# **SUMMARY**

A level 2 standing building survey was carried out on 18-19 December 2017 by Alison Cameron and Alice Jaspars of Cameron Archaeology Ltd. Plans and elevations were hand-drawn and a full photographic survey carried out. Areas excluded were the interiors of Buildings 5, 6, 7 and 10 where there was no access.

The origins of the buildings are Eastside of Craibstone farmhouse (Building 3) which survives with small extensions and the SW and NW walls of a steading (Building 4) which has been partially rebuilt using stone for the former farm steading building. There is no trace of Woodside of Craibstone (Illus 49) which has been demolished. The cottages (Buildings 1 and 2) and Buildings 7-10 are probably early to mid 20<sup>th</sup> century in date; the foundations of Buildings 1 and 2 are constructed of Brownhills bricks not produced before 1937. Buildings 5 And 6 are the latest buildings dating to the latter half of the 20<sup>th</sup> century (Illus 46). The buildings were latterly used by the Rowett Institute.

An archaeological evaluation is required on the associated farmland prior to development but it is recommended that no further work is required prior to the demolition of Buildings 1-10.

## 1 BACKGROUND

- 1.1 The site (Illus 1) is located on the south side of the A96 between Bucksburn and Chapel of Stoneywood. It is centred on NGR NJ 87745 10336, at 70-120m OD in the parish of Newhills.
- 1.2 The work was commissioned by Ben Freeman, Bancon. The site already has an approved masterplan, and Planning Permission in Principle, and the client is preparing to submit an MSC application; Aberdeen City Council require a 7-10% archaeological evaluation of the whole area of the site and this Level 2 standing building survey of Eastside of Craibstone buildings (see Illus 1).
- 1.3 All the archaeological work was carried out in the context of Scottish Planning Policy (SPP) Planning Advice Note (PAN 2/2011) and Historic Environment Scotland's Policy Statement (HESPS) which state that archaeological remains should be regarded as part of the environment to be protected and managed.

## 2 ARCHAEOLOGICAL BACKGROUND

There are no Scheduled Monuments within 1km of the proposed development. There is one site within the development boundary, Eastside of Craibstone farmstead (HES NJ81SE 94). First and Second Edition OS maps show Woodside of Craibstone to the west which has been subsumed into the larger farm.

The Rowett Institute was founded in 1913 with the aim of furthering research in animal nutrition. At the helm was John Boyd Orr, later to become Lord Boyd Orr, who moved from Glasgow to 'the wilds of Aberdeenshire' to become the Institute's first director. When he arrived, there was no Institute building and he started work in a basement laboratory at the University of Aberdeen in Marischal College. At the same time he committed the £5,000 which was available to the building of a granite laboratory block at Craibstone, not far from the present site of the Rowett Institute. At the breakout of the Great War, Orr left the Institute, but returned in 1919 with a staff of four to begin work in a laboratory facility. Orr continued to push for a properly equipped new research institute and finally the Government agreed to pay half the costs but stipulated that the other half was to be found from other sources. The extra money was donated by Dr John Quiller Rowett, a businessman and director of a wine and spirits merchants in London. Rowett's donation allowed the purchase of 41 acres of land at Bucksburn for the Institute to be built on. Rowett also contributed £10.000 towards the cost of the buildings. The money was donated with one very important stipulation from Rowett - "if any work done at the Institute on animal nutrition were found to have a bearing on human nutrition, the Institute would be allowed to follow up this work." The Institute was formally opened in 1922 by Queen Mary with a tree planting ceremony. Although Orr's early research at the new Rowett Institute was initially concerned with the mineral content of pastures and the importance of vitamins and minerals in the diet of farm animals, Rowett's words were soon to be realised and he quickly made major breakthroughs in human health. Having served as a medical officer in the trenches during the First World War, he had seen first-hand the poor health and physique of many of the army conscripts. In the late 1920s. Orr began to look at the relationship between poverty, food and optimal health. His research changed our understanding of the relationship between diet and health - he was the first scientist to show that there was a link between poverty, poor diet and illhealth. He led a study looking at the importance of milk in the diet where he examined the effect on the growth of children. Orr observed that those who grew best had milk in their diets. This ultimately led to the policy of giving children free milk in schools. But Orr's greatest contribution came in the late 1930s in the form of The Carnegie Survey, where he looked at the diet and health of over 1300 families across the UK. The survey data was in the process of being analysed at the outbreak of World War II and the results were used to inform the development of UK food rationing policy, which for the first time was based on a greater understanding of nutritional needs, with special measures to safeguard the health of mothers and children. So effective was this understanding of nutritional needs that the nation's health was said to be generally better at the end of WWII than it was at the beginning. The advances in research continued throughout the post-war period when the Rowett led the way in improving the efficiency of animal production, establishing a global reputation for work in this area. During this period, the Rowett was led first by David Cuthberton and subsequently by Kenneth Blaxter, respectively the second and third directors of the Rowett Institute. The work of Kenneth Blaxter, in particular, had a major impact on practical rearing of farm animals, increasing both the efficiency and costeffectiveness of livestock production. There are large doors on the S wall (D8) and the N wall (D10) and a small door in the W wall (D9). The height of the building has been raised with breeze blocks which have been harled externally and asbestos roofing. Building 7A is 27m NW-SE and 7.2m SW-NE (Illus 34). It is constructed using wooden posts with an open side at the NE (Illus 35-36) and the other three sides being of spaced wooden slats repaired in places using sheet metal (Illus 37). There is a name plate above the NE entrance (Stuart, Old Rayne'). This Dutch barn style of building was presumably used for storage (possibly bails of sileage/haylage) as it was well ventilated.

# 3.11 BUILDING 10

Building 10 is 22.8m SW-NE and 27m NW-SE (Illus 43). It is of a similar construction to Building 7 with a concrete base and vertical wooden slats on the upper section of the walls

(Illus 44) and diagonal slats on the lower section of the walls. There was no access to the interior. There is a large door (D17) on the SE wall and a series of three windows (W31-33) on the NE wall with three wooden ventilators on the roof above (Illus 45). These were inaccessible, and the elevations have been drawn from photographs. The roof is of asbestos sheet roofing material.
