EXECUTIVE SUMMARY

This Archaeological Impact Assessment is provided in support of a full planning application for the installation of a Cycle Hire docking station on the footway adjacent to 31-35 Kingsway in the City of Westminster.

The general principles of the docking station design have been developed in consultation with the boroughs, Royal Parks and other key stakeholders. Pre-application advice has been sought from the Greater London Archaeological Advisory Service. This Assessment includes an appraisal of the recorded archaeological remains in the area and the extent to which the docking station would impact on any significant archaeological remains. The groundworks for the docking station will not penetrate deeper than 450mm below the current ground surface.

It is proposed that an archaeological site investigation be undertaken at an early stage of the construction process to ascertain if there are any archaeological remains on the Site. If archaeological remains are identified all groundworks will be undertaken archaeologically and by hand. A written scheme of investigation is appended.

1 INTRODUCTION

1.1 Statement Overview

Cycling within London has experienced rapid growth. It is estimated that there has been a 91 percent increase in the number of cycling trips within London since the year 2000 with around 500,000 cycle trips currently taking place every day. In 2006/07 cycling accounted for 1.6 percent of all modal trips in London and 3.7 percent of all journeys to work within inner London. The Mayor's aspiration is to increase the modal proportion of cycling trips within London to 5 percent and more generally, improve conditions for cyclists. The Mayor has set Transport for London (TfL) a target to increase cycle trips by 400 percent by 2025.

To help achieve this growth TfL has been tasked with implementing the Cycle Hire Scheme within central London by May 2010. The Scheme will deliver around 6,000 bicycles across approximately 400 sites.

The Scheme will allow people to hire a bicycle from a docking station, use it as desired and return it to either the same or another docking station. To ensure the adequate availability of docking points and bicycles for those hiring and returning bicycles, approximately 10,200 docking points at around 400 sites at a density of approximately nine sites per square kilometre are required.

The Scheme has been developed in collaboration with the Royal Parks and the following nine London Boroughs:

- London Borough of Camden;
- London Borough of Hackney;
- London Borough of Islington;
- Royal Borough of Kensington and Chelsea;
- London Borough of Lambeth;
- City of London;
- London Borough of Southwark;
- London Borough of Tower Hamlets; and
- City of Westminster.

1.2 Purpose of the Document

TfL wish to apply for planning permission for a Cycle Hire docking station, comprising a terminal and 17 docking points adjacent to 31-35 Kingsway, WC2.

Following discussions with the Archaeological Advisor to the Planning Authority, Ms Diane Walls at Greater London Archaeological Advisory Service (GLAAS), this Site has been identified as requiring further archaeological intervention.

The document

- describes the archaeological background to the area;
- describes the proposal;
- assesses the likely impact of the scheme on the basis of the available information; and

- provides a written scheme of investigation for further archaeological intervention.

1.3 Methodology

A list of cultural heritage sites has been compiled (Appendix 1) through consultation carried out by Hyder Consulting in April 2009.

The Assessment draws together the available archaeological, topographic and land-use information to clarify the archaeological potential of the Site.

The Assessment comprises an examination of evidence in the Greater London Sites and Monuments Record (SMR). It considers the results of nearby archaeological investigations, incorporates published and unpublished material and charts historic land-use through examination of any readily available historic maps.

Clearly, any information on the depth of overburden for the archaeological assets would be a key consideration in determining whether the construction of the docking station would be likely to impact on archaeology. Detailed discussions to establish the nature of the archaeological potential have been undertaken with Ms Diane Walls and Mr Rob Whytehead at the Greater London Archaeological Advisory Service (GLAAS).

2 ANALYSIS OF ARCHAEOLOGICAL BACKGROUND

2.1 Scheduled Ancient Monuments (SAMs)

There are no SAMs on the Site or within a distance where their setting would be affected by the proposed development.

2.2 Greater London Archaeology Advisory Service

Archaeological Advisor

Ms Diane Walls has commented on the archaeological implications of the development.

Ms Walls had confirmed that the Site lies in an Area of Special Archaeological Priority: Lundenwic and Thorney Island. It lies within the Saxon settlement of London, *Lundenwic*.

