**Appendix I{A} *Brief and Specification for Archaeological Monitoring*
*[continuous observation of soil-stripping operations]***

**FLIXTON PARK QUARRY, FLIXTON
PHASE 5 (subsequently adopted for all succeeding phases)**

1. Background

- 1.1 Planning consent has been granted for development of the above land (W/10999/10). The planning authority have applied a condition to the consent requiring the implementation of a programme of archaeological works, in line with Planning Policy Guideline 16, paragraph 30.
- 1.2 Flixton Park has a rich and varied archaeology, detailed in reports by Oxford Archaeological Associates (1995; incorporated in Volume 3, Appendices B.1 and B.2 of a RMC submission 1997); by Archaeological Services WYAS 1997, and by the Archaeology Service of Suffolk County Council, reports nos. 96/13, 96/65, 97/53, 98/82 and 99/9.
- 1.3 As a first stage in complying with the planning condition the prospective developer has requested a brief and specification for the archaeological monitoring of the soil-stripping operations in the Phase 5 area.
- 1.4 There is a presumption that all archaeological work specified for the whole area will be undertaken by the same body, whether the fieldwork takes place in phases or not. There is similarly a presumption that further analysis and post excavation to final report stage will be carried through by the excavating body. Any variation from this principle would require justification.
- 1.5 All arrangements for field excavation of the site, the timing of the work, and access to the site, are to be negotiated with the commissioning body.

2. Brief for Archaeological Project

- 2.1 In the areas defined on Figure 1, archaeological monitoring, as specified in Section 3, is to be carried out prior to any extraction of minerals or other development works.
- 2.2 The objective of the monitoring will be:
 - a) to enable the identification and evaluation of potentially significant archaeological features or deposits (see Section 3);
 - b) to identify, excavate and record features and deposits of lesser archaeological significance (see Section 4).

- 2.3 The academic objective will centre upon the high potential for this site to produce evidence for settlement and funerary activities from prehistoric through to medieval times.
- 2.4 This project will be carried through in a manner broadly consistent with the *Management of Archaeological Projects* English Heritage 1991.
- 2.5 The submission of a Project Design based upon this brief and the accompanying outline specification of minimum requirements, is an essential requirement. Final selection of an archaeological contractor should not take place until the Project Design has been approved.

3. **Brief for Archaeological Monitoring of Topsoil-Stripping**

- 3.1 To carry out the monitoring work the developer will appoint an archaeologist (the archaeological contractor) who must be approved by the Planning Authority's archaeological adviser; the Conservation Team of Suffolk County Council's Archaeology Service, Shire Hall, Bury St Edmunds IP33 2AR. Telephone/Fax: 01284 352443. The work of the archaeological contractor and the development itself will be monitored by the Conservation Team to ensure that they conform to previously agreed locations and to the content of this Brief and Specification.
- 3.2 The developer will give Suffolk County Council's Archaeology Service and the appointed archaeological contractor three weeks notice (or any other mutually agreed period of notice) of the commencement of site works.
- 3.3 The topsoil-stripping operations (by the developer or the archaeological contractor) will be carried out using a back-acting machine with a toothless bucket. The depth and method of stripping will need to be agreed in advance with the Conservation Team of Suffolk County Council's Archaeology Service. Machinery will not cross the stripped area until any possible archaeology has been assessed and fully recorded. Any variation from this will need to be agreed with the Conservation Team.
- 3.4 As areas are stripped, they will be assessed for further archaeological work. The options will include:
1. A need for further stripping of subsoil layers such hill-wash or other masking deposits.
 2. Evaluation of potentially significant archaeological features or deposits. The scope of this work is to be agreed between the Conservation Team of SCCAS and the developer (or his consultant).
N.B. Further archaeological work arising from this evaluation may require a new Brief and Specification from the Conservation Team of Suffolk County Council's Archaeology Service.
 3. Small-scale archaeological excavation to clear features and deposits of lesser significance (e.g. isolated features or small clusters of features).
The minimum standards for this work are set out below in Section 4.

4. Consideration by the developer of a redesign of the development to avoid major archaeological features.

The decision regarding further work will need to be approved by the Conservation Team of Suffolk County Council's Archaeology Service.

