino’s private feelings were towards this proposal to carry coals to Newcastle. It was, however, the beginning of a close connection with the Colman family which lasted until 1521, and the correspondence contains the names of Lorenz and Coloman Helmschmied, to whom payments were made through the Fuggers, the famous merchant-bankers of Augsburg. In 1523, the Marquess’s agent at Augsburg, the armourer Anchine della Guiana, complained that he could not obtain delivery of a suit from Colman, as the latter had been called away to work for the Emperor.

In the same year Caremolo Modrone, once more a Milanese, entered the service of the Gonzagas as master of the armouries, and held the post until his death in 1543, twenty-two years later. His brother Paolino Modrone survived until 1563. In 1524 the marquess mentioned in a letter to his ambassador at Venice that he was in the habit of having suits of armour made by Caremolo three or four times a year, according to different designs that pleased him, either for his person or to give to his friends, and that he had difficulty in obtaining the necessary iron from the Captain of Brescia. In 1527 Caremolo wrote to the marquess about a musket-proof bard for a horse of Federico’s named *il primo Soltano Solimano*, adding that he could not get from Brescia the iron already paid for and that he would break up breast-plates and whatever he had in the world to serve the marquess.

Correspondence between the first Duke, Federico II, and Caremolo in the years 1534 deals with the first of

---

1 In the same year, Battista di Mercadante had orders to damascene a light iron chanfron for an Arab horse (*cavallo turco*) in the same manner as he had done the Marquess’s corselet. This is an early instance of the art of damascening. In 1524 the Marquess wrote to Ottavio Ursino about obtaining the services of a Spaniard, ‘che lavora alla azaminc benissimo,’ Bertolotti, *op. cit.* pp. 141–3.
two armours which the Duke Federico presented to the Emperor Charles V (referred to as *El Re d’Espana*). The Emperor is recorded as having said that this armour was more precious to him than a city, and fêted Caremolo ‘as though he were his brother,’ and went as far as to say that ‘if he had taken his measure a thousand times it could not fit better.’ The Duke followed up this success with the gift of a second armour in 1536 in gratitude for being invested with the Principality of Montserrat. Both these armours are depicted in Charles V’s *Inventario Illuminado*, which is preserved in the Royal Armoury at Madrid. This brings us to the second of our sources of information, namely existing armour which is known to have come from Mantua as gifts from the Gonzagas.

### ARMOUR OF GONZAGA ORIGIN

The greater part of this double gift to the Emperor was still preserved in the Royal Armoury at Madrid up to the outbreak of the Civil War in 1936 (Pl. iii), and we hope has survived its recent perilous situation. As catalogued by the late Conde Valencia de Don Juan it comprises 44 pieces out of a total of 53 (Cat. 1898, A 112–114), also the shield (*Ibid.* D 66) and the saddle-steeels (*Ibid.* F.22). Certain portions mysteriously vanished in the nineteenth century and reappeared at Christie’s famous sale of armour from Spain in 1839.¹

The Conde Valencia also suggested that other arms of Italian origin that had belonged to Charles V, notably the target embossed with Hercules and the pillars (*Ibid.* D 63) and the wheel-lock gun (K 30), had been acquired through his relations with the House of Mantua, but there is no documentary evidence in their case to support the claim.

There is preserved in the Louvre a fine and characteristic cinquedea, the blade of which is etched with the Gonzaga arms ² (Pl. iv). Its style ³ denotes the

---

¹ One of these parts of the Gonzaga gift is now in the collection of Mr. James de Rothschild, M.P. Laking Record, Vol. iv, Fig. 1218.

² This sword first came to light in a loan exhibition at Tours in 1890 in the possession of the Baron de Rentz, and was shortly afterwards acquired for the Louvre. Molinier, *La Bulletin des Musees*, 1890, pp. 338–42; M. Maindron, *Revue des Arts Decoratifs*, xi, 1890–1, and the *Gazette des Beaux Arts*, 1892, pp. 24–29.

³ I am indebted to M. Georges Fontaine, Assistant Keeper at the Louvre, for these references and the photographs here illustrated.

³ The characteristics of Fideli’s
ARMOUR MADE BY CAREMOLO MODRONE AND PRESENTED BY FEDERICO II GONZAGA TO THE EMPEROR CHARLES V IN 1534 AND WORN BY HIM AT THE CONQUEST OF TUNIS. ROYAL ARMOURY, MADRID
hand of Ercole de' Fideli, who was contemporary with the Marquess Francesco II (1484–1519). The hilt is covered with two plaques of ivory, and down the copper gilt sides is inscribed 'NVNQUAM POTEST NON-ESSE VIRTITI LOCOS' (sic). The centre of the blade is inscribed on either side with the motto 'OMENES (sic) SOLVM FORTI PATRIA EST' (which is also found on a cinquedea in the Tradescant collection in the Ashmolean Museum), and on the other side: 'ANIMVS. TELO. PRESTANCIOR OMNI' (sic). In the lower left-hand panel of one side are etched the arms of Gonzaga (Argent) a cross (gules) between four eagles of the Empire (sable), which was granted by the Emperor Sigismund in 1434. In the next compartment is an impresa of a nude man lying beneath a brilliant sun, a device of the Gonzagas which forms the reverse of the Medal by Adriano Fiorentino of Elisabetta Gonzaga, Duchess of Urbino. In the two compartments above are what appears to be the figures of Mars and Hercules armed with clubs. On the other side, in the lower panels are a commander being armed by a page, and two naked men, one with a sieve and the other holding aloft a horn of abundance; above these are a deer lodged,1 with the motto 'BID CRAF' (Wider Kraft) on a banderole; and a muzzle with the motto 'CHAVCIVS' (caucius).2

The archives of the house of Saxony record many gifts made to the Electors August and Christian by Guglielmo, third Duke of Mantua (1550–1587). A finely mounted sword and dagger with spring-blade in the Historical Museum at Dresden were brought back by the Chamberlain Heinrich von Hagen in 1587 as a gift from Guglielmo's successor Vincenzo I Gonzaga, and are still preserved at Dresden.3 Another surviving relic of the house of Gonzaga is the helmet of Vincenzo I Gonzaga, fourth duke of Mantua, which is now in the Museo Poldi Pezzoli at Milan and will be referred to later à propos of his portrait (p. 261–2).

There is a couter in the Tower Armouries (No. III, style are described by M. Buttin, La Cinquedea de la Collection de Mme. Goldschmidt, 1906, p. 21. See also Ch. Yriarte, L'Epee de Cesar Borgia, 1891, pp. 202–4.
1 This device is mentioned under No. 259 of the Inventory of 1542 infra.
2 In 1506 Francesco II Gonzaga granted leave to the Guerrieri family to use this motto. The device and motto appear on one of Francesco's medals, Litta, Gonzaga, No. 6.
3 Hanel, kostbare Waffen, Pl. 43 c and d.
which is embossed with the arms of Gonzaga charged upon a double-headed eagle surmounted by a Papal tiara and surrounded by interlacing vines (Pl. v, b). The general scheme of its decoration resembles that on the elbows of the "oak-leaf" suit of Charles V at Madrid (No. A 49), which are embossed with the double-eagle charged with a shield of Austria.

One would like to be able to connect with the Gonzagas the magnificent embossed and damascened shield in the British Museum which is signed and dated: 'GIORGIUS . DE . GHSYS . MANTVANVS . MDLIV,' but nothing is known of its history previous to its forming part of Prince Demidoff’s collection in the Palace of San Donato, at Florence. Giorgio Ghisi (1524-1587), engraver and goldsmith of Mantua, had settled in Rome before the date of the shield, so in all probability it was executed for a patron there. After the sale of the San Donato collection in 1870 it passed through the collections of Edwin Brett, Baron Albert Rothschild of Vienna and Baron Ferdinand Rothschild of Waddesdon, by whose bequest it came to the Museum in 1900. Another example of Ghisi’s work is the hilt of a sword in the National Museum at Budapest signed: 'GIORGIUS . GHSI . MAN . F.'

These few objects give some idea of the taste and resources of the Gonzagas in the matter of arms. It can be greatly amplified by the inventories of their armoury which are the subject of this paper. Their existence is recorded in a number of scattered references in Angelucci’s Catalogue of the Royal Armoury at Turin, 1890, but I could not find that they had ever been published. When working in Mantua in 1929 on the armour in the Sanctuary of the Madonna delle Grazie I took the opportunity of going to the Archives to seek them. Their pressmark was traced in the catalogue, but the first of the papers could not be found, and I was asked to return next day. Meanwhile a search was made and on my second visit a packet of documents was duly produced. The reason for the delay was then apparent, for the bundle bore on the wrapper a note in pencil to say that these papers were

to be put aside for Captain Angelucci, followed by a date in the year 1865. Apparently Angelucci had not returned for them, and sixty years were to elapse, from the era of Garibaldi to that of Mussolini, before another student came treading in the dusty footsteps of his predecessor.

One hardly needs to emphasize the value of contemporary inventories to the study of armour. For one thing they correct and amplify our knowledge of the proper terms, which have become corrupted or misapplied in the loose vocabulary of the text-book and the sale-room. Moreover, they demonstrate the numbers and proportions of what was used. This cannot be learned from the armour that is exhibited to-day in museums or private collections, because its relative quantity is governed by the hazard of survival. Inventories and account rolls, are, in fact, the only voice from the past which can authoritatively confirm or refute the statements of the connoisseur.

