SUMMARY

There is currently a proposal to build an agricultural worker/rural occupation dwelling on land at Upper House Farm, Upton Cressett, Shropshire. The proposed development site comprises agricultural land to the east of the farm house. The site lies 100m to the northeast of the site of the deserted medieval settlement of Upton Cressett, which includes two Scheduled Ancient Monuments and three Grade I Listed Buildings. Because of the potential impact of the development on these and other heritage assets, a desk-based heritage assessment has been carried out of the proposed development. This assessment finds that the proposed development is not expected to have any direct physical impact on any archaeological feature or heritage asset. The proposed development is likely to have a minor indirect impact on the setting of some of the neighbouring designated heritage assets. This impact is likely to be reduced by the mitigation measures included in the development plans.

1 INTRODUCTION

1.1 The Archaeology Service, Shropshire Council, has been commissioned by Madeleys Chartered Surveyors on behalf of their client to produce a desk-based heritage assessment of an area of land at Upper House Farm, Upton Cressett, Shropshire (centred on NGR SO 6575 9277). There is currently a proposal to build an agricultural worker/rural occupation dwelling on the site (Planning Ref.: 13/03182/FUL).

1.2 Upton Cressett is a hamlet in southeast Shropshire 26km to the southeast of the centre of the county town of Shrewsbury, and 5km west of the market town of Bridgnorth. The proposed development site lies in an arable field on the southeast side of Upper House Farm. It is proposed to create a single storey agricultural worker/rural occupation dwelling on the site.

1.3 The scope of this desk-based assessment was agreed with the Historic Environment Officer, Shropshire Council, following consultation with English Heritage. This assessment includes the proposed development site itself (the site) and an area of archaeological assessment within a 500m radius around the site (the study area). (See Fig. 1) However, an informal area of wider search for statutory heritage designations extended from the site for a distance of about 1.5km radius of the development site.

2 AIMS AND OBJECTIVES

2.1 National policy for archaeology is contained in the National Planning Policy Framework [NPPF] paras. 126-141 (Department for Communities and Local Government, March 2012). Paragraph 128 of the NPPF states that local planning authorities should require an applicant for a development to describe the significance of any heritage assets affected by a development, including any contribution made by their setting. The level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance. Shropshire Council's Core Strategy (adopted March 2011) policies CS6 and CS17 refer to the need for conserving and enhancing the historic environment in line with national policy.

2.2 The aim of this archaeological desk-based assessment is to provide information that will enable an informed and reasonable decision to be taken regarding the archaeological provision for the area affected by the proposed development of the land at Upper House Farm, Upton Cressett.

2.3 The objectives were:

- a) To locate any known archaeological features and deposits within the study area.
- b) To assess the likely survival, quality, condition and relative significance of any archaeological features, deposits and structures.
- c) To assess the likely impact of the proposed development on the designated and non-designated heritage assets and their setting within the study area (as defined in 1.3 above).
- d) To assess the likely impact of the proposed development on the setting of designated heritage assets within the wider, informal study area (as defined in 1.3 above).
- e) To identify and recommend options for the management of the archaeological resource, including any further archaeological provision where necessary.

- f) To recommend a strategy for further archaeological field evaluation where the character and value of the resource is not sufficiently defined to permit a mitigation strategy or other response to be devised.

3 METHODOLOGY

3.1 The methodology for this assessment is based on requirements agreed with the Historic Environment Officer of the Historic Environment Team, Shropshire Council.

3.2 This desk-based assessment aims to examine and assess all appropriate sources. These have included: archaeological databases, historic documents (including cartographic and pictorial documents), aerial photographs, geotechnical information, and secondary and statutory sources. The assessment includes an outline history of the development and land use of the study area, supported by copies of relevant historic maps and documents.

3.3 The study area for this desk-based assessment comprises a 500m buffer centred on the proposed development site (Fig. 1). The size of the study area has been chosen to ensure that the documentary and cartographic sources provide sufficient information about the proposed development site and its setting to enable an assessment of the potential impacts on the heritage resource. All known heritage assets identified within and immediately adjacent to the boundary of this study area have been considered in this assessment. The potential impact of the development has been assessed on non-designated heritage assets within a 500m radius of the development site, and on designated heritage assets within a wider area of a 1.5km radius of the development.

