Archaeological assessment of the M42, junctions 1-7A: stage 1 desk based evaluation

Edited by J D Hurst

1 Summary

Desk based evaluation of the route of the M42 from junctions 1 to 7A has revealed a considerable number of sites of potential archaeological interest. These include areas of ridge and furrow cultivation, areas of ancient woodland and other features, such as 'old clay pits'. This information will be useful in defining a strategy for field investigation.

2 Introduction

An archaeological desk based evaluation was undertaken along the route of the M42 in advance of proposed widening to four lanes in either direction. The assessment was conducted along the whole length of the motorway through three counties (Hereford and Worcester, Warwickshire, and West Midlands). The length of each county section of motorway was 13km, 13km and 14km respectively. Archaeological information for the areas of Warwickshire and the West Midlands was provided by the Field Archaeology Section of Warwickshire County Council and the Joint Planning and Transportation Data Team of the West Midlands Planning and Transportation Subcommittee for inclusion in an overall assessment by Hereford and Worcester County Archaeological Service. The specification was presented by Ove Arup (Ove Arup 1992a and b), and augmented by a tender presented the County Archaeological Service (HWCC 1992).

Scope

The extent of the study area was defined as 0.5km on either side of the motorway from

Junction 1 to 7A. This established a total corridor width of 1km over a total motorway length of 40km and covering 40km².

The desk based evaluation was based mainly on information contained in the respective County Sites and Monuments Records, cartographic material, aerial photographs, and selected secondary sources.

3 Aims

The aim of the desk based evaluation was to identify all known sites of archaeological interest within 500m either side of the M42. This was defined in the archaeological study document (Ove Arup 1992a) as the location, recording and assessment of the nature, significance and extent of archaeological features within the study area; areas to be defined around individual archaeological features.

The results have been used to enhance the County Sites and Monuments Records and in the preparation of this report, which includes the following:

1 Written report, including lists of sites with data in selected fields, print-out of records registered with the County Sites and Monuments Record (CSMR) and brief assessment.

2 Constraints maps showing sites of archaeological interest at 1:10,000.

First edition Ordnance Survey 25" and 6" maps

1976/77 1:5,000 Black and white vertical aerial photographs

1990 1:3,000 colour vertical aerial photographs

National Archaeological Record for parishes of Solihull,
Bickenhill, Hampton in Arden and Hockley Heath.

FIG. 3.4 IN
WEST MIDLANDS

4 Hereford and Worcester section (Alvechurch, Beoley, Bromsgrove, Tutnall and Cobley, Wythall)

4.1 Background

Geology

The geology is mostly solid except for occasional deposits of alluvium and river terrace sands of the Avon Terrace (British Geological Survey 1:50,000 sheet 183), and some more substantial areas of Boulder Clay in between Bromsgrove and Alvechurch.

The solid geology consists mainly of Mercian Mudstone Group interspersed with narrow bands of mudstone and siltstone usually referred to as skerry. At the west end of the survey transect several deposits of sandstone are represented (Kidderminster formation, Bromsgrove and Wildmoor sandstones).

Soils

The soils are identified as belonging to the Bridgnorth, Brockhurst, Clifton, Whimble, Worcester, and Oak associations. Except for Bridgnorth these are either poorly drained or seasonally waterlogged.

4.2 Methods

The 1km wide survey transect was plotted onto a 1:10,000 base map (OS 1:10,000 plan sheets SP 07 SE, SP 07 SW, SO97 SE dated 1990) according to the detailed project specification (HWCC 1992). A total area of 13km² was defined as within the desk based evaluation zone. This included parts of five civil parishes. From west to east these are Bromsgrove, Tutnall and Cobley, Alvechurch, Beoley, and Wythall.

A series of record criteria determined by the specification were observed throughout the assessment: primary record number, cross reference to other sites, site name, county, district, parish, national grid reference, status, national monuments record number, form, period, type, subtype, description.

The County Sites and Monuments Record (CSMR) held by Hereford and Worcester County Council was consulted, and all sites

included in the desk based evaluation area were directly copied using the record criteria listed above. These were mapped onto the constraint map, and the location data was checked.

Prior to the commencement of the desk based evaluation a preliminary assessment of the route had identified 66 sites of archaeological interest.

CSMR enhancement

A range of sources, both documentary and cartographic, were consulted in this study (Appendix 1.3).

Information of archaeological interest was transferred from early map editions of the Ordnance Survey. These included the 1831 1-inch map (OS Old Series), and the 6-inch and 25-inch series maps as follows:

6-inch	date	CRO ref
sheet 16 NW	1883	BA6394/1 b705:758
sheet 16 NE	1883	BA6394/1 b705:758
sheet 16 SW	1883	BA6394/1 b705:758
sheet 16 SE	1883	BA6394/1 b705:758

25-inch	date	CRO ref
sheet 16/5	1883	*BA 1524 f250.1
sheet 16/6	1883	*
sheet 16/7	1883	*
sheet 16/8	1883	*
sheet 16/9	1883	*
sheet 16/10	1883	*
sheet 16/11	1883	*
sheet 16/12	1883	*
sheet 17/5	1938	x899:156.71 BA5897
sheet 17/9	1917	x899:156.71 BA5897

*Viewed on microfilm (CRO x970.5:1163 BA 10510(i)).

