The Research Department Report Series incorporates reports from all the specialist teams within the English Heritage Research Department: Archaeological Science; Archaeological Archives; Historic Interiors Research and Conservation; Archaeological Projects; Aerial Survey and Investigation; Archaeological Survey and Investigation; Architectural Investigation; Imaging, Graphics and Survey, and the Survey of London. It replaces the former Centre for Archaeology Reports Series, the Archaeological Investigation Report Series and the Architectural Investigation Report Series.

Many of these are interim reports which make available the results of specialist investigations in advance of full publication. They are not usually subject to external refereeing, and their conclusions may sometimes have to be modified in the light of information not available at the time of the investigation. Where no final project report is available, readers are advised to consult the author before citing these reports in any publication. Opinions expressed in Research Department reports are those of the author(s) and are not necessarily those of English Heritage.

Requests for further hard copies, after the initial print run, can be made by emailing:

Res.reports@english-heritage.org.uk

or by writing to:

English Heritage, Fort Cumberland, Fort Cumberland Road, Eastney, Portsmouth PO4 9LD

Please note that a charge will be made to cover printing and postage.

SUMMARY

A desk-based assessment looking at the building type, prompted by the threat of closure of a significant number of post offices during 2007-2008. The first part of the report assesses what is known about the building type, including qualitative and quantitative categorizations and distributions, and provides a brief overview of the historical development of the Royal Mail and the Post Office, and the evolution of purpose-built post offices from the mid-19th century. The second part of the report examines the nature of the threat to post offices and the sources of information for enriching understandings of the building type. It concludes by briefly considering possible research strategies and options in which architectural investigation in the field is underpinned by sound documentary research and understanding. A series of appendices set out in detail factual material referred to in the report, including specific archive collections, chronologies and lists.

CONTRIBUTORS

The research for this assessment was undertaken by Jonathan Clarke. The image on the front cover is by Will Holborrow; unless otherwise stated the photographs in the report are by the author.

ACKNOWLEDGEMENTS

This document has benefited from the input of a number of English Heritage colleagues, principally Michael Turner and Joanna Smith, who read and commented upon an earlier draft. Thanks are also due to Will Holborrow, , Susie Barson, Shane Gould, Philip Davies, Colum Giles and Charles Walker. Externally, I should like to thank Delores Evans and Ron Symonds, Royal Mail Group Property; the staff and curators of the British Postal Museum & Archive, including Tony Conder, Chief Executive; Joseph Mirwich and Cela Selley, Twentieth Century Society; Ian Dungavel, Victorian Society; Adam Wilkinson (formerly SAVE); Simon Bradley, Buildings of England, and Ken Smith of the Midlands Postal History Society.

INTRODUCTION

The purpose of this document is to identify potential research strategies for a thematic survey on purpose-built post offices. Undertaken at the request of John Cattell, Chief Buildings Historian it follows an earlier outline project proposal that identified this building type as particularly vulnerable to threat during 2007-2008, and one worthy of architectural investigation. Despite being amongst the most familiar and recognisable of building types – one that almost everyone has experience of, within, and without – it is perhaps fair to say that the architectural and historic interest of Post Offices has not been fully appreciated. Certainly, in this country at least, there exists no overview of the historical development of a building type that evolved to serve and administer one of the world's great postal services.

This scoping document is arranged in two parts. Part one presents a brief account of the historical development of the Royal Mail and the Post Office, and an overview of the modern postal network, since this has direct bearing on how architectural fieldwork might be apportioned and organized. This section introduces the different types of post office that emerged in the 19th century, their changing quantities, and geographical distribution. Today, and historically, by far the most abundant category were the Sub Post Office: by 1913 they accounted for 95% of the UK's 24, 354 post offices, and although figures are unavailable, they can be assumed to make up a similar proportion of the current stock of c.14,300 post offices. Logistically it would be impossible to cover a meaningful proportion of this stock of buildings, and, in terms of knowledge returns, the value of such an exercise would be doubtful, since the great majority would be shops and stores containing post office counters. Because the intention is to gain understanding of the evolution and development of a purpose-built building type (rather than the adaptive modification and re-use of existing types), this study will focus on Head Post Offices and Branch Post Offices, and exclude Sub Post Offices (unless, exceptionally, they are palpably purpose-built). To this end, and to highlight the gaps in knowledge, a brief overview of the development of post offices based purely on documentary evidence (largely periodicals) is provided here, to help reveal some of the key themes and questions that need to be addressed by more detailed investigation and inquiry.

Part two is the strategic heart of this scoping document. It discusses, *inter alia*, the nature of the threat to post offices, and the potential purposes it could serve for other English Heritage departments, including Heritage Protection Department, Planning and Development and Government Historic Estates Unit. It also looks at the sources of archival and documentary information on post offices, and a number of research strategies and options for recording post offices. Sound documentary research is seen as critical in informing and underpinning the fieldwork component(s) of any thematic project on post offices.

Both parts one and two make reference to inventories, lists and other explanatory textual and graphical material, including archival and documentary references extracted from

various sources, the postal closure programme (Network Change Programme), and a list of 19th and 20th-century architects compiled from the RIBA etc; these have been appendaged as a series of appendices (Appendices 1 to 8) at the end. A bibliography is given at the end of the document..

This document has benefited from the input of a number of English Heritage colleagues, principally Michael Turner, Will Holborrow, Joanna Smith, Susie Barson, Shane Gould, Philip Davies and Colum Giles. Externally, I should like to thank Delores Evans and Ron Symonds, Royal Mail Group Property; the staff and curators of the British Postal Museum & Archive, including Tony Conder, Chief Executive; Joseph Mirwich and Cela Selley, Twentieth Century Society; Ian Dungavel, Victorian Society; Adam Wilkinson (formerly SAVE); Simon Bradley, Buildings of England, and Ken Smith of the Midlands Postal History Society.

THE ROYAL MAIL AND THE POST OFFICE – A BRIEF HISTORICAL OVERVIEW

Although not as old as some continental mail services, England's public postal system has a long and complex history. The first half of the 17th century saw the beginnings of a real public service, thanks to James I who created the office of Postmaster of England, and in 1609 a monopoly, the Royal Mail – essentially a distribution system for royal and government documents.¹ In 1635 a public service was established to important towns, at rates related to distance, and by the middle of the 17th century towns throughout England and Wales were connected by a postal service. After unification the system was subsequently extended to Scotland and to Ireland.² In 1660 Charles II, building on the distribution system of the Royal Mail, officially established The General Post Office (GPO) in England. William Dockwra augmented the state system in 1680 by establishing a private 'Penny Post' service in London; it proved so successful that he was prosecuted for infringing the state monopoly, and his service was closed down in November 1682, only to be reopened by the government.³ State-owned Penny posts were subsequently established in large provincial towns in the later 18th century, in response to their rapid growth as commercial and manufacturing centres, and to the extensive program of road building. The era of the stagecoach in the late 18th and early 19th centuries saw 'the evolution of a carefully regulated postal service—unprecedented for its standards of speed, frequency, and security'.⁴

The 19th century was a period of enormous expansion for the Post Office. Against a backdrop of population increase, rising adult literacy (resulting in an upsurge in the volume of mail) and the spread of the railways, the reforms championed by (Sir) Rowland Hill in 1840 – 'of a uniform rate of postage, regardless of distance, and prepayment of postage by means of adhesive stamps sold by the post office'⁵– laid the foundations for today's postal system. Hill's 'Penny Post' brought mail to the masses, but his reforms also instigated improvements to the machinery and infrastructure of the postal system. These included a revision of the postal arrangements of 120 of the largest towns and cities,⁶ and the establishment of rural posts in almost every village.⁷ Pillar boxes, allowing the public to deposit stamped mail day or night, were introduced to mainland Britain in 1853,⁸ and in 1857 the first wall boxes were installed in Shrewsbury and Market Drayton. The latter half of the 19th century saw the Post Office expand into new areas, including banking, telecommunications and parcel delivery: in 1861 the Post Office savings bank was established; in 1870, the Post Office assumed control of the new electric telegraph system,⁹ and from 1880, it acquired progressively greater control of the telephone service, with the entire service being taken over in 1912.¹⁰ In 1883 a parcel post service was established.