3.4 The setting of the designated heritage assets within the wider, informal study area was assessed on the basis of the guidance provided by English Heritage (English Heritage, 2011: *The Settings of Heritage Assets: English Heritage Guidance*). Intervisibility between the development site and the designated heritage assets was assessed using Shropshire Council's GIS digital mapping with Panorama contours and Get Mapping digital aerial photography, and checked from the site during the site visit.

3.5 A site visit was undertaken on 5th August 2013 in order to identify any potential archaeological features not recorded by the documentary or cartographic sources, and to assess possible factors, such as existing or previous land use, and their effect on the survival or condition of the archaeological resource.

4 ARCHAEOLOGICAL AND HISTORICAL BACKGROUND

4.1 Designated sites and non-designated sites

4.1.1 Designated sites (Designated assets are individually listed in Table 3 in Appendix 1 of this report).

No World Heritage Sites or sites included on the Tentative List of Future Nominations for World Heritage Sites (January 2012) are situated within the study area or its vicinity.

There are three Scheduled Ancient Monuments within close proximity to the proposed development site. One, "Roman Settlement, 390m north-east of New House Farm" Scheduled Monument Ref. 1409733 (Figs. 2 & 3, Site 1), lies within the wider 1.5km radius study area 750m to the west of the development site. The other two sites lie within the 500m radius study area at Upton Cressett. The first of these is a "Medieval Settlement, south-east of Upton Cressett Hall" Scheduled Monument Ref. 1409739 (Figs. 2 & 3, Site 2), which lies 220m to the south of the development site; the second is a "Moated site and associated ponds [at Upton Cressett]" Scheduled Monument Ref. 1013512 (Figs. 2 & 3, Site 3) which lies 250m to the south-southwest of the development site.

There are three Grade I Listed Buildings within the study area. These are: the "Former Church of St Michael, Upton Cressett" National Reference 254968 (Figs. 2 & 3, Site 4), "Upton Cressett Hall" National Reference 254969 (Figs. 2 & 3, Site 5), and the "Gatehouse at Upton Hall, Upton Cressett" National Reference 254970 (Figs. 2 & 3, Site 6). There are three Grade II* Listed Buildings within the extended study area around the development site at Aston Eyre: the "Parish Church (Dedication Unknown), Aston Eyre" National Reference 254311 (Fig. 2, Site 7), "Aston Eyre Old Hall" National Reference 254313 (Fig. 2, Site 8), and "Hall Farm House, Aston Eyre" National Reference 254312 (Fig. 2, Site 9).

There are a further 6 Grade II Listed Buildings (Fig. 2, Sites 10-15) within the extended study area around the development site (see sections 4.7.2-5 below & Appendix 1, Table x). Three of these lie in Aston Eyre hamlet, one at Meadowley hamlet, one at Upton Park Farm, and one adjacent to the development site itself at Upper House Farm.

4.1.2 Non-designated heritage assets (summary) (Non-designated heritage assets are individually listed in Tables 4 & 5 in Appendix 1 of this report).

There are no recorded heritage assets within the development site. There are a further 4 non-designated heritage assets recorded on the Shropshire Council Historic Environment Record (HER) within or immediately adjacent to the 500m study area (Figs. 2 & 3, Sites 16-19). One previously un-recorded heritage asset has been identified within the study area by this assessment (site 24).

4.2 Previous archaeological work in the study area

4.2.1 There have been no recorded previous archaeological investigations on the development site itself. There have been a limited number of archaeological interventions within the study area.

4.2.2 In 1978 a field inspection (HER event ESA905) was made by a Shropshire County Council archaeologist to Upton Cressett deserted medieval settlement (HER 00947) in response to possible tree planting. The site visit record form contains a summary description (including a sketch plan) of the earthworks to the southeast of the hall.

4.2.3 In 1980 a field inspection (HER event ESA3406) was made by a Shropshire County Council archaeologist to Upton Cressett Moat and Fishponds (HER 04581). The site visit record form contains a description of the site (including a sketch plan) and describes it as a component of an “important surviving manorial complex consisting of moat, hall, church and DMV (deserted medieval village) and probably represents the finest example of such a complex in Shropshire”.

