## NOVAR ESTATE WOODLAND CREATION SCHEME ARCHAEOLOGICAL DESK-BASED ASSESSMENT AND WALKOVER SURVEY

## **Summary**

An archaeological desk-based assessment and walkover survey was carried out between 17 December 2012 and 14January 2013 on behalf of Crosscut Forestry and Novar Estate, Evanton in advance of a new woodland creation scheme at Strath Mor near Evanton in Ross-shire. The work was undertaken to assess the nature and extent of any archaeological sites and features likely to be affected within the area outlined for the proposed woodland creation scheme and to inform recommendations for the protection and management of any sites identified. The survey identified two previously unrecorded hut circles and accurately recorded a known hut circle and field system, shooting butts and boundary dykes. The desk-based assessment revealed that the north-west and south-west peripheries of the area had been subject to survey and a watching brief in 1995, 2002 and 2003. Boundary dykes previously recorded within the survey area are included in this report. Mitigation measures are proposed to safeguard the sites during the woodland planting.

#### 1. Introduction

- 1.1 An archaeological desk-based assessment and walkover survey was carried out in advance of a woodland creation scheme at Strath Mor near Evanton (centred on NGR NH 58000 70715) on behalf of Crosscut Forestry was carried out by *Ross and Cromarty Archaeological Services* between 17 December 2012 and 14 January 2013 (Figure 1). The archaeological work was conducted as part of the funding process for the planting scheme.
- 1.2 The purpose of the desk-based assessment and archaeological walkover survey was to identify and record the location and nature of any archaeological features of interest prior to planting, whilst assessing any potential adverse impacts and proposing an appropriate strategy of mitigation.

#### 2. Site Location

- 2.1 The survey area is centred on NGR NH 58000 70715 in the parish of Alness in Ross-shire. An area of approximately 500 hectares, it lies to the north of Evanton, Ross-shire. Strath Mor runs in a north-east/south-westerly direction between the hills of Cnoc Ceislein and Cnoc Gille Mo Bhriannaig (Figure 1). There are several streams and Loch a Chaplaich in the survey area, which form wet, boggy areas in places.
- 2.2 The underlying geology of the site is Middle Old Red Sandstone<sup>1</sup>. The survey area comprises open hilly, heather moorland with the exception of the flat river terraces in Strath Mor and ranges in height from 285m to 523m OD.

## 3. Archaeological and Historical Background

3.1 The survey area forms part of the Novar Estate. Bought in the mid-1760s by Sir Hector Munro, he set about improving the land from swamp and bog into rich farmland. Such improvement brought about social and economic dislocation for the local population<sup>2</sup>.

.