4. Specification for Small-scale Archaeological Excavation
(See Section 3.4.3)

The excavation methodology is to be agreed in detail before the project commences, certain minimum criteria will be required

- 4.1 Fully excavate all features which are, or could be interpreted as, structural. Post-holes, and pits which may be interpreted as post-holes, must be examined in section and then fully excavated. Fabricated surfaces within the excavation area (e.g. yards & floors) must be fully exposed and cleaned.
- 4.2 All other features must be sufficiently examined to establish, where possible, their date and function. For guidance:
- a) A minimum of 50% of the fills of the general features is to be excavated.
- b) Between 10% and 20% of the fills of substantial linear features (ditches etc) are to be excavated, the samples must be representative of the available length of the feature and must take into account any variations in the shape or fill of the feature and any concentrations of artefacts. Any variations from this practice are to be agreed, if necessary on site, with the Conservation Team.
- 4.3 Collect and prepare environmental samples (by sieving or flotation as appropriate). A general policy on environmental remains, including sampling strategy and processing, is to be agreed with the Regional Environmentalist before the commencement of site work, and should be contained in the Project Design.
- 4.4 A finds recovery policy is to be agreed before the project commences. It should be addressed by the Project Design. Use of a metal detector will form an essential part of finds recovery. Sieving of occupation levels and building fills will be expected.
- 4.5 All finds will be collected and processed. No discard policy will be considered until the whole body of finds has been evaluated.
- 4.6 All ceramic, bone and stone artefacts to be cleaned and processed concurrently with the excavation to allow immediate evaluation and input in decision making.
- 4.7 Metal artefacts must be stored and managed on site in accordance with *UK Institute of Conservators Guidelines* and evaluated for significant dating and

cultural implications before despatch to a conservation laboratory within 4 weeks of excavation.

- 4.8 Human remains are to be treated at all stages with care and respect, and are to be dealt with in accordance with the law. They must be recorded *in situ* and subsequently lifted, packed and marked to standards compatible with those described in the Institute of Field Archaeologists' Technical Paper 13 *Excavation and post-excavation treatment of Cremated and Inhumed Human Remains*, McKinley & Roberts. Proposals for the final disposition of remains following study and analysis will be required in the Project Design.
- 4.9 Plans of the archaeological features on the site should normally be drawn at 1:20 or 1:50, depending on the complexity of the data to be recorded. Sections should be drawn at 1:10 or 1:20 again depending on the complexity to be recorded. Any variations from this must be agreed with the Conservation Team.
- 4.10 A photographic record of the work is to be made, consisting of both monochrome photographs and colour transparencies.
- 4.11 Excavation record keeping is to be consistent with Suffolk County Council Sites and Monuments Record (SMR) requirements and compatible with its archive. Methods must be agreed with the SCC Conservation Team.

5. **General Management**

- 5.1 A timetable for all stages of the project must be agreed before the first stage of work commences.
- 5.2 Monitoring of the archaeological work will be undertaken by the Conservation Team of Suffolk County Council Archaeological Service.
Where projects require an unusual amount of monitoring, the Conservation Team reserve the right to make an 'at-cost' charge for monitoring (currently at a daily rate of £150). A decision on the monitoring required will be made by the Conservation Team on submission of the accepted Project Design and will be reviewed during the course of the project. Any decision to charge for monitoring will be notified to the developer or his agent(s).
- 5.3 The composition of the project staff must be detailed and agreed (this is to include any subcontractors). For the site director and other staff likely to have a major responsibility for the post-excavation processing of this site there must be a statement of their responsibilities for post-excavation work on other archaeological sites.
- 5.4 A general Health and Safety Policy must be provided, with detailed risk assessment and management strategy for this particular site.
- 5.5 The Project Design must include proposed security measures to protect the site and both excavated and unexcavated finds from vandalism and theft.

- 5.6 Provision for the reinstatement of the ground and filling of dangerous holes must be detailed in the Project Design.
- 5.7 No initial survey to detect public utility or other services has taken place. The responsibility for this rests with the archaeological contractor.
- 5.8 The Institute of Field Archaeologists' *Standard and Guidance for Archaeological Watching Briefs* and for *Excavations* should be used for additional guidance in the execution of the project and in drawing up the report.