Field names and boundaries on tithe maps were transcribed as follows:

Parish	Date	CRO reference
Alvechurch	1843	BA1572
Beoley	1843	s760/36 BA1572
Bromsgrove	1840	x760/46 BA1572
Tutnall	1839	s760/564 BA1572
and Cobley		
Wythall	1840	x900 BA 10603**

****Poor quality microfilm copy only available at the CRO. Original available at Public Record Office (PRO ref IR 29/39)**

Field names adjudged to be of archaeological significance (with reference to Field 1972 and Foxall 1980) were plotted on an overlay to the base map.

Other selected cartographic sources were also consulted (Appendix 1.4).

Secondary sources (see bibliography below and Appendix 1.3) were consulted at the CRO local history library (St Helens Worcester) and County Archaeological Service library (Hereford and Worcester County Library).

An index list (dated 1990) of monuments on the National Archaeological Record (NAR) of the Royal Commission on the Historical Monuments of England (RCHME) based at Southampton was checked against the CSMR. In addition current printouts of the National Monuments Record (NMR) for parishes in the assessment zone were provided by the NAR.

Aerial photographs held by the County Archaeological Service had previously been largely incorporated into the CSMR. Additional aerial photographs not yet included were located. This included photographs held by the CRO (County Hall). A cover search for the assessment zone was commissioned from the Aerial Photographic Unit of the Royal Commission for Historical Monuments (RCHM) based in Swindon. The produced a list of approximately 231 photos (verticals ranging in date from 1941 to 1969). Absence of staff at the RCHM offices at Swindon and Acton (London) temporarily prevented a visit to view photos in this collection. A run of 1:3000 colour prints taken by Geographical Services (Southampton) Ltd (provided via Ove Arup) was also viewed.

The schedule of Listed Buildings (DoE 1986) was consulted.

Information about the extent of ancient woodland, and areas of special landscape value in the County (Whitbread 1986) was also recorded where available.

For geological background the relevant British Geological Survey maps were consulted. The form and volume of borehole data held by Ove Arup made it impossible to easily extract any relevant archaeological information. This direction was, therefore, not pursued in detail.

4.2 Results

The preliminary total of 66 sites was extended to 154 (Appendix 1.1).

4.3 Analytical discussion

The following discussion identifies different themes with general areas of interest aiming to focus the fieldwork phase on particular aspects of potential significance.

It is apparent that little systematic archaeological fieldwork has been undertaken in north-east Worcestershire, except on buildings. Synthetic survey of this region is also limited, and where it is available it is mainly based on historical sources. For instance, Hooke (1981, 168-9, figs 3.7-8) includes the area in her major research on the Anglo-Saxon period in the west midlands.

The absence of systematic fieldwork has led to the dominance of cartographic, place-name, and aerial photographic evidence, with relatively little provided through fieldwork. These types of evidence obviously favour the identification of certain types of site, notably earthworks, to the detriment of others.

In general comparison between the first edition Ordnance Survey maps (1883) and modern maps showed the extension of conurbation that has recently occurred at the west end of the desk based evaluation area to the north of Bromsgrove. Otherwise the landscape seems to have undergone little visible transformation since the first maps of the 1830s and 1840s were produced. Most of the sites identified to date are earthworks

recorded on the first edition OS maps, or from aerial photographs. There are only a small number of recorded historic buildings

Several major positive themes have emerged from the desk based evaluation. The historical study by Hooke for the Anglo-Saxon period does demonstrate that this part of Worcestershire was probably heavily wooded in this period. Certainly some field and place-names in the present assessment include several 'wood' (eg *Linthurst* - SO 9930 7250), and 'tree clearance' names (eg *ridding* - HWCM 15533).

The field and place-name evidence is also useful for determining the presence of medieval field systems (eg possibly 'Moorfield' in Beoley). The survival of agricultural field features as earthworks has also occurred in the area as is clear from aerial photographic records. Ridge and furrow was well represented especially in Alvechurch parish where it matches the *furlongs* depicted on a 1792 map (eg HWCM 15498 and 15499). It is clear therefore that arable agriculture was a significant element of the landscape from the medieval period.

Some of the field names make reference to the crops being grown, but most of these did not appear to be of any great antiquity. A reference to lint or flax in the name 'Linthurst' may be associated with the growing of flax in the 16th-18th century (Grant 1939).

The pattern of medieval settlement in this part of Worcestershire has not been researched. There are some indications that it may have been fairly dispersed in character. Domesday and Medieval Bromsgrove in particular is associated with a high number of *bailiwicks* which may have been small settlements outside an estate centre in Bromsgrove. The current pattern of isolated farms, some of which share the same names as the *bailiwicks* (eg 'Shepley' - HWCM 334) could reflect this earlier pattern of settlement organisation.

The main type of site that was added to the enhanced CSMR was the 'quarry'. A large

number of these were shown on the 19th century maps where they were referred to as 'old clay pits' (eg HWCM 15480). Their function remained uncertain, though it is perhaps most likely that they are related to the agricultural practice of marling. This practice was noted by early 19th century authors as widespread and well established in the north part of Worcestershire. However, the suggestion from some cartographic and field name evidence that bricks and tiles were made in the area may mean that they originate as industrial clay pits. Attention has been drawn to the presence of medieval tile makers in the Bromsgrove area by Hurst (1990, 248), and further support for this contention is given by the manor court rolls (Baker, 1963). Other uses are also possible the most obvious of which is for watering stock.

No sites were readily identified as to be of great potential most being fairly common elements of relatively recent periods and not obviously related to sites of former occupation. For the early periods especially this is possibly a reflection of the absence of fieldwork rather than an indication of low densities of occupation. The characterisation of the medieval and post-medieval periods of relatively little settlement identified through documentary sources has yet to be tested.