Greater London Sites and Monuments Record (SMR) and unpublished archaeological sources

The SMR identifies a number of assets within 100m of the Site and these are listed in Appendix 1. These are reviewed in the text below.

Kingsway itself was planned in the late 19th century and was officially opened in 1905. It was constructed through an area which had been built up since at least the 18th century and within the Saxon Settlement of Lundenwic.

An evaluation was undertaken at the adjacent site of Alexandra House in 1991 by Museum of London Archaeology Service. This found extensive basementing but some Saxon features preserved beneath. Another evaluation at 1 Kemble Street found less truncation and deposits included a layer of 'black earth' sealing the Saxon strata. Such deposits were found deeper than the proposed works.

2.3 Historic Maps

Rocques map of 1746, Horwood's of 1799 and Stanford's of 1862 show properties on Stanhope Street in the vicinity. Those properties were demolished and levelled when Kingsway was built at the end of the 19th and beginning of the 20th centuries. It is possible that deposits associated with those properties will survive beneath the surface of Kingsway and its footway.

3 THE PROPOSALS AND THEIR POTENTIAL IMPACT

3.1 Site Description

The Site lies on the footway adjacent to 31-35 Kingsway. Please refer to the Planning Design and Access Statement for further information.

3.2 Docking Station

The development comprises terminal and 17 docking points. The foundations would be no deeper than 450mm below the current ground level. The form that the foundations will take has not been finalised. Further information regarding the docking station can be found in the Planning Design and Access Statement.

3.3 The Potential Impact

Foundations would be no deeper than 450mm but since post-medieval deposits have been recorded nearby and the Kingsway was constructed only just over a century ago it is possible that post-medieval deposits will be revealed in the proposed works.

Under these circumstances it is proposed that an archaeological watching brief is undertaken so that any such features which are revealed in the course of the works may be appropriately recorded.

4 CONCLUSIONS

This Assessment has revealed that there is potential for significant archaeological remains in the footway adjacent to 31-35 Kingsway in the City of Westminster.

Since post-medieval structural remains have been found in the adjacent plot, it would seem sensible to investigate the Site in case significant archaeological remains exist and, if they do, undertake all the groundworks archaeologically by hand. A method statement for this investigation is attached in Appendix 2. If initial investigation fails to reveal any significant archaeological remains, there will be no need for further archaeological intervention.

Greater London Sites and Monuments Record - Search Report

Enquiry: Report 8307 London Cycle Hire Scheme Kingsway TQ 30659 81171 100m radius search

Thank you for your enquiry to the GLSMR. Please find below all records held on the GLSMR database within the area specified in your request. Please note that there is a backlog of listed buildings and archaeological reports awaiting entry into the system and we cannot guarantee that the information supplied is fully up to date.

*** GLSMR NEWS ***

3-Aug-2006 *Record Sort Order Changed*

The records within the SMR search report are now sorted by 'Name' (and then by 'MonUID') rather than 'MonUID' as this should display multiple records for a single site together in the indexes and report. However, many site names begin with numbers from the address and so records from same street will not necessarily appear together. All new records added to the GLSMR, and those altered during data rationalisation and other projects, are being named with the street name before the number (for example The Street (No. 1), London) so that in future results from the same street will appear together.

31-July-2006 *Full Address Data Added*

The HTML report and XML data file have been altered to include the full address which was perviously missing.

25-Jan-2006 *Listed Building Data and Designations Updated*

All of the Listed Buildings entries within the GLSMR have been updated using the latest dataset from the National Monuments Record and the GLSMR search report (the document you are reading now) has been updated to display the full designation description for the listed buildings encountered within your search area.

*** END ***

NOTE: Please ensure you read this document from a saved version and not directly from the e-mail as this may cause problems with the displayed data and hyperlinks.

If you have any further enquiries, or if you have any problems interpreting the data, please do not hesitate to contact us.

Yours Sincerely,

The Greater London SMR Team

Summary	
Description	Evaluation by B. Barber for Museum of London Archaeology Service, Mar-May 1992; site code BRU 92. (Full excavation took place in 1993; results not yet available, May 1994). A mid-Saxon well was recorded. It was not clear whether the well continued in use into the late Saxon/early medieval period; the backfill contained Late Saxon shelly ware sherds, and was indistinguishable from the overlying layer (082561). PERIODS RECORDED UNDER SAME SITE CODE: Saxon (082556-9); Saxon/medieval (082560); Saxon/medieval/post-med (082561); medieval/post-med (082562-4).

