Assessment of Metal Finds from Donna Nook Flood Management Scheme (DON-23)

Alan Vince

A small collection of metal finds from the field survey carried out for the Donna Nook Flood Management Scheme by Network Archaeology Ltd was submitted for identification and assessment.

The finds include several bullets and a bullet casing and iron fittings of recent date and it is likely that all the metal finds are of 20th-century date.

Description

Copper Alloy

Five copper alloy objects were recovered. All are parts of bullets or bullet casing. The one case is stamped "30". The four bullets, from their weight, probably have a lead core with a copper alloy sheath.

Iron

Three iron objects were recovered. One is possibly part of a nail whilst the other two are unidentified fittings.

Assessment

Donna Nook is a bombing range for the RAF and it is possible that these finds are associated with firing practice.

Further Work

It is likely that a specialist familiar with 20th-century military ordnance could identify the bullets more closely and perhaps identify the two iron objects.

Retention

Since the objects have not been closely identified they should be retained for potential further study.