Though the armoury of the Gonzagas has vanished, these inventories are unusually detailed and enable one to reconstruct a picture of what it was like in its prime. There are four in all, one dating from the beginning of the fifteenth century, two from the middle of the sixteenth, and the fourth from the beginning of the seventeenth. The last two are sufficiently close to each other in point of time for it to be possible to identify some of the same items in both.

THE INVENTORY OF 1407

The first of these inventories is dated 1407, the year of the death of Francesco I Gonzaga, fourth Captain of the People and first Marquess of Mantua. It is the shortest, and is written in a corrupt form of Latin.

I should like here to acknowledge my debt to Cavaliere Luigi Marzoli and Dr. Eric Millar for generous help in revising the transcript. I have also to thank Professor Cesare Foligno of Oxford, for numerous valuable suggestions in the interpretation of the text.

In the first place, it is interesting to note that the writer of the inventory is careful to distinguish steel (azalis) from iron (ferrum), not only in armour of plate, but also of mail (e.g. Nos. 12 and 13).
Six varieties of headpiece are given. Firstly there is the helm (*elmus*, Nos. 51, 57, and Pl. vi), one (No. 105) being garnished with buckles of silver gilt which belonged to the late Lord Francesco himself. It is not, however, so rich as the two headpieces described under the title *bantus* or *bautus*, a word whose etymology I have been unable to discover. No. 17 has an orle of roses of silver gilt and enamel, and the other (No. 19) is described as of large size with a frontal of silver gilt with a plume of feathers of white and red and encircled with nine roses of silver gilt and enamel.

The word *celata* was employed in Italy to denote a sallet in the fifteenth century and a burgonet in the sixteenth. But the form of sallet which we are accustomed to understand by this word, had not developed by the year 1407, and it probably denotes here what is usually understood by a bascinet. One of these mentioned here (No. 23) is a rich example covered with crimson pile velvet with fringes of bright green.

The references given here to the barbute (*barbutus*) should put an end to the old controversy as to whether this helmet is so named because it is one which carries a beard, i.e., an aventail, or because it is open at the chin and shows the beard of the wearer. Item No. 58 reads ‘17 barbutes with aventails, of iron and steel, one of which has a coronet of silver with three enamels,’ and No. 59 ‘two barbutes without aventails’ (*sine camalio*). This wording shows beyond dispute that the barbute was frequently worn with an aventail, and confirms Viollet-le-Duc’s reconstructed illustration of the one now in the Wallace Collection.

Then there is the *capelletus* or *chapelle-de-fer*, known in England as a ‘shapewe’ or war-hat. No. 18 is the most elaborate helmet in the list, ‘a war-hat of steel covered with red pile velvet with seven rays of silver gilt with doves of bright silver and a plume-holder.’ No. 61 is described as having a mail aventail.

Lastly, there is the *elmetus*, a word apparently used as a general term. No. 20 is described as being of steel covered with scarlet velvet. Others are simply

---

described as of steel (No. 21) or of iron (No. 22), and there are references to rivets for them of latten (No. 108). Visors are not mentioned except by implication (No. 122, ‘forty-nine pivots for visors’).

The cuirasses (corazie) were probably not brigandines (corazzine), but built up of large plates like the one at Churburg,¹ for one of them is described as being uncovered (No. 2), and others are mentioned as being used for jousting (Nos. 49 and 103) and would therefore be solidly built. The breasts of steel and iron (pectora, Nos. 31, 32, etc.), probably consisted of a single plate strapped over the hauberk, or even over the jupon, as one sees represented on the tombs of the time. The paunces (pancerie, Nos. 8 and 9) covered the lower part of the body in front.

Armour for the limbs includes many references to pauldrons (spallaroli, Nos. 54, 60), vambraces (brazales, Nos. 33, 34, 64, 69, 70), one of his lordship’s (No. 33), having borders of silver gilt, like the contemporary armour at Chartres, and gauntlets (Nos. 15, 16, 55, 125). The many pairs of tassets (franchales, Nos. 3, 4, 6, 7, etc.), are at first sight difficult to explain, as tassets of the form to which the word is usually applied had not yet come into existence. They must here denote the hooped skirts of lames extending from the waist to mid-thigh in use at this date, which were made in two parts, front and back, hinged together and buckled at the side, and could therefore be described as pairs (cf. the Churburg armour No. 18). The leg-harness (arnixii, Nos. 28,30, 71, 72) is usually entire, but sometimes its component parts are mentioned, cuisses (cossales, No. 72), knee-fringes (balzae, No. 38), greaves (schinariae, No. 73) and sabatons (subtellares, No. 29). There are a few scattered references to shields of various kinds, rotelli (Nos. 35, 41), targhete (Nos. 27, 106), targones (No. 77), pavesus (No. 42), and scuta a giostra (No. 56). There are a few banners and standards (Nos. 36, 80, 101, 102), plumes and crests (Nos. 75, 128, 129), and many belts and straps, apparently included on account of the richness of their buckles and mounts (Nos. 83–86, etc.). The straps for helms (corigie ab elmo, Nos. 83, 84) probably took the form

¹ Trapp and Mann, The Armoury of the Castle of Churburg, 1929, no. 13.
of the long ornamental tails to be seen on the backs of
the kneeling knights of Sempach painted on the walls
of the chapel of St. Agnes at Königsfelden and on the
statue of Bernabo Visconti in the Castle of Milan.
A leather hip-belt lined with red velvet still survives
at Churburg to illustrate the descriptions of similar
girdles here, while others are of latten gilt, like the
ornamental bawdries represented on brasses and monu-
mental effigies of this time (Nos. 89, 90). There is
only one tabard (No. 81) and two references to mail
for horses (Nos. 47, 48).

There are comparatively few offensive arms; swords
(Nos. 50, 76, 104), lances (Nos. 37, 68), axes (No. 46, 62),
two crossbows (No. 74), and the pilgrim's staff (No. 63),
which seems to have been a species of sword-stick. Of
special interest are the two English bows (No. 67) and
the bronze cannon (No. 78), which is a very early
reference to ordnance of this kind. There are many entries
relating to buckles, tags, and eyelets (fibulæ, macie,
passeti), rivets and nails (clavi, claveti, broche, stachete)
in great variety. The nails used on brigandines and
other armour covered with rich textile were often of
an elaborate nature, but it is surprising to note the
diversity of rivets specified for helmets, vambraces,
 gauntlets, leg-harness and lance-rests, respectively
(Nos. 107–124). Some of them may refer to hinges. Three
items of practical interest are the pincers and anvils (Nos.
39, 40) and the emery for cleaning armour (No. 121).

THE INVENTORY OF 1542

The first inventory belonged to a time from which
little actual armour has survived. The second one was
drawn up nearly a century and a half later on the death
of the second Duke, Federico II (d. 1540), and is dated
according to the old style, January 21st, 1542. It is
written in the Mantuan dialect and gives a list of 415
items in the armoury in the Castello in the charge
of the court armourer Caremolo Modrone.¹

¹This would be the Castello di Corté (Pl. v, A), sometimes called the
Castello di San Giorgio, built for the
Gonzagas in 1395–1406 by Bartolini
Plotti. It faces the lake and contains
the Camera degli Sposi painted by
Mantegna in 1474. It is connected
by a passage with the Ducal Palace or
Reggia, seen on the right of Morone's
picture (Pl. i), originally a palace of the
Bonacolsi, which contains a room
subsequently used as the Salone dell'
Armeria, see page 259.

ARMOUR OF FRANCESCO II GONZAGA, 4TH MARQUESS (1484-1519). AMBRAS COLLECTION, NEUE HOFBURG, VIENNA, DESCRIBED IN THE GONZAGA INVENTORY OF 1542
ARMOUR OF FEDERICO I GONZAGA, 3RD MARQUESS (1478-1484). AMBRAS COLLECTION, NEUE HOFBURG, VIENNA. DESCRIBED IN THE GONZAGA INVENTORY OF 1542.
A. FEDERICO I GONZAGA, 3RD MARQUESS (1478–84)
From the engraving in Schrenck's
Armamentarium, 1601

B. FRANCESCO II GONZAGA, 4TH MARQUESS (1484–1519)
From the engraving in Schrenck's
Armamentarium, 1601
It begins with six armours of men-at-arms parcel-gilt (parle adorate per Fillo) and the rest plain, which belonged to the late Francesco, Marquess of Mantua (1484–1519), whose portrait is to be seen in Mantegna’s painting the Madonna della Vittoria in the Louvre (Pl. vii).

Here at last is something the existence of which we may be able to trace, for when the Archduke Ferdinand of Tyrol was forming his collection of armours of famous men in the second half of the sixteenth century he included both Francesco and his predecessor Federico Gonzaga in his gallery. The transfer of their two armours from Mantua to Innsbruck saved them from the destruction of the Gonzaga armoury in 1630. Both can be identified to-day in the Kunsthistorisches Museum in Vienna (Pls. viii and ix).

The armour given to the Marquess Francesco Gonzaga, which is reproduced in Schrenck’s Armamentarium published in 1601 (Pl. x),\(^1\) agrees in point of date and corresponds well enough with the description given in the inventory, for although it is now rough and blackened, there are traces of the parcel-gilding there mentioned (Pl. viii). Nor need the German form of the bellows visor deter one, for it has already been shown how closely Francesco was in touch with the Colmans of Augsburg.