Summary Description	AN ARCHAEOLOGICAL EVALUATION WAS CARRIED OUT BY THE Department of Greater London Archaeology IN OCT/NOV 1991 (SITECODE ALO91). BASEMENTS HAD CAUSED EXTENSIVE TRUNCATION TO ALL BUT MAJOR CUT FEATURES. THE TRUNCATED BASE OF A PIT OR WELL WAS FOUND.(15.66M OD INTO NATURAL GRAVELS). THE FEATURE HAD BEEN BACKFILLED, INCORPORATING BURNT DAUB, CHARCOAL, MIDDLE SAXON POT AND A ROUND HEADED COPPER ALLOY PIN. SAXON OCCUPATION(?) TOGETHER WITH A WATCHING BRIEF BY MOL AT WILD ST(SEE SMR 082388, SITECODE WID 91) SUGGESTS THAT THE SETTLEMENT AREA MAY EXTEND FURTHER EAST THAN HAD BEEN THOUGHT. FOR POST-MED FEATURES ON THE SITE SEE SMR REF 082387.

Summary Description	Excavation undertaken by R Cowie for Museum of London Archaeology Service, March-May'93; site code BRU92. Bone and antler off-cuts were fairly common in Saxon contexts on the site indicating that bone-working took place on or near the site. The bone assemblage was dominated by domesticated species (cattle, sheep/goat and pig). Periods recorded under same site code: Pre-Saxon (083165), Saxon (082556-9, 083166-72), Saxon/Medieval (082560, 083173), Saxon/Medieval/Post-Medieval (082561), Medieval (083174, 083175), Medieval/Post-Medieval (082562-4), Post-Medieval (083176-80)

Listed Building (II)	411499 BRUCE HOUSE	TQ 3081 SE CITY OF WESTMINSTER KEMBLE STREET, WC2 60/9 14.1.70 Bruce House G.V. II Large lodging house. 1907 by W E Riley for London County Council. Red brick with some glazed brown brick and rendering, slate roof. Humane, Arts and Crafts Free Georgian design for a charitable lodging house, incorporating a former dispensary. The large block extends between Drury Lane and Kean Street. Principally of 5 storeys and basement with attic dormers in mansard and mansard gables. Slight asymmetry in the grouping of the 20-bay Kemble Street front with right hand half advanced. Semicircular arched entrance off centre in 1st bay of advance, large semicircular arched ground floor windows. Upper floor windows take the form of narrow 2-light recessed sashes. The rendered facing is applied to the top floor beneath the eaves. 2 mansard gabled attics with dormers between. Return to Drury Lane ends with a staircase tower and 2-storeyed oriel beyond. Lower north wing with return to Kean Street, of 4 storeys, basement and mansard, same details. Good Arts and Crafts area railings of elongated design with ball finialed standards. Listing NGR: TQ3057681120

Type/Grade	Reference/Title	Description
Listed Building (II)	426267 KINGS CHAMBERS	TQ 3081 SE CITY OF WESTMINSTER ST CLEMENT'S LANE, WC2 60/6 No 3 (Kings Chambers) GV II Chambers. C1905 and stylistically close to H Fuller Clarke. Ceramic brick, plain red brick, Portland stone and polished granite, slate roof. Original Edwardian Free Style design for offices. 3 storeys and attic storey. 6 windows wide to St Clement's Lane and 5 windows wide to Portugal Street, the corner canted and developed as cupolared tower. St Clement's Lane front has secondary doorway to left set into ashlar wall face with drip mould-cornice and lay-light with glazing bars above; 2 large office windows and a single window, flat stone mullions and transoms flush with ashlar wall, with glazed stall risers lighting basement. Main entrance, to centre of Portugal Street front, takes the form of a large round arched niche line in green mosaic with good Arts and Crafts/Art Nouveau lettering in gold: "KINGS CHAMBERS" on semi-dome; panelled and glazed door with fanlight follows curve of niche as do the curved plate glass side windows; the niche opening framed by very large broken segmental pediment rising from granite piers and encompassing centre light of tripartite, Ionic columned, 1st floor window. 2 office windows flank entrance niche on ground floor with similar detailing to those on return. Upper floors and attic storey are flanked by through storey canted bay windows. The attic storey is faced in green ceramic brick and rises from bold stone cornice to secondary cornice with pediment in parapet. The corner splay of attic between canted bays has oculus and above the parapet the combination of canted bays and corner splay read as a "tower" crowned by lead cupola. Interesting island block development of chambers with Nos 2 and 4 Portugal Street qv. Listing NGR: TQ3074981201

