SUMMARY SHEET

Site name/Address: No 80 Hardwick Lane, Bury St Edmunds	
Planning application: DC/13/0594/HH	
Parish: Bury St Edmunds	District: St Edmundsbury BC
NGR: TL 8534 6290	Site Code: BSE 444
Type of Work: Inspection and recording of two hand excavated evaluation trenches across the footprint of the planned new garage in the south-eastern corner of the overall plot.	Site Director/Group: John Newman Archaeological Services
Date of Work: 18 March, 2015	Size of Area Investigated: Two 2.80m long & 900mm wide trenches excavated on an east-west orientation and 900mm apart Current land use: Shingle covered drive
Location of Finds/Curating Museum: NA	Funding source: Mr S Steele
Further Seasons Anticipated?: Yes	Archaeological interest: The site is in the general area where previously Early Anglo-Saxon burials have been recorded.
Final Report: NA	
Periods Represented: None	
SUMMARY OF FIELDWORK RESULTS: (See also Fig & Images) The two trenches had a similar deposit profile with 250mm to 300mm of clean mid brown sandy subsoil below a thin shingle layer for the drive and above the locally occurring natural orange sand with small flints and chalk fragments where no archaeological features were revealed.	
Conclusion: The results from this small scale evaluation supports the findings of a previous monitoring for an extension at the house further suggesting that if the scatter of Early Anglo-Saxon burials recorded in the Barons Road/Hardwick Lane area extend to this area then their density appears to be low.