This entry is not, however, so conclusive as the next item, No. 2 ‘E piu una armatura da huomo d’arme senza arnese e schenere e guanti’ (without arms or legs or gauntlets) which is described as having belonged to Federico Gonzaga ‘de la buona memoria,’ one time Marquess of Mantua. This would be Federico I, Marquess from 1478 to 1484, who defeated the Venetians in 1482. His armour at Vienna\(^2\) (Pl. ix) answers exactly to this description, for the body is that of an Italian Gothic armour of the fifteenth century made for a man of great size, but the arms and legs have been added from a smaller armour of much later date. The etched borders are a subsequent attempt to make the different parts appear more homogeneous,

\(^1\)Boheim, Führer, 1890, No. 124; \(^2\)Boheim, Führer, 1890, No. 68; Grosz and Thomas, Katalog der Waffensammlung in der Neuen Burg, 1936, i, 31.
and must have been executed before 1596, as it appears thus in Schrenck’s engraving (Pl. x B).

Then comes (No. 3) an armour for a man-at-arms which is described as having belonged to Alessandro da Gonzaga, probably Alessandro (1497–1527), son of Giovanni, brother of the Marquess Francesco II and founder of the line of Vescovato, ‘spigolata et designata con lo elmetto incastrato ne la gola.’ ‘Spigone’ is the ridge-tile of a roof, and Angelucci understood ‘spigolata’ to refer to fluting, although further down this inventory the more usual words ‘a cannellini’ are used with this meaning. The fact that the helmet is ‘let in’ or ‘embedded’ on the gorget suggests one of these sixteenth-century close-helmets with a circular flanged rim to ride on the gorget. There is a fluted armour of this kind among those in the Santuario della Madonna delle Grazie outside Mantua.¹

No. 4 is ‘un corseletto alto in Foggia de coraza adorato disopra cive le Figure in azurro, del Illə signor Duca Fedrico Felice memoria.’ This is followed by another ‘corseletto’ described as gilded by the hands of Mə Battesta in the year 1533. This probably refers to the goldsmith of that name, described as ‘molto valente,’ who is mentioned in a contemporary document as working in the shop of Ippolito Chiap- pino gilded a dagger for the Marquess in March 1520.²

No. 5 is a light corselet which the Duke wore as an infantryman, ‘che serve da Fanti a piedi’... ‘con la celata e brazali spigolate a liste.’ Then comes a gorget of mail to be worn beneath the armour, ‘batuta con una chiave sopra la coppa d’argento.’ This probably does not describe an armourer’s mark but a device with which it was decorated.

These are only two out of a number of rich pieces described. It is interesting to note that the armour appears to have been set up on dummies, for in the description of another armour ‘spigolata’ for horse and man (No. 11), there is mention of a ‘banner in his hands.’ Compare the references to pedestals and manikins in the inventory of 1604 (p. 257).

It is not possible here to take this inventory item by item, and the text must be left to speak for itself. But glancing down one comes on entries of particular note, for instance (No. 39) ‘two gauntlets of mail for the right hand used in the combat between Zohan de Madana [Modena] and Bertie.’

The ‘due gole de maglia todesche’ (No. 24) are quite clearly what are often now called bishop’s mantles, and the ‘visera da celatta alla Bergognona facta a Fenestrelle’ (No. 26) must mean a falling buff. One would like to know how old was the ‘brazale vechio anticho con la guardia adorata.’ That the armoury was something of a museum, one gathers from the inclusion of a ‘falta de pele de papagallo qual fu poratta da India’ (No. 93), a skirt of parrots’ feathers from India, presumably the West Indies (cf. also No. 66). The same applies to a turban wound round with silk (No. 104) (‘turbante da turcho con la tella involtata’), which the Emperor Bajazet sent as a gift to the Marquess Francesco. This would probably be Sultan Bajazet II ‘Lamorabaquin’ (1481–1512) rather than Bajazet I, who reigned a century earlier, though he too happened to be contemporary with a Francesco Gonzaga.

An early object is the sword, ‘stocho Anticho’ (No. 128) with the hilt in gilt relief, given by the Signoria of Florence to the Marquess Lodovico (1444–78). It is followed by a small battle-axe (No. 130) with a handle of pear-root, covered with silver embossed with two figures.

Then there is another sword described as ‘antico’ (i.e., à l’antique, not necessarily ancient),¹ No. 133, with the hilt and scabbard of silver chased and gilt, with its belt worked in silver with buckles and tags of beaten silver which had been given by the merchants of Mantua to the Marquess Francesco. They also gave Duke Federico, in 1526, a great two-hand sword with pommel, grip and quillons and scabbard of beaten silver chased and parcel-gilt (No. 144), and another is recorded as having been given to his predecessor the Marquess Francesco in the first year of his marquesate

¹ It is possible from the frequency with which this phrase is used that it may refer not only to classical motifs but to all embossed decoration.
THE LOST ARMOURY OF THE GONZAGAS

(No. 151). From the fact that we find further down yet another rich sword given to the Duke by the merchants of Mantua in 1535, and again two-handers given by them in 1538, 1539, 1540, 1541 and 1542, one gathers that it was a custom for the merchants of Mantua to present a sword to the Duke every year.

There is a gilt shield 'adorate e lavorato' (No. 158) presented to Francesco by the Republic of Venice in 1521. Two others decorated with palm-leaves, swags and scrolls are stated to have been made by Caremolo himself (No. 314). There are numerous rich horse-trappers and bards covered with silk and velvet, and richly embroidered with gold, such as one sees in the prints of Lucas Cranach. There are Turkish maces, many Turkish bows and quivers, and a pair of Turkish stirrups 'lavorati alla Damaschino,' probably brought back by Ferrante Gonzaga or one of the other members of the family who had fought against the Turks in Hungary.

'Una camisa granda da maglia gazarina anticha la qual era degli danese palladino' (No. 216) is particularly interesting for it confirms that the much-debated word 'jazerine' refers to a special type of mail and not a brigandine. Further on one finds a gorget 'da maglia gazarina' (No. 320) which was made for Messer Galeazzo of Naples when he fought at Gazolo. Also a pair of stockings of mail, a pair of gussets ('lunette') and a pair of gloves and a hood of mail, all of jazerine 'tutta gazarina' (No. 323).1 'Il Danese palladino' (whose relics are described under Nos. 147, 216, 265) is presumably the legendary hero of the French romances known as Ogier le Danois and in Italian cantatas as Uggieri il Danese. This historical relic reappears in the inventory of 1604 (Nos. 35, 45 and 127).

Then come twelve infantry and cavalry banners of divers types captured by the Duke in the war against the French and Venetians in 1521, 1522 and 1523, with their staves and heads. Also a great silk standard given by the Signory of Bologna to the Marquess Ludovico (1444-1484) when he was their Captain General (No. 241), with the badge of San

1 cf. also No. 11 of the Inventory of 1407.
A. THE FINDING OF THE TRUE CROSS. ENGRAVING BY ALAERT DU HAMEEL (1449–c. 1509), SHOWING A DOG IN ARMOUR

B. ARMOUR FOR A HOUND. ROYAL ARMOURY, MADRID
OBVERSE AND REVERSE OF THE MEDAL OF GIAN FRANCESCO GONZAGA, 1ST MARQUESS, BY PISANELLO. BRITISH MUSEUM
Petronio and other Bolognese symbols gilt. These are followed by the banners of many other cities and princes who employed the military talents of the Gonzaga on various occasions, such as Francesco Sforza, Duke of Milan, the Signory of Florence, Borso d'Este of Ferrara, of the Republic of Venice, the Emperor Maximilian, King Louis XII of France, Popes Julius II, Leo X, Adrian VI and Clement VII, all of great richness.

The banners that had belonged to the Marquess Ludovico Gonzaga of the fifteenth century must have been nearly a hundred years old at the time of this inventory. The banners of Francesco himself are also included with his arms of the red cross between four black eagles. Two of these banners will be found referred to in the latter's correspondence with Bernardino Missaglia in 1503. Various known badges and imprese of the Gonzagas are mentioned, such as the Crucible, Mount Olympus, the Sun, the Displayed Wings, the Plummet, the Glove, the T, the Tree Stump, and the Hind, and the Papal badges of the Umbrella and Crossed Keys.

There is a curious helmet 'alla Borgognona,' gilt and designed 'a tomo' with scales and two visors one above the other, one of which is flat and the other pointed, given him by a relative of Pierino Mareschalchi (No. 296). It is not clear, but very probable, that the 'targhe alla spagnole' of white leather were of the heart-shaped Hispano-Moresque type\(^1\) known as 'adargas' (No. 298). Mention is made of several weapons of an unusual type, such as the gilt and enamelled mace with an inkstand in it (No. 343).

Then we have a quaint item 'two white armours for arming two dogs,' 'due armature bianchi per armare cane' (No. 306). These are not so outlandish as they seem, or as one would gather from Alaert du Hameel's engraving of the finding of the True Cross (Pl. xiA), which shows a dog so equipped. Armour was used to protect valuable hounds when hunting boar. There is a unique specimen of a white (i.e. steel) dog armour of this time at Madrid etched with scenes of boar hunting

\(^1\) cf. Archaeologia lxiii, p. 302.
(Pl. xib), and there is a quilted eyelet coat for a dog in the Wartburg at Eisenach.

