1 ABSTRACT

Pre-Construct Archaeology Ltd (PCA) was appointed by CgMs Consulting to undertake an archaeological evaluation on land south-west of Ludgershall, Wiltshire. The Site is the subject of a housing development proposal for which a planning application is to be prepared for submission to the Local Planning Authority Wiltshire County Council. A total of 34 30m X 2m trenches were proposed, arranged over the Site area and targeting possible archaeological resources identified by geophysical survey. A total of 33 trenches were opened with trench 23 not being excavated owing to the presence of a mains foul pipe. The evaluation was completed in keeping with the Written Scheme of Investigation, except for the excavation of trench 23.

The evaluation revealed archaeology of moderate interest in the eastern part of the Site in the form of a ditch in Trench 7, from which pottery dating from the Roman period was recovered. A small number of other features were also identified, such as the features in Trench 3 and 9, however these all appeared modern in date and did not represent significant archaeological resources.

2 INTRODUCTION

2.1 **Project Background**

- 2.1.1 Pre-Construct Archaeology Ltd (PCA) was appointed by CgMs Consulting to undertake an archaeological evaluation on land south-west of Ludgershall, Wiltshire (Figure 1), hereafter 'the Site' (NGR SU 26944 50514). The Site is the subject of a housing development proposal for which a planning application is to be prepared for submission to the Local Planning Authority Wiltshire County Council.
- 2.1.2 The evaluation forms part of a staged approach to understanding the archaeological implications of the proposed development in order to inform, and satisfy the requirements of, the Local Planning Authority. This stage was informed by the results of a geophysical survey (Stratascan 2016) and advice provided to CgMs Consulting by Clare King, Assistant County Archaeologist (ACA) for Wiltshire County Council.
- 2.1.3 A total of 34, 30m X 2m trenches were proposed, arranged over the Site and targeting possible archaeological resources identified by geophysical survey. A total of 33 trenches were opened with trench 23 being left due to the presence of a mains foul pipe.
- 2.1.4 This document has been prepared in accordance with the Chartered Institute for Archaeologists standard and guidance for archaeological field evaluation (ClfA 2014) and Management of Research Projects in the Historic Environment (Historic England, 2015).

2.2 Location, Topography and Geology

- 2.2.1 The Site, an area of approximately 17ha, is located to the south-west of the current settlement of Ludgershall. The site comprises of arable farmland with Andover Road running along the northern boundary. The Site is accessed from the north-west from Empress Way.
- 2.2.2 The Site is fairly flat and slopes gently from the north down to the south, lying between 110m and 120m above Ordnance Datum.
- 2.2.3 The underlying natural geology of the Site is mapped as 'Seaford Chalk Formation'; sedimentary bedrock formed approximately 83 to 89 million years ago in the late Cretaceous Period (British Geological Survey 2014). Although there are no superficial geological deposits listed as being present on Site, there are 'head' deposits very close to the Site where clay-with-flint capped much of the natural chalk.

2.3 Archaeological and Historical Background

2.3.1 The Site lies in an area of known archaeological sites, findspots and monuments, including the historic settlement of Ludgershall, documented since the 11th century, and medieval Ludgershall Castle. Finds of earlier periods indicate later prehistoric and Romano-British activity in the vicinity of Ludgershall, but no clear focus or type of activity in these periods has been identified.

2.3.2 A geophysical survey (Stratascan 2016) appeared to indicate sub-surface anomalies of possible archaeological character including linear and discrete anomalies in the northeastern extent of the Site.

3 AIM

3.1 **Archaeological Evaluation**

- 3.1.1 The aim of the archaeological evaluation was to determine the presence or absence of archaeological resources within the Site and, where present, determine their nature, extent, date, condition and significance, taking account of their potential to contain biological and palaeo-environmental remains.
- 3.1.2 This report on the evaluation aims to provide a context for any archaeological resource that was identified and provide sufficient information so that the future treatment of that resource, in respect of the proposed housing development, can be determined in consultation with the archaeological advisor to the Local Planning Authority.