The expansion of the Post Office continued through the 20th century: from 1908, it acquired a new social role as the chief payment agency for social security benefits, beginning with old-age pensions in that year. The 20th-century also brought with it the gradual recognition of the post office's role as a commercial enterprise rather than as a

government revenue department. By the early 1930s, the size, complexity and progressively more commercial character of the department brought increasing public criticism. A parliamentary committee of enquiry, the Bridgeman Committee, called for substantially increased decentralisation, and led to the setting up of eight regions in the provinces, each in the charge of a Regional Director responsible for the control and co-ordination of all Post Office services within his region. In addition to these eight provincial regions, two further regions were established in London - one for Posts and one for Telecommunications. The provincial regions were divided into Head Postmasters' districts for the management of the postal and the telegraph services (although in practice these were already in existence).¹¹

The General Post Office ceased to be a Government Department on 1 October 1969 and was established as a public corporation (i.e. a nationalised industry) under the Post Office Act of that year. Under the terms of the Act, the Corporation was split into two distinct divisions, Posts and Telecommunications. In 1981 the telecommunications business privatised, trading as British Telecom (BT), and the next two decades saw a great deal of restructuring and rebranding. Unlike other former state monopolies such as The Stationery Office, British Gas and British Telecom, Royal Mail was not privatised in the 1980s and 1990s, but remains a public limited company wholly owned by the UK government. Post Office Ltd, which operates the national network of post offices (many under franchise agreements) was separated from the postal service Royal Mail in 1986 but remains a wholly owned subsidiary of Royal Mail Group Ltd.¹²

POST OFFICES AND THE POSTAL NETWORK: TYPES, NUMBERS, CATEGORIES AND DISTRIBUTION

The UK's c.14, 300 functioning post offices form part of a hierarchical delivery network, geographically and administratively structured into postcode areas (the largest geographical unit), postcode districts and post towns. The structure and functioning of this network has inevitably and variously changed since the mid-19th century (when it was first placed on a comprehensive, modern footing) and, for the most part does not follow parish, district, county or even national boundaries. Since 1996, when the Royal Mail abolished its subdivision based on postal counties, there have been 99 postcode areas within England (including 10 in London), served by 1086 post towns, each of which typically corresponds to one or more postal districts (see Appendix 6). Often a post town area corresponds with the area served by a single Royal Mail delivery office, although several small post towns can sometimes share a single delivery office, and, conversely, multiple delivery offices will usually serve a large post town.¹³

In terms of administrative status, historically there emerged essentially three broad types of post office: Head Post Offices, Branch Post Offices, and Sub Post Offices (which might be further sub-divided into Town sub-offices and Country sub-offices). Whilst complex, and at times overlapping, a cogent description of these categories of office, and their changing numbers, is provided by M.J. Daunton (1985):

The head post office of a town provided a full range of services and the postmaster had general responsibility for the efficient handling of the town's mail. In larger towns there would be branch offices treated as 'detached counters' of the head office... Far more numerous were the sub-post offices, which comprised 23,256 out of 24,354 offices in 1913. The subpostmasters were, until the late nineteenth century, all treated in the same way, receiving a commission for the transaction of various services and providing the necessary staff and accommodation. They were not established members of the workforce, and were often small shopkeepers who welcomed this side-line ...

... The distinction between branch offices and salaried sub-offices [became] somewhat anomalous and came in for criticism between the wars... In 1936 it was decided that branch offices should predominate in an inner circle around head offices, with salaried sub-offices at a greater distance and in less important locations. More recently, the number of salaried sub-offices has increased as head offices have been reduced in number and regraded. The result, therefore, was the emergence of a complex pattern of post offices which varied according to the type of building and the status of the postmaster.¹⁴

Overlapping this administrative categorisation – at least during the period c.1850-1950 – was a further distinction; that between various classes of Crown Office. Over the course of the 19th century, as the charge of providing large or important post offices fell increasingly on the Office of Works, there emerged a distinction between ‘Crown Offices Class I’, built and maintained by the Office of Works; and ‘Crown Offices Class II’, which were the responsibility of the Post Office (see Appendix 2). Head Post Offices were predominantly purpose-built Class I offices (although they could be Class II offices), whereas Branch and Sub Post Offices were overwhelmingly Class II offices, which were locally designed buildings (either purpose-built, or speculative offices), paid for, or leased by, the Post Office.

In broad terms, therefore, the greater the administrative and official status of any given post office, the greater the likelihood that it was a purpose-built building (the subject of this scoping document), designed either by the Office of Works and its successors, or by local, private practice. The post offices located in the centre of the 1086 English post towns (Appendix 6) are, in all likelihood, Head Post Offices, with Branch Offices tending to be concentrated in an inner circle around them. The reduction in the number of Head Post Offices during the second half the 20th century will have resulted in the re-grading (to Branch status perhaps), replacement or disposal of many, but again, it is likely that those surviving (either as post offices, vacant, or with a change of use) will occupy central locations within current or former post towns. On the evidence of the buildings so far earmarked for closure under the current Network Change Programme, it would appear that Branch Post Offices are primarily at risk. Assuming continuity of grading, these are most likely to be locally designed buildings, either purpose built or adaptive reuses of speculatively built premises. However, it is possible some may be former (re-graded) Head Post Offices or indeed Sub Post Offices.

POST OFFICES: A BRIEF BUILDING HISTORY AND KNOWLEDGE GAPS

The Establishment of the Post Office necessarily extends over the kingdom... Its Headquarters are in London; there are Metropolitan Offices in Edinburgh and Dublin; and there are District Offices in every town, and almost every village, throughout the country (1854).¹⁵

In this country, there currently exists no equivalent of James H. Bruns's *Great American post offices* (New York; 1998), or indeed anything similar that celebrates the history of this historic, distinctive building type. Select examples have been described in the context of general topographical/architectural surveys (e.g. the Buildings of England, The Victoria County History and the Survey of London) and the statutory lists of listed buildings. Others have been touched upon in local histories, or in period- or subject-specific works of architectural history, such as those covering the Victorian and Edwardian eras, or on Government buildings. But there exists no thematic article or monograph on the architectural history of the English Post Office, and for this reason there follows a summary overview, based largely on information derived from architectural periodicals. One of the principal purposes of this is to identify gaps in knowledge, and this historical overview concludes with a consideration of key questions and subject areas that call for further research and investigation.

1660-1839

Post offices, in common with other forms of offices, banks, and other building types, did not emerge as a distinct building type until the early-to-mid 19th century. However, buildings to serve the General Post Office seem to have been provided from its formative years in the 17th century. According to Ackermann's *Microcosm of London* (1810), 'in 1660, an act of Parliament [was] passed ... authorizing the king to establish a Post-Office in London, and Post-Houses in such parts of the country as were unprovided, both on the post and by-roads'. William Lewins, writing in 1864 details the mid-17th-century headquarters buildings in London, noting 'The first General Post-Office was opened in Cloak Lane, near Dowgate Hill, and removed from thence to the Black Swan in Bishopsgate Street. After the Great fire of 1666, a General Office was opened in Covent Garden, but it was soon [c.1678] ¹⁶ removed to Lombard Street, to a house which had been the residence of Sir Robert Vine, once Lord Mayor of London'.¹⁷ Built on the site of a noted tavern destroyed in the fire, the General Post Office in Lombard Street was 'a very large and curious dwelling, with a handsome paved court, and behind it "a yard for stabling and coaches."¹⁸ Ackermann, in his *Microcosm of London* (1810) was less impressed:

the edifice can merit no praise as a building. It stands behind Lombard-street, from which a passage, under an arched gateway on the south

side, leads to the offices. it is a national reproach, when edifices of this kind, which, from our great mercantile concerns, afford occasion for a display of public architecture, and ornament to the metropolis, are lost to those purposes.¹⁹

Nevertheless, within his book he included a 'print [that] is an exact representation of the office whence the letters are delivered in the morning, and where the newspapers are sorted in the evening' (Fig. 1). Although the General Post Office was, by the Georgian era, seemingly provided with a large, open, well-lit space for sorting (presumably in an annexe), it was in nonetheless a domestic building. Unable to meet the demands of the explosion in mail business, it was decided 'that a large and commodious building should be specially erected in some central part of the City, and the business once more transferred'.²⁰

Figure 1 Interior of the sorting office of the GPO, Lombard Street c. 1810 (Rudolph Ackermann, *The Microcosm of London* Vol. II).

