## **1 NON-TECHNICAL SUMMARY**

Pre-Construct Archaeology Ltd was appointed by CgMs Consulting to undertake a second phase of archaeological evaluation, 'Phase 2 & 3', on land at Boorley Green, Hampshire following an initial evaluation, 'Phase 1', of the north-western part of the Site. This report provides the results of the evaluation, which comprised 84 50m X 2m trenches excavated in April 2016.

The evaluation was completed largely in keeping with the Written Scheme of Investigation although some re-adjustment to trench locations was required and trenches 122 to 135 at the eastern extent of the Site were not excavated owing to the presence of buried and overhead services and livestock. A number of trenches were also abandoned owing to flooding or depth constraints. The evaluation appears to demonstrate that the Site has, generally, low archaeological potential, which may have previously been reduced by the formation of the existing golf course. The results of this stage of evaluation appear consistent with the Phase 1 evaluation results.

Little substantive evidence of late prehistoric activity was found and certainly no further evidence of funerary remains found in the Phase 1 evaluation. The single sherd of probably late prehistoric pottery and flint flake from the small pit [4104] do not significantly alter the impression that the Site and immediate landscape contain sparse evidence of activity in this period.

No evidence of the Romano-British tile kiln site excavated in 1956 was found in trenches opened close to its recorded location. It would seem that all evidence of the kiln has been entirely removed.

It is concluded that this phase of evaluation appears to confirm that the Site retains little, if any, significant archaeological potential. This may in part be due to the impact of the golf course on the landscape but appears to be consistent with the paucity of archaeological resources so far recorded within or in the vicinity of the Site.

## 2 INTRODUCTION

### 2.1 Project Background

- 2.1.1 Pre-Construct Archaeology Ltd (PCA) was appointed by CgMs Consulting to undertake an archaeological evaluation on land at Boorley Green, Hampshire, NGR 450669 115332, hereafter 'the Site' (**Figure 1 & 2**). An initial evaluation, 'Phase 1', of the north-western part of the Site was undertaken in January 2016 (PCA 2016a) and this report concerns the evaluation of the remainder, 'Phases 2 & 3'. The evaluation was conducted in accordance with the general 'Overarching Written Scheme of Archaeological Investigation' (WYG, 2015), covering the whole Site, and a specific Written Scheme of Investigation for Phases 2 & 3. (PCA 2016b).
- 2.1.2 The Site is the subject of a housing development proposal and covers an area of 71ha. The archaeological evaluation was required, in keeping with NPPF Section 12 (Department for Communities and Local Government 2012) and Local Plan Policy (Hampshire County Council, 2012), by the Local Planning Authority (LPA) Eastleigh Borough Council (EBC) to provide information toward understanding the archaeological implications of the proposed development and determining the subsequent treatment of archaeological resources within it. The requirement follows consultation by CgMs with the LPA's archaeological advisor David Hopkins, County Archaeologist, Hampshire County Council. The requirement for archaeological works forms Condition (17) of planning permission for the proposed housing development (EBC planning ref: 0/12/71514).
- 2.1.3 This document provides a report on the Phase 2 & 3 evaluation, which comprised 84 50m X 2m trenches excavated in April 2016. The evaluation took place between 30<sup>th</sup> March 2016 and 22<sup>nd</sup> April 2016.
- 2.1.4 This document has been prepared in accordance with the Standard and Guidance for archaeological field evaluation (Chartered Institute for Archaeologists 2014) and The Management of Research Projects in the Historic Environment: The MORPHE Project Manager's Guide (Historic England 2015).