4.2.4 In 2000 a watching brief was carried out on drainage works at the Church of St Michael, Upton Cressett (HER event ESA4772). The work recorded a medieval ground surface, the foundation cut for the south wall of the nave of the church, and parts of the south wall of the nave and south chapel. A residual sherd of Romano-British pottery was recovered, suggesting possible Roman period activity in the area of the church. (Wainwright, J, 2000)

4.2.5 In 2012 an excavation in the former orchard (NGR: SO 656 923) opposite the gatehouse of Upton Cressett Hall located a single ditch with stratified cooking pot of mid-13th to 14th century date (White 2013).

4.3 Geology and topography

4.3.1 The bedrock within the study area comprises interbedded argillaceous (fine-grained) purple, brown and green sandstones and red mudstones of the St Maughans Formation. These are sedimentary rocks formed approximately 391 to 417 million years ago in the Devonian Period. These rocks were formed from rivers depositing mainly sand and gravel in channels to form river terrace deposits, with fine silt and clay forming floodplain alluvium, including estuarine and coastal plain deposits. (BGS, 2013)

4.3.2 The proposed development site lies between the 190m and 200m contours on the southwest side of Aston Hill, whose summit rises to 221m above sea level. The development site is on the side of a valley in which runs a small stream, a tributary of the Borle Brook, flowing to the southeast. The development site looks down over the stream towards Upton Cressett Hall and the remains of Upton Cressett deserted medieval village which lie on the rising ground on the southwest side of the valley.

4.4 Prehistoric (pre-43AD)

4.4.1 There are no known prehistoric period sites or find-spots on the proposed development site or within the study area. A Neolithic leaf-shaped flint arrowhead (HER 03510, site 20) and an unfinished flint arrowhead of Neolithic or Bronze Age date (HER 03792, site 21) have been found within the wider study area some 950m to the southwest of the proposed development site (see Figs, 2 & 3) indicating activity in the area in the Neolithic to Bronze Age periods (c 4,000BC – 750BC). Other flints of Neolithic to Bronze Age date have been found in the area of the Parlour Coppice Roman settlement (White, 2013). There is some evidence of settlement in the wider study area in the later prehistoric period in the form of a cropmark enclosure of a possible Iron Age or Romano-British farmstead (HER 04484, site 22; Fig. 2) adjacent to Upton Park Farm, some 1,350m southwest of the development site. A single sherd of possible late Iron Age pottery was recovered from the Roman site at Parlour Coppice west of Upton Cressett in the 1990s.

4.5 Roman (43AD – 410AD)

4.5.1 A Roman settlement (HER 01919; site 1; Figs. 2 & 3) lies 650m to the west of the development site at Parlour Coppice. The place-name “Parlour” is sometimes associated with Roman sites (Foxall, 1980, p53), and a field to the southeast of this site was known as “The Parlour” in the mid-19th century. Between c. 1960 and 1990 Roman pottery, including Samian, Rhenish, Malvernian and Severn Valley wares had been found on the surface here on a number of occasions. In 1990-1 and again in 1994-5 field-walking surveys were carried out on the site and recovered a good early Roman assemblage, with evidence for activity continuing into the 2nd century, and, at some level, into the 3rd or perhaps 4th century. A possible Late Iron Age sherd was also identified. In 2009 further investigations were carried out by Birmingham University as an undergraduate training project. These investigations took the form of a geophysical survey of part of the site and the excavation of a trial trench; this work identified a Roman roadside settlement with plots running at right angles from the road. Stratified pottery was recovered that demonstrated occupation dates consistent with the material recovered from the earlier fieldwalking. A further geophysical survey, carried out in March 2012, attempted (unsuccessfully) to trace the roadside settlement into the field to the north, Moor Barn field. (White, 2013). Part of the Roman settlement is now a Scheduled Ancient Monument (Roman Settlement, 390m north-east of New House Farm, Scheduled Monument Ref. 1409733).