Sir Robert Smirke (1780-1867), one of the three appointed Architects to the Office of Works, gained the commission for the new headquarters of the G.P.O. Erected in 1824-29 by the Samuel Baker (fl. 1787?-1836) – Smirke's favourite building contractor²¹ – these grandly Greek Ionic premises stood on the east side of St Martin's le Grand (Fig. 2) until 1912. Smirke was a key

Figure 2 Smirke's GPO, St Martin le Grand (1825-29; demolished 1912). York & Son (DD97/00534) Reproduced by permission of English Heritage.NMR

protagonist of the Greek Revival, and this work, along with some of his others, including the Custom House (1825-27) and his masterpiece, the British Museum (1823-46), were instrumental in raising Grecian Classicism to the status of an official style.²²

1840-1857

In the mid-1840s, in the wake of Rowland Hill's postal reforms, Smirke's building was reorganised and extended to incorporate among other things a cavernous new sorting room, framed using cast-iron trusses of audacious span which also carried the floor.²³

The Illustrated London News reproduced a number of interior views 'of this

Figure 3 Interior of the Letter Carriers' Office of the GPO, as depicted in *The Illustrated London News*, 22 June 1844.

Figure 4 Interior of the Inland Letter Office of the GPO, as depicted in *The Illustrated London News*, 22 June 1844.

extraordinary machine',²⁴ including the galleried Letter Carriers' Office and the Inland Office (Figs 3 and 4). Besides the changes to the General Post Office, four Branch Post Offices were established, at No. 1 Old Cavendish Street; Charing Cross/Strand (West); No. 10 Lombard Street; and at No. 266 Borough High Street,²⁵ as well as a number of Sub-Offices, 'namely, those offices in the suburban district where letters are both received and delivered'.²⁶ By 1856, however, owing to the 'immense magnitude of the metropolis', London was further sub-divided into 10 postal districts, 'it having been found impossible to overcome the

obstacles to a more speedy transmission of letters within and around London.. [and] the ever increasing amount of Post-Office business'.²⁷ In the provinces, other large towns quickly followed London's example, being divided into districts to facilitate more efficient distribution. The mid-19th century witnessed a remarkable post office building programme: by 1864, there were 542 Head Post Offices in England & Wales (excluding London's 10 District Offices), and 141 in Ireland and 115 in Scotland. Despite their similarity of purpose, there was considerable architectural variety among these buildings. One contemporary noted

They vary exceedingly, no two being exactly alike, but are settled in each town pretty much in proportion to the demands of the place, its size, trade & c. Sometimes, however, the position of a town – the centre of a district, for instance – gives it more importance in an official sense than it would otherwise acquire from other and ordinary circumstances. The number of sub-offices attached to each town also varies greatly, according to the position of the head office. Next to the three chief offices, the largest establishments are those of Liverpool, Manchester, Glasgow, Birmingham, and Bristol. Among the most important offices of the second class, we may enumerate Aberdeen, Bath, Belfast, Cork, Exeter, Leeds, Hull, Newcastle-on-Tyne, Norwich, Sheffield, Southampton, and York.²⁸

Liverpool was given an especially grand Head Post Office (c.1851, demolished), designed by Sir James Pennethorne (1801–1871) (Fig. 5). It was, according to one source,

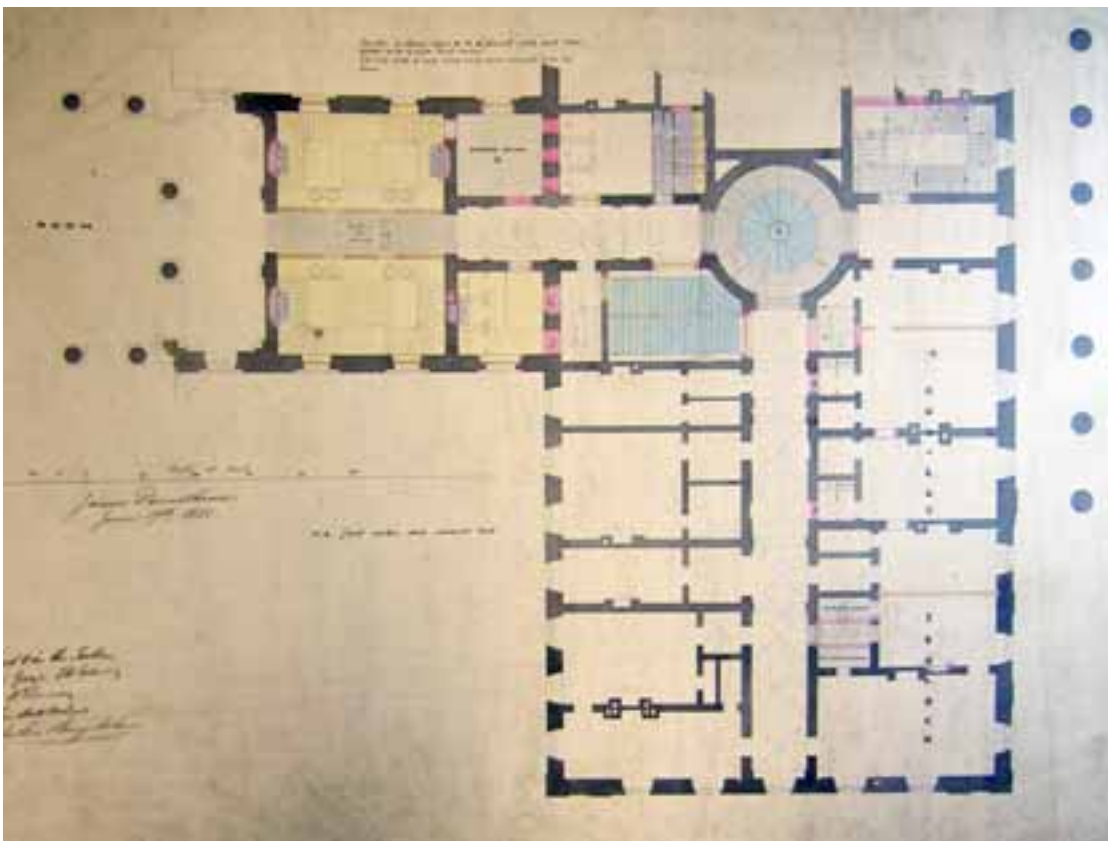

Figure 5 Plan of first floor of Liverpool Head Post Office, signed by James Pennethorne, 1851 (demolished). The National Archives (TNA): PRO WORK 30/828.

emblematic of 'the patrician banking house style of the first 30 years', with ornate, high-ceilinged interiors and mahogany counters lending an air of solid respectability.²⁹ Doubtless, many other Head Post Offices constructed in the period between 1854 and 1913³⁰ (see Fig 6) were similarly grand. As early as 1864 William Lewins, who could note how

The part now dedicated to the public might be part of a first-class banking establishment. Entering by a spacious doorway, with a lofty vestibule, there is accommodation for a score of people to stand in the ante-room and leisurely transact their business. Then there runs along the whole length of the first or public room a substantial mahogany counter, behind which the clerks stand to answer inquiries and attend to the ordinary daily business. There is a desk for the money-order clerk, and drawers in which postage-stamps are kept.³¹

The national network of post offices expanded from 4,028 in 1840 to 24,354 in 1913 (Fig. 6). The numbers of Head Post Offices in this period actually fluctuated (probably in response to changes in the administration of the post office network), whereas lesser post offices, particularly county sub-offices, saw huge, steady growth in the period 1854-1913

POST OFFICES IN THE UNITED KINGDOM, 1854-1913

Figure 7

purposes of this scoping document, but a reasonable estimate, based on the data for 1864 given earlier, suggests that numbers of English Head Post Offices in the period 1854-1913 varied between c.500 and c.750. During this period, the method of appointment of postmasters changed, and so did the manner in which their buildings were provided. In the early-to-mid-19th century, the onus was on the postmaster to supply his own new or enlarged premises, with the cost met by an addition to his allowance that was authorised by the regional Surveyor. As the power of political patronage diminished and the cost of providing larger offices for a widening range of services mounted, it became increasingly common for the cost to be met by the Post Office which provided, and owned, Crown Offices. To begin with, the Post Office employed local architects and builders to design these Crown Offices (excepting the main offices in London, Edinburgh and Dublin), but in 1858 it was ruled that all future building should be the responsibility of the Office of Works.