Next to this come ‘due cocodrilli grandi’ (No. 307).\(^1\) These reptiles, protectively armed by nature, are not entirely out of place in an armoury. There is a stuffed crocodile still suspended in the nave of the church of Santa Maria della Grazie, five miles from Mantua, which I have described in my first account of the Sanctuary.

Furniture and fittings, like the painted chests and boxes for pole-arms and for a breast and back, mentioned in this inventory, have mostly disappeared from armouries to-day, even though their contents may have survived. There was a carved and painted box of the fifteenth century made to hold crossbow bolts in the Figdor Collection at Vienna (sold 1930, lot 318), and a contemporary engraving of King Charles I of England shows his armour in a specially fitted box. There are interesting references to furniture, racks and hangings. Two Bohemian arquebuses are mentioned.

Last of all in the list under the No. 415 is a rusty sword which belonged to Monsignor Carlo Bologna, with the hilt gilt, and a pair of rusty mail shoes, ‘scarpe de maglia ruginente’ (No. 415).

THE INVENTORY OF 1604

The descriptions in this inventory are much briefer than those of the list of 1542, and number 200 items in all. The smaller total may be in part due to a serious fire which broke out in the palace in 1591 and destroyed the Ducal theatre and magazine and part of the arsenal. That it did not destroy all the armour is shown by the fact that one is able to recognise in this list several items that have previously appeared in that of 1542.

It begins with body armour. There is an armour of proof described as in the French style with gorget of the German, and tassets of the French fashion, and pauldrons. It may seem at first sight rather a mixture of styles, but one reads at this time in England

\(^1\) In 1525 Cardinal Sigismondo Gonzaga chose as his device a crocodile and the motto *crocodili lachrimae*. This was an act of repentance for having been the means of electing Pope Leo X, and the motto alluded to those who dissimulate with fair words on their lips and hatred in their hearts. Mrs. Bury Palliser: *Historic Devices, Badges and War Cries*, 1870, p. 137.
of 'Almaine collars' (i.e., gorgets with the monnions attached), and tassets 'in the French style' which almost certainly meant long tassets, reaching to the knee. The French had been among the first to adopt this fashion, which is exemplified on several French armours of the middle of the sixteenth century in the Musée de l'Armée.¹

There are other armours and pieces of proof ('a botta'), all presumably subsequent to the 1542 inventory, when firearms were not so generally used. No. 12, 'two armours of combatants, that is, one of the Forno and the other of the Fontana,' must refer to some notable duel, like the gauntlets in the last inventory. Their swords are mentioned later on (Nos. 37 and 38).

The armour was apparently displayed to be seen, for there is frequent mention of painted pedestals (e.g., No. 14). A complete armour of the Marquess Ludovico stands holding in its hand a small mace, of brass, gilt, furnished with a handle of mother-of-pearl (No. 15). If this armour was truly Ludovico's, it would be a Gothic suit of the fifteenth century. Next to it comes another complete harness 'di tutto ponto' with an estoc in its hand, which had belonged to Duke Federico (1519-40), No. 16. It is possibly identical with No. 5 in the 1542 inventory. They are followed by a black jousting armour with a lance in its hand and two white jousting armours similarly set up, and an armour 'fatta a canelini all'alemana,' i.e., a fluted armour of the so-called 'Maximilian' type.

One recognises from the last inventory 'la camisa del Danese' (No. 45), the hauberk of Ogier le Danois, and its stand (No. 127). One also finds his sword 'una spadina, nominata la curtana di Danese fornita de negro' (No. 35), previously described as having silver mounts chased in low relief. The Mascarone alle corne nero' (No. 47) suggests the grotesque visors of the first half of the sixteenth century like the one presented by Maximilian to Henry VIII in the Tower of London (Cat. iv, 22).

¹ E.g. Nos. G 61 and G 118, armours of the Connetable de Montmorency and Henri II.
A shield briefly described as ‘una rodella fatta a mascarone’ was probably a richly embossed rondache with a Medusa’s head or grotesque mask in the centre.

New entries are the muskets, pistols¹ and powder-flasks, and the cutlasses of the guard of archers of the late Duke Guglielmo. An interesting item is the hand machine for cleaning arms (No. 70), probably a buffing wheel or lathe turned by a handle. Several boys’ armours are mentioned, a gilt ‘armaturina,’ furnished with its arms, gauntlets, morion, chanfron, and a crest of feathers of divers colours and pearls, belonging to the Prince, probably the young Vincenzo (No. 180), another similar one of Don Fernando (No. 181), later fifth Duke, who would be 17 years old at the date of the inventory, and two old ‘armaturine’ (page’s armour) ‘a color di ferro.’

The crocodile turns up again (No. 149), this time with an armed man on top, presumably in allusion to St. Theodore, who is shown standing upon a crocodile on one of the two pillars in the Piazzetta at Venice. The place of the other crocodile is taken by another curiosity, a marine fish (‘una pesce marino’), No. 150.

This inventory ends with a list of arms and armour on charge to the captains of the gates and the outlying castles, and tables of cannon and munitions.

One looks in vain for armour in the inventory printed by Carlo d’Arco² of the picture gallery and other works of art in the Ducal Palace at Mantua which was compiled in 1627. An inventory drawn up by Ottavio Piccolomini of works of art found in the Palace on January 24th, 1631, mentioned ‘In the Sala di Troja . . . two swords with diamonds, one with rubies, with their daggers, and scimitars studded with turquoises, . . . in a large gallery adjoining many scimitars and Indian things.’³ Possibly one of these was the jewelled sword valued at 30,000 ducats which is recorded as having been presented to Duke Vincenzo I by Henri IV of France.⁴ This does not

¹ Some have stocks inlaid with ivory (Nos. 170, 171).
² Carlo d’Arco, Storia di Mantova, Vol. ii, p. 153. Nor is there any in the inventory of 10th November, 1665, Ibid. p. 182, or of 1700, Ibid.

BY ALBERTO CAVALDI. MUNICIPIO DI SABBIONETA
appear in the inventory of 1604 and was probably not kept in the armoury.

There is to-day a long room on the ground floor of the Reggia or Ducal Palace which adjoins the Castello di Corte, known as the Salone dell' Armeria. It was here that the Council of Mantua met under the presidency of Pope Pius II to organize the resistance of Christendom to the Turkish menace. Afterwards it was used as an armoury, and A. Patricolo in his *Guida del Palazzo Ducale di Mantova*, 1908, p. 6, states that it was still used for this purpose as late as 1774. If so, it must have contained arms acquired subsequently to the sack of 1630.

It is sad to realize that out of all this wealth and variety of arms in the three inventories now before us, we can only identify two suits as existing to-day. It may be suggested that some of this armour now clothes the curious armoured figures in the galleries of the Sanctuary of the Madonna delle Grazie outside Mantua,¹ but this is unlikely. None of the armour there is old enough to have formed part of the inventory of 1407, and Francesco d'Aquanegra began his decoration of the nave of the church shortly after 1521, which would be too early for the inventory of 1542. Though some of the armour in the sanctuary is certainly later than this, it probably found its way there during one of the restorations of the church.

**ARMOUR IN FAMILY PORTRAITS**

Let us turn now from the inventories to the evidence supplied by family portraits. The series of wooden equestrian statues and busts of his ancestors, commissioned by Vespasiano Gonzaga for his palace at Sabbioneta and executed by Lorenzo Bregno in 1587, are not reliable witnesses, though they are interesting as an example of the retrospective antiquarianism of their time.² The same applies to Alberto Cavalli's notes on Italian armour of the Fifteenth Century,* Archaeologia, Vol. lxxx, 1930, pp. 117, and continued in Vol. lxxvii, 1937, pp. 311 et seqq.

² Most of these were included in the important *Mostra Iconografica Gonzaghesca*, held in the Ducal Palace at Mantua from May to September, 1937.
series of portraits and reliefs in plaster. For the most part they show the early members of the House in a fair representation of fifteenth-century armour, wearing Gothic breastplates each with a vertical strap fastening the placate to the upper breast, and large pauldrons (e.g. Luigi Gonzaga, 1268–1360, Guido Gonzaga, d. 1369, and Francesco Gonzaga, 1366–1407). The paintings on canvas executed about the same time for Ferdinand of Tyrol’s portrait gallery at Ambras are in most cases derived from the same models. The Archduke also had 102 miniature portraits of the House of Gonzaga painted for his cabinet. These are in nearly every case reductions of larger originals and are of little use for our purpose, as in most cases only the head is portrayed, allowing very little of the armour to be seen.

One is on more satisfactory ground when one examines the work of contemporary artists. Pisanello’s medals of Gianfrancesco I Gonzaga (1407–44) and Ludovico II (1444–78) show these princes in armour characteristic of the Italian quattrocento, such as they must have possessed (Pls. xii and xiii). So does Sperandio’s medal of Francesco II (1484–1519). In this instance the artist has gone so far as to reproduce the armourer’s mark, the letters AA crowned, on the back of Ludovico’s pauldron.1 Cavalli’s plaster relief of Ludovico II shows a very fair representation of the armour of his time, although it was executed a century later (Pl. xiv).