### 2.2 Location, Topography and Geology

- 2.2.1 The Site is located within the parish of Botley, which lies within the Borough of Eastleigh, Hampshire. The Site lies to the north of the hamlet of Boorley Green and the historic village of Botley. Immediately to the north of the Site is the rural parish of Durley. A hamlet of the same names is located 2km to the north-east. The mainline railway running between Winchester to the northwest and Gosport in the south-east lies 550m to the south of the Site, and Junction 7 of the M27 motorway is situated 3km west-south-west.
- 2.2.2 The whole Site, an irregular area of 71 hectares, is bound to the west by the B3354 Winchester Road, which runs between Horton Heath and Boorley Green. To the immediate south of the Site lies Maddoxford Lane, residential properties along the northern frontage of Maddoxford Lane, and Maddoxford Farm. The northern and eastern boundaries of the Site are demarcated by the meandering course of Ford Lake, a tributary of the River Hamble. Beyond Ford Lake to the north lies Chancellor's Lane. The majority of the Site is occupied by the golf course of Botley Park Hotel and Country Club, with associated buildings including Braxells Farm, located along the Site's western boundary. The southernmost section of the Site comprises a series of pasture fields associated with Maddoxford Farm.
- 2.2.3 The Site, an area of undulating land, occurs at between approximately 25m and 30m above Ordnance Datum (aOD).

- 2.2.4 The underlying geology of the Site is mapped as sand, silt and clay of the Wittering Formation a Sedimentary Bedrock formed approximately 40 to 56 million years ago in the Palaeogene Period when the local environment would have been dominated by shallow seas. These 'rocks' were formed in these shallow seas, with mainly siliclastic sediments (comprising of fragments or clasts of silicate minerals) deposited as mud, silt, sand and gravel. Sand and gravels were identified within Phase 1 trenches (CA 2014).

## 2.3 Archaeological and Historical Background

The archaeological and historical background to the Site was set out in a Desk-based Assessment (Archaeological Solutions 2012) and subsequent documents (Cotswold 2014, PCA 2016a) and is not repeated here.

## 3 AIM

### 3.1 Archaeological Evaluation

- 3.1.1 The aim of the archaeological evaluation was to determine the character, extent, date, condition and significance of archaeological resources that may survive within the Phase 2 & 3 part of the Site, taking account of their potential to contain biological and palaeo-environmental remains.
- 3.1.2 This report aims to provide sufficient information concerning the results of the evaluation so that the future treatment of any archaeological resources identified within the Site, in respect of the proposed development, may be determined.

## 4 RESULTS

### 4.1 Introduction

- 4.1.1 This section provides a summary of the results of the evaluation and is based on the Site archive, which comprises written, drawn and photographic records along with a small assemblage of artefacts. The Site archive is held at the PCA Winchester office under Site code **BGBH15**, and will be deposited in due course with Hampshire Cultural Trust. A trench summary table is provided in **Appendix 1**.

### 4.2 Evaluation Programme

- 4.2.1 The Site was recently a golf course for which there is evidence of substantial landscaping including the building up of fairways and the creation of a substantial mound between the course, Braxells Farm and the driving range in the north-west corner of the Site. In some trenches there was evidence of redeposited natural material used to flatten fairways and reduce gradients. Soil and subsoil appears to have been relocated within the Site to create the golf course and this appears to have resulted in localised reduction or reshaping of the original landscape; this may have resulted in the removal and truncation of the Site's archaeological potential.
- 4.2.2 The 100 proposed Phase 2 & 3 trenches were numbered trench 36 to trench 135, following the numerical sequence established in the initial Phase 1 evaluation, trenches 1-35 (**Figure 2**).
- 4.2.3 A total of 84 of the proposed 100 50m by 2m trenches were opened. Trenches 39 and 114 were not opened as they were placed in dense woodland and there was nowhere appropriate nearby to reposition them. Trenches 59, 60, 61, 104, 106, 107 and 113 were all attempted but abandoned due to made ground exceeding safe excavation limits. Trench 94 was abandoned due to the rapid ingress of ground water.
- 4.2.4 In addition to those not opened or abandoned, trenches 96, 98, 111 and 116 all flooded before anything more than a basic trench record could be made.

