

Assessment of the Medieval and Later Pottery from the 2007 Fieldwork on the Pannal to Nether Kellet Pipeline (PNK 07)

Alan Vince and Kate Steane

A collection of medieval and later pottery was recovered from archaeological fieldwork carried out on the line of the Pannal to Nether Kellet pipeline by Network Archaeology Ltd (Site Code: PNK 07).

The finds include a few sherds of medieval pottery and large collections of post-medieval and early modern pottery.

Description

Ceramic Building Material

Eighteen fragments of ceramic building material were recorded. Three were unidentifiable fragments (from 23021 and 6110007). Five of these were fragments of handmade bricks (from 14159 and 16016). The use of brick in England started in the later medieval period but in the Pennines it is likely that brick was not used until late in the post-medieval period. Nine fragments came from field drains (14006, 14098, 6110053, 6110125, and 6119032). The widespread use of ceramic field drains started in the mid 19th century. Finally, a fragment of refined whiteware wall tile with a cream glaze (6119032) is likely to be of 20th century date.

Pottery

Medieval

Three sherds of medieval pottery were recorded. All are apparently, from visual analysis, of types produced in Yorkshire. The earliest (6110118) is a sherd of Yorkshire Gritty ware (YG). This ware was produced at centres in West Yorkshire from the mid 11th to the 13th centuries. A sherd of northern gritty ware (16016) is of a type produced at several centres in West Yorkshire from the later 12th century onwards. Finally, a sherd of Humberware (6119022) was present. This type was produced at centres in the Humber wetlands and Vale of York from the mid 14th to the early 16th centuries.

Post-medieval

One thousand, four hundred and fifty-five sherds of post-medieval pottery were recorded. They were grouped into broad ware groups which in the main do not indicate their source but reflect broad ceramic traditions. Most are varieties of glazed red earthenware for which large numbers of manufacturing centres existed (Brears 1971).

Most of the pottery could be assigned to at least a broad form group or at least to a choice of two or three forms (Table 2). Of note is a tin-glazed drug jar or albarello and a possible grog-tempered whiteware saggar from plot 54/2, which may indicate the production of pottery nearby.

Early Modern

Six hundred and seventy-seven sherds of pottery of later 18th century or later date were recorded (Table 3). The pottery is mainly of refined whiteware fabrics which were produced at several centres in English, most prominent of which are the Staffordshire potteries.

Exceptions are Derbyshire and Nottinghamshire stonewares, both of which are the products of specific midlands potteries, and Sunderland Coarseware. The latter has a dark red body with variable quantities of calcareous inclusions in the groundmass and is easily distinguished from the post-medieval red earthenwares, none of which have a calcareous body. The only recognised foreign import in this collection is a sherd of a Rhenish stoneware Seltzer bottle, probably imported together with its mineral water contents.

Grand Total		677

Much of the early modern could be assigned to a form group (Table 4). Many of the forms are similar to those found in the post-medieval period. However, pancheons and posset pots are absent. New types include insulators, used mainly on telegraph poles; marmalade jars (ancestral to our present-day glass preserve jars in size and shape); flowerpots and sanitary ware (such as toilet bowls, urinals, and sinks).

Stone

A single fragment of slate was recorded. This may have been roof slate or an unworked fragment of natural origin.

Assessment

The topsoil Strip Watching Brief

The majority of the finds, 1462 objects in total, were recovered during the watching brief and topsoil strip stage of the project. Most are essentially unstratified. Two of the medieval potsherds come from this stage, from plots 40/6 and 56/6. The 884 sherds of post-medieval pottery include 622 from site 34/5 and no other site produced more than 21 sherds (Table 5).

The early modern pottery also shows a concentration on site 34-5 but not to the same extent (Table 6). It includes a collection from context 14050 (site 36/11) which was a large landfill area and which includes several marked pieces which, with work, could be closely dated. These are, however, extremely late in date and include a marmalade jar marked with medals awarded in the 1870s and jars marked W.P. Hartley, London and Liverpool, which also date at the earliest to the late 19th century.

The pottery from context 14026 (site 38/1) comes from a field levelling deposit. The wares present suggest a mid 19th century date.

The pottery from site 41/3 nine includes telegraph insulators of four types, all probably produced by Bullers Ltd, London. These were associated with a dismantled railway.

Site 31-11

Eighteen sherds were recovered from a deposit below trackway 19001. This assemblage is of late 18th-century or later date and includes 12 transfer-printed ware sherds but, as with Site 34-5, no wares which could not have been present before c.1800.

Site 34-5

In addition to the pottery recovered from Site 34-4 during the watching brief phase, this site was excavated and produced a further 644 sherds. These came from four contexts:

Context 16007 was the backfill of a stone trough. The 36 sherds are mostly of post-medieval date, together with a single sherd of a Pearlware tankard. Assuming that this is not intrusive it should date the backfill to the late 18th century or later.

Context 16016 is a spread of material below the topsoil. The pottery assemblage consists predominantly of post-medieval wares (435 out of 491 sherds) together with 55 sherds of late 18th-century or later date. None of the latter need be later than c.1800.

Very similar assemblages come from the topsoil (1615) and unstratified material (16035).

The Site 34-5 assemblage includes some sherds which are probably of mid 17th century or earlier date whilst the majority could date to the later 17th to mid 18th centuries and it is likely that the site was occupied from at least the mid 17th to the end of the 18th centuries. When considering the date of abandonment of the site it is interesting to note that only two of the sherds are of transfer-printed ware and that most of the late 18th century pottery consists of Pearlware and Creamware.

Site 45-7

A culvert or sump on site 45-7 was excavated and produced two fragments of field drain which probably date the backfill to the mid 19th century or later.

Site 54-2

Thirty-four sherds of pottery were recovered during excavations on site 54-2. All come from the filling of a ditch. The primary fill, 21008, produced sherds of English porcelain, flowerpots and transfer-printed ware. Although this could be given a later 18th-century date the character of the assemblage suggests a 19th-century date. The secondary fill of the ditch (21003)

includes marmalade jars and misc whitewares which are of late 19th-century or later date. The ditch contained a series of iron cauldrons or buckets and one of these produced sheds of misc English stoneware (21007).

Retention

All the pottery from unstratified contexts could be discarded, although in several cases it is possible to associate it with excavated sites and thus provide a context for the finds. The remaining finds should be retained.

Further work

The late 18th-century material from site 34-5 could be compared with that from the 2006 phase of this project, for which a similar period of occupation was suggested. It is likely that documentary and cartographic study would identify the site and provide more social context for the finds, as well as a tighter chronology. Such a study would have to include detailed study of the red earthenware fabrics and reconstruction and illustration of as many vessels as possible. No good estimate of the scale of this project can be made without a re-examination of the material as a group but there are 92 individually recorded rims from post-medieval vessels from the site, each of which would have to be either drawn or assigned to a type. At the least, this might involve 20-30 illustrations and 5 days work (£1000 plus VAT at 2007/8 rates). There are also eight distinct redware groups, based on method of glazing or decoration. To establish how many centres these were made at would require half a dozen samples of each ware, i.e. 48 samples. Thin section and chemical analysis of these would cost £2400 at 2007/8 prices.