A preliminary assessment, however, suggests that one of the main objectives of fieldwork should be to examine the possibility of remains of small medieval settlements at Radford, Allcot, and Febley. Other wider landscape features such as the extent of ridge and furrow may relate closely to the development of these. Another theme may be the investigation of significance of the extensive scatter of 'clay pits, across the area.

4.4 Conclusion

A total of 88 new sites have been identified during the desk based evaluation. This information related to a variety of different periods, the medieval and post-medieval periods being well represented. The information was gathered from documentary

and cartographic sources in order to identify areas of potential archaeological significance. It will be used to determine the areas of known archaeological interest for the next phase of archaeological survey.

5 Warwickshire section (Tanworth in Arden, Little Packington, Coleshill)

John C Hodgson MA AIFA Sites and Monuments Record Officer
Candida Stevens Archaeological Assistant

5.1 Background

Geology

The solid geology of the northern section of the M42 corridor is largely Mercian Mudstone with a band of Arden Sandstone. Drift deposits include some glacial sands and gravels in the vicinity of Coleshill (Geological Survey of Great Britain Sheet 168 Solid and Drift).

The solid geology of the southern section of the M42 corridor is largely Mercia Mudstone and Arden Sandstone with drift deposits of boulder clay and some glacial sands and gravels.

5.2 Method

The limits of the area of desk based evaluation were marked onto a 1:10,000 base map (500m either side of the M42, 1km in total width). The corridor has a total length of approximately 13km in two separate sections within Warwickshire. The current civil parishes crossed by the route are Tanworth in Arden, Little Packington and Coleshill.

The relevant 1:10,000 Ordnance Survey sheets are SP07SE, SP17SW, SP18NE, SP28NW, SP28SW.

The kilometre grid squares covered by the corridor are SP0772, SP0773, SP0872, SP0873, SP0972, SP0973, SP1071, SP1072, SP1073, SP1171, SP1172, SP1271, SP1272,

SP1273, SP1274, SP1371, SP1372, SP1373, SP1374, SP1888, SP1889, SP1985, SP1986, SP1987, SP1988, SP1989, SP2084, SP2085, SP2086, SP2087, SP2088.

The CSMR was consulted and all sites within the corridor were mapped, and selected information in the records extracted. References in the CSMR were checked and new sites and information added to the record.

A search was conducted with the NAR for any sites not recorded in the CSMR, but none were found.

The desk based evaluation area was checked against the first edition Ordnance Survey maps at the 6" to one mile and 25" to one mile scales (see Appendix 2.4 for list of sheets consulted). All information thought to be of interest was transferred onto the map sheets and are listed in Appendix 2.2.

Searches were made for estate and tithe award maps covering the corridor (see Appendix 2.4 for a list of sources consulted). Field names and the extent of a deer park (WA 3683) were recorded on a plan of Coleshill parish of 1783 (CRO Z.115 (u)) - see constraint map and overlay - but little other information was obtained.

Additional sources were consulted in the CRO and the local history section of the County Library.

All vertical and oblique air photographs in the CSMR were checked. These include copies of relevant NMR air photographs, Warwickshire Museum photographs, RAF 1:10,000 survey, and OS 1:7,000 scale vertical cover. A cover search for additional air photographs has been requested from the NMR and the results should be sent direct to the County Archaeological Service of Hereford and Worcester County Council. Air photographic cover of the corridor taken in 1976/77 for Solihull Borough Council was examined. All air photographs transcriptions held in the CSMR were used in the assessment and are included on the constraint maps. This included a plot of ridge and

furrow cultivation in the parish of Tanworth in Arden. Ridge and furrow was also plotted for the remainder of the corridor from available air photographs. As the photographs used in this process date from the 1940s to the present, there is no guarantee that all the transcribed ridge and furrow survives.

The status was determined from the listed buildings lists (DoE 1989 List of Buildings of special architectural or historical interest: District of North Warwickshire). Extracts from this are included in Appendix 2.3.

The provisional Warwickshire inventory of ancient woodland was consulted, and all areas of ancient semi-natural and ancient replanted woodland within the corridor have been marked on the constraint maps. The definition of ancient woodland is:

Ancient woodland sites are those which have had a continuous woodland cover since at least 1600 AD to the present day and have only been cleared for underwood or timber production. A wood present in 1600 AD is likely to have been in existence for centuries (Lean and Robinson 1989, 16).

5.3 Results

In an initial search through the CSMR a total of thirteen sites were located within the corridor. An additional site was added during the assessment, together with additional areas of ridge and furrow cultivation and features of possible interest marked on first edition OS maps. A total of fourteen sites are therefore recorded within the desk based evaluation area, together with areas of ridge and furrow and other features of possible significance.

The data on the fourteen sites is included in Appendix 2.1, which contains selected information from the CSMR.

Constraint maps are also supplied at 1:10,000 scale, showing constraint area based on land parcels.

5.4 Discussion

Overview of the available archaeological information

Archaeological research in the area of this study has not been intensive. Solihull Archaeological Society investigated the route of the M42 in Tanworth in Arden (Della Hooke pers comm) prior to construction, and survey was also carried on the northern section (Demidowicz 1984). No other surveys are recorded in the CSMR. Air reconnaissance for archaeological purposes has also been relatively limited, due in part to the restricted zone around Birmingham airport.

A more detailed assessment of the archaeological information is discussed below for each 1:10 000 map sheet.