6. Archive Requirements

- 6.1 Within four weeks of the end of field-work a timetable for post-excavation work must be produced. Following this a written statement of progress on post-excavation work whether archive, assessment, analysis or final report writing will be required at three monthly intervals.
- 6.2 An archive of all records and finds is to be prepared consistent with the principle of *Management of Archaeological Projects (MAP2)*, particularly Appendix 3. However, the detail of the archive is to be fuller than that implied in *MAP2* Appendix 3.2.1. The archive is to be sufficiently detailed to allow comprehension and further interpretation of the site should the project not proceed to detailed analysis and final report preparation. It must be adequate to perform the function of a final archive for lodgement in the County SMR or museum.
- 6.3 A clear statement of the form, intended content, and standards of the archive is to be submitted for approval as an essential requirement of the Project Design (see 2.5).
- 6.4 The site archive quoted at *MAP2* Appendix 3, must satisfy the standard set by the *Guideline for the preparation of site archives and assessments of all finds other than fired clay vessels* of the Roman Finds Group and the Finds Research Group AD700-1700 (1993).
- 6.5 Pottery should be recorded and archived to a standard comparable with 6.4 above, i.e. *The Study of Later Prehistoric Pottery: General Policies and Guidelines for Analysis and Publication*, Prehistoric Ceramics Research Group Occ. Paper 1 (1991, rev. 1997), the *Guidelines for the archiving of Roman Pottery*, Study Group for Roman Pottery (ed M G Darling 1994) and the *Guidelines of the Medieval Pottery Group* (in draft).
- 6.6 All coins must be identified and listed as a minimum archive requirement.

- 6.7 The data recording methods and conventions used must be consistent with, and approved by, the County Sites and Monuments Record. All record drawings of excavated evidence are to be presented in drawn up form, with overall site plans. All records must be on an archivally stable and suitable base.
- 6.8 A complete copy of the site record archive must be deposited with the County Sites and Monuments Record within twelve months of the completion of fieldwork. It will then become publicly accessible.
- 6.9 Finds must be appropriately conserved and stored in accordance with UK Institute of Conservators Guidelines.
- 6.10 Every effort must be made to get the agreement of the landowner/developer to the deposition of the finds with the County SMR or a museum in Suffolk which satisfies Museum and Galleries Commission requirements, as an indissoluble part of the full site archive. If this is not achievable for all or parts of the finds archive then provision must be made for additional recording (e.g. photography, illustration, analysis) as appropriate. If the County SMR is the repository for finds there will be a charge made for storage, and it is presumed that this will also be true for storage of the archive in a museum.
- 6.11 Where positive conclusions are drawn from a project, a summary report in the established format, suitable for inclusion in the annual 'Archaeology in Suffolk' section of the *Proceedings of the Suffolk Institute for Archaeology* must be prepared and included in the project report, or submitted to the Conservation Team by the end of the calendar year in which the evaluation work takes place, whichever is the sooner.

7. **Report Requirements**

- 7.1 A report on the fieldwork and archive must be provided consistent with the principle of *MAP2*, particularly Appendix 4. The report must be integrated with the archive.
- 7.2 The objective account of the archaeological evidence must be clearly distinguished from its archaeological interpretation.
- 7.3 An important element of the report will be a description of the methodology.
- 7.4 The report will give an opinion as to the potential and necessity for further analysis of the excavation data beyond the archive stage, and the suggested requirement for publication. Further analysis will not be embarked upon until the primary fieldwork results are assessed and the need for further work is established. Analysis and publication can be neither developed in detail or costed in detail until this brief and specification is satisfied.

- 7.5 The assessment report must be presented within six months of the completion of fieldwork unless other arrangements are negotiated with the project sponsor and the SCCAS, Conservation Team.

This brief and specification remains valid for 12 months from the above date. If work is not carried out in full within that time this document will lapse; the authority should be notified and a revised brief and specification may be issued.

If the work defined by this brief forms a part of a programme of archaeological work required by a Planning Condition, the results must be considered by the Conservation Team of the Archaeological Service of Suffolk County Council, who have the responsibility for advising the appropriate Planning Authority.