4.6 Early medieval (5th century - 1066AD) and Medieval (1066 – 1600)

4.6.1 There are no recorded early medieval features within the study area. By the time of the Domesday Survey of 1086, the study area occupied part of the manor of Upton Cressett. The place-name evidence places the origin of the manor within the Saxon period. The place-name “Upton” derives from the Old English *Upptun* meaning “higher settlement”. Cressett is a family name: in the mid 14th century Thomas Cresset married into the de Upton family, and the manor subsequently took its name from him. In 1341 the settlement was referred to as “Upton super Egge” (Upton on the hillside) and in 1354-5 as “Upton Waryn” (possibly after the first Norman Sheriff of Shropshire, Waryn the Bald). (Gelling, 1980, p296)

4.6.2 At the time of the Domesday Survey the manor of Upton Cressett was held by Reginald the Sheriff from Roger of Montgomery, Earl of Shrewsbury. At Domesday, the manor was an average sized manor of three taxable hides, occupied by 6 villagers, 4 smallholders, a free ploughman, and a rider with 4 ploughs between them, and with a further 2 ploughs and 3 slaves in lordship. There was also woodland for fattening 30 pigs. The manor was worth 25 shillings in 1086, but had been worth 40 shillings before the Norman Conquest, when it had been held by Almund (who may have held a number of other manors in the area). The manor formed part of the extensive holdings of the Sheriff, which passed from Reginald to Alan Fitz Flaad and then formed part of the FitzAlan Baronies of Oswestry and Clun (Thorn & Thorn, 1986, Notes 4,3 & 4,3,63). From 1165 Upton Cressett was held from the FitzAlans by the de Upton family. The Cressetts first appear as lords of the manor towards in the 14th century, when the family succeeded to the manor through marriage and gave their name to the place.

The Domesday settlement is likely to have occupied the same site occupied by the earthwork remains of the medieval settlement at Upton Cressett (HER 00947, site 2; Figs. 2 & 3). There are two concentrations of possible building platforms within the earthwork complex: one to the north of the church centred on SO 656 926, and the other to the southeast of Upton Cressett Hall centred on SO 657 923 (these latter lie within the

scheduled part of the settlement remains). The manor house in all likelihood stood in the area of the later moated site and fishponds (HER 04581, site 3).

4.6.3 The Church of St Michael (HER 00607, site 4) at Upton Cressett dates from the 12th century, though it may be on the site of an earlier, Saxon church as there are indications that some of the fabric may be re-used from this period. The church is first mentioned in sources in 1291. The nave and chancel date from the 12th century, and the font is Norman. A chapel was added to the south of the chancel in the early 13th century. The west wall of the chapel has a wall-painting that dates from about 1200 AD and is possibly by the same hand as the wall-paintings in nearby Claverley Church. Some alterations to the chapel were made in the post-medieval period and some restoration work was undertaken in 1858. The church suffered from decay in the 20th century and it was closed in 1959 due to its dangerous condition. It was formally declared redundant in 1970, the same year in which it was listed at Grade II. Repair works were carried out in the 1970s, and the church is now in the care of the The Churches Conservation Trust. The church was re-designated as a Grade I Listed Building (National Reference 254968 “Former Church of St Michael, Upton Cressett”) in October 2012.

4.6.4 To the south of the church are the remains of a moat and fishponds (HER 04581, site 3) marking the site of the medieval (and probably the Domesday period) manor house. The moat and fishponds are a Scheduled Ancient Monument (Mon. Ref. 1013512). The present Upton Cressett Hall (HER 00608, site 5) lies on the eastern side of the medieval moat and is in origin an early 15th century timber-framed hall (dated by dendrochronology to 1428-31) with a solar wing at its north-east end. The house was built for Hugh Cressett, a Royal Commissioner along the Welsh March and Constable of Mortimer Castle, a Member of Parliament for and Sheriff of Shropshire. A further cross wing was added to the house towards the end of the 15th century. In 1580 Upton Cressett Hall was remodelled by Richard Cressett: the building was encased in brick, large brick chimneystacks were added to the east side of the house and the first-floor rooms were probably inserted over the hall at this time too. A three-storey brick gatehouse (HER 12089, site 6) was also built to the southeast of the house at this time. The hall and the gatehouse are both Grade I Listed Buildings (Nat. Ref. 254969 & Nat. Ref. 254970 respectively).

