 Sample Excavation and Feature Planning Report
## 1. Introduction

This report has been commissioned by Geoffery-Royston Ltd, in advance of the proposed erection of five dwellings, two detached double garages and conversion of Woodbine Cottage, Yapham, East Yorkshire (SE 78935210 : Fig. 1).

This document sets out the details and results of the Archaeological Sample excavation and a general feature plan as specified in the agreed Written Scheme of Works.

The Archaeological work was undertaken by MAP Archaeological Consultancy Ltd between the $3^{\text {rd }}$ of October to $26^{\text {th }}$ of November, 2003.

All Maps within this report have been produced from The Ordnance Survey with the permission of the Controller of Her Majesty's Stationery Office, Crown Copyright. License No. AL 50453A.

This report has been funded by Geoffrey-Royston Ltd.
2. Site Description (Fig. 2)

The site, measuring 0.39 hectares, lies at the northern end of the settlement, in a triangular area formed by a fork in the road - one fork goes to Mill Farm where it terminates, the other (Melsonby) runs past Woodbine Cottage, before turning south-eastwards to run past High Garth.
3. Geology

The proposed development area is located on soils of the Worcester Association. This association comprises of slowly permeable non-calcareous and calcareous reddish clayey soils over mudstone, shallow on steeper slopes. Associated with similar non-calcareous fine loamy over clayey soils.
4. Historical and Archaeological Background

The site of the development lies at the north end of the medieval hamlet of Yapham. This is a pre-Conquest settlement, which has its origins in the Saxon period, the name deriving from the Old English meaning "at the steep places"; it formed part of Warter hundred. At the time of Domesday Book, the King held 11 carucates in Yapham, and Ulfr and Wulfstan held 10 carucates and 6 bovates here, sufficient land for 2 ploughs, it was worth 20s. The settlement is attested throughout the Middle Ages.

Well-preserved earthworks, especially in the southern part of the settlement, demonstrate that the latter was once considerably larger than it is today. The remains of earlier settlement are present in the surrounding area. The cropmarks of a number of rectangular enclosures, one of which contains a hut circle, which could date from the prehistoric or Romano-British periods, are visible from aerial photographs to the north-west of the village.
5. Methodology

The first stage of work was to strip all of the topsoil from the area of the proposed development using a $360^{\circ}$ excavator fitted with a toothless ditching bucket under archaeological supervision. The exposed surface was then thoroughly cleaned, in order to assist the identification of any features. A detailed plan was then made of all features, which were showing, to an appropriate scale (e.g. 1:10, or 1:20).

A targeted amount of excavation work was also carried out around the area of Woodbine Cottage. This was done to enable some groundworks to take place which were located in this area including a septic tank.
6. Results: Sample Excavation (Figs. 3 \& 4)

A total of seven features were excavated in the area around Woodbine Cottage to enable groundworks to take place. (these can be located using Figure 3 and seen in greater detail with Figures 4 and 5, plan and sections respectively).

## Postholes

There were a total of three postholes located in the targeted excavation area.

Posthole 3 , had a diameter of c. 0.40 m and a depth of 0.12 m with a U -shaped profile. The fill of this feature (2) was a dark grey brown (10YR 4/2), sandy loam with occasional gravel and limestone inclusions containing no finds.

Posthole 5, had a diameter of c. 0.40 m and a depth of 0.12 m with a U-shaped profile. The fill of this feature (4) was a very dark grey (7.5YR 3/1), sandy loam with occasional gravel and limestone inclusions containing one limb bone fragment of possibly a sheep.

Posthole 14 , had a diameter of c. 0.30 m and a depth of 0.30 m with a steeply sided $U$ - shaped profile. The fill of this feature (13) was a dark brown (10YR $3 / 3$ ), silty sand with occasional gravel and limestone inclusions containing no finds. This feature was cut by Ditch 10 (this ditch was also located during the general feature plan and given the number 224).

Ditch
Ditch 10 (same as 224) ran north to south and went directly underneath the middle of Woodbine Cottage. It had a width of c. 1.9 m and a depth of 0.40 m with a steeply sided U-shaped profile. The primary fill (12) was a reddish brown (5YR 5/4), silty sand with occasional gravel and limestone inclusions containing no finds. Above fill (12) was fill (11), this was a dark brown (10YR $3 / 3$ ), silty sand with occasional gravel and limestone inclusions containing 13 sherds of $12^{\text {th }} / 13^{\text {th }}$ century pottery. (For more information on this ditch see the results for the targeted feature plan, feature number 224).