<sup>&</sup>lt;sup>1</sup> BGS 2010

<sup>&</sup>lt;sup>2</sup> Ash 1991, 72-73

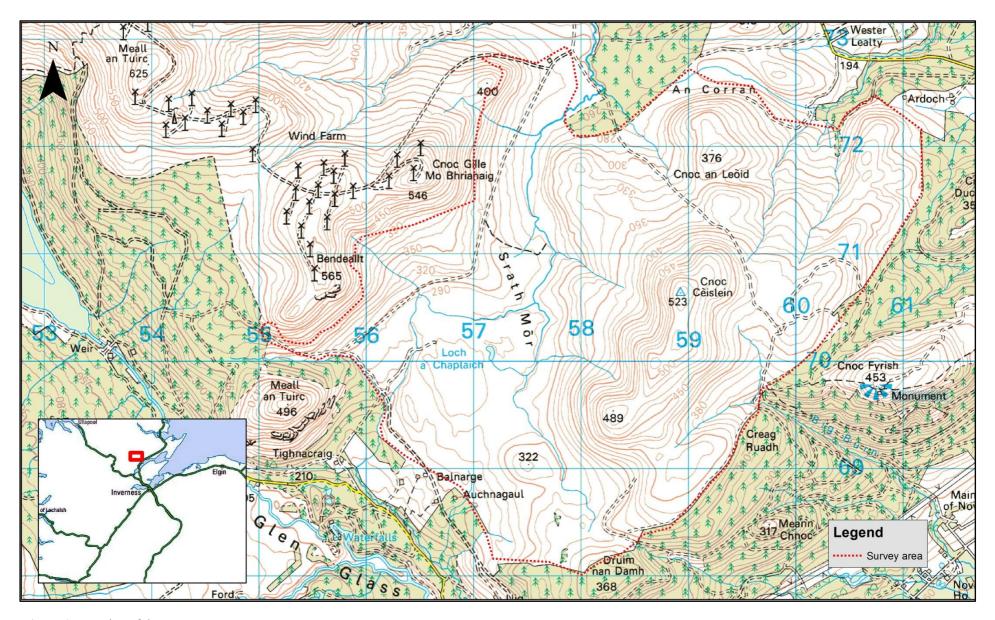

Figure 1: Location of the survey area

Evictions in the late 1790s and early 1800s followed to make way for sheep with no provision being made for the occupants elsewhere, many had to emigrate<sup>3</sup>.

3.2 An archaeological survey and watching brief were carried out ahead of the construction of the Novar wind farm, which is located close to the western boundary of the survey area. Post – medieval structures and boundary dykes were recorded at Balnarge and a prehistoric settlement was discovered at Ballone, both within the current survey area.

# 4. Methodology

The overall aim of this archaeological walkover survey was to identify and record any archaeological sites or features that might be affected by the proposed woodland creation scheme. This would enable informed mitigation measures and recommendations to be proposed to ensure that archaeological sites would not be damaged or destroyed during planting.

#### 4.1 Desk-based assessment

- 4.1.1 A desk-based assessment was conducted prior to commencement of the survey in order to assess the archaeological potential of the area based on previously recorded sites and any historical documentation.
- 4.1.2 A search was made of all relevant records from the National Monuments Record of Scotland (NMRS) and the Highland Council Historic Environment Record (HHER). Online aerial photographs were also checked for any relevant site information where possible, while cartographic and other written records were also assessed for information relating to the area proposed for survey.

## 4.2 Walkover survey

- 4.2.1 The survey area was walked over and surveyed on 17 December 2012 and 11 and 14 January 2013. Conditions were variable: the first day was cold with variable visibility due to patchy hill-fog. The second day was cold and dry with good visibility whilst the third day was generally fine with the occasional snow shower and snow on the ground. The boggy ground and dense heather in areas caused some difficulty in traversing the ground and some of the steeper ground was not covered on foot as it was extremely unlikely that any archaeological sites would be located here. There are good quality aerial images available for the survey area, which were assessed before, during and after the survey to assist in identifying and locating sites.
- 4.2.2 Archaeological sites were recorded individually including using high-resolution digital photography where possible, while sketch survey drawings were produced where necessary. The individual site locations were plotted with a handheld GPS capable of sub-metre accuracy using ArcPad GIS software on a handheld Windows Mobile-based rover. Details relating to the sites can be found in the Gazetteer of Archaeological Sites in Appendix 1.
- 4.2.3 Survey and recording methods from the Royal Commission on the Ancient and Historical Monuments of Scotland (RCAHMS)<sup>4</sup> were employed and all work was conducted in strict

5

<sup>&</sup>lt;sup>3</sup> Richards 2000, 88; 169

<sup>4</sup> RCAHMS 2004

adherence to the *Institute for Archaeologists'* (*IfA*) Code of Conduct <sup>5</sup> and the Highland Council's *Standards for Archaeological Work* <sup>6</sup>.

#### 5. Results

#### 5.1 Desk-based assessment

A desk-based assessment was carried out in advance of the walkover survey in order to assess the archaeological potential of the area based on previously recorded sites and any historical documentation.

# 5.1.1 Historical mapping

Historical maps, unless otherwise stated, were consulted using the National Library of Scotland's online collection<sup>7</sup>

#### 5.1.1.1 Roy's Military Survey of Scotland 1747-54

This is the earliest map to show the area in any detail, which shows a scattering of settlement outwith the survey area.

# 5.1.1.2 Ordnance Survey Six-inch to the mile map 1<sup>st</sup> edition (Ross-shire and Cromartyshire (Mainland), Sheet LXV, surveyed 1874-5 and Sheets LXIV, LIII and LII, surveyed 1875)

The 1st edition Ordnance Survey mapping depicts an unroofed building at *Tighcruinneachaidh* to the north of *Balnard* along with a small field system and tracks running into the boggy hinterland.

# 5.1.1.3 Ordnance Survey Six-inch to the mile map 2<sup>nd</sup> edition (Ross and Cromarty Sheets LII and LXIV, both revised 1902 and Sheets LII and LXV.NW, both revised 1904)

The 2<sup>nd</sup> edition mapping again depicts an unroofed building at *Tighcruinneachaidh* to the north of *Balnard* along with a small field system and tracks running into the boggy hinterland.