SP07SE

The M42 crosses the route of a Turnpike road (WA 4806) at Junction 3, but this would appear to have little archaeological implication. The site of a windmill (WA 101) lies within an area recorded as ancient woodland which is cut by the route of the M42, and two other areas of ancient woodland lie adjacent to or on the route of the motorway. There may be a potential for the survival of earthwork sites within these woodland areas. No ridge and furrow cultivation has been recorded in any fields immediately adjacent to the M42, although there are twelve fields with ridge and furrow within the corridor on this map sheet.

SP17SW

No archaeological sites are recorded immediately adjacent to the M42, although there are three within the corridor on this sheet (WA 1080, WA 1082, WA 1090). Sixteen fields with ridge and furrow cultivation are cut by the M42, with a total of 71 fields with ridge and furrow cultivation within the corridor on this sheet. Four areas of ancient woodland are cut by the M42, and there are seven areas of ancient woodland within the corridor on this sheet. There may be a potential for the survival of earthwork sites within these woodland areas. The field name 'Brick Kiln Close' at SP130722

indicates brick-making activity at this location and is related to other such localities to the north of Umberslade Park. The M42 crosses the Stratford Canal (WA 4330) at SP134738.

SP28SW

The only archaeological site on this sheet is the route of a Turnpike road (WA 4782).

There is no apparent archaeological implication associated with this. No areas of ridge and furrow cultivation or ancient woodland are recorded on this sheet.

SP28NW

The only archaeological site on this sheet is the route of a Turnpike road (WA 4782). There is no apparent archaeological implication associated with this. No areas of ridge and furrow cultivation or ancient woodland are recorded on this sheet.

SP18NE

Three recorded sites lie immediately adjacent to the M42 on this sheet: the site of an imperial brickworks (WA 293); Wheeley Moor Farmhouse (WA 6408); and an earthwork site (WA 4884). It is likely that these sites may be affected by the proposed works.

A cropmark/soilmark site (WA 4846) may also be affected, together with the moat and later buildings at Coleshill Hall (WA 289 and WA 290). The M42 also passes through the area of Coleshill Park (WA 3683).

One field with ridge and furrow cultivation is cut by the M42, with a total of four fields with ridge and furrow cultivation within the corridor. There are no areas of ancient woodland recorded on this sheet.

5.5 Conclusions

A total of fourteen archaeological sites have been recorded within a 1km corridor along the route of the M42 in Warwickshire, together with 87 fields with ridge and furrow cultivation and ten areas of ancient woodland. This information has been used to identify areas of potential significance and in defining a strategy for field investigation.

6 West Midlands section (Solihull, Bickenhill)

Neil Lang BA MIFA

6.1 Background

The desk based evaluation presented in this short report gives details of sites in a 1km corridor for the sections of the M42 within the West Midlands County.

The report provides:

i A print out of all sites within the corridor of the fourteen fields specified in the evaluation brief. Please note that 'Parish' is not currently filled in for the majority of West Midlands sites, and 'Subtype' is not a field used by the West Midlands CSMR. 'NMR Number' is not currently included, as systematic checking of NMR records has not been undertaken for the County, though records derived from the OS have their numbers included. The numbers on the form refer to field tags used by the CSMR, and may be useful in cross referring to the CSMR records. The order of fields follows that in the brief.

ii Constraint maps. These are taken directly from the relevant OS map sheets. Other information derived from aerial photographs and First edition OS has been sketched onto this base map for re-drawing at a later stage. This information has not yet been included in the CSMR. Sketch plots of the extent of ridge and furrow include areas where ridge and furrow appears as a crop or soil mark. The majority of the ridge and furrow in the Solihull section of the M42 appears to have been ploughed flat.

iii Plots showing a 50m and 500m buffer (100 and 1000m corridors) around the M42, with the

background distribution of sites

6.2 Methods

The first edition Ordnance Survey maps

The information in this section is based on the study of the first edition OS 25" and tithe maps. Any possible features have been marked on the modern 1:10,000 CSMR map.

The first edition 6" maps were not available. Two second edition 6" maps examined did not give any additional information.

The feature types which have been noted are as follows:

- i) Sites of buildings marked on the modern map which are also evident on the first edition maps and which do not have a CSMR reference.
- ii) Sites of buildings shown on the first edition maps which are not evident on the modern map and which do not have an CSMR reference.
- iii) Map evidence of pits. The first edition map key defines the symbol which these features are indicated by as 'Clay Pit'. However the symbol is sometimes ambiguous and may reflect other pit types or contours.
- iv) Ponds which denote a moated site, or other features of archaeological interest.
- v) Field names which may have an archaeological implication.

All features have been given a letter on the map and notes relating to each are on this sheet.

Field name sites with their tithe map number are outlined in green. An index for this is also on this sheet.

6.3 Results

See Appendix 3.1.

6.4 Discussion

Sites within the desk based evaluation area

Within a 100 metre corridor, the following sites would be affected: WM 3064, WM 3127, WM 4531, WM 4549, WM 4534, WM 4532, WM 4524.

SP17NW

The M42 finishes at Monkspath on this edition, therefore the line of the road has been estimated from here to the end of this sheet only.

AA) Square 'pit' with pond marked on first edition Ordnance Survey (on modern SP17SW with bigger pond). Possible moat?

BB) Marked on as pit, first edition Ordnance Survey.

SP17NE

A) Moat (?) shaped ponds first edition Ordnance Survey shows this as one pond and slightly smaller (less like a moat).