Pit 9 , had a diameter of c. 0.65 m and a depth of 0.50 m with a steeply sided U shaped profile. The fill of this feature (8) was a very dark brown (10YR 2/2), sandy clay with occasional gravel and limestone inclusions. This contained two sherds of Roman Greyware, 3 sherds of $14^{\text {th }}$ century pottery and one sherd of $18 / 19^{\text {th }}$ century Blackware which was possibly intrusive.

Pit 7 had a diameter of c .0 .60 m and a depth of 0.22 m with a U -shaped profile. The fill of this feature (6) was a very dark grey ( $10 \mathrm{YR} 3 / 1$ ), sandy loam with occasional gravel and limestone inclusions containing no finds.

Pit 17 had a length of c. 3.5 m and a width of c. 1.7 m with a broad U -shaped profile. The primary fill of this feature (16) was a dark grey (10YR 4/1), clay silt with occasional gravel and limestone inclusions containing forty-eight sherds of $14^{\text {th }}$ century pottery. Above fill (16) was fill (15), this was a very dark greyish brown (10YR 3/2), loamy sandy silt with occasional gravel and limestone inclusions containing four sherds of Roman Greyware and six sherds of $12^{\text {th }} / 13^{\text {th }}$ century pottery.

## Results of Targeted Feature Plan (Figs. 3 \& 13) :

All areas stripped by the machine were cleaned by a team of archaeologists and planned to a scale of 1:20. Although no excavation of features took place they have been put into five categories. These five categories were:

1. Ditches
2. Gullies
3. Pits
4. Postholes
5. Unusual features (eg. Ponds)

As none of the features were excavated it was not possible to give certain stratigraphic relationships. However, pottery which was found on the top of features during cleaning was saved and some relationships between features were visible without excavation.

The site has been split into two zones to allow features to be viewed on plan quicker (Fig. 3). These will be Zone A (north of the concrete slab) and Zone B (south of the concrete slab).

## Zone A

There were a total of five ditches, thirty-eigth postholes, thirty-four pits, fifteen gullies and five unusual features.

## Ditches (Fig. 6)

Ditch 128 , ran along the entirety of the western baulk edge running north to south in Zone A. This ditch was filled by a very dark brown, silty sand with occasional chalk and flint fragments. There were three sherds of Roman pottery dating from the $3^{\text {rd }} / 4^{\text {th }}$ century and one sherd of medieval pottery from the $12 / 13^{\text {th }}$ century recovered from this feature.

Ditch 115, was also located on the western baulk edge of Zone A, centrally positioned running west to east and visibly cut ditch 128 . This ditch was filled by a very dark brown, sandy silt with occasional chalk and flint fragments containing no finds.

Ditch 114, was located running west to east along the northern sector of Zone A and was visibly cut by Ditch 128. This ditch was filled by a dark brown, sandy silt with occasional chalk and flint fragments. There were sixteen sherds of $3^{\text {rd }} / 4^{\text {th }}$ century pottery found on the surface of this ditch.

Ditch 81 ran alongside Ditch 114 on its northern side. It was unclear if this was the same ditch with two different fills or two separate ditches. The fill was a very dark brown, silty sand with occasional chalk and flint fragments. There were twenty-three sherds of pottery dating from the $3 / 4^{\text {th }}$ Century and one sherd of pottery dating from the $12^{\text {th }} / 13^{\text {th }}$ century recovered from this feature.

Ditch 95 was located in the northern area of Zone A, centrally positioned running into the northern bulk and visibly cut by ditch 81 . The fill was a very
dark brown, silty sand with occasional chalk and flint fragments. Small find 9 was found on this feature during cleaning, this was a dated to the $17^{\text {th }}$ century. It seems likely, however, that this find was in the topsoil above the feature.

## Pits (Fig. 7)

There were a total of thirty-four pits located in Zone A. These were feature numbers $55,56,60,66,78,79,88-94,98,99,106,107,112,113,117,120-$ $123,127,131,140,142-148$ and 164 . All these fills were given munsell colours between dark yellowish brown to very dark brown and had silty sandy fills with occasional chalk and flint fragments. Pits 55 and 131 had small fragments of Roman pottery and Pit 92 had one sherd of $12^{\text {th }} / 13^{\text {th }}$ century pottery.

## Postholes (Fig. 8)

There were a total of 38 postholes located in Zone A. These were feature numbers $54,57,59,61,62,64,65,68,69,73,74,76,80,85-87,97,103-105$, $109,111,116,118,124,125,132-135,137-139,141$ and 149-152. All these fills were given munsell colours between dark brown and very dark brown and had silty sandy fills with occasional chalk and flint fragments. Posthole 132 had one sherd of $3^{\text {rd }} / 4^{\text {th }}$ century pottery and Posthole 133 , again, had one sherd of pottery datable only to the Roman period.