4 RESULTS

4.1 Introduction

- 4.1.1 The following presents a summary of the evaluation results based upon the Site archive which comprises and Site dairy, trench recording sheets, context sheet, site drawings and digital photographs.
- 4.1.2 A summary of recorded contexts is provided in a Trench Index in **Appendix 1** and a selection of photographs of the trenches and trench sections in **Appendix 2**. The archive is held at PCA's Winchester office under the Site code **EWLW16** and will in due course be deposited with the Wiltshire Heritage Museum.

4.2 Methodology

- 4.2.1 The archaeological evaluation was undertaken following the methodology that was detailed in the Written Scheme of Investigation (PCA, 2016), which was approved on behalf of the Local Planning Authority in advance of the commencement of works.
- 4.2.2 The evaluation comprised of 34 30m X 2m trenches, with a total 33 being opened; trench 23 was not opened due a mains foul pipe (**Figure 2, Plates 1&2**).

4.3 Summary of Deposition Sequence

- 4.3.1 The deposit sequence shown by the evaluation trenches was generally consistent across the Site (**Figure 6**, **Plate 2 & 3**). The trenches demonstrated a topsoil and subsoil above the natural, with both chalk and clay-with-flints seen at an average depth of 0.28m below ground level (BGL).
- 4.3.2 Evidence of late Post-medieval Modern material was evident across the site, particularly to the north, including Ceramic Building Material (CBM), glass and other ceramics.

4.4 Archaeological Features

- 4.4.1 A single linear was identified in Trench 7 ([704]) (**Figure 3, Plate 5**), 1.59m wide, 0.46m in depth, running east-west across the trench. To the north the sides were straight with a gradual slope whereas the southern side was convex with a sharp break of slope; it had a rounded base. A single fill was seen ((403)), clayey silt, with pottery and CBM and animal bone recovered, all thought to date to the Roman period (**Appendix 3**).
- 4.4.2 Trench 3 revealed a small linear feature ([304]) (**Figure 4, Plate 6**), running east-west across the trench. The single fill contained modern CBM and pottery.
- 4.4.3 Trench 9 revealed a small sub-circular pit (**Figure 5, Plate 7**), containing evidence of burning and charcoal; this feature was not dated but is thought to be relatively modern in date.

4.5 **Conclusion**

- 4.5.1 The evaluation revealed archaeology of moderate interest in the eastern part of the Site in the form of a ditch in Trench 7, from which pottery dating from the Roman period was recovered.
- 4.5.2 A small number of other features were also identified, such as the features in Trench 3 and 9, however these all appeared modern in date and did not represent significant archaeological resources.

5 ARCHIVE PRERARATION AND DEPOSITION

5.1 The Site Archive

5.1.1 The Site archive, to include all project records and cultural material produced by the project, will be prepared in accordance with 'Guidelines for the Preparation of Excavation Archives for Long-term Storage' (UKIC 1990) and the Institute for Archaeologists 'Standard and Guidance for the creation, compilation, transfer and deposition of archaeological archives' (ClfA 2014). On completion of the project PCA will arrange for the archive to be deposited with the Wiltshire Heritage Museum.

5.2 Copyright

- 5.2.1 The full copyright of the written/illustrative archive relating to the site will be retained by Pre-Construct Archaeology Ltd under the Copyright, Designs and Patents Act 1988 with all rights reserved. Wiltshire County Council, however, will be granted an exclusive licence for the use of the archive for educational purposes, including academic research, providing that such use shall be non-profitmaking, and conforms to the Copyright and Related Rights regulations 2003. Further distribution and uses of the report either in its entirety or part thereof in paper or electronic form is prohibited without the prior consent of Pre-Construct Archaeology Ltd.
- 5.2.2 The licence extends to the use of all documents arising from this project in all matters relating directly to the project, as well as for bona fide research purposes (which includes the Wiltshire and Swindon Historic Environment Record).
- 5.2.3 Pre-Construct Archaeology Ltd has made every effort to ensure the accuracy of the content of this report. However, Pre-Construct Archaeology Ltd cannot accept any liability in respect of, or resulting from, errors, inaccuracies or omissions this report contains.