1858-1900: Emergence of Crown Offices

The second half of the 19th century saw the emergence of two broad categories of Crown Offices: 'Crown Offices Class I', which were designed, built and maintained by the Office of Works; and 'Crown Offices Class II', which were the responsibility of the Post

Office. Crown Offices Class II could be purpose-built, speculative offices, tendered to local architects and builders, or they could be pre-existing premises rented or leased on the open market by the Post Office. There were essentially three broad types of post office: Head Post Offices (HPOs), Branch Post Offices (BPOs), and Sub Post Offices (SPOs), and whilst the lower two types (Branch- and Sub-offices) were overwhelmingly 'Crown Offices Class II', HPO's might be either Crown Offices Class I or II, or even owned by the Postmaster. Although speculative in the current state of knowledge, one of the dominant trends in post office design during this period was the increasing influence of the Office of Works, which saw the emergence of an embryonic 'house style' in the later 19th century. Many of the key exemplars seem to have been designed by architects within the Office of Works who came to specialise in post offices. Unsurprisingly, the extensions to the GPO headquarters in St Martin's le Grand and King Edward Street, London, helped set the tone. James Williams (1824-1892?), who designed the pedimented West Range of 1869-73, demolished 1967), also transmitted his architectural ideas to the provinces, designing, among others, Northampton Post Office (1872);³² Birmingham Post Office (1873; stylistically described as 'Classical – boldly Classical'),³³ Middlesbrough Post Office (1877), and the former Post Office, Nos. 17-19 Bedford Street, Westminster (1883-4), executed 'in a remarkably serious Roman High Renaissance' manner.³⁴ More prolific and influential still was Sir Henry Tanner (1849-1935), who entered HM Office of Works in 1871 and remained there until his retirement in 1911, having succeeded Sir John Taylor as principal surveyor in 1898. Besides giving the GPO two enormous, ornate blocks (1889-95 and 1907-11), Tanner's London work included the vast Post Office Savings Banks at Carter Lane (1890-94) and Hammersmith (1899-1903). He also designed many dozens of post offices for provincial towns and cities, including Liverpool Eastern District Post Office (1883), York (1885), Bradford, Halifax, Barrow in Furness, Leicester, Birmingham (c.1885-1891); Harrogate (1896), Wolverhampton (1895), and Tipton Southend and Nottingham (c.1897). His preferred style was classical, frequently of French Renaissance derivation, but sometimes he worked in a formal Tudor or Jacobean.³⁵

It was possibly the exuberance of some of Tanner's buildings that prompted Henry Heathcote Statham, editor of *The Builder*, to question the quality of post office architecture. In 1898, he wrote 'Let the Office of Works send over to the next Salon their most florid post-office design, and see if the jury will give them a gold medal for that!'.³⁶ Yet behind the lively exteriors of the late 19th-century Crown Offices Class I lay adroit planning and constructional techniques that were designed with economy efficiency, and fitness of purpose in mind. Changing functional requirements, including the need to house (in addition to public offices, postmen's cloak rooms, stock rooms, retiring rooms, kitchens, toilets etc), sorting offices (increasingly important from 1893, when the parcel post was acquired), telephone and telegraph instrument rooms, switch and instrument rooms, messenger rooms etc. Modern constructional techniques, including the use of steel and concrete, were used to create more flexible, well-lit, and fire-resisting spaces.

1901-1918: 'economy, efficiency and uniformity' vs. local distinctiveness

By the start of the 20th century, a hierarchical network of post offices built during the past half century served most of the UK's towns and cities. Building activity during the Edwardian years seemingly tended to be directed at filling gaps left by this 'first generation' Victorian legacy, or on upgrading, extending or even replacing pre-existing buildings. The number of Head Post Office actually decreased in this period, from 906 in 1900 to 789 - a 13% decrease that presumably reflected changes in the administrative status and boundaries of postal areas or regions. However, the same period saw a steady increase of Class II offices (Branch Post Offices increased from 255 to 309; Town sub-offices from 4,964 to 6,620; and Country sub-offices from 15,815 to 16,636). Many of these Class II offices were of high quality that paid particular attention to local building traditions,

Figure 8 Ripon Post Office (1906, John G. Burrell, architect). *The Architect*, 11 May 1906.

Figure 9 Grimsby Post Office (1908, John Rutherford, H.M. Office of Works). *The Building News*, 16 October 1908.

materials and townscape. For example Ripon Post Office (Fig. 8) was built by a Durham-based developer 'who agreed to build and lease the new offices to the Post Office authorities' It was designed by the Durham architect John G. Burrell 'who has built many post offices', and used Knaresborough stone for the lower storey and Buttermere slates for the elegant Mansard roof.³⁷

Stylistically at least, such buildings contrasted with the more imposing, formal, 'official' dress of the Class I offices. For example, Grimsby Post Office (Fig. 9), by John Rutherford of H.M. Office of Works, might equally have been at home in London as in the Lincolnshire town. Behind the four-storey Portland stone front block, the building extended more than 200 feet, housing a spacious sorting office, covered loading area, engine house etc.³⁸ Rutherford seems to have been especially active at this period, designing similarly sober designs for Twickenham (1908), Torquay (1909) and St. Helier, Jersey (1910).

By the mid-Edwardian period, this 'artificial and uneconomic division of powers',³⁹ with, essentially, the Office of Works responsible for freehold offices and the Post Office for offices held on lease, was coming under increasing criticism. In 1907 a Select Committee on Post Office Servants recommended that responsibility for all buildings should be given to the Post Office – a proposal that was rejected by the

government. A subsequent Treasury Committee argued that all government building work should be placed in the hands of the Office of Works, to secure 'economy, efficiency and uniformity'; after all, it was argued, 'The Postmaster General should be in the position of a building owner employing the Office of Works as his architect'.⁴⁰ However the Post Office argued that considerable delays resulted from the need to deal with the Office of Works, and that, as the largest business in the country, it was capable of handling building matters itself. Furthermore, in the Post Office's opinion, the architectural style emanating from the Office of Works was pompous or mean, and often ignored local context. Postmaster General Herbert Samuel (1870 - 1963) summed up these feelings in 1910 when he pointed out

The State has the duty of erecting its public buildings in a manner which will contribute to the dignity and beauty of the towns in which they are situated, and particularly is this the case when those buildings are for the purpose of conducting a vast and very profitable business, and are daily entered by great numbers of people.⁴¹

The treasury however remained unmoved by such economic and architectural arguments,

and the matter was left unresolved until the 1930s. Despite the criticisms of some of the official Class I architecture, many post offices emanating from the Office of Works in the period c.1905-1918 were of considerable merit and, in terms of the stylistic development of British architecture, highly interesting. Unlike most other types of buildings, the construction of which was halted or at least diminished by the 1914-18 War, Post Office building activity seemingly continued largely unaffected, in part because of the need to maintain efficient lines of communication. As such, stylistic trends, which were prematurely interrupted in other types of buildings, were allowed full expression, and thus, almost uniquely, post offices provide a rare glimpse into the transition from Edwardian mannerism to inter-war Classicism (Fig. 10). This continuity and quality of output was doubtless related to the fact that, by the Edwardian period the Office of Works' Architects division comprised well established and presumably largely self-contained divisions specialising in particular building types overseen by three principal architects for England. The Office of Works Staff List for 1914-1915 reveals that by that date the substantial and specialised post office division was headed by Walter Pott, and comprised four regional teams: South-West & Midlands branch (H.A. Collins, head architect); South-East branch & London north & north-west districts (Albert Robert Myers, head architect); London branch (except north & north-west districts) (E. Cropper, head architect); and a North branch (Charles P Wilkinson, head architect).⁴²

1919-1940: Teamwork and Traditionalism

The 1920s saw an increasingly collaborative atmosphere between the Office of Works and the Post Office. Although the division between Class I and Class II offices persisted, the need for specialised telephone exchanges, the increasingly complex requirements of post offices, and the development of uniform standards for working conditions saw a sharp decline in the number of leasehold premises that were taken. Faced with the volume of new buildings required, and the delays inherent in deciding upon its own requirements, the Post Office realised that centralisation of architectural work in the hands of the Office of Works was the most efficient strategy. Thus, during the 1920s and 1930s, the relationship between the two bodies became much more one of architect and client.⁴³ Stylistically, the dominant

Figure 11 Chipping Norton Post Office and Telephone Exchange (1933), by H.E. Seccombe. This unlisted post office still survives as offices (see front cover).