Appendix I{B} Project Design for a Programme of Continuous Archaeological Monitoring of Topsoil Stripping at Flixton Park Quarry, Flixton. (Phase 5) (subsequently adopted for all succeeding phases)

1. Background

- 1.1 A condition on planning consent on application (W/10999/10), for continued quarrying operations at Flixton Park Quarry, requires that the applicant (RMC Aggregates (UK) Ltd) provide for a programme of archaeological works consistent with Planning Policy Guideline 16, paragraph 30.
- 1.2 At the request of the applicant, a brief and specification document was written by the Conservation Team of Suffolk County Council's Archaeological Service (hereafter SCCASCT) which covered the archaeological monitoring of the soil-stripping (*ie.* topsoil & upper subsoil where necessary) in Phase 5 (centred on TM 3017 8605) (Martin, Ref. flix.doc)
- 1.3 The perceived archaeological potential of the site is based principally on the significant archaeological deposits recorded in old phases (phases 4-6 of a previous consent) of the quarry, to the north-east of the present (new) Phase 5, and the presence in the vicinity of cropmarks seen on aerial photographs. Excavation and monitoring carried out by Suffolk County Council's Archaeological Service, Field Projects Team had recorded evidence for Late Neolithic (sub-circular post-hole circle), Early Bronze Age (ring-ditch), Late Iron Age/Early Roman (post-hole circle & pits) and Early Saxon (inhumation cemetery) activity.
- 1.4 The academic aims of the monitoring will revolve around the potential of the site to produce evidence of settlement and funerary activity, possibly associated in a wider context with the previously recorded archaeology, of prehistoric through to medieval date.
- 1.5 While there is no existing evidence for archaeological features within the new Phase 5, their presence cannot be ruled out. As non-invasive methods of evaluation have proved unreliable with the soil conditions encountered at Flixton, and trial-trenching was not considered a satisfactory option, an alternative method based on the continuous monitoring of soil-stripping was deemed more appropriate.

2. Monitoring Methodology

- 2.2 The soil-stripping operation (covering *c.*3+ hectares) is projected to take four weeks using a 360 degree mechanical excavator equipped with a toothless ditching bucket, to give a good clean cut, and employing wheeled dumper trucks when necessary.
- 2.3 Initially, three north-east to south-west orientated trenches, each a bucket width (*c.*2 metres), were opened on the western limit of the new phase to ascertain the eastern edge of the previously quarried area and correctly position the subsoil bund. This operation has been carried out prior to the commencement of the monitoring programme.
- 2.4 The details of the subsequent soil-strip are still to be advised as differences in topsoil and subsoil character will necessitate their separate removal and storage. As a consequence, decisions regarding the soil-stripping programme will be made while the process is in progress, in response to these circumstances. However, it is likely that a *c.*12 metre wide 'haul route' will be first be cleared around the western and southern edge of the area followed by 6 metre wide strips removed from the west, south and east sides, working towards the northern edge of the site. Having three faces available for working allows for flexibility should more prolonged archaeological recording become necessary.
- 2.5 Monitoring will be carried out by a Project Officer with assistance when required (estimated as at least one day in every two) by an experienced excavator who will also be a proficient metal detectorist (both based at the Ipswich offices of Suffolk County Council's

Archaeological Service). Hours on site will be between 9.00 and 16.00 (Monday to Friday). Should only isolated archaeological features be encountered then no further staffing would be required. In the event of significant archaeological features or denser concentrations of archaeological deposits/features being identified then consultation with Adrian Havercroft (Archaeological Consultant to RMC Aggregates (UK) Ltd) and Edward Martin (SCCASCT) would be required to agree revised staffing levels and, if necessary, the need for Assessment of these. In the event that 'set piece' excavation became necessary it is understood that SCCASCT would issue a new brief and specification and new project design and costing would be required prior to excavation taking place.