6 ACKNOWLEDGEMENTS

Pre-Construct Archaeology is grateful to Matt Smith of CgMs Consulting Ltd for commissioning the evaluation and to Clare King, Wiltshire County Council, for advice. James Williams of Readypower Ltd is thanked for operating mechanical plant.

The evaluation was supervised by Katherine Marshall, assisted by Thom Hayes.

This report was prepared by Katherine Marshall with Illustrations prepared by Charlotte Faiers. The project was managed for PCA by Paul McCulloch.

Appendix 3: Artefact Summary Assessment

Artefact Summary Assessment: EWLW16

Introduction

This summary assessment provides an overview of the artefact assemblage recovered from an archaeological evaluation at Land South-West of Ludgershall, Wiltshire (Site code: EWLW16). The archaeological investigation produced a small assemblage of pottery, animal bone and Ceramic Building Material (CBM). The artefacts were found from two contexts, one associated with a linear feature and the other from topsoil above the linear feature.

The Pottery Assemblage

The pottery assemblage recovered from EWLW16 appears to derive from the same broad time period; the Romano-British period (AD43-410).

All of the pottery (42 sherds) was recovered from context (703), the fill of linear feature [704]. Three broad types were identified; Fine Greyware, Coarse Greyware and Oxfordshire Ware. The greywares derive from a number of different vessels, however identifying vessel type is difficult owing to the nature and size of the individual sherds from the assemblage. Furthermore, although this pottery can be broadly dated to the Romano-British period, it is difficult to narrow down a more specific date. Two small sherds, including a rim sherd, of Oxfordshire Ware were also recovered. The Oxfordshire ware is more easily dateable than the Greywares and is likely to derive from the 3rd or 4th century AD.

CBM

A small piece of *Tegula* was recovered from the topsoil, [700], located directly above linear feature [704]. The tile is likely to date to the Romano-British period.

Animal Bone

A small collection of animal bones was recovered from fill (703). It comprised five pieces of large mammal bone and four pieces of small mammal bone. It is likely that the large mammal bone is bovine (in particular the vertebrae). However, the small mammal bones are to degraded to distinguish any specific species.

Context	Material	Quantity	Weight (g)	Туре	Other Comment	Date Range
700	СВМ	1	171	Tegula	Small degraded section of tegula tile (from topsoil)	Romano British
703	Pottery	32	501	Fine Greyware	A collection of greyware pottery from a variety of vessels. 2 base sherds and 2 rim sherds	Romano British
		8	489	Coarse Greyware	All wall sherds from more than 1 vessel	Romano British
		2	14	Oxfordshire Ware	1 rim sherd and 1 degraded wall sherd. Likely 3rd/4th century	Romano British
	Animal Bone	5	144	Large Mammal	1 vertabrae, 2 (?) Scapula, 1 Rib, 1 undiagnostic	N/A
		4	14	Small Mammal	1 long bone, 1 phalanges, 2 undiagnostic	N/A

Table 1 Artefact quantification and descriptions

Conclusions and Recommendations

All pottery from the archaeological evaluation can be broadly described as being from the Romano-British period, suggesting that evidence for activity can be limited to this period. All datable artefacts were recovered from secure contexts and can provide *terminus post quem* for all features.

Although the pottery represents good dating evidence, the nature of the assemblage does not lend itself to further investigation at this time. Furthermore, it is not recommended that publication photographs or illustrations are necessary.

Project details

Project name Land South-West of Ludgershall, Wiltshire

the project

Short description of Pre-Construct Archaeology Ltd (PCA) was appointed by CgMs Consulting to undertake an archaeological evaluation on land south-west of

Ludgershall, Wiltshire. The Site is the subject of a housing development proposal for which a planning application is to be prepared for submission to the Local Planning Authority Wiltshire County Council. A total of 34no 30m X 2m trenches were proposed, arranged over the Site area and targeting possible archaeological resources identified by geophysical survey. A total of 33 trenches were opened with trench 23 being left due to the presence of a mains foul pipe. The evaluation was completed largely in keeping with the Written Scheme of Investigation. The evaluation revealed moderately significant archaeology in the east of the site in the form the ditch, probably dating to the Roman period. A number of other features were also identified, such as Trench 3 and 9, all appeared modern in date

and do not represent any significant archaeology.