- 4.2.5 Trenches 122 to 135 at the eastern extent of the Site were inaccessible due to a buried high pressure gas/oil pipeline, a buried gas main and an overhead power line. In addition, these trenches were proposed east of the golf course in fields containing livestock.
- 4.2.6 The proposed location of several of the trenches was adjusted to avoid obstacles such as trees or golf course features.
- 4.2.7 The topsoil was, in general, a 0.1m to 0.2m thick layer of dark greyish brown silty clay over a 0.2m thick layer of lighter silty clay beneath (see for example **Figure 11 and 12**). In most trenches the lower layer was recorded as subsoil and may represent soil redeposited for construction of the golf course. Both topsoil and subsoil were notably free of any archaeological finds.
- 4.2.8 The natural deposits consisted of a clayey 'Brickearth' and varying mixtures of sands, clays and silts.

### 4.3 Evaluation Trenches

- 4.3.1 A total of 30 discrete and linear features were investigated and recorded (**Figure 3**). Of the 19 discrete features, seven of these, in Trench 80 (**Figure 5**), were, on investigation, found to be anomalies in the surface of the underlying natural ([8004], [8006] not shown, [8008], [8011], [8012], [8014] & [8016], despite their promising appearance in plan. Of the other twelve discrete features investigated only three were of any note, [4104], [4904] and [8405], and are discussed below. The other nine were, in Trench 54, a small undated pit [5404] (**Figure 4**), in Trench 63 two small possible postholes [6304], [6306] and a small pit [6308], all undated (**Figure 4**), in Trench 84 a small feature of uncertain character [8407], undated (not illustrated) and in Trench 110, four post-holes of modern date, probably remnants of a fence line (**Figure 6**).
- 4.3.2 In Trench 41, pit [4104] was regular and circular in plan, 1.2m in diameter and 0.30m deep (**Figure 10**). The sides and base were concave and it had a homogenous, brownish yellow, silty clay fill [4105]. This fill contained a very small single sherd of flint tempered, probably late prehistoric pottery and a very small, possibly worked flint flake. Trench 49 revealed an irregular feature [4904] that was shallow with steep sides (**Figure 4**). The edges were hard to follow and the feature would have been considered a natural anomaly but for two large pieces of ironstone recovered from its fill [4905]. This stone is not local to the area and was therefore brought to the Site but when and for what purpose is unknown. In Trench 84, feature [8405] was of irregular form and its fill [8406] yielded a single, possibly worked, flint flake that has the shape of a scraper but showed no sign of having been retouched (**Figure 6**).
- 4.3.3 Of the eleven linear features, [3704] (**Figure 8**), [4704] (**Figure 4**), [4706] (**Figure 4**), [6310] (not illustrated), [6404] (**Figure 5**), [7204] (**Figure 9**), [7304] (**Figure 5**), [8304] (**Figure 5**), [8403] (**Figure 6**), [9204] (**Figure 7**) and [10004] (**Figure 6**) are interpreted as ditches, perhaps part of the post-medieval agricultural landscape (Archaeological Solutions 2012) or an earlier system of enclosures. However, in the absence of any finds from their fills, all remain undated. The ditches were generally steep sided with flat or concave bases and were between 0.5m and 0.7m wide and 0.15m to 0.25m deep and no finds were recovered from them.
- 4.3.4 The ditches were broadly the same as those observed in the Phase 1 evaluation (PCA 2016a), however ditch [9204] was notably larger at 1.35m wide by 0.50m deep. It is located close to the line of an existing footpath at the edge of the golf course and its greater surviving depth, when compared with the other ditches, may be due to it having been subject to less severe impact when the golf course was constructed.
- 4.3.5 Trenches 72 to 75 were located near to the site of a Romano-British tile kiln (HER 17969) that was excavated in 1956. Trench 72 revealed a ditch [7204] that yielded no finds.

#### **4.4 Finds**

- 4.4.1 A very small finds assemblage was recovered during the evaluation. The single piece of worked flint from [8406] and the small sherd of possibly prehistoric pottery and single piece of worked flint from [4105] along with the non-local stone from [4905] were the only finds recovered from stratified contexts. Additionally two sherds of ceramic material and three other possible worked flint flakes were found unstratified in subsoil together with a sherd of 19<sup>th</sup> century pottery and a fragment of modern glass.
- 4.4.2 No palaeo-environmental remains were identified.

