

The pottery from Hazel Lane Quarry, Hampole, North Yorkshire (HLH02/04)

Alan Vince, with Barbara Davies and Jane Young

Seventy nine fragments recovered in fieldwalking at Hazel Lane Quarry, Hampole, North Yorkshire, were submitted for identification. The collection spans the Romano-British to the early modern periods but the majority is of 17th to 18th-century date.

Four or five sherds of Roman pottery were found. All were heavily abraded and could mainly be dated broadly to between the 2nd to 4th centuries.

Twenty-two sherds of medieval pottery were found. The earliest, Yorkshire Gritty ware, date between the late 11th and the early 13th centuries, and are most probably later 12th to 13th century in date, alongside sherds of Beverley ware, mostly glazed jugs (BEVO). Late 13th to 14th-century Coal Measure whitewares (CMW) were represented by 7 sherds and later medieval pottery was represented by two sherds of Humber ware (HUM) and sherds of Northern Gritty ware and Midlands Purple (MP). All these sherds were abraded and likely to be present as a result of field manuring rather than occupation.

The remaining material was of Post-medieval date, consisting of 51 sherds of pottery and 15 fragments of ceramic building material. Of these, most could only be broadly dated but there are 8 sherds of early post-medieval date (16th to early 17th century). These consist of Rawmarsh ware, of 15th to 16th-century date, Midlands Yellow ware (mid 16th to mid 17th century) and Cistercian ware (late 15th to early 17th century). These sherds too are abraded and indicative of manuring.