1 INTRODUCTION

1.1 Purpose of the Document

This document sets out the method for undertaking archaeological investigations on the Sites of docking stations associated with Transport for London's Cycle Hire Scheme.

An Archaeological Impact Assessment has been undertaken for the Site to which this document is attached.

1.2 Planning Background

A planning application is to be submitted for a bicycle docking station as part of Transport for London's (TfL) Cycle Hire Scheme. An Archaeological Impact Assessment has been undertaken to which this generic written scheme of investigation has been attached. Any planning permission is likely to include a condition requiring that no development take place until a programme of archaeological work in accordance with a Written Scheme of Investigation has been submitted to and approved by the Planning Authority. This archaeological work should consist of the investigation of whether there are any archaeological remains within the footprint of the groundworks for the docking station. If the results of the Site investigation are positive then any archaeological features, deposits or finds which lie within the footprint of the docking station groundworks should be preserved by record.

1.3 Specific Aims of the Archaeological Work

The objectives of this archaeological investigation are (not exclusively):

To understand the character, form, function and date of past activities indicated in this area by the archaeological remains;

To record and consider the evidence of the activities present on the Site within the wider context of finds in the area; and

To investigate and record the spatial distribution of activities across the Site in terms of the distribution of features, artefacts and environmental evidence

Although it is usual to include more specific aims than the above, in this instance there is no evidence of any specific remains. However, should these emerge during the works specific project aims shall be formulated and adopted as part of the project design at the start of the post-excavation process.

2 SITE INVESTIGATION

2.1 Methodology

Site Investigation

On the Site, the area of the groundworks will be marked out and the carriageway/roadway/footway surface together with any levelling material shall be lifted by the main works contractor.

An archaeologist shall then investigate the area by hand. This will involve the excavation of small investigative trenches by hand with a mattock and/or trowel. The area of these trenches in plan may vary but should be of sufficient size to determine the presence/absence of any archaeological remains on the Site. On some Sites it may be immediately obvious that the whole area consists of undifferentiated rubble and small holes to confirm this every 5m or so would suffice; on others the Site may consist of more complex deposits which require a more sophisticated approach which investigates the nature of the different features which have been revealed.

Excavations will proceed down to the maximum depth of foundations, however this will be no deeper than 450mm.

Any human remains must be left in-situ, covered and protected. Removal can only take place under appropriate Ministry of Justice Licence and environmental health regulations. Such removal must be in compliance with the Burials Act 1957.

Where no significant archaeological remains are revealed, no further archaeological intervention shall be undertaken.

Further Investigation

Those areas of the Site where initial investigation suggests the presence of features or possible features shall, if necessary, be hand-cleaned to ensure features are properly defined and sufficient information is available to produce a base plan.

Once a Site grid has been established using an EDM or theodolite and this has been converted into the Ordnance Survey National Grid, the stripped surface shall be accurately planned at an appropriate scale (1:50 or 1:100 depending on complexity). Some hand cleaning may be necessary and the archaeological team shall be structured to ensure that the hand cleaning and planning operations run in close sequence. The exposing and planning of the archaeological features shall be undertaken on the same or consecutive days while the uncovered surface is fresh, whether or not those features are exposed by machining or hand cleaning. Should particularly vulnerable deposits be revealed (eg graves or cremations) these shall be given priority.

Where initial data is captured electronically, the archaeologist shall ensure that sufficient points are taken to provide a true reflection of its form in plan. A print out of the plan shall be checked for accuracy on Site.

In addition to capturing plan data, sufficient levels shall be taken across the Site and within any features to support future topographic modelling of the Site.

