

Cow Tag 67

Type

Description 1.90m in length. The first metre is square in section measuring 20cm x 20cm. This shape was made removing 4-bcm of the outer part of the trunk. End A is damaged. End B is cut, possibly by saw during excavation. Diameter of trunk at End B is approx 30cm. The less worked area, measuring 90cm is cracked. End A, although damaged appears to have the remains of a possible mortice and tenon joint or something similar. This indicates it was attached to something or part of a larger structure.

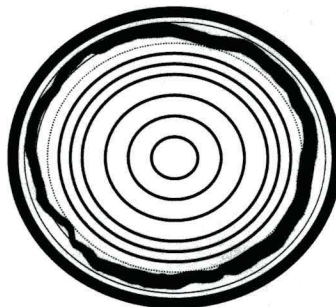

*DRAWINGS ON TWO SHEETS.