#### **4.5 Conclusions**

- 4.5.1 The evaluation was completed largely in keeping with the Written Scheme of Investigation although some re-adjustment to trench locations was required and trenches 122 to 135 at the eastern extent of the Site were not excavated owing to the presence of buried and overhead services and livestock. A number of trenches were also abandoned owing to flooding or depth constraints. The evaluation appears to demonstrate that the Site has, generally, low archaeological potential, which may have previously been reduced by the formation of the existing golf course. The results of this stage of evaluation appear consistent with the Phase 1 evaluation results.
- 4.5.2 Little substantive evidence of late prehistoric activity was found and certainly no further evidence of funerary remains that were found in the Phase 1 evaluation. The single sherd of probably late prehistoric pottery and flint flake from the small pit [4104] do not significantly alter the impression that the Site and immediate landscape contain sparse evidence of activity in this period.
- 4.5.3 No evidence of the Romano-British tile kiln site excavated in 1956 was found in trenches opened close to its recorded location. It would seem that all evidence of the kiln has been entirely removed.
- 4.5.4 It is concluded that this phase of evaluation appears to confirm that the Site retains little, if any, significant archaeological potential. This may in part be due to the impact of the golf course on the landscape but appears to be consistent with the paucity of archaeological resources so far recorded within or in the vicinity of the Site.

## **5 ACKNOWLEDGEMENTS**

Pre-Construct Archaeology Ltd would like to thank Matt Smith of CgMs Consulting Ltd for commissioning the evaluation and David Hopkins, Hampshire County Archaeologist for his advice on behalf of the Local Planning Authority.

Fieldwork was carried out by Stephanie Ralph, Dominic McAtominey, Ryan Wolfe, Steve Hubbard and Katherine Marshall, supervised by Jon Kaines. This report was written by Jon Kaines and the report illustrations were prepared by Jennifer Simonson. The project was managed for PCA by Paul McCulloch.

## APPENDIX 2: Oasis Record

OASIS ID: preconst1-249796

### Project details

Project name	Boorley Green, Hampshire Phase 2 and 3
Short description of the project	An archaeological evaluation of land at Boorley Green, Hampshire. This second phase of evaluation comprising 84 trenches revealed very low numbers of archaeological features, mostly undated. A single feature containing a single sherd of late prehistoric pottery and a small worked flint flake was recorded, along with a number of possibly post-medieval or earlier field boundaries/enclosures, all undated.
Project dates	Start: 30-03-2016 End: 22-04-2016
Previous/future work	Yes / No
Any associated project reference codes	BGBH15 - Sitecode
Type of project	Field evaluation
Site status	None
Current Land use	Other 14 - Recreational usage
Monument type	PIT Late Prehistoric
Monument type	DITCH Post Medieval
Significant Finds	POTTERY Late Prehistoric
Methods & techniques	"Sample Trenches"
Development type	Housing estate
Prompt	Planning condition
Position in the planning process	After full determination (e.g. As a condition)

### Project location

Country	England
Site location	HAMPSHIRE EASTLEIGH BOTLEY Boorley Green, Botley
Postcode	SO32 2BX
Study area	71 Hectares
Site coordinates	SU 50669 15332 50.934657478073 -1.278845927313 50 56 04 N 001 16 43 W Point
Height OD / Depth	Min: 22m Max: 31m

### Project creators

Name of Organisation	PCA West
Project brief originator	CgMs Consultants Ltd
Project design originator	CgMs Consultants Ltd
Project director/manager	Paul McCulloch
Project supervisor	Jon Kaines

