

## An Assessment of the Pottery, Ceramic Building Material and Stone from the Sproatley to Aldborough Pipeline, East Yorkshire (SPA04)

### *Alan Vince and Kate Steane*

One hundred and ninety-nine fragments of ceramic building material, 595 sherds of pottery and two pieces of stone recovered during fieldwalking on the line of the Sproatley to Aldborough pipeline, in East Yorkshire, by Network Archaeology Ltd were submitted to the authors for identification and assessment. The finds come from fifteen different plots (Table 1) and range in date from the Late Bronze Age or Iron Age through to the 20<sup>th</sup> century.

Almost all of the finds are abraded to some degree and are consistent with their having been in active ploughsoil from soon after breakage and disposal. Therefore, they are likely to be evidence for the manuring of fields rather than settlement on the line of the pipeline. The exceptions are one sherd of Late Bronze Age or Iron Age date and one putative Anglian vessel.

## Description

The finds were identified and recording using a series of ware codes (Table 2). Where the item was large or distinctive enough it was also assigned to a form code (Table 3). Details of traces of use and current condition were also noted.

**Ceramic Building Material**

The brick and tile fragments were examined visually, augmented occasionally by x20 microscope examination. They were assigned to 29 fabric groups and four forms (Table 4).

### Roman?

Two fragments of ceramic building material were tentatively identified as being of Roman date. In the light of the extremely low incidence of pottery of this date from the fieldwork, both have to be treated as suspect.

### Medieval

Sixty-four fragments of flat roof tile dating between the later 12<sup>th</sup> and the 17<sup>th</sup> centuries (or even later) were recorded. Several of these fabrics have characteristics seen in the products of the medieval Beverley tiliary. However, similar resources (Quaternary quartzose cover sands, coarse mixed sands and gravels, micaceous silty estuarine clays and calcareous silty estuarine clays) occur widely in East Yorkshire.

*Table 5*

Subfabric	Description at x20 magnification	Comments	Total
F03	Few inclusions over 0.1mm. Micaceous groundmass		6
F04	Few inclusions over 0.1mm across except for lenses of a calcareous/quartzose sand with rounded grains up to 0.3mm across. Micaceous groundmass		5
F05	Poorly mixed clays. a) red-firing with fine quartz sand up to 0.2mm across and b) cream/yellow/grey firing calcareous clay	Possibly from Beverley	15
F07	Red-firing calcareous silty clay with some organic inclusions	Possibly from Beverley	7
F10	Red-firing calcareous silty clay with fine	Possibly from	6

	quartz moulding sand	Beverley	
F11	Sparse rounded quartz sand. Fine-textured micaceous groundmass	Possibly from Beverley	2
F15	Few inclusions over 0.1mm. Calcareous micaceous groundmass	Possibly from Beverley	5
F17	Moderate rounded quartz/sandstone/ironstone sand in a fine-textured micaceous groundmass	Possibly from Beverley	1
F18	Sparse rounded dark red clay pellets. Micaceous groundmass (includes biotite)		8
F20	Red-firing with fine quartz sand up to 0.2mm across	Possibly from Beverley	1
F22	Sparse rounded quartz/flint/chert inclusions up to 2.0mm across in a fine-textured micaceous groundmass	Possibly from Beverley	7
F28	Few inclusions over 0.1mm. Calcareous micaceous groundmass. Fine rounded quartz moulding sand		1
Grand Total		5	64

Forty-one flat roof tile fragments had complete thicknesses (Table 5). These ranged from 11mm to 20mm with a mean thickness of 14.9mm. One fragment, from context 5018, is overfired and might be considered a waster. However, one would require more evidence before suggesting that tile was produced locally. No peg holes or nibs were present.

### Post-medieval

Although brick was used in the late medieval period, the widespread adoption of brick in rural East Yorkshire is likely to have been during the later 16<sup>th</sup> century. Fifty-size fragments were recorded in this collection (Table 5). The same range of shapes and sizes of brick were then used throughout the 17<sup>th</sup> and 18<sup>th</sup> centuries and in places through the 19<sup>th</sup> century too. Detailed fabric analysis tied to stratigraphy might allow brick fragments to be dated more closely but in the presence case the brick can only be broadly dated. Pantiles are a second post-medieval introduction. They originated in the low countries but were widely adopted in England, especially in the later 17<sup>th</sup>-century and later. Thirty-nine examples were recorded in this collection (Table 5).

**Table 6**

Grand Total	53	3	37	2	95

These bricks and tile fabrics include most of those in which flat roof tiles were also found but twelve fabrics are new (Table 6). Most of these bricks were made from a calcareous clay, probably an estuarine mud, and therefore probably produced close to the Humber. Only one fabric, F14, might have been made from boulder clay, which forms the bedrock in the pipeline area.