4.6.5 A park (HER 07552, site 23; Fig. 2) was established in the southwestern part of the manor by the early 16th century. Upton Cressett Park was first mentioned in 1517 in Wolsely's Inquisition of Enclosures, when it was alleged that Thomas Cressett had emparked 40 acres of arable land (Rowley, 1972, p123). Later in the 16th century the park was enclosed. In July 2013 a possible park boundary was digitised based on a 1647 Survey of Upton Cressett (Browne, 1647, SA ref 5406/5/1/1). The former existence of the park also survives in field-names recorded on the 1848 Tithe Award (*Far Park Barn Meadow, Park Barn Piece, The near Park* and *The Far Park*; the modern place-names *Upton Park Farm* (SO 6481 9170) and *Upton Lodge* (SO 6557 9125) are also reminders of the park's former existence.

4.6.6 The hamlet of Aston Eyre lies in the northern part of the wider study area. Aston Eyre is recorded in the Domesday Survey of 1086. It was occupied by the Fitz Ayer family (descendants of the Domesday tenant) until the early 14th century, when it passed to the Charltons, one of the most important Shropshire families of their day. The construction of the first stone hall (HER 00601, site 8; Fig. 2) may date to this time, presumably replacing an earlier house set within the moat. Aston Eyre Old Hall is a

Grade II* Listed Building (Nat. Ref. 254313). Hall Farm House, Aston Eyre (HER 17165, site 9) dates in part to c. 1300 and was formerly the gatehouse to the hall. In the early post-medieval period, the gatehouse was extended to become the main residence and the hall relegated to agricultural use. The Hall farm House is a Grade II* Listed Building (Nat. Ref. 254312). In the mid 15th century the Cressetts acquired the manor by marriage and in the mid 16th century it passed by marriage to the Actons of Aldenham, who held it until the early 20th century.

4.6.8 The church at Aston Eyre (HER 00602, site 7; Fig. 2) is of 12th-century construction with with later medieval windows. It was restored in the 19th century and a bellcote and porch were also added at this time. The church is a Grade II* Listed Building (Nat. Ref. 254311)

4.7 Post-medieval (1600 – 1800) and Modern (1800 – present)

4.7.1 The Shropshire Hearth Tax Roll of 1672 records 25 householders (including Robert Cressett) paying tax in Upton Cressett, though a number of these may have been households in the wider area beyond the settlement at Upton Cressett itself (SAS, 1949, p238-9). In 1703-04 Cound Hall near Shrewsbury was built for Edward Cressett and from 1792 this became the Cressett family's principal seat, following the death of Elizabeth Cressett. She left her estates to her maternal uncle, Henry Pelham, of Sussex. At about the same time Upton Cressett Hall underwent alterations including the demolition of some parts of the building, and the hall was downgraded in status to a farmhouse (HER 23428, site 18; Figs. 2 & 3). Among the surviving ancillary farm buildings dating to this period is a horse-driven cider mill (HER 15454, site 17). In the 19th and early 20th centuries the farm was occupied by a number of farmers: by William Corser in 1851, in 1891 by Edward Bradley, and in 1929 by John Lamb (Bagshaw, 1851; Kelly's, 1891 & 1929). The hall was bought by Sir Herbert Smith, a carpet manufacturer and owner of Witley Court in Worcestershire, in about 1937 to use as a shooting lodge. After his death in 1943, the house was unoccupied and gradually fell into partial dereliction. The hall was sold in 1969 and has since been restored and was re-designated as a Grade I Listed Building (Nat. Ref. 254969) in October 2012.

4.7.2 The farmstead at Aston Eyre Hall was developed in the post-medieval period with the addition in the 17th and 18th centuries of a barn range (HER 17380, site 10; Fig. 2) to the northwest of the Hall Farm House. The barn is a Grade II Listed Building (Nat. Ref. 255082). In the southern part of the hamlet is East Farm House (HER 11466, site 11), a timber framed farmhouse on a stone base of probable early 17th century date. East Farm House is a Grade II Listed Building (Nat. Ref. 254314). Timber-framed barns to the west of East Farm House (HER 11467, site 12) also date to the 17th century, and are also designated as a Grade II Listed Building (Nat. Ref. 254315).