Francesco II (1484–1519) is well served in the matter of portraits, and there is no mistaking his beetle-browed features. Besides Sperandio’s medal already mentioned, there is Mantegna’s painting of him in the Louvre kneeling before the Virgin and Child, and known as the Madonna della Vittoria (Pl. vii). It was commissioned in 1495 after the battle of Fornovo, when he commanded the allied Italian forces against the French. There is, too, an important terracotta bust of him by Gian Cristoforo Piccinino (Hill, Corpus of Italian Medals, No. 22), and on Guacialoti’s medal of Alfonso of Calabria (Hill, Ibid. No. 745).

1 The same mark also appears on the pauldron on Pisanello’s portrait medal of the condottiere Niccolo Piccinino (Hill, Corpus of Italian
FEDERICO II GONZAGA, 1ST DUKE (1519-40). BY TITIAN. MUSEO DEL PRADO, MADRID
A. CLOSE HELMET OF VINCENZO I GONZAGA, BELONGING TO THE ARMOUR SHOWN IN HIS PORTRAIT. POLDI PEZZOLI MUSEUM, MILAN
B. VINCENZO I GONZAGA, 3RD DUKE (1587-1612). NEUE HOFBURG, VIENNA
Romano in the Palazzo Ducale at Mantua which shows him in armour of Gothic form, but with the surface of breast and pauldrons embossed with classical reliefs. This is doubtless due to the licence of a Renaissance sculptor, working under the influence of the antique, for the era of embossed armour had barely arrived. The Ducal Palace also contains an oil painting of him executed by an anonymous sixteenth-century painter after a lost original by Bonsignori. It shows armour of the mature sixteenth century, well advanced in style with high neckguards, though the face is an unmistakable portrait. None of these depicts his existing armour which we have already identified at Vienna (Pl. viii).

There appears to be no portrait in armour of Federico II (1519-1540), on whose death the second inventory was drawn up, though he was painted more than once by Titian in civil dress, one instance of which is in the Prado (Pl. xiv). It was formerly believed to represent Alfonso d'Este. Another showing him as an older man was in the Marschall Nemes collection.

Vincenzo I Gonzaga, third Duke (1587-1612), during whose reign the third inventory was compiled, and who had the Admirable Crichton as his tutor, was painted in armour by Frans Pourbus. Several versions of this picture exist. A whole-length is in the possession of the Marchese M. Cavriani at Mantua. A half-length version is in the Kunsthistorisches Museum at Vienna (Pl. xvi B), and one was in the Pallavicini Collection sold in London in 1927 by Messrs. Knight, Frank and Rutley. Here we are at last able to bring together the armour in a portrait and an actual surviving part of it. The helmet of this suit, which is richly blued, and decorated with etched and gilt arabesques over its entire surface, is in the Museo Poldi Pezzoli at Milan (Pl. xvi A). Repeated three times among the gilt decoration is a crescent, inlaid in silver and ensigned with the first word of the Duke's motto sic,1 which he assumed when he went to fight against the Turks in Hungary. It can also be seen truthfully

---

depicted on the armour in the painting.¹ At present it would seem that the helmet alone has survived the sack of 1630, but possibly other parts of the suit may yet be forthcoming. The full-length version belonging to the Marchese Cavriani shows on the floor at his feet an alternative helmet of the form known as a celata alla Viscontea,² similar to that on the cuirassier armour No. 1122 in the Wallace Collection, but with the addition of a buff.

Another portrait of the Duke, hanging in the gallery that crosses the Arno joining the Uffizi to the Pitti, shows him in armour painted on breast and pauldrons with a black eagle, and with splinted defences inside the vambraces (Pl. xvii).

There is, too, in existence a portrait of Carlo Gonzaga of Nevers, eighth Duke (1628–37), during whose reign the armoury was destroyed, in armour with bright gilt bands, jewelled blue piccadills or tabs, with blue edging. It was exhibited in the Mostra Iconografica and belongs to Signor Maria Siliprandi Valenti of Mantua.

ARMOUR OF THE CADET LINES

The Ambras collection possesses three armours of the cadet branches of the Gonzaga line, and portraits of their owners wearing them. These armours are now in the Waffensammlung in the Neue Hofburg at Vienna.

There is firstly, Carlo Gonzaga (1523–1555) son of Pirro Gonzaga of Gazzuolo, represented by a half

¹ The Milanese armourer, Pompeo della Chiesa, is known to have worked for Guglielmo and Vincenzo I Gonzaga (Bertolotti, Arti minori, pp. 150–1 and Artisti in relazione coi Gonzaga, Modena, 1885, p. 108); but this armour is not etched in the manner commonly associated with his work.

armour with casque and anime, black with embossed and gilt decoration\(^1\) (Pl. xviii). Secondly, Ferrante I Gonzaga (1507–1557), who met his death at the battle of St. Quentin fighting on the side of the King of France. He was the son of Francesco II, fourth marquis, Duke of Ariano and founder of the line of Guastalla. His is a half-armour with engraved and gilt bands with high neck-guards on the pauldrons\(^2\) (Pl. xix). There is a half-length portrait of him in the Palazzo Ducale at Mantua showing him in a different armour with etched and gilt bands, with volutes on the pauldrons (Pl. xx b) and he is represented in yet a third armour without volutes or high neck-guards in the Ambras Collection at Vienna (Pl. xx a).

Thirdly, Vespasiano Gonzaga, d. 1591, Duke of Sermoneta, who commissioned the retrospective series of wooden statues and busts for his palace at Sabbioneta, and is commemorated by an Italian armour to the knees of the second half of the sixteenth century with etched and gilt bands and borders\(^3\) of the so-called ‘Pisan’ style (Pl. xxi). All three suits are engraved in Schrenck’s Armamentarium. There is a painting in the Vatican Gallery, showing a hero seated and crowned by Victory among the trophies of the battlefield (Pl. xxii), which is described as representing Vespasiano, but this ascription must be accepted with reserve.\(^4\) The central figure wears a closely fluted armour of the first half of the sixteenth century; beside him is a richly etched and gilt Italian corselet of the late sixteenth century, and he carries a buckler of the same style.

The armour of the cadet lines would have been kept in their castles at Guastalla and Sabbioneta, and not in the Ducal armoury at Mantua; but apart from the three suits just mentioned, these armouries too have vanished. Ludovico Bregno’s wooden equestrian statue of Gianfrancesco Gonzaga (1445–96) founder of the line of Bozzolo and Sabbioneta shows

---

\(^1\) Grosz and Thomas, *op. cit.* v, i. and Munich. The features of the hero in the Vatican example do not resemble Vespasiano’s. I have to thank Dr. Brinckmann for allowing me access to his collection of Rubens material.
him in an armour, half-gothic, half-sixteenth century in style, the surface of which is black relieved with yellow flames and drops. The corresponding statue of Luigi Gonzaga (1500–32), son of Ludovico, Lord of Sabbioneta, the original of Tasso’s hero ‘Rodomonte,’ shows a black sixteenth-century armour ensign on the breast with two yellow keys in saltire carved in relief. Rodomonte’s son, Vespasiano, already mentioned, is portrayed by Bregno in an armour of the second half of the sixteenth century, black with gilt ribands and insignia of the toison d’or. This is the only contemporary portrait in the series by Bregno, and as it commemorates his patron it is more likely than the others to be a fairly reliable representation of his armour.

THE SKETCH-BOOK OF FILIPPO URSONI

A study of the armour in Mantua in the middle of the sixteenth century would not be complete without reference to the Album of Filippo Ursoni which was acquired by the Department of Engraving and Design of the Victoria and Albert Museum in 1929. This volume of drawings, though it cannot compete for interest with the famous Jacobe album in the same collection, is none the less important on account of the rarity of contemporary drawings of armour and equipment. These can be grouped in three categories: 

(a) Drawings of existing armour meant to serve as a pictorial inventory,—such as the Inventario Illuminado of Charles V at Madrid. 
(b) Designs for armour specially prepared as a pattern for the armourer or his engraver to work from,—such as the series of cartoons in the Kupferstichkabinett at Munich, and the sketches for the Farnese armour at Vienna preserved in the Bibliotheque Nationale in Paris. 
(c) Sketch-books and albums of a general character, and pattern books intended for publication, like the Trachtenbücher of Weiditz and Vogtherr.

Filippo Ursoni’s book belongs to the third class. Although the descriptions written below each drawing contain suggestions as to materials and decoration, the elementary nature of much of it shows that the
A. ARMOUR OF VESPASIANO GONZAGA, DUKE OF SERMONETA, D. 1591. IN THE AMBRAS COLLECTION, VIENNA
VESPAVISIONO GONZAGA, DUKE OF SERMONETA

From the engraving in Schrenck's *Armamentarium, 1601*
ALLEGORICAL PORTRAIT OF A HERO CROWNED BY VICTORY. RUBENS ATELIER. VATICAN MUSEUM, ROME
author intended his book to reach a wider circle than the artist-armourers of the time. The form of the book with its title pages suggests that he intended it to be engraved and published, or at any rate had played with the idea.