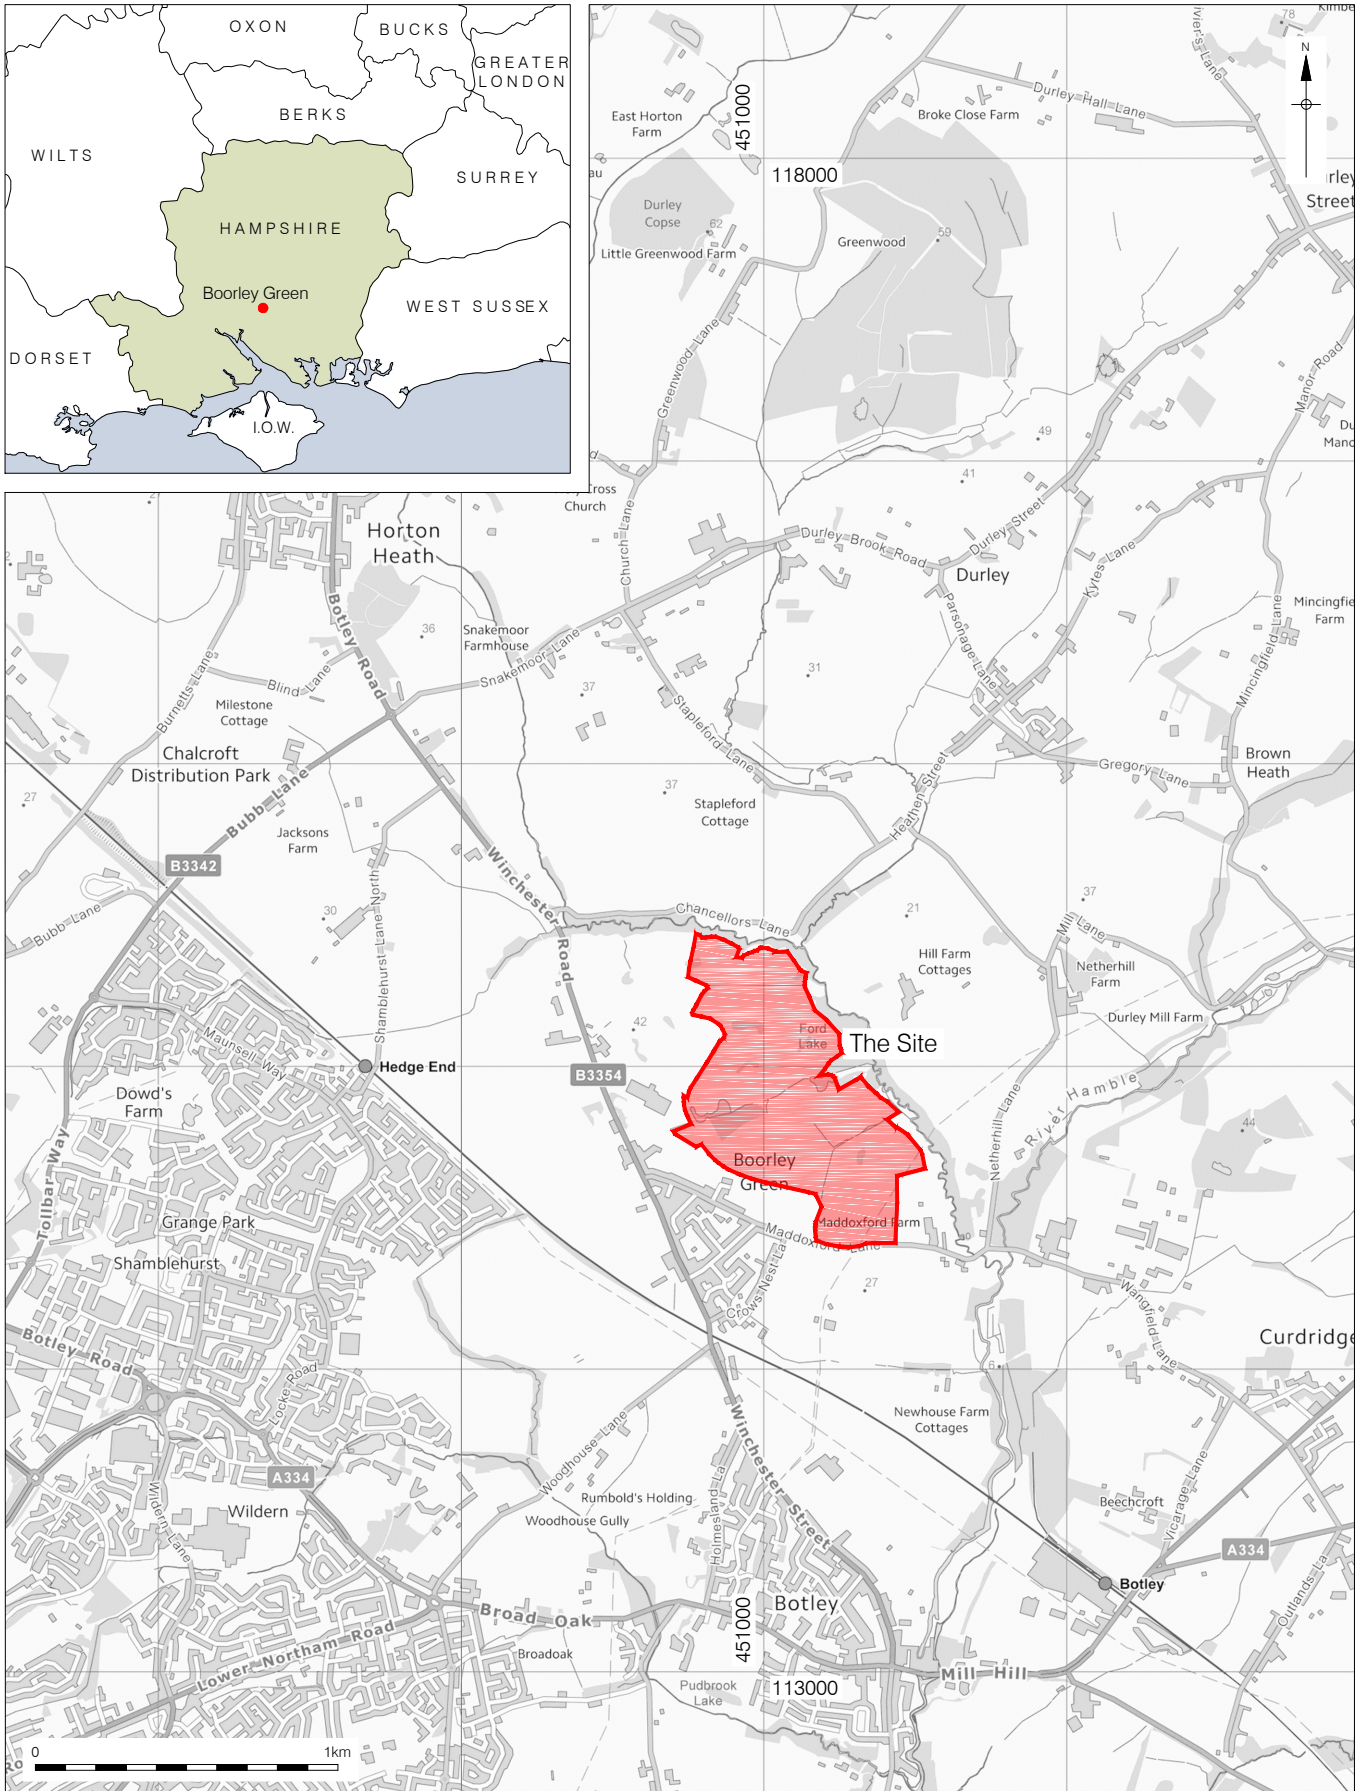

---

### Project archives

Physical Archive recipient	Hampshire Cultural Trust
Physical Archive ID	BGBH15
Physical Contents	"Ceramics", "Worked stone/lithics"
Digital Archive recipient	Hampshire Cultural Trust
Digital Archive ID	BGBH15
Digital Contents	"Ceramics", "Survey", "Worked stone/lithics"
Digital Media available	"Text", "Images raster / digital photography", "Spreadsheets", "Survey"
Paper Archive recipient	Hampshire Cultural Trust
Paper Archive ID	BGBH15
Paper Contents	"Ceramics", "Stratigraphic", "Survey", "Worked stone/lithics"
Paper Media available	"Context sheet", "Diary", "Drawing", "Report", "Section", "Survey "