- 2.6 Soil-stripping without the presence of the archaeological project officer can only be carried out by prior arrangement and agreement between Edward Martin (SCCASCT) and Adrian Havercroft (Archaeological Consultant to RMC Aggregates (UK) Ltd).
- 2.7 The monitoring operation will be carried out while adhering to the Suffolk County Council statement on health and safety (copy enclosed) and fully complying with RMC Aggregates own health and safety policies. Particular attention will be given to the following points which are deemed particularly relevant to this site.
- ◆ **Insurance:** Site staff and official visitors are covered by Suffolk County Council insurance policies (see attached).
 - ◆ **Whereabouts of personnel:** All archaeological staff and visitors will book in at the quarry site office on their arrival and departure.
- 2.7 (cont.)
- ◆ **Working within close proximity to mechanical plant:** Hard hats, high visibility vests and protective footwear will be worn at all times. The metal detectorist will not be allowed to work within a 20 metre radius of operating mechanical plant.
 - ◆ **Working in a semi-rural setting:** A fully charged mobile phone will be available at all times. Site staff will be made aware of the location of the nearest hospital casualty department and a van will always be available for transport purposes. At least one of the site staff will be a qualified first aider and a fully maintained first aid kit is kept in the van.
 - ◆ **Extremes of weather:** Site staff will be issued with waterproof clothing and made aware of the dangers of extreme temperature. The van will be available for shelter should conditions become unworkable.
 - ◆ **Toilets/washing facilities:** A site portaloos will be provided for the duration of the site works.
 - ◆ **Deep excavations:** Should the archaeological investigations involve the excavation of deep holes/trenches, battered or stepped sides may be deemed necessary. Deep excavations left overnight will be fenced off with high visibility bunting and where appropriate, covered by boarding.
 - ◆ **Site Security:** The quarry is a restricted area and for the purposes of the monitoring, further security is not considered necessary. However, should significant archaeology be identified then the project design and costing covering the further works would include a review of the need for an increased level of security, with an understanding that these measures may need to be implemented immediately, prior to the issue of the revised specification and project design (as specified by Edward Martin, SCCASCT).
- 2.8 The archaeological monitoring will be carried out in line with the brief and specification issued by SCCASCT and will involve a visual inspection of and, where necessary, manual cleaning of the exposed surface of the subsoil to locate and define incised or stratified archaeological features. If significant features or concentrations of features are identified then the archaeological consultant (Adrian Havercroft) and SCCASCT Archaeologist (Edward Martin) will be informed (see 2.5) and a strategy will be formulated to deal with the archaeology. However, if the archaeology is limited to isolated features, then recording and excavation can be carried out as part of the monitoring process. Generally, the monitoring will include the following procedures.
- ◆ **Metal detector survey:** A metal detector search will be carried out both prior to and after the removal of topsoil. All finds will be located on site plans (1:1000 for topsoil

finds, 1:100 for subsoil finds). Some immediate emergency conservation work may be required on fragile metal finds. The costing for conservation work will be negotiated with the archaeological consultant (Adrian Havercroft) if and when it becomes necessary.

- 2.8
(cont.)
- ◆ **Excavating features:** When identified, discrete features such as pits and post-holes will be half sectioned, while linear features such as ditches will have representative sample sections excavated through them. All artefactual evidence will be retained at this stage of the project, with no discard policy. Where significant artefactual evidence is obtained from discrete features, or they are deemed to be structural, second halves may be removed to recover all of the included finds. When considered necessary by the project officer, bulk soil samples will be taken from features for later processing, with any isolated cremation burials retained as 100 % samples. The subsequent processing of these samples would form part of the post-excavation phase of this project and would be covered under by a later project design.
 - ◆ **Section Drawings:** Excavated sections will be drawn at a scale of 1:20 in pencil on plastic drafting film.
 - ◆ **Plans:** Site plans will be drawn at a scale of 1:100 (with smaller scale, 1:50 or 1:20 when necessary) in pencil on plastic drafting film. In addition a 1:1,000 scale OS map will be used as a base plan to record triangulation points, planning baselines and topsoil metal detector finds.
 - ◆ **Photography:** A full photographic record, both colour slide and monochrome print, will be made and will form an integral part of the site archive.
 - ◆ **Finds Processing:** As specified by Edward Martin (SCCASCT), provision must be made for preliminary finds processing (cleaning) to facilitate their immediate evaluation and possible archaeological implications.

2.9 Should there be a need for site visits from archaeological specialists (environmental archaeologist *etc.*), then the archaeological consultant (Adrian Havercroft) would be informed so that any additional costs could be approved. In addition, a Home Office Licence will be obtained if human burials are found. Any inhumation burials will be assessed *in situ* by a Suffolk County Council Archaeological Service Field Projects Team specialist (Sue Anderson).

3.0 Post-excavation (Finds Analysis/Archive/Report Preparation)

This project design does not extend beyond the fieldwork stage and does not cover any post-excavation other than preliminary finds processing. A further project design and costing will be produced after the monitoring has been completed when an idea of the categories and quantities of the finds and character of any archaeological deposits can be assessed.