4.7.3 Upper House, Upton Cressett (HER 12086, site 13; Figs. 2 & 3) lies immediately adjacent to the proposed development site. The farmhouse is an early 19th century stone and brick building, and is a Grade II Listed Building (Nat. Ref. 254965). The farm was occupied in 1851 by Thomas Bishop, by Mrs Mary Ann Bishop in 1891, and by Joseph Evans in 1929 (Bagshaw, 1851; Kelly's, 1891 & 1929). The house lies within a farmstead (HER 23395, site 18) which has been extended significantly in the 19th and particularly later 20th centuries, and includes a number of concrete and steel-framed barns, outbuildings and silos. During the site visit, the remains of a small outbuilding (site 24; Photo 6) were noted about 40m southeast of the farmhouse adjacent to the boundary of the proposed development site. The remains consisted of what appeared

to be the eastern end wall of a small shed built of red sandstone and bonded in a light grey mortar of post-medieval type. The wall was about 2.5m long by about 1.25 in height. The outbuilding is shown on the 19th and early 20th century Ordnance Survey 25" mapping. This mapping also shows orchards to the southwest of the farm (and the proposed development site) which have recently been partially re-planted in recent years.

4.7.4 On the southwestern edge of the wider study area is Upton Park, Upton Cressett (HER 12088, site 14; Fig. 2), an early 18th century red brick house, which is a Grade II Listed Building (Nat. Ref. 254967).

4.7.5 Upper Meadowley Farm House, Morville (HER 11883, site 15; Fig. 2) is in the eastern part of the wider study area and is a 17th century timber framed building refronted in brick in the early 19th century. The house is a Grade II Listed Building (Nat. Ref. 254749)

4.8 Land use in the Post-medieval and Modern periods

4.8.1 The historic landscape in the southwestern half of the study area is characterised by the settlement at Upton Cressett, and the immediately adjacent fieldscape of paddocks and closes, re-organised piecemeal enclosure, and other small rectilinear fields. The northeastern half and the western edge of the study area, north of the stream are characterised by very large post-war fields and large irregular fields.

4.8.2 Shropshire's mid-19th century field names were captured and recorded on a series of field-name maps by H D G Foxall from the Tithe Apportionment and maps of c. 1830 – 1848. The study area falls within the field name map for Upton Cressett parish, 1841 (Foxall, 1976).

4.8.3 The field names in the southwestern half of the study area suggest that this was, in the post-medieval period, predominantly pasture land, a change of use from the medieval arable cultivation attested by the surviving ridge and furrow in "Old House Meadow". One of the manor's former medieval open fields is indicated by a group of field-names in the southwestern part of the study area: Far Butt Field, Sludwell Butt Field, Upper Butt Field, and Lower Butt Field, a "butt" being a piece of ploughed land comprising a number of furrows (Foxall, 1980, p8). Another of the former open fields may have lain on the north side of the stream – the development site itself lies in "Churchyard Furlong" and the adjacent field is named "Long Length".

4.8.4 An area of former common land lay on the eastern edge of the study area and is evidenced by the field-names "The Upper Common", "Middle Common" and "Lower Common", and an area of heath is suggested on the northwestern edge of the study area by "The Heathlands", "Little Heathlands" and "Big Heathlands". "The Lime Ground with Rough and Pits" on the northern edge of the study area may indicate digging for lime in the post-medieval period.

4.8.5 The field-names in the southeastern part of the wider study area provide some evidence for the existence of the former Upton Cressett Park (HER 07717; site 23; Fig. 2). In the study area "Park Meadow" to the west of Upton Cressett Hall is likely to reflect the gardens of the post-medieval house rather than the Tudor deer park.

4.8.6 The open fields of the study area were probably enclosed piecemeal from the later medieval period into the 18th century. The present large fields of the northern and western parts of the study area are a product of the removal of hedgerows and field boundaries in the post-WWII period of the 20th century.

5 IMPACT ON THE HERITAGE

5.1 Direct impact

5.1.1 Significance of recorded archaeological features This desk-based assessment has not identified any archaeological features within the area of the proposed development site itself. The proposed development is not expected to have any direct physical impact on any archaeological feature or heritage asset.

5.1.2 Potential for archaeological remains There is evidence for prehistoric or Romano-British activity outside the study area (but within the wider study area) in the form of two findspots of flint (sites 20 & 21), a cropmark enclosure (site 22), and the Roman settlement at parlour Coppice (site 1). In addition a single sherd of residual Roman pottery has been recovered from within the study area at St Michael's Church (HER event ESA4772). It is considered therefore that there is a low potential for archaeological features or deposits of these periods to be present within the proposed development site itself. The development site formed part of the medieval, post-medieval and modern agricultural landscape, and the potential for archaeological remains of these later periods is also considered to be low.