As no excavation work was carried out it is difficult, without using guesswork, to look for structures. However, Postholes $64,69,86$ and 87 are clearly incorporated with Gully 63 to create a small round house.

## Gullies (Fig. 9)

There were a total of fifteen gullies located in Zone A. These were feature numbers $63,67,70,75,77,82,83$ (same as 100), $84,96,101,102,108$ (same as 136), 110, 126 and 130. All these were given munsell colours between dark brown and very dark brown and had silty sandy fills with occasional chalk and flint fragments. None of these features contained pottery to date them.

## Unusual Features (Fig. 10)

There were five of these features located during planning. These were either features that could not be defined without excavation, a pond or a possible furrow.

Feature 53 was located in the south-eastern corner of Zone A and contained pottery from the $17^{\text {th }}$ to $18^{\text {th }}$ century. It seems likely that this was to hold water for livestock and was backfilled during the $17^{\text {th }}$ to $18^{\text {th }}$ century.

There were also five features described as general deposits, one of which contained some reddish clay (71). These features were 58, 71, 72, 119 and 129 All were given munsell colours between dark yellowish brown to very dark brown and had silty sandy fills with occasional chalk and flint fragments. Feature 58 and 72 had fragments of pottery datable only to the Roman period and 119 had pottery dating to the $4^{\text {th }}$ century

## Zone B

There were in total ten ditches, two gullies, thirty-two postholes, thirty-six pits and two unusual features.

## Ditches (Fig.6)

Ditch 22 (same as 39 and 184) was roughly in the centre of Zone B running in a southwest to northeast direction. This ditch was filled by a greyish brown to dark grey, silty sandy fill with occasional chalk and flint fragments. One sherd of pottery datable to the Roman period and three sherds of pottery from the $13^{\text {th }} / 14^{\text {th }}$ century were recovered from this feature.

Ditch 51 (same as 221) was located in the centre of Zone B going into ditch 22, it was not possible to see what relationship these two ditches had to each other. This ditch was filled by a dark brown, silty sandy fill with occasional chalk and flint fragments. No finds were recovered associated with this ditch

Ditch 24 (same as 194 and 210) was ran roughly parallel with ditch 22 to the east. This ditch was filled by a dark greyish brown to dark brown, silty sandy fill with occasional chalk and flint fragments. No finds were recovered associated with this ditch.

Ditch 25 was located in the northeast corner of Zone B running in an east to west direction. This ditch was filled by a dark greyish brown, silty sand fill with occasional chalk and flint fragments. No finds were recovered from this ditch. It was clear, however, that this feature was cut by both Gully 18 and 21.

Ditch 34 was located in the northeast corner of Zone B. This ditch was filled by a dark greyish brown, silty sand with occasional chalk and flint fragments. No finds were recovered associated with this ditch. It was clear, however, that this feature was cut by Gully 21.

Ditch 36 (same as 169 and 170) was located again in the northeast corner of Zone B. This ditch was filled by a dark greyish brown to dark brown, silty sand with occasional chalk and flint fragments. There were two sherds of pottery located dating to the $12 / 13^{\text {th }}$ century.

Ditch 37 was located in the northeast corner of Zone B, however, very little was seen. This ditch was filled by a dark greyish brown, silty sand with occasional chalk and flint fragments. No finds were associated with this ditch.

Ditch 38 again was located in the northeast corner of Zone B. This ditch was filled by a dark greyish brown, silty sand with occasional chalk and flint fragments. No finds were recovered associated with this ditch.

Ditch 197 was located in the northeast corner of Zone B running in an east to west direction joining both Ditches 24 and 224. It was not possible, however, to see what relationship they had. This ditch was filled by a dark brown, silty sand with occasional chalk and flint fragments. No finds were recovered from with this ditch.

Ditch 224 was joined to Ditch 197 and was located in the eastern side of Zone B and ran in a southwest to northeast direction. This ditch was filled by a dark brown, silty sand with occasional chalk and flint fragments. No finds were recovered associated with this ditch.

## Postholes (Fig. 8)

There were a total of thirty-two postholes located in Zone B. These were feature numbers $19,27,28,31,32,40,46,157,165-168,172-174,177-179$, 181, 191, 196, 198, 199, 203, 204, 211, 212, 214, 215, 218 and 219. All these fills were given munsell colours between dark brown and dark greyish brown with silty sandy fills and occasional chalk and flint fragments. Posthole 168 had three sherds of $2^{\text {nd }} / 3$ rd century pottery and Posthole 172 had two sherds of pottery datable to the $3 / 4^{\text {th }}$ century.