B) On first edition Ordnance Survey as Blythe Hill House. Feature to north-west within constraint area marked on modern map but not shown on first edition.

C) The tithe map shows a distinct moat shape here. This is not evident on the first edition Ordnance Survey, although some contour marks (faint) can be seen. It is named Widney Farm on the latter.

D) Moat shaped pond? But only the smaller round pond shows on first edition Ordnance Survey. Fieldname 952 is 'Marlpit Close' which probably refers to this feature.

E) Site of 'Blythe Hurst' and 'The Nest' on first edition Ordnance Survey. E1 is the site of an un-named building complex also on the first edition Ordnance Survey and tithe map. E1 is largely built on the M42. E is

not on the tithe map.

F) Clay pit marked on first edition Ordnance Survey.

G) Building on first edition Ordnance Survey.

H) Possible feature? on first edition Ordnance Survey.

I) Cow Hayes Farm, on first edition Ordnance Survey. Present building c 1940s after fire destroyed predecessor (Sue Bates pers comm).

J) An ambiguous, possible feature. The tithe map shows a feature similar to the remains of the moat at Henwood Priory (WM 1666), although the two possible arms do not align so well. The area is shown as being wooded on the first edition Ordnance Survey.

K) On first edition Ordnance Survey.

L) On first edition Ordnance Survey.

SP18SE

M) Hampton Lane Farm, on first edition Ordnance Survey.

N) Two pits marked on first edition Ordnance Survey.

O) Pit marked on first edition Ordnance Survey. Shown more rectangular than on modern map.

P) Heathath Farm, on first edition Ordnance Survey.

●) Home Farm, on first edition Ordnance Survey.

R) Feature?, on first edition Ordnance Survey.

S) Feature on first edition Ordnance Survey.

T) Pit on first edition Ordnance Survey.

U) Small building (barn?) on first edition

Ordnance Survey.

V) Site of Warren Farm shown on first edition Ordnance Survey. Unsure of exact location. May be under the road or towards the exhibition centre. Pit named 'Old Marl Pit' slightly to south-east of site on first edition Ordnance Survey.

SP28SW

W) Cottage Farm, on first edition Ordnance Survey.

X) Bickenhill Common Farm, on first edition Ordnance Survey.

SP18NE

Y) Firfield Farm, on first edition Ordnance Survey.

169 Gorsey Pit Piece

6.5 Conclusions

Desktop assessment of the West Midlands section of the M42 shows that there are a considerable number of potential sites of archaeological interest. Many of these are areas of ridge and furrow representing earlier arable agriculture. There are also earthwork

features, 'old clay pits', of unknown function, but other better known classes of monument are also represented such as moated sites of medieval date.

7 General conclusions

J D Hurst

The desk based evaluation has succeeded in identifying a significant number of new sites which will be examined in more detail in the ensuing fieldwork stage.

The main themes that have emerged along the length of the M42 are the extent of surviving earthworks, probably of medieval to post-medieval date. The majority of these are evidence for the extent of arable agriculture and recording this in more detail will lead, in particular, to a better understanding of medieval and later settlement in the area. An important theme may also turn out to be the extent of rural industry in the north-east region of Worcestershire as evidenced in the form of clay pits scattered across the area. The possibility of rural industries such as tile and brick making is certainly hinted at in the historical sources, though this has hardly yet begun to emerge in the archaeological record.

Apart from the direct physical affects on individual archaeological sites the desk based evaluation has highlighted the need to consider the features of the later landscape (see above) as a group rather than in isolation.

Status	-
NMR no	-
Form	-Documentary
Period	-Roman
Type	-Communications
Subtype	-Road
Description	-Suggested route of Roman road. For next 3 miles to Bromsgrove the course is not yet proved, although traces of a raised road were reported near Lickey long ago in a position not now known. If the line through Bromsgrove was continued to Lickey, as seems most likely, it would have gone through Lickey End, Yew Tree Farm and Lickey Square on a line that is now very close to a stream, and this maybe the reason why this part of the route was later abandoned. Where it joins the obvious road at Bromsgrove there does seem to be a definite ridge along E side of stream just as continuation of line would run {1}. Gravel applic on edge of road line at 98277396 rejected? {2}

TWENTY-FIFTH LIST OF BUILDINGS OF SPECIAL ARCHITECTURAL OR HISTORIC INTEREST
COMPILED UNDER SECTION 54 OF THE TOWN AND COUNTRY PLANNING ACT 1971

HIEREFORD & WORCESTER

BROMSGROVE DC

ALVECHURCH

SP 07 SW

Gate piers and gates
about 5 metres east
of Longfield Manor

GV

II

Gate piers and gates. Late C17 with late C19 additions. Sandstone ashlar and wrought iron. Two plain square piers with moulded cornices and ball finials, pair of wrought iron gates with spear-headed rails. Longfield Manor is not included in this list.

SP 07 SW

ALVECHURCH CP

6/2

Barn and cow house
about 20 metres north
of Longfield Manor

GV

II

Barn and cow house. Probably 1799, with some mid-C20 alterations. Brick with concrete tile roof. L-plan, barn extending to south-west, cow house with granary to south-east. Barn: four roof bays, one bay to left has a stable door, other three bays are barn with central threshing floor, other front has a gabled porch to floor, hit-and-miss ventilators; cow house has one storey with loft over, dog-tooth brick cornice; ground floor: six openings with shallow segmental heads and boarded doors, to right-hand end a two-storey building with granary on first floor, dovecote in gable, and external steps to right-hand wall. The date 1799 is cut in a brick to right of blocked entrance to ground floor of granary. Longfield Manor is not included in this list.