Large homogenous linear features shall be sampled (a minimum of 10%) and the intersections of features shall be investigated so that their stratigraphic relationships may be recorded. Discrete features, such as pits and postholes, shall be investigated with a minimum sample of 50% (unless it is agreed with the Archaeological Advisors to the Planning Authority that a smaller sample is adequate).

Excavation shall proceed down to the maximum depth of foundations or the undisturbed natural substratum, whichever is encountered first.

Reasonable access to the Site is to be arranged for the Planning Authority's Archaeological Advisors, who may wish to make Site inspections to ensure that the archaeological investigation is progressing satisfactorily.

2.2 Site Recording

Context sheets shall include all relevant stratigraphic relationships and for complex stratigraphy a separate matrix diagram shall be employed. This matrix shall be fully checked during the course of the investigation.

The Site archive shall be so organised as to be compatible with other archaeological archives produced in Greater London. Individual descriptions of all archaeological strata and features excavated or exposed shall be entered using a continuous numbered context system onto prepared pro-forma recording sheets. Sample recording sheets, sample registers, finds recording sheets, access catalogues, and photo record cards shall also be used.

Plans of archaeological features on the Site shall be drawn at a minimum scale of 1:20. Sections shall be drawn at a minimum scale of 1:20.

All archaeological plans and sections shall be on drawing film and would include context numbers and OD spot heights for all principal strata and features.

Other plans shall include a Site location plan, a general plan (e.g. OS 1:1250) showing investigation area and development Site in relation to surrounding locality. These shall be supplemented by trench plans at 1:500 (or 1:200), which shall show the location of the areas investigated in relation to the investigation area, OS grid and Site grid (if any). The locations of the OS bench marks used and Site temporary bench marks (TBMs) shall also be identified.

A photographic record of the project shall be provided. This would illustrate in both detail and general context the principal features and finds discovered. The photographic record would also include working shots to illustrate more generally the nature of the archaeological operation mounted.

2.3 Site Reporting and Archiving

Site Investigation only

In the event of the Site investigation being negative the archaeologist shall produce a report stating that there were no findings, one unbound, six bound hard copies and one digital copy. Four copies shall be provided to Greater London Archaeological Advisory Service.

Should the Site investigation prove positive, a further investigation will be carried out.

Further Investigations

Depending on the outcome of the Site investigation, a further Site investigation will be carried out and this will be proportionate to the findings recovered.

A research archive for the Site shall be produced in accordance with MoRPHE (English Heritage 2006). Within 3 months of completion of field work, the archaeologist shall produce a report, one unbound, six bound hard copies and one digital copy. Four copies shall be provided to Greater London Archaeological Advisory Service. A summary report shall be submitted to a suitable regional or national archaeological journal(s) within six months of completion of fieldwork.

Specialist assessment reports shall be produced if required. The following external specialist services may be required: osteoarchaeology; animal bone; Roman, medieval and Post-medieval pottery and metalwork; pollen; soil micromorphology; snails; plant macrofossils. Pottery reports shall refer to the appropriate type series.

The archive shall be used to produce a report including narrative, illustrations and plans as appropriate. It shall give details of the background to the project, the archaeological evidence recorded during the excavation and the archaeological conclusions that can be drawn.

Following completion of the above, a review of the post-excavation programming shall be held in consultation with the Archaeological Advisor to the Planning Authority and the relevant specialists. At this review stage a timetable including a Critical Path Analysis and the aims of specialist research shall be identified and agreed. This timetable shall also contain agreed monitoring points.

After that review, all specialist reports shall be commissioned and the full post-excavation programme implemented through to full archive report and publication.

Data including a copy of the written archive shall be prepared for accession to the Historic Environment Record.

The material archive and one copy of the Site archive shall be prepared for accession to the Museum of London. Agreement for the long-term curation of the archive shall be made with the Museum of London.

3 THE SITE ARCHAEOLOGISTS

The field team deployed shall include only full time professional archaeological staff. All staff in supervisory positions should be Members of the IFA.

The project shall comply with the Institute of Field Archaeologists Code of Conduct and all relevant Standards and Guidance documents

4 HEALTH AND SAFETY

All archaeological work must be undertaken in accordance with relevant health and safety legislation. It is assumed that CDM regulations will apply.