## 5.1.1.4 Ordnance Survey 1:25000 Map Revised 2007

The unroofed building at *Tighcruinneachaidh* is shown. Additionally, four sets of grouse butts are depicted: two at Torr Dearg, one at Cnoc Ceislein and one at Coire Mor. A hut circle is shown on the edge of the survey area at Ardoch.

#### 5.1.2 Highland Council Historic Environment Record (HHER)

The Highland Historic Environment Record was consulted online<sup>8</sup> and the following sites were recorded in the survey area:

<sup>6</sup> Highland Council 2012

<sup>&</sup>lt;sup>5</sup> IfA 2009

<sup>&</sup>lt;sup>7</sup> NLS 2012

<sup>&</sup>lt;sup>8</sup> Highland HER 2013

MHG 28205 Cnoc a' Leacachan NH 57600 72600

The remains of three roundhouses and associated clearance cairns survive on the E side of Cnoc a' Leacachan, covering an area of about 2ha. The best-preserved is oval, 11 x 8m internally with a probable entrance to the SE.

MHG 34246 Balnarge NH 56400 69200

This is recorded as a settlement site, but no details are given.

MHG 20087 Bog Buidhe NH 56540 69090

This is a single unroofed building of two compartments as shown on the 1992 OS 1:10000 map.

MHG 32226 South of Achnagoul NH 58785 68563

This is an unroofed building marked on the 1<sup>st</sup> edition OS map.

MHG 7990 Ardross NH 60000 70000

This record refers to several small enclosures or remains of chambered cairns, although it is unclear as to where they are actually located. The suggestion is they are probably in the neighbourhood of Ardross.

MHG 8010 Ardoch NH 60970 72300

In 1972 this site was described as a ruinous stone-walled hut visible as a platform measuring about 11m x 9.5m with traces of a stone wall around the north half. The south-west arc is mutilated by a track. The hut is crossed by a fence. To the south of the hut is an area of stone clearance heaps, probably from contemporary cultivation plots. There is also a smaller area of clearance heaps at NH 611 718.

EHG 159 Walkover Survey NH 57593 67640 (centroid)

A walkover survey was conducted by the Centre for Field Archaeology, University of Edinburgh in 1994, which included a small part of the current survey area in the vicinity of Balnarge.

EHG 704 Novar Windfarm NH 57268 69339 (centroid)

A detailed survey of the area adjacent to the abandoned settlements of Cnocan and Balnarge and a watching brief of the topsoil strip of the access road and site compound for Novar wind farm was conducted by Wordsworth Archaeological Services in 2002. Of interest are the survey of the croft at Balnarge and the recording of associated dykes (on the edge of the survey area) and the discovery of a prehistoric settlement on the lower slopes of Cnoc a'Leacachan (within the survey area). This comprises three roundhouses, one on the east side of the track and two on the west side, along with associated clearance cairns.

EHG 1021 Novar Wind Farm Extension NH 55346 71821

An Environmental Impact Assessment was carried out by Glasgow University (GUARD) in 2003.