For description see under Nos 1 & 3 Red Lion Street (west side).

6/17

The Old Rectory

II

Rectory, now house. Second half C15, clad and raised in early C18, with late C19 and some late C20 alterations. Timber-frame clad in painted brick with tile roof. H-plan, hall range aligned east/west with two-bay hall to east, two-bay service to west; west cross-wing a later addition, east cross-wing at upper end is also C15. Garden front (south): the two gabled cross-wings project slightly, that to left has a stone coped verge and a blind window to the attic, bands to ground floor; right-hand wing has two bands and main range one to ground floor; 1 + 7 + 1 windows: 2-light casements to cross-wings, others are timber cross-windows (there is a further narrow window at each end of the main range, which is blocked); ground floor similar except for entrance in place of the window to right of centre and French casements to cross-wings. Main entrance in north front has a C19 gabled porch. Lateral stack to east cross-wing is of brick on a stone plinth with two stumps of 6-point star-plan shafts. Interior: exposed framing visible in most rooms of east cross-wing, which also has a C18 staircase with turned balusters. (Typescript report and drawings by S J Price (1984) in files of Department of Local History, Birmingham City Museums and Art Gallery).

Moorgreen Hall

23.4.52

GV

II

House. Late C17 with late C19 and some mid-C20 alterations. Pebble-dashed timber-frame with machine tile roof. L-plan with limbs extending to east and south. The east/west range is of three bays, with four bays to other range; gable-end stack on east gable and on west lateral wall. South front: gabled range projecting to left of two storeys with gable-lit attic; one window: 3-light casement; main range: two storeys with two windows; 3-light casements; entrance in angle with C19 lean-to tiled porch. Framing: four square panels high to the first floor. Interior: first floor room in south wing has a late C17 decorated plaster ceiling; fireplace to east gable on ground floor has a massive lintel formed of one slab of stone, beam in same room has an ovolo moulding.

Gaunts

23.4.52

II

Farmhouse. 1659 for Nicholas Dunn, with mid-C19 and some mid-C20 alterations, and extensions. Timber-frame with brick infill and tile roof. T-plan, cross-wing aligned north/south, other range extending to west. Chimney stack at junction has four engaged brick shafts. Street (south) front: two-storey cross-wing to right has a gable-lit attic, two windows: square oriel to left, canted oriel to right; ground floor: two canted oriels. Inscribed on lintel of blocked door "N 1659 D". Entrance in opposite (north) front. Framing: two square panels high with straight tensions over close-studding on ground floor; gable trusses have two collars and multiple struts.

23.4.52

II

House. 1678, probably for Thomas and Lydia Horton with mid-C18 and later additions, and some late C20 alterations. Sandstone ashlar with slate roof. Central stair hall flanked by two rooms with rear stacks. Two storeys, three windows: two 3-light windows flank a 2-light window, all with stone mullions, datestone over centre inscribed "H/ TL/ 1678 "; ground floor: two 3-light windows flank central C18 porch which has a moulded cornice and two engaged Doric columns. Left-hand gable has a 4-light window to each floor; gable has an exposed timber truss with close-studding. Interior: dividing walls are timber-framed, four square panels high. (Typescript report and drawings by S J Price (1983) in files of Department of Local History, Birmingham City Museums and Art Gallery).

FORTY-SIXTH LIST OF BUILDINGS OF SPECIAL ARCHITECTURAL OR HISTORIC INTEREST
COMPILED UNDER SECTION 54 OF THE TOWN AND COUNTRY PLANNING ACT 1971

SP18NE

7/1

COLESHILL

BIRMINGHAM ROAD
(North-west side)
Coleshill Hall Farmhouse

11

Stable block incorporating farm house. Late C17 with later alterations. Red brick (Flemish bond) with sandstone quoins and plinth coping; massive plain tile roof with hipped ends; brick off-ridge stack. Aligned north-west/south-east; the house occupies the south-east end of the range whereas the rest of the building is devoted to stables. North-east front: 2 storeys. 5 bays: C19 casements with segmental heads. Half-glazed door to left of centre with C19 bracketed canopy. The right hand half of this front is obscured by vegetation. The south-west front towards the farmyard has a central door with heavy chamfered timber frame, leading into a former through-passage. House door to the right flanked by 2 bays of segmental headed casements. The fenestration is otherwise irregular and includes 2 fixed-light glazing bar casements with segmental heads. Inserted doors to the left, and a loft hatch with plank door. Interior: late C17 roof with 2 collars and 2 pairs of queen struts. Reputed to be the former stable block to the now demolished Coleshill Hall.

SP1889-1989

9/2

COLESHILL

BIRMINGHAM ROAD
(North-west side)
Nos. 22 and 24 (Park Cottage)

11

Pair of houses. c.1840. Red brick; half-hipped plain tile roof; brick stacks at junction of main range and rear wing. 2 storeys and gable-lit attic with moulded eaves cornice; 3 windows; 16-pane glazing bar sashes with segmental hood moulds and raised keys. Central panelled door with rectangular overlight and gabled hood on console brackets.

COLESHILL

MAXSTOKE LANE
Duke End
Duke End Bridge (that part in
Coleshill C.P.)

II

Bridge. C18. Squared and coursed sandstone. 5 round-headed arches with cutwaters. Blocked parapets with moulded coping. The other part of Duke End bridge is included in Maxstoke C.P.