On the first title-page the author introduces his book in a few florid lines which one suspects are intended to be elegiacs: ‘Si cupis Armorum varias cognoscere formas, Insignes cultus, militiaeque novos. Admiranda vide, Vrsonis monumenta Philippi; cuius docta manus, picta colore dedit . . .’ and more in the same vein. Below are what appear to be his arms, a bear rampant beneath a star, and then in more sober terms come the title and scope of the book: ‘Liber Philippi Vrsonis manu, Pictoris Mantuani, de variis equestribus stratis, Phaleris, Ephippijs, Bullis, Stapetibus, Fraenis multiplicitibus, vestibus versicoloribus, militaribus Emblematis, Galeis, Coriis, Thoracibus. DE Macherar [um], Capulorum, Globorum; omnibus miro artificio ad amusim fabrefactis.’ The second title-page shows at the bottom an aerial view of Mantua with the Lago di Mezzo beyond. There follow 304 drawings comprising: two drawings of saddlery and trappers; six of equestrian figures, some in gala costumes (alla Romana, alla Turchesca, etc.) and others in complete hosting armour; five diagrams of the points, anatomy and diseases of the horse; four drawings of close-helmets and parts of armour; five of saddle-steels and stirrups; 16 of casques, most of them elaborately embossed; 39 designs for sword-hilts; and finally a title page preceding 204 drawings of various types and patterns of bits. On Folio V of the drawings is the date MDLIIII.

It is beyond the limits of this paper to describe the drawings individually. They are executed in pen and ink with touches of yellow and bistre water-colour. The designs for sword hilts are neatly and carefully drawn and show the artist’s work at its best, but the drawings of horses and human heads reveal his weaknesses as a draughtsman. Nothing is known of Ursoni beyond what his book tells us. Dr. Torelli, who was formerly the Keeper of the Archivio Gonzaga at Mantua
and who has kindly answered my enquiries, denies all knowledge of him, nor does his name appear among the artists of the Court of Mantua published by Bertolotti and others. Probably he worked in a minor capacity designing costumes and scenery for pageants and supplying patterns for the Court armourers and goldsmiths. His description of himself as 'Pictor' and the punning coat of arms of a bear may be a touch of personal vanity which is borne out by the naiveté of some of his comments. Folio V (E.1730–1929) bears the date 1554, which is, incidentally, the same as that borne by the elaborately embossed and damascened shield in the Waddesdon bequest in the British Museum signed by his fellow-townsmen Giorgio Ghisi. Each drawing is inscribed at the foot with a brief description or explanation, occasionally rather unnecessarily self-evident, but sometimes throwing an interesting light on the taste of the time. Some give alternative proposals for the carrying out of the designs, which shows that it is not a record of work done, but suggestions for use. The book seems never to have been published, nor has evidence yet come to light to show that any of his designs were carried out. Yet Italian parade casques of the period and numerous richly mounted swords survive to show that, fantastic as some of them are, they were not beyond the skill of the Italian artist craftsmen of the day.

Among the equestrian figures are designs for pageant costumes, thus: "Questo habito e alla Romana per mascarata" and "Questa habita per la mascarata alla Amazoneda"; some show national fashions "alla boemia et di Moscovia," or "alla Turchesca naturale"; others show armour for the field or for the tournament (Pls. xxiii and xxv).

The casque in the Wallace Collection No. 105, which is certainly of the School of the Negoli, if not from their hand, is not far removed from Ursoni's drawing B xi (Pl. xxvii). A casque in the Riggs collection in the Metropolitan Museum should also be compared. One must be careful, however, not to deduce too much from a general resemblance produced by artists working within the same classical conventions. Note the very

DESIGNS FOR DETAILS OF ARMOUR AND STIRRUPS. SKETCH-BOOK OF FILIPPO URSONI
DESIGNS FOR HELMETS FOR WAR AND THE JOUST. SKETCH-BOOK OF FILIPPO URSONI
DESIGNS FOR STIRRUPS AND SADDLE-STEELS INCORPORATING THE BADGES OF HENRI II, KING OF FRANCE. SKETCH-BOOK OF FILIPPO URSONI
Negroli-like foliated volute on the casque in Ursoni’s drawing on Folio B X. There are casques in the form of a dolphin’s head at Madrid (Inv. III Pl. x), in the Musée de l’Armée, the Hermitage, the Widener Collection, Philadelphia, and elsewhere, and it is amusing to read under Ursoni’s design of this kind (Folio C) ‘Questa celada a testa di delfino fa terribile lo soldado.’ In several cases he incorporates the badges of the Emperor (eagles, fire-steels, the initial K, etc.) and more frequently those of his rival, the King of France (cockle-shells, fleurs-de-lys, the initial H). 1

Charles V twice visited Mantua when great festivities and tournaments were held, and the references to the Emperor are more understandable than those to the French King Henri II (Pls. xxvi and xxviii A).

In 1551 Charles and Henri were at war over Parma and Piacenza, which Ferdinando Gonzaga had claimed on the Emperor’s behalf, but which the Pope had assigned to Ottavio Farnese. Hostilities were suspended by a truce in 1552, and Ursoni’s drawings may possibly have been prepared for a pageant to celebrate the signing of peace. Or they may be accounted for by his having compiled his book from other sources. Evidence suggesting that he made use of existing designs will be referred to later. 2

Some of Ursoni’s descriptions are of value for their use of Italian armour terms. On folio A VII (E.1763) he draws two reinforcing pieces for the left side very like each other, but one is called a targhetta and the other a sovrapetto (Pl. xxiv). He describes a classical cuirass as an anima, though one is accustomed to the word being limited to describing a splinted breast. Thus A VII (E.1763)—Vero designo per far fare celade, over elmi, per cavalieri a cavallo, si per guerra, come ancora per giostra, co’ la sua bufa, so[vrapetto et targheta, et sovrabracial stanco colla schifa alla lanzia et maza et altre ferri da offendere stando a cavallo come

1 The Emperor: Pages lettered P, C I, and C III. C I (E.1793) is inscribed ‘Questa celada e Foggia piu Todescha ch’Italiana et e alla imperiale come si vede,’ and Henri II: Pages lettered A, O, BV, V VIII, C, CIV. BV reads: ‘Questa celada e Fatta di relievo et e con le imprese del Re Henrico di Francia accomodata e con bella mostra arma lo soldato come si vedde.’

2 Pp. 269, 270, infra.
qui sotto si vedde. A vamplate is called a 'schifa,' a hammer a 'zettarino,' a halberd a 'setta bastarda' and another with a longer cutting blade a 'zettarino pontivo e taglia.' On Folio A VIII he describes the use of the pieces of exchange or 'double pieces,' as they are called in the old English inventories, and suggests gilding, russeting, silvering and etching.

'Questi pezi d'arme servi per piede per cavaloleggeri et per Homo d'arme levande li souvrapessi et ponendolli, secondo il besogno si potrà adorare et brunire overo inargentare il capo overo farlo a disegni con lacqua Forte nei campi vodi; una simile ne porta in franza (on the edges) il maggioranza co la barda a d[iv]erse mode.'

The sword hilts are designed with or without knuckle-guards and four of them are for falchions. They are all of an elaborate character and intended to be enriched with gold and silver. The letters which appear like bladesmiths' marks on the ricassos of one or two instances are probably without significance. The letters 'F.O.' in one case may have been suggested by the artist's own initials, in other cases they take the form of 'Z.F.' and 'F.A.' Several of Ursoni's designs refute Laking's assertion on p. 292 of vol. iv of his Record that the sword of Charles V at Vienna could not have belonged to him as the style of the hilt is too late. Ursoni's drawings for swords of this type were executed four years before the Emperor's death.

The first of them (CVI) bears an introductory note: 'Qui comincia le quaranta carte dove sono disegnate quaranta guarnimenti e fornimenti o esssa de spade si da piedi, come da cavallo, et per cortelaci da cavallo—storte de piede; fate con beliss[im]o disegno. Tutti variati dintalio et lavorieri d[ive]'r[si] si potrane fare con facilita de d[iversi?] maestri in tal arte esperti premiando.' This paragraph is written a little more heavily than the description of the sword above it, but apparently by the same hand. There are hilts of four falchions (storte or cortelaci) among the swords (Pl. xxx B). The descriptions are mostly concerned with the gilding and decoration, and in some cases details have been drawn separately at the side, as for instance the lion's

¹ Cf. schiba in the inventories of 1407 and 1542.

B. DESIGN FOR A CASQUE. SKETCH-BOOK OF FILIPPO URSONI, 1554
A. CAPARISON (*girello*), DECORATED WITH SILVER MOONS AND GOLDEN SHELLS, DEVICES OF HENRI II, KING OF FRANCE. SKETCH-BOOK OF FILIPPO URSONI
B. HORSE-TRAPPING OF GREEN AND GOLD.
SKETCH-BOOK OF FILIPPO URSONI
head on folio DX, which is described below: ‘Quest'  
elssa e molti bizara, ma tiene buona guarda; se bene  
nel disegno mostra grandezza si potra tenerla di ferro  
mancho adornandolo con oro e argente come piacera a  
quei ch’ d' essa vorano servirsi.’ Sometimes the  
suggestions took a practical form, as for instance on  
Folio E VIII, which has a knuckle-guard decorated  
with festoons of laurel: ‘ma le punti delle folie bosognia  
siano base perche haviendo le punte levate straceria;  
vestimenti e offenderia la mano.’ Immediately following  
the last sword comes the title page of the section on bits.  
So far only one piece of material evidence bearing  
upon Ursoni’s book has come to light.¹ This is a  
drawing for a single sword hilt, which entered the  
Victoria and Albert Museum as long ago as 1864 or  
earlier² and is almost an exact replica of one of Ursoni’s  
(Pl. xxix a and b). The size is in each case the same,  
the chief difference being that Ursoni’s drawing shows  
much more penwork. In the single drawing which  
bears the Departmental No. 1088, the shadows are  
rendered in wash, but in Ursoni’s by shading with pen  
and ink. Ursoni’s yellow colour is applied flat, and is  
paler than that in the drawing No. 1088. The water-  
colour of drawing No. 1088 is a deep yellow and is  
differently disposed, e.g., on the rams’ heads and  
female sphinxes, which are tinted in No. 1088 and left  
white by Ursoni, and on the cross-gartering of the grip.  
There are a few minor differences in the design itself;  
the ears of the rams’ heads on the ends of the quillons  
in drawing No. 1088 protrude through the curled horns,  
whereas in Ursoni’s the ears are omitted. Ursoni  
shows an additional acanthus scroll on the underside of  
the ring-guard. In the drawing No. 1088 the head on the  
escutcheon is flanked by C-scrolls and in Ursoni by a  
wreath. There are differences, too, in the style of  
execution. The features of the head on the escutcheon  
are better rendered in drawing No. 1088 than by  
Ursoni. The rams’ heads on the pommel and the  
sphinxes on the pas d’ane are freer and more lively.  