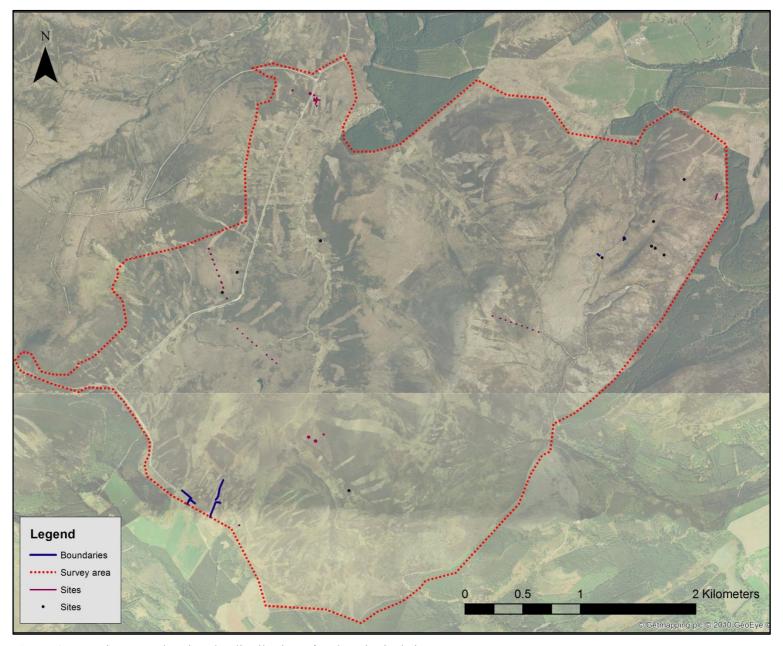

Figure 2: Location map showing the distribution of archaeological sites

# 5.2 Walkover Survey

The walkover survey identified two new hut circles and a small quarry and conducted a detailed survey of the previously recorded hut circle at Ballone and the boundary dykes at Balnarge. The shooting butts at Torr Dearg were also recorded (Figure 2). There were no other new sites identified during the survey; this was not surprising due to the high elevation of the ground surveyed and the deep, dense heather covering much of the survey area. The Gazetteer of Archaeological Sites (Appendix 1) provides details of the sites recorded during the survey.

#### 5.2.1 Prehistoric sites

Two discrete areas of prehistoric activity were recorded. One of the previously recorded hut circles and associated field system identified by Jonathon Wordsworth at Ballone (Sites 2-4; Figure 3) were recorded in as much detail as the dense vegetation allowed. The hut circle sits on the west side of the wind farm access road on an east facing terrace at the base of Cnoc a' Leacachan and measures approximately 8m in diameter internally with a possible entrance on the south-east side (Plate 1). Short lengths of stone and turf dykes and several clearance cairns were identified on the east side of the road, which suggest a field system associated with the hut circles. Site 4a on the west side of the road appeared to be a small cairn, possibly clearance, but that interpretation is uncertain and it may be a natural mound. The remaining two hut circles were not located, although the surveyors identified an amorphous area contiguous to the east side of the road, which may be the hut circle truncated by the access road and excavated by Jonathon Wordsworth.

The second, and previously unrecorded, area of hut circles and possible mound (Sites 7-9) is located across the valley on a west facing terrace at the base of Druim Dubh Ruigh Bhomaich (Figure 4). Both hut circles measure approximately 9m in diameter internally. Site 8 has a small oval cell on the south-west side, but dense heather masks whether it is attached to, or separate from, the hut circle. Site 9 has a possible entrance on the south-southeast side. Site 7 was a heather-covered mound that had possible built up banks in places. There was no evidence of an associated field system.

#### 5.2.2 Post-medieval sites

A smattering of post-medieval boundary dykes (Sites 14-20; Figures 4 and 5), a small quarry (Site 10; Figure 4) and the remnants of a track (Site 1; Figure 5) were recorded on the north-eastern and south-western edges of the survey area. Hints of turf banks (Sites 12 and 13; Figure 5) were also recorded in the vicinity of sites 14 and 15, but the much degraded nature of them made a conclusive interpretation difficult.

#### **5.2.3** Sporting sites

Novar is a sporting estate and this is evidenced by the numerous shooting butts located in the survey area. Two stands of butts were recorded in detail: sites 5 and 6 (Figure 6). Site 11(Figure 7) is detailed in the Gazetteer of Sites (Appendix 1), but these butts were not visited due to the dense fog during the first day of survey when that part of the survey area was visited. The shooting butts have been plotted from aerial imagery and the description based on other butts visited. A fourth set of butts is depicted on modern OS mapping at Coire Mor (Site 21, Figure 5), but these were also not visited due to the foggy conditions. The positive identification of only about three of these butts using aerial imagery suggests the majority are in a degraded state.