theme in this period was the abandonment of Classicism in favour of traditionalism, particularly its Neo-Georgian and Neo-Tudor strands. A new generation of architects, including A. Bulloch, D.N. Dyke (b.1881), F.A Llewellyn, H.E.T. Rees and H.E. Seccombe (Fig. 11), rose to prominence within the Office of Works, and began turning out more vernacular, contextual designs that typically featured brick façades with rubbed-brick dressings, door cases with fanlights, sash windows, and hipped, tile-hung roofs. Who within the Office of Works instigated and set the creative mould is unclear, but those architects active in the Edwardian era, such as A.R. Myers and Charles P. Wilkinson, realigned their designs in the traditionalist direction (exemplified by their respective designs for post offices at Reading and Formby for example).⁴⁴ That the great majority of were now purpose-built, rather than leased, speculatively built properties, post offices acquired a truly recognisable 'house style', an identity reinforced by the use of Roman lettering, Roman figured clocks and white-on-black Office of Works hanging signs. Indeed, the Office of Works seems to have adopted a standard specification (or specifications) for both construction and fittings, which explains the similarity of many inter-war designs.⁴⁵ Cognisant of these changes, Lord Gerald Wellesley, Fellow of the Royal Institute of British Architects, wrote perhaps the first English article on the subject, entitled 'Recent Post-Office Architecture' (1926).⁴⁶ According to Wellesley:

A post-office must be in prominent position. It should look dignified and permanent, and should, as far as possible, harmonize with its surroundings ... The public office, which should, of course, be of a size adequate to the number frequenting it, should, in the larger instances, have doors giving on to the street at both ends. This requirement adds a great difficulty to the satisfactory designing of the elevations of post-offices, for a large entrance is instinctively sought in the centre of any large public building. [...] The public office must be very well lit, and this may mean windows on the ground floor which, ideally speaking, are disproportionately large compared with those in the upstairs offices. A clock and prominently displayed letter-box are also features of a post-office front.⁴⁷

The impressive output of the Office of Works during the 1920s and 1930s, both in quantity (almost 2,000 Class I offices by 1931),⁴⁸ won favourable criticism from the contemporary architectural press, and helped overturn lingering prejudices that 'the work of Government and Municipal Departments was architecturally inferior to that of the private practitioner'.⁴⁹ According to one architectural magazine, the quality of Post Offices (and Labour Exchanges) across the country showed how 'the Office of Works, working over a large area, has re-established an English vernacular in small country town architecture in a way which would be impossible to the individualistic architect working on his own'.⁵⁰ In that periodical's view, the quality of these buildings, and their cohesiveness as a building type, stemmed directly from the structure and working practices of the Office of Works architects, 'where they benefit by each other's criticism and mutually

pool a considerable amount of experience and knowledge built up systematically over a long period'.⁵¹

Figure 12 Mount Pleasant Post Office and Garage, Finsbury (1937-38), by A.R. Myers, Senior Architect, Office of Works (DP040072).

Whilst the Architects' Division of The Office of Works was strident in developing traditionalist styles for its designs, it was by no means exclusively wedded to them. Classicism continued in some post offices, albeit often underlying, or intermixed with vernacular elements, and Modernism was tentatively engaged. An extension to the Mount Pleasant complex in London was an early experiment by the Office of Works in Modernism (Fig. 12). Beckenham Post Office and Sorting Office, Bromley (1939-40), which possibly owes inspiration to the

highly influential, Dudokian Homsey Town Hall (1933-35), is similarly illustrative of the stylistic versatility and open-mindedness of the Post Office section of the Architects' Division at a time when most 'official architecture' was resolutely conventional (Fig. 13).

Figure 13 Beckenham Post Office and Sorting Office (1939) by F.A. Llewellyn (DP040073).

Hitherto, its designer, F.A. Llewellyn had worked purely in Neo-Georgian style, and whether this represented his – or his department's – only pre-war foray into Modern territory is currently not known.

1945-1969 Rationalisation, Mechanisation and moves towards a House Style

In 1940, as the Government's need for new buildings and the conversion of existing buildings became more urgent, the Office of Works was reorganised and renamed the Ministry of Works and Buildings. In 1942 it was renamed the Ministry of Works and Planning, becoming the Ministry of Works (MoW) in 1943 – a departmental name that lasted until 1962. It is unclear whether the Post Office Section of the Architect's Division continued during the period of hostilities, although construction of post offices seems to have gradually resumed in the mid-to-late 1940s.⁵² However, the profitability of the Post Office witnessed a marked down-turn in the post-war period, characterised by mounting deficits and declining traffic.⁵³ The 1950s saw the Post Office enter a critical period. By the middle of that decade the Ministry of Works was responsible for over 5,000 Post Office buildings and accommodation for the Post Office constituted the Ministry of Works second main activity (the main activity was research and development). It was estimated that some 350 new buildings per annum were required the Post Office, largely because of the expansion of the telephone service.⁵⁴ Furthermore, many of the older post offices were out of date at a time when the Post Office was grappling with the introduction of automation in the telephone service and letter-sorting, and when the staff and public alike were growing increasingly irritated about the outmoded design of the public offices.

In 1957 the then Postmaster General, Ernest Marples commissioned Sir Hugh Casson and Professor Misha Black of The Design Research Unit (DRU) to modernise three London Offices (South Molton Street, Knightsbridge and Ludgate Circus). In the north, Marples asked the Liverpool architects Omrod and Partners to, with W.L. Stevenson, to modernise offices in Liverpool, Leeds and Manchester. The resulting offices were 'lively, colourful and very expensive'.⁵⁵ Already some 10 million was being invested annually by the Post Office in its building programme – a substantial figure that demanded efficiency savings. In the same year, 1957, Marples and the MoW established a joint research and development group that was tasked with obtaining better value from this sum, by reducing the cost of Post Office buildings. The group, which was under the chairmanship of J.O. Stevens, Superintending Architect of the MoW's Chief Architect's Division, included architects, surveyors and engineers from the Ministry, and administrative, postal, engineering and finance offices from the Post Office. Brigadier K.S. Holmes (1912-1994),⁵⁶ Director of Mechanisation and Buildings in the Post Office was in overall charge. The first two buildings designed by the development group were a telephone exchange for Altringham, Cheshire, and a Head Post Office for Hitchin, Hertfordshire (Fig. 14) – these were built at, respectively, 50 per cent and 40 per cent the cost of comparable buildings in the past. The guiding design concept for the Hitchin building was providing the smallest building that could meet foreseeable needs, yet which could allow future extension for unforeseeable requirements.⁵⁷ Other economies were achieved by working to lower ceiling heights than past practice, and avoiding expensive basement construction by housing the heating apparatus in a separate building.⁵⁸

Figure 14 Hitchin Head Post Office – the first Post Office to emanate from the cross-departmental R&D group established in 1957 which was tasked with providing more economical, efficient buildings (DP040074).

It is unclear how many subsequent offices were built in the mould of the Hitchin building, but a uniform, modern and economical house style was perhaps an unrealistic goal. Some of the offices built in the early 1960s by the Ministry of Works (which became the Ministry of Public Buildings and Works (MoPBW) in 1962) (in association with the building division of the Post Office) showed 'lingering traces of "Post Office Georgian"'.⁵⁹ Furthermore, those offices designed by Local Authorities (e.g. Stevenage Post Office, 1958-59, by the architects of the Stevenage Development Corporation)⁶⁰ did not seemingly have to meet the approval of this working group. In such cases 'A local architect would be given a bundle of recommendations from the working party: the house style would be his own invention'.⁶¹ In c.1964 the Ministry of Public Buildings and Works introduced a scheme of modular building for Crown Post Offices, to much acclaim, but this initiative too seems to have met with limited success, with just two offices - at Mount Pleasant and Whitechapel - fitted out with the new design by 1967.⁶²

Aside from concerns of achieving a house style, more pressing were the changes demanded by the introduction of mechanised postal services. The first moves towards the mechanisation of letter sorting were taken in the 1930s and in 1966 Croydon piloted the postal code system, designed to enable automatic letter sorting equipment.⁶³ Mechanization, according to Tony Benn, the then Postmaster General, required 'better buildings ... not only to house machinery but to provide decent conditions for the people who work in the post office'.⁶⁴ A nationwide programme of new building, and upgrading of older buildings followed the publication of the White Paper Post Office Prospects,

1965-66 with London, Manchester, Belfast, Bristol, Birmingham, Glasgow, Sheffield, Cardiff among the first beneficiaries. In 1967 some 40 new post offices and 20 new sorting offices were scheduled for construction.⁶⁵ Older offices which were unable to be modernised to take mechanized equipment, or which were no longer well-sited or large enough to handle postal services on the anticipated scale were replaced in the succeeding years.⁶⁶