¹ I am indebted to Miss Reinhart  
of the Metropolitan Museum of Art  
for this discovery.  
² In 1864 it is recorded as having  
been transferred ‘from the Art  
Library to the Art Museum’ and  
must therefore have been acquired  
at some date between 1852 and 1864.
One is led to the conclusion that drawing No. 1088 preceded Ursoni’s. It may conceivably have been Ursoni’s own first draft, which lost its freshness when reproduced by him for the Album. But the more likely inference is that Ursoni was copying the work of a more original artist. The watermarks do not help much. Drawing No. 1088 has the watermark of two crossed arrows beneath a six-pointed star closely resembling, but not actually reproducing, those given by Briquet Nos. 6289–6300, which are all Italian marks of the first half and middle of the sixteenth century. The only mark visible in the Album shows two crossed arrows without a star, resembling Briquet Nos. 6167–6284, a type of mark used in Italy over a long period from the fourteenth century onwards. Having found one drawing so closely connected with Ursoni, one hopes that others may now come to light which may reveal the source of his inspiration and tell the whole story.

The second part of the book, which consists of 204 drawings of bits, must be studied in conjunction with the numerous bit-books published in the second half of the sixteenth century (Pl. xxxi). Its numeration follows consecutively, beginning with F VI for the title. It is four years later in date than the best known bit-book, that of the Neapolitan Federigo Grisone, the first edition of which appeared at Naples in 1550. This was followed by repeated editions published at Pesaro in 1556, 1557, 1558, and in Venice in 1551, 1553, 1571, 1582, 1592 and 1620, with translations and editions in English (Blundeville) 1560 (?), Spanish 1568, German 1570, 1573, etc. Beyond a general similarity due to their illustrating the same subject, Ursoni’s drawings do not appear to have any direct connection with Grisone’s woodcuts. That is to say that he has not plagiarised in the manner so frequently found in technical books of the time. (Grisone himself was accused of borrowing from Ferraro’s father in the latter’s Cavallo Frenato 1602). Though it is possible that he may have been influenced by the success of Grisone’s book to produce something similar. Another Italian bit-book of the time is that of Cesare Fiaschi Gentiluomo Ferarese, published in Bologna in 1556,
A. DRAWING IN PEN AND WATER-COLOUR OF A SWORD-HILT. NO. 1088 IN THE VICTORIA AND ALBERT MUSEUM

B. DESIGN FOR A SWORD-HILT. SKETCH-BOOK OF FILIPPO URSONI

B. DESIGN FOR HORSE-BIT, "ALla Turchessa."

To face page 271.
entitled *Tratto dell' imbrigliare maneggiare et ferrare cavalli con disegni di Briglie*, etc., which also ran into numerous editions. Somewhat later are Pirro Antonio Ferraro's *Il Cavallo frenato* 1602, which incorporated a MS treatise of his father's of earlier date, and Alessandro Massario Malatesta's *Tractatus de modo equos fraenandi*, etc., of 1607. Meanwhile other books had been appearing elsewhere, such as those by the German authors Giefert, Löhneyssen, Seutter and Creutzberger. The value of Grisone's book is attested by Bedingfield in his edition of Claudio Corte's *Cavallerizzo*, published in 1584, where he says that by that year English equitation had greatly improved as the result of Blundeville's English edition of Grisone, which was the first English book on equitation.

The first printed book in any language with illustrations of bits was that of Laurentius Rusius, *Liber mareschalchie equorum*, of c. 1489. The fact that these books dealing with bits ran into so many editions forms an interesting commentary on the horse-mastership of the time. Previous to mechanization one simple 'bit, universal' was issued to the whole of the British army and the rider had to supplement it with his skill. In the sixteenth century, if a horseman's hands were heavy his horse was probably no less hard in the mouth, and the great coarse-bred stallions of the day may well have required these jaw-breaking contrivances.

Little is known of the history of the book itself. The binding is not the original one, as the leaves show that they have been at one time drastically shaved, cutting into some of the drawings. That it was sewn together before this is evident from the fact that one of the drawings is upside down, but the author's description is not reversed, so that this must have been written after binding. One or two leaves may be missing near the beginning, as the numbering of the folios begins rather irregularly with Folio E, followed by the other vowels I, O, V and then A, then come C, D, E and onwards in unbroken alphabetical order to Z.¹ Otherwise the book appears to be complete. On folio CVI (E 1788) the author speaks of 'quaranta' drawings

¹ This is followed by two amperzands and then a new alphabet A, AI, etc.
of swords to follow, whereas actually there are only 39, but there is no gap in the old numbering of the folios.

On the second title page is written the words *Bibl. Embs*, which probably denotes that the book formed part of the library of Marx Sittich Graf von Hohenembs, or Altaembs, created a Cardinal by his uncle Pius IV in 1561. This library was dispersed in the eighteenth century. Ems is a village near Chur in the Grisons. There is also a seal of red wax with a coat of arms and the initials W.R.V.T. At the end of the nineteenth century Ursoni’s album formed part of the Spitzer Collection, like the Jacobe album, which it has now rejoined after a lapse of thirty years. It is mentioned and several of its drawings are illustrated in J. B. Giraud’s introduction to volume vi of the large Spitzer catalogue published in 1890–92. It was lot 3041 in the Frederic Spitzer sale of 1893, when it realized 5140 f. and it bears the rubber stamp of the sale on one of the fly-leaves. It then disappeared and for thirty years all trace was lost of it. That it sojourned in Italy is evident from the lead seal marked *R. Uffizio di Esportazione Artistica, Firenze*, and rubber stamps permitting its export from Italy. In 1927 it reappeared in private hands in the South of France, and one gathers from a German bookseller’s note written in pencil on the inside of the back cover that it must have passed through Central Europe before reaching its final resting place in London.

The following words were written by a member of an English mission sent by Queen Mary to the Pope in 1555, the year after Ursoni had dated his book and fifteen years after the inventory of 1540–42.

‘Mantua is a notable strong city, environed with great lakes and marshes. The Duke met with the Lords in the city and brought them to his lodgings, which was an old palace of the Duke’s. The Duke is very young [that is Guglielmo, who would be 17 at the time], and looketh a little asquint. Here the Lords were greatly feasted at the Duke’s charge. After supper, they went to the Court to deliver the Queen’s letters, and there we saw the Duke’s grandmother, his mother’s sister, the wife of Gonzaga, and his daughter,
and one other lady called Hippolita, one of the fairest ladies in the world. After compliments of salutation, the Lords had a banquet, in the which were green almonds, the first that I ever saw; we were brought into the Duchess's jewel houses, which exceeded in rich jewels, as agates, sapphires, diamonds, an unicorn's horn, a tree of coral an ell long; here we saw also a beast called the tyger.

One wonders if they were also shown the armoury, but one thinks not. If they had been, one feels sure from other comments elsewhere in his record of his travels, that this English traveller would certainly have mentioned the two crocodiles.

1 This would be Ippolita (1535-1563), daughter of Ferrante Gonzaga, first Count of Guastalla (Pl. xix). She married firstly Fabrizio Colonna Duke of Tagliacozzo, and secondly Antonio Carafa, Duke of Mondragone. She has been eulogised by the litterati of the time for her intellectual and artistic gifts.

Translation

Below are listed the arms which are in the charge of Boninsegna da Castelbarco.

ITEM

1. Firstly, 2 cuirasses covered with scarlet velvet for the body of his late lordship.
2. A cuirass, uncovered, for the body of his late lordship above-mentioned.
3. A pair of large complete tassets of steel of his late lordship abovementioned.
4. 2 pairs of steel tassets garnished with velvet of his lordship abovementioned.
5. 4 steel cuirasses for retainers.
6. 2 pairs of steel tassets for retainers.
7. A pair of steel tassets garnished with velvet.
8. 29 steel paunces.
9. 28 iron paunces.
10. 20 steel faulds (skirts of mail).
11. 14 iron faulds.
12. 16 steel jazerines.
13. 8 iron jazerines.
14. 3 steel brayettes (breeches of mail).
15. 28 pairs of steel gauntlets.
16. 48 pairs of iron gauntlets.

A headpiece of steel with an orle of roses gilt and enamelled, viz. of 5 marks weight.

A steel hat covered with red pile velvet with 7 rays of silver gilt with doves bright silver, of the weight of 4 marks 2 ounces, together with a plume-holder.