SP28NW
8/55
18/07/72

COLESHILL

POUND LANE
(South side)
Pound Cottage

II

Cottage. C17. Timber-framed with plaster infill panels; thatched roof; brick ridge stack. 3-cell range aligned east-west facing north. One storey and attic; 2 tiers of square panels to eaves level, and straight braces. 5-window front: C20 casements, 2 attic dormers with weatherboarded fronts and thatch arched over. Boarded door to left of centre with thatched hood. Interior not inspected.

SP18NE
7/56
11/11/52

COLESHILL

STONEBRIDGE ROAD
(West side)
Wheeley Moor Farmhouse

II

Farmhouse. Early C18 with later additions. Red brick; hipped plain tile roof; brick ridge stack. 2 storeys and attic, with first floor band and toothed eaves band. 3-window front dominated by a central porch/staircase wing with dentilled eaves band and pyramidal roof. Central tall fixed-light glazing bar window to ground floor within a segmental arched recess, blind window above painted with imitation glazing bars. The windows to the main body of the house are C19 or C20 glazing bar sashes within C18 openings with segmental heads; attic dormers with hipped roofs. There is a C20 door to the left return of the porch. 2-storey extension set back to the right. Roughly 3 bays but irregular fenestration. Lean-to extension in front of the left hand bay, its roof continued to the right as a canopy over a plank door. On the right hand side of the rear elevation is a C19 two-storey canted bay with hipped slate roof, C20 French casements and C19 glazing bar sashes. Interior not inspected.

3.1 Selected field lists from County Sites & Monuments Record

CSMR no	-WM64
Site Name	-HENWOOD HALL
County	-West Midlands
Borough	-Sol
Parish	-
NGR	-SP 1834 7869
Site Status	-LB II
OS No.	-
Form	-Roofed building
Period Specific	-C19
Site Type	-Hall
Site Description	-Rebuilt 1824 near site of medieval nunnery. Red brick, tiled roof. 2 storeys, 3 sash windows with glazing bars under cement lintels and keyblocks. Door surround under cornice on consoles. Lower back part with 2 gables, flush casement windows. <1>

CSMRNo.	-WM 65
Site Name	-EASTCOTE HALL
County	-West Midlands
Borough	-Sol
Parish	-
NGR	-SP 1900 7924
Site Status	-LB IIS
NMR No.	-SP17NE 3
Form	-Roofed building
Period Specific	-Medieval
Site Type	-Hall
Site Description	-Eastcote Hall is an early to mid C15 house that had a great hall, facing N and S. In the C18 or C19 the N front of the hall block was rebuilt and most of the lower story of the other parts refaced or rebuilt with brickwork. A square moat filled with water surrounds the house, crossed by a modern bridge over the N side. <1> The building is not outstanding. Pub. survey of moat (25") correct. <2> Eastcote Hall, a large private residence in good condition as described above, but with considerable late and modern restoration and rebuilding; not outstanding. The fine water-filled square homestead moat measures, overall 53m each way. The steep sided arms are 6m to 8m wide and 1.5m to 2m deep. A retaining bank on the W side is 6m wide and up to 1m high. Further W, above the banks of the River Blythe, is a water-filled extension, parallel with the W arm of the moat and formerly linked with it, measuring 85m in length, 8m in width and about 2m in depth. Though the river has cut well below the level of the moat, it probably originally supplied it. The moat is now maintained by surface drainage for the most part. Pub. 1:2500 survey and MSD revised. <3> C15 with remains of 2 bay hall, containing screens passage and open timbered roof.

Close set and patterned timber frame, whitewashed plaster infilling, some refacing in red brick. C16 red brick chimneystacks with moulded caps and bases to diagonally set shafts. Gabled tiled roof. 2 storeys and attics, casement windows, mainly renewed. Early nail-studded main door. <4>

Site Name -BACONS END
County -West Midlands
Borough -Sol
Parish
NGR -SP 1500 8500 ? -
Site Status -LB II

OS No.
Form -Other structure
Period Specific -C18
Site Type -Bridge
Site Description -Remodelling 1764 of earlier bridge, widened on west 1925 and 1970. Stone parapet dated 1764 now removed during last widening. 3 stone arches, 1 slightly pointed probably late medieval, 2 round. Partly in Fordingbridge. <1>

CSMR No. -WM 186
Site Name -WALFORD HALL FARMHOUSE
County -West Midlands
Borough -Sol
Parish

NGR -SP 1861 8030 -
Site Status -LB IIS
OS No. -SP18SE 2
Form -Roofed building
Period Specific -Medieval
Site Type -Farm house
Site Description -C15, it had a great hall of 2 bays with crosswings making the plan H-shaped. In the C16 the great chimney stack was built in the W bay. The N and S fronts show some of the original rectangular framing, the former also retains a curved brace. <1> A farmhouse of no outstanding interest. <2> Walford Hall Farm, wide-spaced half-timbered farmhouse in fair condition. The SE wing has been rebuilt in modern brick. Most features are of C18/C19 date; the building is not outstanding. <3> C15 hall house with cross wings. Altered C16 by raising of hall roof and insertion of 1st floor. West wing rebuilt C16. East wing partially refaced in red brick. Timber frame and red brick nogging on stone foundations. Old tiled roof with gables, oversailing at south end of west wing. C16 red brick chimneystack with 3 star plan shafts, elaboratly moulded caps. 2 storey, flush casement windows with glazing bars, 1:2:1. VCH, IV, p 81. <4>