1970-2008 Public Corporation, Private Design

The reconstitution of the General Post Office as a public corporation rather than as a Government Department on 1 October 1969 ostensibly signalled the end of the MoPB&W's role in designing post offices. Rather, it, and its successor (from 1972), the Property Services Agency - a centralised organisation that controlled all building and estates management works for government departments and the armed services – functioned as the central budget holder for all such works, and let contracts with the private construction industry on behalf of its clients, such as the Post Office. Thus, with the end of its centralised design role, there was little scope for establishing a uniform house style (although The Post Office Board established a design advisory committee in 1970 'to consider all aspects of Post Office design').⁶⁷ One of the first buildings to emerge in this new era of private practice was Guildford's North Street Post Office (1970-72), designed by Roman Halter and Associates, a building distinguished mostly by its projecting 'gazebo' first and second floors with wrap-around tinted glazing. The design was very much orientated around the needs of security and terrorism, and apart from the entrance lettering, there was little that advertised the building's function.⁶⁸ From about this period, for certain schemes where it was economically profitable, the Post Office began moving towards the 'design and construct' concept, in which the principal contractor was given considerable freedom in key design areas, such as the layout of the building and the choice of materials.⁶⁹

The 1970s and 1980s saw the increasing use of computers for postal code sorting, which impacted on the design of buildings. Hemel Hempstead Head Post Office for example, comprising a main sorting area, and administrative, welfare and maintenance facilities, utilised a light tubular steel framework to permit large, well-lit interior spaces. Owing to previous maintenance problems, the roof and walls were treated as a continuous skin without openings that could cause leakage.⁷⁰

Gaps in knowledge

The foregoing overview is necessarily brief and limited in scope – its aim is to synthesise and outline what is known about the development purpose-built post offices so that consideration can be given to what is not known. Thus what follows here are some of the key emergent subject/thematic areas that are less well understood or documented, and that therefore merit further consideration, research and investigation.

Very early purpose-built post offices

Robert Smirke's General Post Office (1826-29, demolished 1912) at the St Martins Le Grand/Newgate street junction was presumably the first purpose-built post office building in the UK. Assuming this is the case, what followed it in the 1830s, and do any buildings from this decade survive?

Early purpose-built post offices

All of the known, surviving purpose-built post offices (BoE, listed etc) date from the late 1860s onwards. The mid-19th century witnessed a remarkable post office building programme: by 1864, there were 552 Head Post Offices in England & Wales (including London's 10 District Offices). Not all of these Head Post Offices will have been built-from-scratch in the wake of Sir Rowland Hill's revolutionary reforms, but a sizable proportion will have. Does anything survive from the 1840s and 1850s?

The Office of Works and emergence of house styles

This is a key theme in terms of the visual contribution to post offices to townscapes but one that we currently know very little. Who set the stylistic agendas/parameters, and were these codified or formalised in any way? How much latitude was there for junior staff to introduce their own designs or flourishes? Shedding light on the mindset and culture of the Architectural Staff of the Office of Works would be an intriguing and informative component of this study, which would be of wider value for future studies of other Government building types, such as Telephone Exchanges, Labour Exchanges, Diplomatic and Consular offices etc.

Future research could look at buildings of individual Works architects in the four regional teams and it may be possible to trace the members of the teams in ensuing years according to which architect is credited with particular buildings. Further work could focus on the introduction of the more vernacular Office of Works municipal arts and crafts style that was employed early in the twentieth century by the Office of Works, for example at the economically constructed Osborne Royal Naval College by HN Hawks in 1903. Ostensibly the specialised post office division, headed by Walter Pott in c.1915, was slow to adopt the arts and crafts idiom (classical Beaux Arts inspired schemes for head post offices still predominated in the 1915-18 period) and not until the later 1920s and 1930s was there an arts and crafts inspired deference to regional styles and materials for post offices. H.E. Seccombe's Chipping Norton post office of 1933, illustrated on the front cover of *The Builder* (and this report) is indicative of this stylistic change in direction. Yet Seccombe was working in the SE post office branch in 1914 and may have been there since at least 1911 – the year he was promoted to Assistant Architect 1st class. So did Seccombe's style change, and if so, was this a personal change or, more probably, a broad-spectrum change in office policy? But was this also a reflection of the scale of

building, i.e. the classical tradition was deemed appropriate for head post offices and large sorting offices, while more licence was given (encouraged?) in the design of smaller class 1 post offices which could be more contextual. That scale was important might be borne out by the example of Woking Sorting Office and Post Office in White Rose Lane. The 1910 building (Work 13/443) was rebuilt on an enlarged footprint in 1935 in brick with stone sills in a stripped-down neo-Georgian style without any obvious regard to the local context (although it was more cheaply built than Llewellyn's Beckenham Post Office and Sorting Office of 1939-40).

Influence of technology and society on building form and organisation

Early on, Smirke's General Post Office building at the St Martins Le Grand/Newgate street junction had its own underground railway connecting the various departments, and indeed many other Post Offices relied on railway technology to transfer mail underground between buildings. What is the chronology of this development, and was it widely adopted in the provinces? And more generally, given that the Victorian post office network emerged in the railway era, is there a correlation between Post Towns and Railway Towns? Did one tend to follow the other, and if so, which? And how was the passage of factory legislation, the growth in female workers, and other societal changes mirrored in the design of buildings (e.g. female-only changing and wash-rooms)?

Technological virtuosity

As Crown property, Post Office buildings were exempted from local and metropolitan (London) Buildings Acts, including the usual provisions regarding materials and construction. In the pursuit of fire-resistance, spatial openness and flexibility of planning, new materials and techniques were pressed into service by post office designers, and as a class of buildings they appear to be among the more technologically ambitious of the Victorian and Edwardian eras. Sir Henry Tanner for example was an early and influential advocate of reinforced-concrete framing, and his crowning achievement, the King Edward Building of the General Post Office (1907-11) was at the time of its construction 'the largest Post Office in the world ... [and] the largest building ... carried out in ferro-concrete'. Earlier Tanner had used steel-frame construction for some of the buildings in the Mount Pleasant complex. But to what degree were these modern construction techniques applied to smaller offices, both in other districts of London and the metropolis? And did this technological fortitude continue beyond the Edwardian age, into the inter-war and post-war years when techniques of welded steel frames, pre-stressing and so forth came into widening use?

An audit of what survives

How many Victorian and Edwardian purpose-built offices survive in England in 2008? How many from other eras? Nationally, what distribution patterns are there, and what

are the chief factors behind these? Does the current quantity of listed buildings adequately reflect these patterns, and the significances specific to the building type?

A national survey would give a more representative overview of what survives, and in what condition, and therefore underpin the criteria for designation, and be of value in the formulation of Detailed Asset Descriptions for individual buildings.

Post offices in the evolution of towns and cities

Post offices, as a class of 'public buildings', are among the more familiar, visible, and important elements of most English town- and cityscapes, a role recognised by the Postmaster General in 1910 when he said they should 'contribute to the dignity and beauty of [their surroundings]'. But this is just the more palpable, architectural contribution they make; post offices are part of the story of how towns equip themselves with all the facilities of new business, commercial and other requirements, and as such their study will help enlarge our understandings of urban infrastructural development.

THE NATURE OF THE THREAT TO POST OFFICES

Closure of Branch Post Offices, 2007-8

The imminent threat facing some 20 per cent of the UK's 14,300 Branch Post Offices is closure under the government-owned Post Office Ltd's Network Change Programme. This will involve the compulsory compensated closure of up to 2500 branches, with around 500 of these being replaced by 'Outreach' type service points. This closure programme is being implemented on a rolling basis, with the UK being divided into some 50-60 review areas, including 28 in England. Figures for England are not yet available, but can be estimated to be in the order of approximately 30 to 50 per cent of that for the UK total (2,500) i.e a figure somewhere between 750 and 1250. To date, closures within seven English review areas have been formally announced:

Kent (56 closures; see Appendix 4)

East Midlands (74 closures)

East Yorkshire with Bassetlaw and North Lincolnshire (42 closures)

East Essex and Suffolk (47 closures)

Hampshire and the Isle of Wight (61 closures)

Merseyside, Wirral, and Cheshire with Wigan, Leigh and Makerfield (60 closures)

Sussex (41 closures)

Leicestershire, Northamptonshire and Rutland (50 closures)

The decisions regarding the Branch Post Offices within the remaining 20 English review areas will be announced over the remainder of 2008. Preliminary research on the post offices so far earmarked for closure suggests that the majority of these BPO's (96% of which are operated by subpostmasters who are independent business people) are not purpose-built (see pp. x).