5.1.3 Survival of archaeological remains Because the proposed development site has been in agricultural use in the medieval, post-medieval and modern periods, the potential survival of any below-ground archaeological remains present within the site is likely to be moderate.

5.1.4 Potential impact of the proposed development The current proposal is for the erection of a single storey dwelling on the development site. The impact of the development on any below-ground archaeological remains by groundworks (such as the excavations required for foundation trenches and services) would be high. However, given that the assessment for the archaeological potential of the development site is low, the impact of the proposed development is considered to be negligible to low.

5.2 Indirect impact

5.2.1 The indirect physical and non-physical (visual) impacts of the proposed development on the designated and non-designated heritage assets within the study areas have been assessed as required under paragraph 128 of the NPPF based upon the standards and guidance issued by English Heritage (English Heritage 2011a & 2011b). An assessment has been made of the importance of the setting for each designated and non-designated heritage asset within the defined study areas, ranked from very high, through high, medium, low, and none/negligible. The levels of impact were assessed and the significance of the effect was determined from the importance of the resource and the magnitude of the impact upon it.

5.2.2 Setting. PPS5 defines the setting of a heritage asset as “the surroundings in which (the asset) is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral.” (English Heritage, 2011, p3.) This definition remains unchanged for the current National Planning Policy Framework (*English Heritage Commentary on the National Planning Policy Framework*, March 2012)

5.2.3 Heritage assets and their settings. A number of heritage assets will be affected indirectly by the proposed development in that the development may impact upon

elements of the setting of these assets. These assets mainly relate to the medieval and post-medieval settlement at Upton Cressett and include two Scheduled Ancient Monuments (the Moated site and associated ponds [at Upton Cressett] SAM Ref. 1013512, and the Medieval Settlement, south-east of Upton Cressett SAM Ref. 1409739), three Grade I Listed Buildings (the Former Church of St Michael, Upton Cressett Nat. Ref. 254968, Upton Cressett Hall Nat. Ref. 254969, and the Gatehouse at Upton Hall, Upton Cressett Nat Ref 254970), and the Upton Cressett deserted medieval settlement (HER 00947).

5.2.4 The issues related to the setting of these heritage assets have been identified as, though not strictly limited to, the following:

- Visual impact – views across, from, and towards the heritage assets
- Historic land use of the development site

The overall indirect impact of the development on the heritage assets has been assessed using the methodology detailed in: “The Settings of Heritage Assets: English Heritage Guidance” English Heritage 2011, and “Seeing the History in the View” English Heritage 2011. The results of this assessment are set out below in sections 5.2.5 and 5.2.6.

5.2.5 Visual impact – views across, from, and towards the heritage assets

	Heritage Assets	Importance of asset	Element	Value of view	Magnitude of impact	Significance of effect
(i)	Roman Settlement, 390m north-east of New House Farm SAM Ref. 1409733	High	View east across the SAM towards development site	Medium	Imperceptible	Negligible
(ii)	Medieval Settlement, south-east of Upton Cressett SAM Ref. 1409739 Upton Cressett deserted medieval settlement HER 00947	High High	View north across the heritage assets towards development site from PRow 0150/4/1	Medium	Low adverse	Minor
(iii)	Moated site and associated ponds [at Upton Cressett] SAM Ref. 1013512 Former Church of St Michael, Upton Cressett LB I, Nat Ref 254968 Upton Cressett Hall LB I, Nat Ref 254969 Gatehouse at Upton Hall, Upton Cressett LB I, Nat Ref 254970 Upton Cressett deserted medieval settlement HER 00947 00947 (unscheduled part)	High High High High Medium	View north to northeast across the heritage assets towards the development site from PRow's 0150/5/3, 0150/4/1, 0150/4/2, 0150/7/1 & 0150/7/2	Medium	Low adverse	Minor

Table 1

Discussion

(i) The proposed development will be partially visible from some parts of the Roman settlement adjacent to Parlour Coppice (SAM Ref 1409733) when looking east across the heritage asset. However, the development will be partially screened from these parts of the settlement and fully screened from the remainder by the existing landscape and tree cover, and by the post-medieval and modern buildings of Upper House Farm itself. It is considered that the proposed development will have an imperceptible impact on this view element of the setting of the scheduled Roman settlement. The overall significance of the effect of the proposed development on the views looking east across this heritage asset is expected to be negligible.