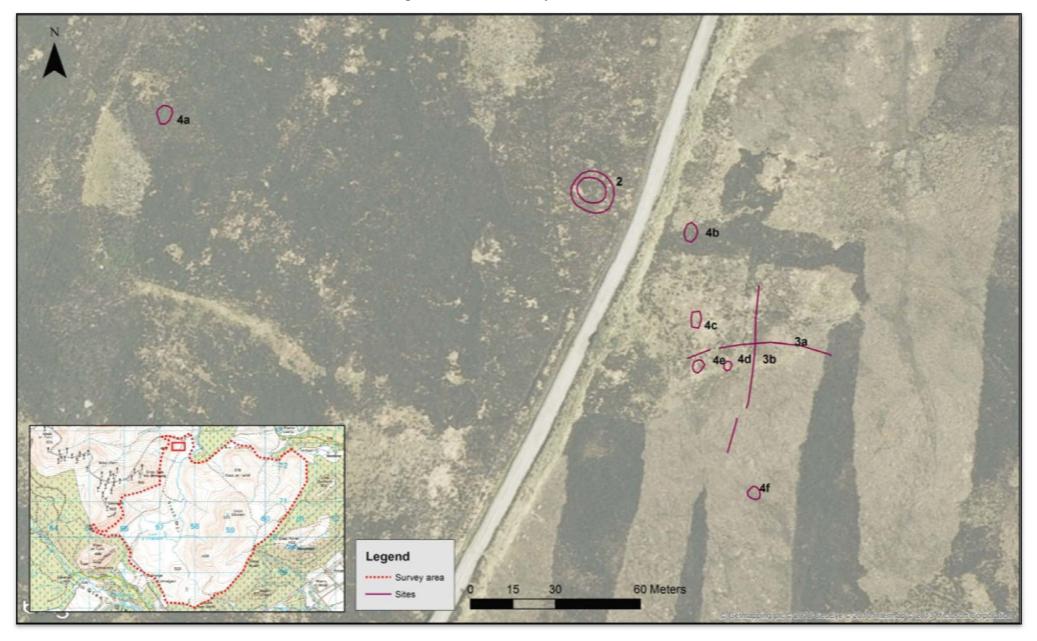

Figure 3: Location of sites 2-4, a hut circle and associated clearance cairns and boundary dykes

Plate 1: Site 2, hut circle

Plate 2: Site 8, hut circle

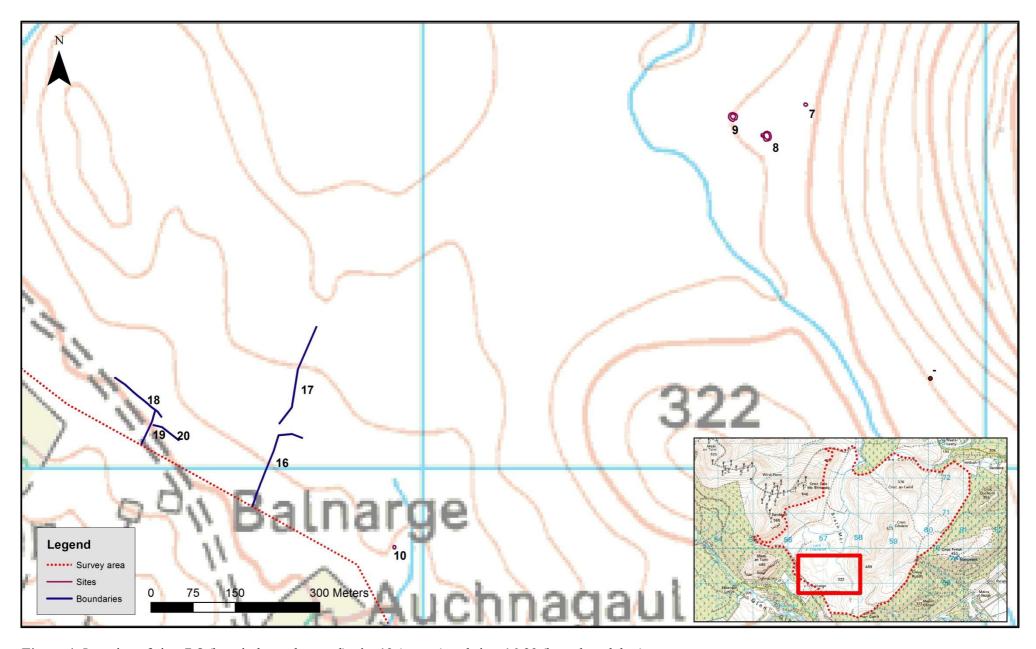

Figure 4: Location of sites 7-8 (hut circles and mound), site 10 (quarry) and sites 16-20 (boundary dykes)