*Table 7*

Subfabric	Description at x20 magnification	Comments	Total
F01	Red-firing, silty calcareous micaceous body with light-coloured marl pellets		7
F02	Sparse rounded white fine-grained sandstone fragments up to 3.0mm across. Overfired, probably calcareous poorly mixed silty groundmass		15
F06	No inclusions over 0.1mm across. Poorly mixed calcareous and fine-textured clays.		8

## Pottery

### Iron Age

Three sherds of Later prehistoric pottery were found. Two of these contain large angular rock fragments, mostly basic igneous rock. Such rocks are present in the local boulder clay but would have had to be deliberately selected in order to get the high frequency found in these sherds. One of the sherds is large and unabraded and was probably dislodged from a feature or occupation deposit by the plough (Plot 10, find 6145) whilst the other is abraded and smaller and has been subjected to plough damage and weathering (Plot 4, find 6048).

A sherd tempered with angular sparry calcite might be of later prehistoric or late Roman date (Plot 4, find 6040). This fabric was produced and used in the Vale of Pickering from the Late Bronze Age into the Anglo-Saxon period but is rarely found outside of the vale except in those two periods. It is small, abraded and the calcite has been leached.

### Roman

Two sherds of Romano-British greyware were recovered. Both were small and abraded and probably present through manuring (Plot 4 find 5053 and Plot 14 find 1187).

### Anglo-Saxon

The rim of a possible Ipswich ware jar was found on Plot 14 (find 6184). The sherd is relatively fresh and large and may indicate occupation of this period on the site. Finds of Ipswich ware are rare in Yorkshire. Even on the site of the Mid Saxon extramural settlement at York they only account for approx 3-5% of the contemporary sherds found and other finds are limited to single vessels from Lurk Lane in Beverley, Bridlington and Sewerby Cottage Farm. A single find, therefore, might well be indicative of a settlement rather than a stray find.

### Medieval

Thirty-four sherds of medieval pottery were recovered. All were of Humberware and all were heavily abraded, so that in some cases the identification is suspect (Table 9). Although the highest quantity of sherds comes from Plot 4, this plot also produced a large quantity of later pottery and there is no real evidence for a concentration such as might indicate settlement. the sherds include fragments of unglazed drinking jugs, jars and jugs but are mostly not

attributable to a form. Humberware may first appear in East Yorkshire in the late 13<sup>th</sup> century but it only becomes common in the mid 14<sup>th</sup> century and throughout the remainder of that century and the 15<sup>th</sup> century it is the most common ware used in the region. There were undoubtedly several production sites supplying East Yorkshire with Humberware and recent work at Wawne suggests that these may well have been located in East Yorkshire. The ware continued to be used into the 16<sup>th</sup> century and these late vessels often have a brown, semi-vitrified glaze as a result of the deliberate overfiring of a lead-glazed, brown-slipped vessel. So few of the sherds from this fieldwork retain their surfaces that it is impossible to say whether any of the finds might be of 16<sup>th</sup> century date. However, the drinking jug form does not occur in this late phase and so at least one sherd is of later 14<sup>th</sup> or 15<sup>th</sup>-century date.

#### Post-medieval

Fifty-five sherds of post-medieval pottery were recovered from the fieldwork. They range in date from sherds of Cistercian ware and Raeren stoneware, of late 15<sup>th</sup> or early 16<sup>th</sup> century, to sherds from English White Saltglazed Stoneware (SWSG) which are of mid 18<sup>th</sup> century date. Most, however, are of glazed red earthenwares which cannot be closely dated.

### Early Modern

Five hundred and two sherds of pottery dating to the later 18<sup>th</sup>, 19<sup>th</sup> and 20<sup>th</sup> centuries were recorded (Table 12). The majority of the sherds probably date to the second half of the 19<sup>th</sup> century and consist of miscellaneous refined whitewares (WHITE), transfer printed wares (TPW) and miscellaneous English stonewares (ENGS). The latter include a number of vessels with a feldspathic glaze, introduced in the mid 19<sup>th</sup> century, and marmalade jars of late 19<sup>th</sup>/early 20<sup>th</sup>-century date. A high proportion of the vessels recovered were translucent and classed as porcelains (ENPO). This may also be a reflection of the late date of the collection.

## **Stone**

Two fragments of stone were submitted. One of these is identified here as a natural glacial erratic but the other is a sandstone hone. The hone has a circular cross-section and a tapering profile and shows little sign of wear. It appears to be of early modern or recent date.

## **Assessment**

The Later Prehistoric sherd from Plot 10 is indicative of settlement in the area, probably on site as possibly is the sherd of Ipswich-type ware from Plot 14. Both finds should be investigated further.

The remaining sherds are indicative of manuring, in the Roman period and then again in the later medieval, post-medieval and early modern periods. It is presumed that in the medieval period the manure was obtained from the nearest settlement (farmyard manure) but the later finds might well have come from further afield, since there are documentary references to the existence of communal laystalls (dung heaps) by the 16<sup>th</sup> century in towns.

The Ipswich-type ware sherd should be drawn and samples take for thin section and chemical analysis, to test the possible attribution.

The ceramic building material should be discarded, with the exception of the fabric series which, together with the pottery, should be retained for future study.