(ii) The proposed development is likely to be included in some views across the medieval settlement of Upton Cressett (SAM Ref 1409739 and HER 00947) from the south, looking north. However, the proposed development will be partially screened from the settlement existing by existing tree cover, and will be set against the backdrop of the existing Upper House Farm complex. It is considered that the proposed development will have a low adverse impact on this view element of the setting of the Upton Cressett medieval settlement. The overall significance of the effect on the views looking north across this heritage asset is expected to be minor.

(iii) The proposed development is likely to be included in some views from the south, looking north and northeast across the moated site at Upton Cressett (SAM Ref 1013512), St Michael's Church (LB Ref 254968), Upton Cressett Hall (LB Ref 254969), the Gatehouse (LB Ref 254970) and the unscheduled part of the Upton Cressett deserted medieval settlement (HER 00947 00947). However the proposed development will form part of the existing farmstead which already includes domestic and agricultural buildings of 18th to 20th century date.

The proposed development will also be partially screened in the views across this group of heritage assets by existing tree cover. It is considered that the proposed development will have a low adverse impact on this view element of the setting of the scheduled moated site at Upton Cressett and associated designated and non-designated heritage assets. The significance of the effect of the proposed development on this aspect of the setting of these heritage assets is expected to be minor.

5.2.6 Historic land use of the development site

	Heritage Assets	Importance of asset	Element	Value	Magnitude of impact	Significance of effect
(i)	Medieval Settlement, south-east of Upton Cressett SAM Ref. 1409739 Moated site and associated ponds [at Upton Cressett] SAM Ref. 1013512 Former Church of St Michael, Upton Cressett LB I, Nat Ref 254968 Upton Cressett Hall LB I, Nat Ref 254969 Gatehouse at Upton Hall, Upton Cressett LB I, Nat Ref 254970 Upton Cressett deserted medieval settlement HER 00947 (unscheduled part)	High High High High High Medium	Change to the historic land-use of the proposed development site	Low	Low adverse	Minor
(ii)	Upper House, Upton Cressett LB II, Nat Ref 254965	Low	Change to the historic land-use of the proposed development site	Low	Low adverse	Minor

Table 2

Discussion

(i) The proposed development site is on land currently used for arable agriculture, and has been used as such since the post-medieval period at least. The land is on the north side of the stream that forms the northeastern boundary of the medieval settlement of Upton Cressett and is distinct in character from the pastureland which currently occupies the site of the deserted medieval settlement and the surviving ridge and furrow on the southwest side of the stream. It is also further physically separated by the road and track to Upper House Farm. It is considered that the proposed development will have a low adverse impact on the historic land-use setting of the designated and non-designated heritage assets of the Upton Cressett medieval settlement. The significance of effect is expected to be minor.

(ii) Similarly, the proposed development will have a low adverse impact on the historic land-use setting of the Grade II listed Upper House Farm (LB Ref 254965), and again, the significance of effect is expected to be minor.

5.2.7 The remaining designated heritage assets comprise three Grade II* Listed Building (sites 7-9) and two Grade II Listed Buildings (sites 10 & 11) within the hamlet of Aston Eyre, and the setting of these assets lies within the context of this settlement. The proposed development site is screened from this settlement by rising ground to the north, and there is expected to be no impact (direct or indirect) from the proposed development on these assets. Similarly, there is expected to be no impact (direct or indirect) from the proposed development on the Grade II Listed Buildings at Upton Park (site14) and Meadowley (site 15)

5.3 Recommended mitigation including further archaeological provision

5.3.1 The application is for a single storey dwelling which is likely to limit the indirect visual impact on the setting of the heritage assets detailed in Table 1. The overall impact of the proposed development will be further reduced by the planting of a hedge around the development site and by planting of (fruit) trees as detailed in the block plan submitted with the planning application (Plan No. C239/1/2013/2a).

5.3.2 Given the low potential for the existence of archaeological remains within the proposed development site and the resulting low to negligible potential impact of the proposed development, it is recommended that no further archaeological work will be required in mitigation for the proposed development.