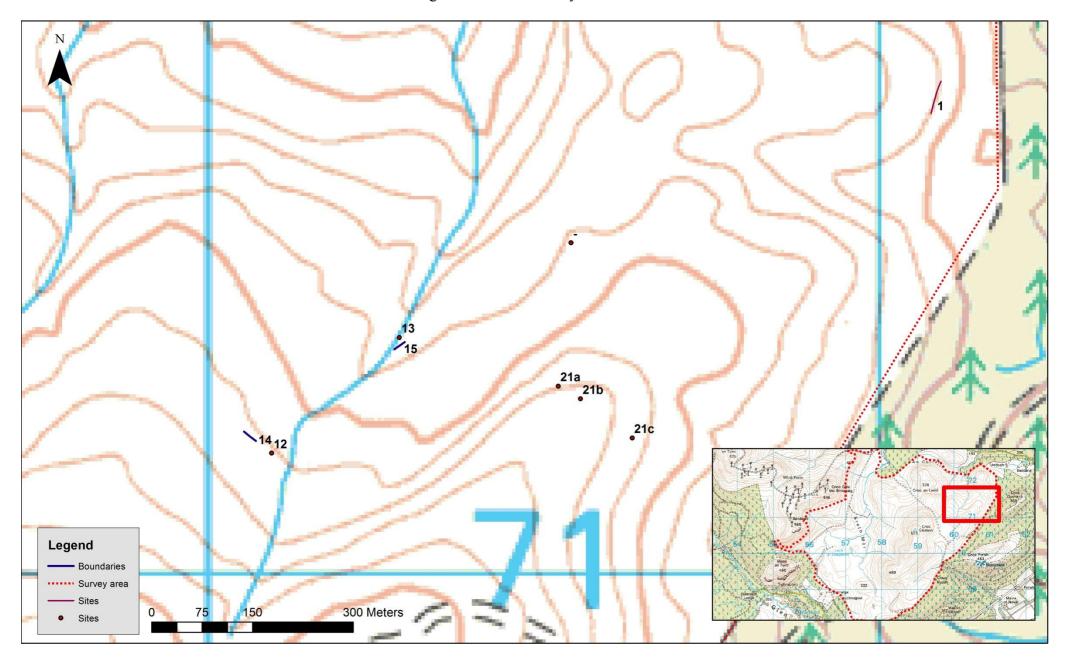

Figure 5: Location map of sites 1, 12-15 and 21

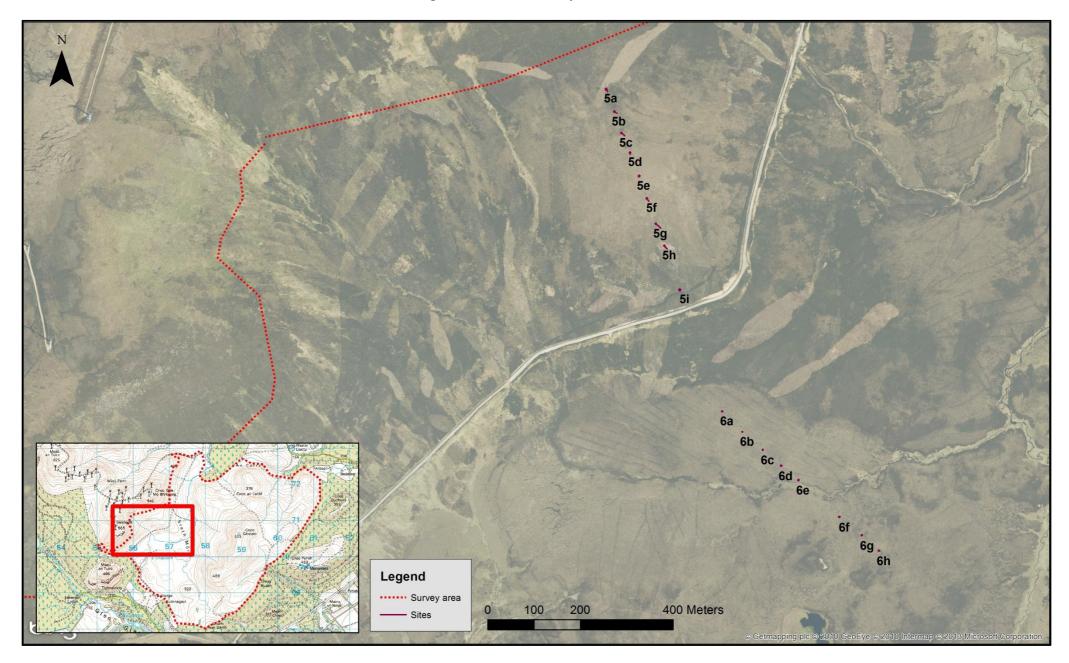

Figure 6: Location of the shooting butts, sites 5 and 6

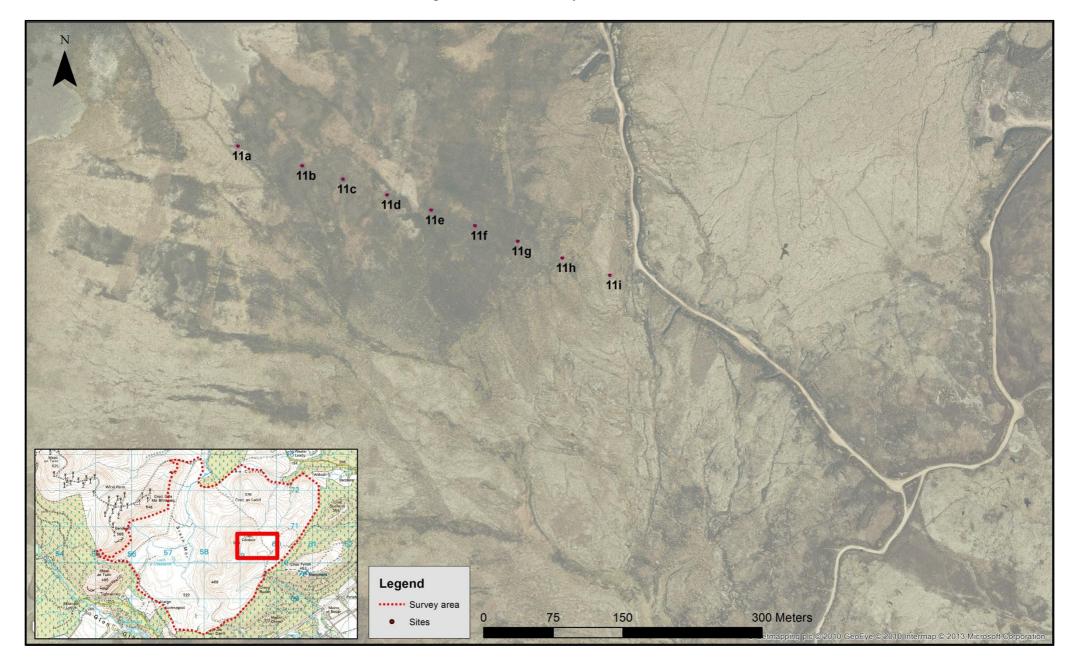

Figure 7: Location of shooting butts, site 11

#### 6. Discussion

- The archaeological desk-based assessment and walkover survey of the proposed woodland creation area at Novar revealed that in general the area does not contain any previously unidentified archaeological sites. The only exceptions to this are the two new hut circles and mound (sites 7-9) found at Druim Dubh Ruigh Bhonmaich and the stretches of Post Medieval turf banks and dykes ( sites 12-20).
- 6.2 The historical mapping indicated that there was no settlement within the survey area, other than beyond its periphery, and no evidence of settlement was found during the survey apart from the sections of dykes (sites **14-20**). The interpretation of sites **12** and **13** is inconclusive. This may be due to the use of the land as a sporting estate and the generally wet, boggy ground that covers much of the area.
- 6.3 The sporting history of Novar Estate is attested to by the four groups of shooting butts recorded through survey and the use of aerial imagery. The grouse butts are not shown on the 1<sup>st</sup> and 2<sup>nd</sup> edition OS maps, which indicates they post-date 1902.
- 6.4 The hut circle shown on the modern OS map at Ardoch and described by the HHER (MHG 8010) as a hut visible as a platform was not found.

## 7. Recommendations

- 7.1 The following buffer zones should be retained around archaeological sites recorded during the walkover survey:
  - A 10-metre buffer zone around the hut circles and a 5-metre buffer around the associated sites of clearance cairns, mounds and dykes. It is recommended that a generous buffer be given around the whole of each of the hut circle and associated cairns etc. to preserve the setting and structures as a whole.
  - A 5-metre buffer zone around the shooting butts
  - A 5-metre buffer zone around the Post Medieval boundary dykes.
- 7.2 Sites should be marked out with highly visible fencing or flags prior to planting of the new woodland. Self-set trees are a common occurrence in woodland planting and this should be taken into account during planting.
- 7.3 Access tracks for vehicles associated with the proposed developments should also respect the recommendations set out above.