Disposal of Crown Post Offices to WHSmith, 2007-8

Post Office Ltd, which in 2006 disposed of six of its branches in a trial exercise, intends to move a further c.70 Crown Post Offices to nearby WHSmith stores in UK towns and cities under a new partnership agreement. The company will continue to run 373 alongside those branches run by private subpostmasters and mistresses and by retail franchise partners. The high probability that these functionally obsolete c.59 UK Crown

Post Office are purpose-built (with many being HPOs) means that the implications of this threat are more than serious than that posed by the Network Change Programme. A list of the English Crown Post Offices scheduled for relocation to WHSmith store (with relocation dates where known) is given in Appendix 5

Future Closure and Disposal of Branch Post Offices and Crown Post Offices, 2008-

Since the 1970s there has been a steady attrition in the number of post offices, with the most recent trends being the closure of increasing numbers of Branch Offices and relocation in stores as Franchise Post Offices. Following the closure of the c.2500 offices under the current closure programme, numbers will stand at well below one third of what they did in the 1930s, when provision was at its highest. Whilst it is impossible to predict future patterns, based on past trends it is safe to assume that there will be further attrition to the stock of functioning buildings. Whilst many functionally obsolescent buildings will find new uses, others will face demolition because of the valuable sites that they occupy.

SOURCES OF INFORMATION

The great bulk of archives and documentary material relating to the Post Office and its buildings are located in London. This is largely because for most of the 19th and 20th centuries the Post Office was 'ruled by the autocratic power of St. Martin's le Grand',⁷¹ and because the Office of Works and its successor bodies were also based in the capital. Archives relating to both these departments are almost wholly held by the British Postal Museum and Archives, London WCI, and at the National Archives in Kew. Two other major repositories are the NMR, and the RIBA Library, which has an unrivalled collection of architectural periodicals. In a far more haphazard way, some local archives hold material relating to specific post offices.

The British Postal Museum & Archive (BPMA), Freeling House, London WC1X 0DL

A great deal of information directly relevant to post office buildings is held within the BPMA, catalogued with the top-level prefix POST. The BPMA Library holds some 3,260 books and journals covering a period from the 18th century to the present, most of it on open access. It is divided into eight main sections (General Postal History, Transport, Military History, Industrial Relations, Local Postal History, Philately, Biographies and a general historical reference) and holds duplicate archive material, including complete runs of the successive in-house magazines including St Martin's Le Grand (1890-1933); The Post Office Magazine (1933-1966) and Courier (1966-present) (all with annual illustrations and subject indexes, which have been collated). One of the most useful sources of all is on open-access in the search room: three ring-bound volumes containing lists of current and former post offices arranged by county. Compiled by Ken J. Smith in 1998 (and updated since then), and covering the whole country (including Greater London), this is a truly invaluable work, for it gives, for each office, the street address, opening date – or earliest reference – and closing dates based on methodical cross-compiling and referencing of multiple postal archival sources (Appendix 3).

The most rewarding POST classes will include the following; more detailed, piece-level lists of material identified as relevant are given in Appendix 4.

POST 30 Registered Files, Minuted Papers (England and Wales) 1792-1956 [e.g. P 30/0564 POST 30/262A (1) Wolverhampton Post Office: new premises (2) Post Office buildings: apportionment of costs, Postal and Telegraph Accounts c. 1874].

POST 31: Registered Files, Minuted Papers (Ireland) 1841-1960 [e.g. P 31/129 POST 31/84b Post Office sites and buildings 1910-1939].

POST 33: Registered Files, Minuted Papers (General) 1921-1954 [e.g. P 33/0911 POST 33/608 Secretary's Office: buildings and supplies branch, architectural section establishment c. 1922].

POST 52: STAMP DEPOT 1865-1992 [e.g. P 52/4/399 POST 52/1078 British Historic Buildings (and Miniature sheets) 1977 Oct 11-1979 Mar 02].

POST 92: Post Office Publications 1855-Present [e.g. POST 92/346-389 List of Head Post Offices in the United Kingdom, showing the Offices subordinate to them, and the Surveyor's district in which each is situated, etc. 1897-1970].

POST 122: Registered Files, Minuted And centralised Registry Papers 1955-1973 [e.g. POST 122/4480 House Style for Public Offices: Policy Bundle. Adoption of a standard style for public post offices. Designed to give a 'family resemblance' and produce savings in planning and construction. Correspondence with Ministry of Public Buildings and Works. Includes some building plans 1963 Mar 07-1967 Jun].

The National Archives, Kew, Richmond, Surrey, TW9 4DU

The class most likely to yield the most fruitful information is WORK, with WORK 13 and WORK 30 comprising information on the design of 19th and early 20th century post offices, the architects responsible and the contractors who erected them. WORK 13 comprises the contracts for the construction or enlargement of hundreds of post offices and/or sorting offices for the period 1890-1935; these are tightly bound, but worthy of systematic perusal to extract names of architects, types of materials or constructional methods etc. Bulk orders of material (up to c.30 items) can be pre-ordered by telephone or email. More detailed, piece-level lists of material identified as relevant are given in Appendix 4.

WORK 5: [e.g. WORK 5/212 HM Office of Works etc: Accounts Branch: Old Information Book A; includes wages and expenditure. Indexed 1858 Jan 01 - 1893 Jan 01]

WORK 11 [e.g. WORK 11/493 Post office facilities 1944-1955]

WORK 12 [e.g. WORK 12/369 Head Post Office, Small Street, Bristol : works services; alterations and extensions 1871-1934]

WORK 13 Office of Works and successors: Deeds, Series III (Contract Rolls) 1844-1951 [e.g. WORK 13/113 Burton on Trent Post Office. Erection. R. Kershaw. 1903 May 2]

WORK 30 Office of Works and successors: Public Buildings in England: Plans and Drawings 1656-1962 [e.g. Subseries within WORK 30 POST OFFICES includes drawings of, among others, post offices for Aylesbury, Barnet, Bedford, Bristol, Chipping Norton, Clifton, Hereford, High Wycombe, Oxford, Ramsgate and districts within London]

WORK 69 [e.g. WORK 69/24 Buildings erected by HM Office of Works: various buildings]

The National Monuments Record Centre, Swindon SN2 2GZ

The Library at the NMRC comprises over 50,000 volumes, including good runs of a number of architectural periodicals including *The Builder*, *Building* and *Architectural Review*.

Public access ('Red Box') collections

500,000 photographs of buildings, ranging in date from the 1870s to the 1980s and deriving from various sources. Although not fully indexed/catalogued yet (and hence amenable to thematic searching), this collection might be useful for particular buildings already identified as of interest.

PSA Negatives Collection– Group G

A substantial part of the Property Services collection was deposited with the NMR at privatisation. The PSA Negatives Collection – Group G includes images of post offices erected, enlarged or modernised in the period 1944 - 1990, as well as occasional views of older Office of Works-designed buildings taken prior to demolition. The collection has been indexed into 4 printed volumes covering London and the rest of England; for the purposes of this project those images relating to post offices have been extracted and recompiled for ease of use/ordering of photographs (see Appendix 8)

Photograph collections

A number of photographic collections are likely to include images of post offices: Alfred Newton and Sons; Henry Taunt; Hallam Ashley; Paul Barkshire; York and Son; Gordon Barnes; Nathaniel Lloyd; Goodhart Rendel; Jackson Stopps; Gerald Cobb; James Stevens Curl. Some of these will be filed in the red boxes.

However, many of these appear to be of rural sub-post offices, and the collections are more likely to be useful for targeted searching of named/located post offices. The A2A portal is a very user-friendly way into these collections.

Buildings Files

Information on over 70,000 individual buildings, comprising a combination of photographs, drawings, notes and reports deriving principally from RCHME and EH fieldwork.

Amenable to thematic searching on AMIE/Pastscape, although trial searches suggest this collection will be of limited use.

EH London Office (Architectural Investigation)

Good runs of architectural periodicals, on microfilm are located outside the Architectural Investigation/Survey of London offices in Waterhouse Square. A microfilm reader, with computerised print-out facility, is also available in the corridor. Microfilmed collections include

Academy Architecture (1889-1931)

Architects Journal (1958-73)

Architectural Review (1897-1920; 1963-68)

The Builder (1842-1939; 1943; 1958-73)

The Building News (1862-1879)

The RIBA Journal/Transactions (1835-1938; 1966-73)

Also available are the PSA Negatives Collection – Group G printed indexes (4 vols), bound copies of HM Office of Works staff lists for 1914-15; 1928; 1936; 1937 and 1939 (Xeroxed/photographed from originals held by the NMR and TNA, and a copy of The Blue Notes on Class VII Estimates: Administered by the Office of Works, revised 1931.