There are no specific structures in Zone B which stand out when Figure 8 is viewed. However, there is some clustering of Postholes 203, 204, 211, 212, 214 and 215.

## Pits (Fig. 7)

There were a total of thirty-six pits located in Zone B. These were feature numbers $20,23,26,29,30,33,35,43,44$ (same as 206), 45, 47, 48, 52, 153, 158, 161-163, 171, 175, 176, 182, 183, 185, 189, 190, 192, 202, 207, 216, 220, 223 and 225-227. All these fills were given munsell colours between dark yellowish brown to very dark brown and had silty sandy fills with occasional chalk and flint fragments. Pits 23 and 153 had small fragments of pottery datable to the Roman period, pit 183 had two sherds dating to the $3 / 4^{\text {th }}$ century, pit 44 had 13 sherds of $12^{\text {th }} / 13^{\text {th }}$ century pottery and Pit 48 had one sherd of pottery dating to the $13^{\text {th }} / 14^{\text {th }}$ century.

## Gullies (Fig. 9)

There were a total of twenty-one gullies located in Zone B. These were feature numbers $18,21,41$ (same as 195), 42, 49, 50, 154-156, 159, 160, 180, 186$188,200,201,205,208,209$ and 217. All these were given munsell colours
between dark brown and very dark brown and had silty sandy fills with occasional chalk and flint fragments. Gully 18 contained pottery dating to the $1^{\text {st }} / 2^{\text {nd }}$ century, Gully 21 contained pottery dating to the $4^{\text {th }}$ century and Gully 156 contained pottery dating to the $3^{\text {rd }} / 4^{\text {th }}$ century.

Interpretation for these gullies is difficult without proving by excavation, however, it seems likely that the majority of these are for drainage.

## Unusual Features:

These features were 193 and 213. Both the fills were very dark brown, silty sand with occasional chalk and flint fragments. Deposit 193 did not contain any finds but Deposit 213 contained one sherd of $2^{\text {nd }} / 4^{\text {th }}$ century pottery and one sherd of $12^{\text {th }}$ century pottery.

## Small Finds (Fig. 12 \& Appendix 3 )

When the site had been stripped a metal detector survey was carried out to locate any small finds. This located a total of twenty-four finds, including fourteen coins. These coins all dated between 340AD and 378AD. For a complete list of these small finds see Appendix 3.

## Conclusion (Fig. 12)

From an initial view of the overall feature plan it is clear that there is a great deal of archaeological activity. This seems to date from the $3^{\text {rd }} / 4^{\text {th }}$ century and $12^{\text {th }} / 14^{\text {th }}$ century, which would fit into the general picture of Yapham and the surrounding areas. It is difficult, however, to further interpret or discuss these features without excavation

Small Finds Listing

| Number | Location | Type |
| :--- | :--- | :--- |
| 1 | Spoilheap | Copper Alloy Coin (Metal Detector find) |
| 2 | Road Area | 2 Lead Objects (Metal Detector find) |
| 3 | Road Area | Copper Alloy Coin (Metal Detector find) |
| 4 | Road Area | Ferrous ring object (Metal Detector find) |
| 5 | Road Area | Lead fragment (Metal Detector find) |
| 6 | Road Area | Copper Alloy Coin (Metal Detector find) |
| 7 | EDM Located 30/10/2003 | Lead fragments (Metal Detector find) |
| 8 | Spoilheap | Copper Alloy Thimble (Metal Detector find) |
| 9 | Road Area | Copper Alloy Coin |
| 10 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 11 | EDM Located 30/10/2003 | Lead fragment |
| 12 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 13 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 14 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 15 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 16 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 17 | EDM Located 30/10/2003 | Ferrous object - equine equipment |
| 18 | EDM Located 30/10/2003 | Lead Object |
| 19 | EDM Located 30/10/2003 | Lead fragment |
| 20 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 21 | EDM Located 30/10/2003 | Copper Alloy Ring (possibly medieval) |
| 22 | EDM Located 30/10/2003 | Copper Alloy Object (19 ${ }^{\text {th }}$ or 20 ${ }^{\text {th }}$ century) |
| 23 | EDM Located 30/10/2003 | Copper Alloy Coin |
| 24 | EDM Located 30/10/2003 | Copper Alloy Coin |