 OS No. -SP17NW 6
 Form -Earthwork
 Period Specific -Medieval

Site Type	-Moated site
Site Description	-The manor of Little Monkspath is assoc with Simon de Mancetter, who in the C13 settled himself within the Lordship of Tanworth, where a certain large moated place (though the buildings be gone) beareth yet the name of his habitation.' VCH refers to Dugdale and says: The name has been lost, but the moated site is probably that just S of Monkspath Bridge over the Blythe. <2> All but the N arm of the moat destroyed and the N arm itself partly rubbish filled. No building remains are evident and no evidence was found to associate this site with the C13 manorial work of authority 1. Published survey 25", 1964 revised. <3> Remains of a now-dry rectangular homestead moat are situated upon the S bank of the River Blythe. Most of the site has been filled in with the dumping of spoil and rubbish and only the centre position of the N arm together with the NW and NE corners of the island, remain. The E arm is reduced to a narrow drainage ditch, which, with the N arm gives the approx size of the island to be some 25m square. Recent excavation of the site has revealed the N arm to be 24m in width. Externally it was 0.5m deep and was no doubt flooded by the river 30m away. The inner slope is 2m high, being the old bank of the river. The excavations have uncovered cobbled areas over the N half of the island and the stone foundations of 4 circular ovens or kilns on the W side. Their dia. are from 2 to 4m. A narrow stone covered drain leads from the centre of site to W side. <4> The moat must have originally had an entrance and there is a reasonable probability that that evidence for their construction lies outside the moat. Also, there may be structures outside the moat. <5> <6> Excavation, fieldwork, and documentary evidence on this moated site is revealing a small complex of buildings and other activities, such as the production of fish. It may have been the manor house of Simon de Mancetter, lord of the manor of Little Monkspath in the parish of Tanworth, or it may have been the property of the Crewenhale family. The buildings appear to be grouped into two main periods, the first probably starting somewhere in the late C12 or early C13. More details of the early period are still emerging but at the moment no coherent overall plan can yet be seen. The later period dates from the late C13 or early C14 when there appeared to have been 3 ranges of buildings set around a central courtyard with an entrance on the S side. The site subsequently underwent several minor changes before being abandoned in the late C14 or early C15 <7>
CSMR No.	-WM 3064
Site Name	-MONKSPATH HILL FARM
County	-West Midlands
Borough	-Sol
Parish	
NGR	-SP 1470 7572 -
OS No.	-SP17NW 8
Form	-Site of
Period Specific	-C17
Site Type	-Farm house

Site Description -Monkspath Hill Farm appears to have been an early C17 house, facing E, with a cross-wing projecting in front which was added or rebuilt in 1691. A much longer and lower wing also extends E from the S end; this seems to be an C18 addition, but part of it adjoining the main block may be of the original period. In the E gable-head of the short N wing is a round stone inscribed WP 1691 and a smaller added date 1810. The latter refers to the E gable wall, but the N side and W end of the wing are of the 1691 brickwork. The wing has a central chimney with 2 diagonal shafts. The main block has walls of later brickwork but has front and back gable heads plastered, indicating timber-framing: it is also gabled at its S end. At the back is a C17 projecting chimney stack with a plain shaft, it has a wide fireplace. The long S wing overlaps the E gable of the main block. It is of C18 brickwork. N of the house is a long six bay barn with walls of heavy timber framing and 2 great doorways in each side. NGR given by OS as SP 148 757. <1> The M42 interchange at the Stratford Rd resulted in its demolition in 1974. SAG undertook part survey, archive in Warwick Record Office. No mention of building in Archer Survey, 1500. Frame suggested first construction c. 1600.

<2> <3>

CSMR No.	-WM 3071
Site Name	-HENWOOD PRIORY
County	-West Midlands
Borough	-Sol
Parish	
NGR	-SP 1845 7867 -
OS No.	-SP17NE 6
Form	
Period Specific	-C12
Site Type	-Priory
Site Description	-Priory of Benedictine Nuns founded by Ketelberne de Langdon between 1149 and 1161 at a place later known as Heanwood or Henwood. In the C14 there were 15 nuns but the Black Death left only 3 of them and at the Dissolution there were only 6 nuns with the prioress and an aged former prioress. In 1540 the site and the priory possessions were sold to John Higford by the crown for 207.5s.0d. <1> Listed. The founding date is given as 1154-61. Dissolved 1536. <2> 'Henwood Hall which stood on the site of Henwood Priory was pulled down in 1824 but a small modern farmhouse nearby has a number of stones from the nunnery built into the garden walls. Several lines of low banks and depressions in the fields E of the farm probably indicate the actual conventual site.' <3> 'All that remains to identify the site of the Nunnery of Henwood is a number of grass-ground mounds, on the elevated portion of a field contiguous to the farmhouse called Henwood Hall; a large walnut tree marks the spot. The foundations have been dug out, and these elevations are doubtless, formed of the rubbish left. Indications of a moat on the E and N, remaining part of it, on the latter, being banked up to form a pond'. <4>

Small scale excavation trenches dug across the moat produced no evidence of buildings. A trench dug on the site of the walnut tree revealed a stone corner buttress of Norman design, an extension of the trench revealed thick walls and a second buttress 35ft away, return walls were followed for some distance. Probably remains of the end of a large building pointing due east, possibly the priory church. Medieval encaustic tiles and leaded glazing with stained glass found in this trench. Site filled in 1951 following disposal of farm by Mr Dickens. <5> <6>

CSMR no.	-WM 3125
Site Name	-HENWOOD WINDMILL
County	-West Midlands