A large headpiece with a frontal of silver gilt with a plume of feathers of red and white and with 9 roses of silver gilt, enamelled, to the weight of 5 marks 2 ounces.

A helmet of steel covered with scarlet velvet.

34 helmets of steel.
A.D. 1407
22 Quatuor helmeti ferri.
23 Vna cellata coperta velluto carmesi piloso cum certis dindinel-lis racamatis viridis.
24 Vna cellata magna azalis.
25 Quadraginta tres cellate ferri.
26 Decem octo Spalaroli azalis.
27 Vna targheta azalis.
28 Vigintiunum paria Arnixiorum azalis. In quibus sunt quatuor paria pro prefato quondam domino.
29 Duo paria subtellarium azalis cum calcaribus.
30 Nouem paria Arnixiorum ferri.
31 Quadrangintaunum pectora azalis lu quibus sunt duo pro persona quondam prefati domini.
32 Viginti vnum pectora ferri and Sichomanis.
33 Viginti octo paria Brazalorum in quibus est vnum pro persona quondam prefati domini frisatum argenti aureati.
34 Triginta paria Brazalorum ferri.
35 Quinque Rotelle azalis.
36 Vna lanza gaia cum canono argenti cum Arma sancti georgii and arma gonzage quartilatis cum franziis site rubee ad manichas.
37 Centum uiginti octo lanze ab equo.
38 Viginti paria balzarum ab Arnixiis vetera.
39 Due Tenalie pro Incidendo ferrum.
40 Duo Incudines longi in forma vnius palli ferri.
41 Vna Rotella ligni cum vno breue and vna rosa alba.
42 Vnus pauesus pictus ad diuersa arma.
43 Octo paria speronorum a pagiis.
44 Trigintauna corigie a panceria in quibus est vna fulcita argento.
45 Tres mantelline scarlatini panni ab helmeto.
46 Vna Azeta parua.
47 Tredecim Mantelli de Maia de ferro ab Equis.
48 Septem pecii maglie de ferro ab Equis.
49 Decem Coracie a giostra.
50 Vna spada a Campiono.
51 Vndecim Elmi a giostra.
52 Vndecim Brazalidia a giostra.
53 Tredecim Manete a giostra.
54 Quatuordecim paria spallarolorum a giostra.
55 Quindecim guanti a giostra.
56 Nouem scuta a giostra.
57 Tres Elmi a giostra veteres.
THE LOST ARMOURY OF THE GONZAGAS

A.D. 1407
22 4 helmets of iron.
23 A salade covered with crimson pile velvet with certain fringes embroidered in bright green.
24 A large salade of steel.
25 43 salades of iron.
26 18 pauldrons of steel.
27 A target of steel.
28 21 pairs of steel leg-harness of which 4 pair are those of the aforementioned deceased lord.
29 2 pairs of steel sabatons with spurs.
30 9 pairs of iron leg-harness.
31 41 breasts of steel, of which 2 are for the late abovementioned lord.
32 21 breasts of iron and . .
33 28 pairs of vambraces of which one is for his late lordship bordered with silver gilt.
34 30 pairs of iron vambraces.
35 5 steel bucklers.
36 A lance with silver head (?) [with a banner of] the arms of St. George and Gonzaga quartered, with dagged fringes of red silk.
37 128 horsemen’s lances.
38 20 pairs of fringes 1 for old leg-harness.
39 2 pincers for forging iron.
40 2 long anvils, in the form of a single iron stake.
41 A buckler of wood [painted] with a scroll and a white rose.
42 A pavise painted with various arms.
43 8 pairs of pages’ spurs.
44 31 hip-belts, 1 of which is garnished with silver.
45 3 helmet mantlings of scarlet cloth.
46 A small axe.
47 13 hoods of iron mail for horses.
48 7 pieces of iron mail for horses.
49 10 cuirasses for jousting.
50 A champion’s sword.
51 11 jousting helms.
52 11 armpieces for jousting.
53 13 cloaks (mantling ?) for jousting.
54 14 pairs of pauldrons for jousting.
55 15 gauntlets for jousting.
56 9 shields for jousting.
57 3 old jousting helms.

1 Lit. valences. A small curtain of mail at the knee was a characteristic feature of Italian leg-harness in the fifteenth and sixteenth centuries, cf. Archaeologia, lxxvii, (1937), p. 329.
A.D. 1407

58 Decemseptem Barbute cum camalio de ferro and azello de quibus barbutis vna est habens vnam coronetam de argento de aurato cum tribus smallis.

59 Due Barbute sine camaglio.

60 Sex spalareti de ferro.

61 Duo capelleti ferri veteres inter quos est vnum habens camalia de Malia.

62 Tres Acie.

63 Vnus Bordoncellus a pelegrino cum lama azelli quadra que reconditur in manubrio.

64 Duo paria brazallarum cum guarnimentis.

65 Vnum scossum parvum de azoli cum lamis frisatis.

66 Vnus spetus a venando.

67 Duos arcus de ligno anglici.

68 Lancia gaia cum franzia circa manubrium.

69 Sex brazalia sine cubitu cum rotulis.

70 Vnum par brazellarum de azollo grevarum.

71 Quinque paria Arnisiarum de ferro.

72 Duo paria Arnesiarum de ferro cum mediis cossalibus.

73 Octo paria schineriarum de ferro.

74 Duo baliste fracte.

75 Quinque penerii albi et Rubei sine fulcimentis que ab Ipsiis ablata sunt.

76 Vna spata vetus.

77 Duo targanes picti pro ludo Mazascuti.

78 Vna bombardella de Bronzo.

79 Vna capelina coperta de veluto de grana.

80 Vnum Stindardum sindonis Rubei cum divisia tortorelle.

81 Vna zornea sindonis de grana cum cruce alba.

82 Vnum par caligularum de camocia albarum et Rubearum.

Portata ad voltam die vii Novembris 1407.

Due corigie ab Elmo de tesuto Azuro cum fibullis et maciis et decemnovem passetis argenti deaurati ponderis in totum onciarum duodecim quartorum duorum cum dimidio.

84 Vna corigia ab Elmo tesuti Rubei cum macia et fibula et viginti tribus passetis argentii deaurati ponderis onciarum octo et quarti vnum cum dimidio.

85 Tres corigie de corio Rubeo suffulte corio albo.

86 Vna corigia a panceria de corio Rubeo noua fulcita de Auricalco.

234 An old saddle-cover of yellow satin.
235 An old saddle-cover of turquoise satin.
236 A large harness for a mule, viz., headstall, false reins and peytral covered with cloth of gold upon black velvet, charged with S.S. of copper gilt with their furniture of copper gilt.
237 A jupon of white and tawny satin for jousting for a boy padded with cotton wool.
238 A mail gusset.
239 12 banners of infantry and cavalry of various fashions with their devices captured by his lordship when he was at war against the French and the Venetians in 1521, 1522, and 1523, with their staves and iron heads.
240 10 cavalry banners of cendal of various fashions and devices of the late lamented Marquess Francesco and of the present Lord with their staves gilt, and their heads.
241 A large standard of cendal given by the Signory of Bologna to the late lamented Marquess Ludovicò at the time that he was appointed Captain-General with the devices of San Petronio and other devices of Bologna in gold.
242 A large standard of cendal given by the late lamented Duke Francesco Sforza, Duke of Milan, to the late lamented Marquess Lodovico at the time that he was appointed his Captain-General with the devices of the said Duke of Milan.
243 Two large standards of cendal given by the Signory of Florence to the late lamented Marquess Federico when he was made Captain-General in various years, with the device of the aforesaid Signory of Florence in gold.
244 A large standard given to the late lamented Marquess Federico by the Duke Borso of Ferrara at the time that he was made Captain-General of the league which was formed in Ferrara against the Venetians.
245 A large standard of crimson cendal which was given to the late Francesco, Marquess of Mantua, by the Signory of Venice, Francesco Sforza, Duke of Milan 1450–66. Federico I commanded the army of Lorenzo de'Medici in 1479. Borso d'Este, Duke of Ferrara (1413–71). This is probably an error, and may refer to his successor Ercole I, who was in alliance with Federico I against the Venetians in 1482–4. Francesco was Captain-General for Venice in 1501 and was again in the service of the Republic when attacked by the League of Cambrai, on which occasion Francesco was imprisoned for a year after being defeated at Isola della Scala.

There follow trappers, holsters, stirrups, bards, etc., 48 open-work horse muzzles, 16 broken muzzles, 9 horse bits, 451 others of various kinds. Total: 524 items of horse furniture.

Inventory of the horses of his Highness the new Duke in the year 1542.

Inventory of his highness the Duke's horses in the year 1542. The Italian names of the various species of 94 horses given here are interesting in view of the fact that Federigo II, the 4th Marquess, was a great breeder of horses. He introduced Arab blood and King Francis I sent specially to Mantua for a horse on which to ride at the Field of the Cloth of Gold. The walls of the Palazzo del Te at Mantua are decorated with paintings of horses by Giulio Romano and his pupils, representing favourite Arabs from Federico II's stud. Horses also appear as a motif of the decoration of Francesco II's breastplate on his bust by Gian Cristoforo Romano. There follows a description of horse trappings, many of great richness, e.g. a saddle for a mule of velvet embroidered with gold, etc.

1 Marcello; cf. no. 410 of the Inventory of 1542.