Historians Files (including research notes on Sorting Offices); London Region Photographs, and Survey of London volumes and background notes (also held off-site in Ipswich).

FIELDWORK/RECORDING OF POST OFFICES: RESEARCH STRATEGIES AND OPTIONS

Ideally, a thematic project of this sort should draw upon two principal classes of evidence – the buildings themselves, and relevant documentary material. It is consideration of these that forms the principal components of this document, and one observation that can be readily drawn is that fieldwork will have disproportionately greater time-and-resource implications than archival research. Despite being among the most recognisable and easily accessible building types, the quantity of post offices distributed throughout England puts logistical considerations to the fore. By contrast, documentary evidence is exceedingly compact and centralised, with the great majority of it located in London.

Given the level of threat to post offices, and the large gaps in knowledge on most aspects of this building type, a variety of recording and research strategies present themselves. Methodologically, there is considerable scope for latitude in terms of how selective/comprehensive, intensive/extensive, reactive/proactive and static/evolving the response(s) might be. One low-level response might be to focus solely on a selection of those post offices threatened by the Network Change Programme, and those earmarked for disposal to WHSmith. This might proceed on an incremental basis, as the certified closures in each of the 28 review areas unfold. One of the drawbacks of this reactive approach is that an unforeseeable but large proportion of these buildings will not be purpose-built, and, more fundamentally, will give a highly selective and possibly distorted overview of the architectural development of post offices (skewed, in all likelihood, towards lower-status buildings of the post-war era). At the other end of the scale are those strategies that would be driven by the need to document surviving purpose-built buildings identified through an earlier/overlapping phase of archival/documentary research. More strategic approaches such as these would capture former purpose-built post offices, as well as those not currently under threat, but which might face closure under possible future closure initiatives. Because the knowledge gains from such thematic approaches would be greater, they would lend themselves to a wider range of possible outcomes, including the formulation of detailed criteria for assessing the historical and architectural significance of post offices for Heritage Protection Department, or the production of a monograph or an Informed Conservation type publication.

APPENDIX I

Postal Regions in England (*figures in brackets denote number of post towns*)

North West

BB (Blackburn) (9) Accrington, Barnoldswick, Blackburn, Burnley, Clitheroe, Colne, Darwen, Nelson, Rossendale

BD (Bradford) (7) Bingley, Bradford, Cleckheaton, Keighley, Settle, Shipley, Skipton

BL (Bolton) (2) Bolton, Bury

CA (Carlisle) (22) Alston, Appleby-in-Westmorland, Beckermeth, Brampton, Carlisle, Cleator, Cleator Moor, Cockermouth, Egremont, Frizington, Holmrook, Keswick, Kirkby Stephen, Maryport, Moor Row, Penrith, Ravenglass, Seascale, St Bees, Whitehaven, Wigton and Workington in England.

CH (Chester) (13) Bagillt, Birkenhead, Buckley, Chester, Deeside, Ellesmere Port, Flint, Holywell, Mold, Neston, Prenton, Wallasey, Wirral

CW (Crewe) (8) Congleton, Crewe, Middlewich, Nantwich, Northwich, Sandbach, Tarporley, Winsford

HD (Huddersfield) (3) Brighouse, Holmfirth, Huddersfield

HG (Harrogate) (3) Harrogate, Ripon and Knaresborough

HX (Halifax) (5) Elland, Halifax, Hebden Bridge, Sowerby Bridge

LA (Lancaster) (17) Ambleside, Askam-in-Furness, Barrow-in-Furness, Broughton-in-Furness, Carnforth, Coniston, Dalton-in-Furness, Grange-over-Sands, Kendal, Kirkby-in-Furness, Lancaster, Millom, Milnthorpe, Morecambe, Sedbergh, Ulverston, Windermere

L (Liverpool) (4) Bootle, Liverpool, Ormskirk, Prescot

LS (Leeds) (6) Ilkley, Leeds, Otley, Pudsey, Tadcaster, Wetherby

M (Manchester) (3) Manchester, Sale, Salford

OL (Oldham) (7) Ashton-Under-Lyne, Bacup, Heywood, Littleborough, Oldham, Rochdale, Todmorden

PR (Preston) (4) Chorley, Leyland, Preston, Southport

S (Sheffield) (8) Barnsley, Chesterfield, Dronfield, Hope Valley, Mexborough, Rotherham, Sheffield, Worksop

SK (Stockport) (11) Alderley Edge, Buxton, Cheadle, Dukinfield, Glossop, High Peak, Hyde, Macclesfield, Stalybridge, Stockport, Wilmslow

WA (Warrington) (9) Altrincham, Frodsham, Knutsford, Lymm, Newton-le-Willows, Runcorn, St Helens, Warrington, Widnes

WF (Wakefield) (11) Batley, Castleford, Dewsbury, Heckmondwike, Knottingley, Liversedge, Mirfield, Normanton, Ossett, Pontefract, Wakefield

WN (Wigan) (3) Leigh, Skelmersdale, Wigan

Total = 155 Post Towns

North East

DH (Durham) (5) Chester le Street, Consett, Durham, Houghton le Spring, Stanley

DL (Darlington) (14) Barnard Castle, Bedale, Bishop Auckland, Catterick Garrison, Crook, Darlington, Ferryhill, Hawes, Leyburn, Newton Aycliffe, Northallerton, Richmond, Sildon, Spennymoor

DN (Doncaster) (13) Barnetby, Barrow upon Humber, Barton-upon-Humber, Brigg, Cleethorpes, Doncaster, Gainsborough, Goole, Grimsby, Immingham, Retford, Scunthorpe, Ulceby

HU (Hull) (8) Beverley, Brough, Cottingham, Hessle, Hornsea, Hull, North Ferriby, Withernsea

LN (Lincoln) (7) Alford, Horncastle, Lincoln, Louth, Mablethorpe, Market Rasen, Woodhall Spa

NE (Newcastle) (34) Alnwick, Ashington, Bamburgh, Bedlington, Belford, Blaydon-on-Tyne, Blyth, Boldon Colliery, Chathill, Choppington, Corbridge, Cramlington, East Boldon, Gateshead, Haltwhistle, Hebburn, Hexham, Jarrow, Morpeth, Newbiggin-by-the-Sea, Newcastle upon Tyne, North Shields, Prudhoe, Riding Mill, Rowlands Gill, Ryton, Seahouses, South Shields, Stocksfield, Wallsend, Washington, Whitley Bay, Wooler, Wylam

SR (Sunderland) (3) Peterlee, Seaham, Sunderland

TS (Middlesbrough) (10) Billingham, Guisborough, Hartlepool, Middlesbrough, Redcar, Saltburn-by-the-Sea, Stockton-on-Tees, Trimdon Station, Wingate, Yarm

YO (York) (10) Bridlington, Driffield, Filey, Malton, Pickering, Scarborough, Selby, Thirsk, Whitby, York

Total = 104 Post Towns

Midlands

B (Birmingham) (15) Alcester, Birmingham, Bromsgrove, Cradley Heath, Halesowen, Henley-in-Arden, Oldbury, Redditch, Rowley Regis, Smethwick, Solihull, Studley, Sutton Coldfield, Tamworth, West Bromwich

CV (Coventry) (11) Atherstone, Bedworth, Coventry, Kenilworth, Leamington Spa, Nuneaton, Rugby, Shipston-on-Stour, Southam, Stratford-upon-Avon, Warwick

DE (Derby) (11) Alfreton, Ashbourne, Bakewell, Belper, Burton upon Trent, Derby, Heanor, Ilkeston, Matlock, Ripley, Swadlincote

DY (Dudley) (8) Bewdley, Brierley Hill, Dudley, Kidderminster, Kingswinford, Stourbridge, Stourport-on-Severn, Tipton

HR (Hereford) (6) Bromyard, Hereford, Kington, Ledbury, Leominster, Ross-on-Wye

LE (Leicester) (12) Ashby-de-la-Zouch, Coalville, Hinckley, Ibstock, Leicester, Loughborough, Lutterworth, Market Harborough, Markfield, Melton Mowbray, Oakham, Wigston

NG (Nottingham) (7) Grantham, Mansfield, Newark-on-Trent, Nottingham, Sleaford, Southwell, Sutton-in-Ashfield

NN (Northampton) (8) Brackley, Corby, Daventry, Kettering, Northampton, Rushden, Towcester, Wellingborough

ST (Stoke-on-Trent) (6) Leek, Newcastle, Stafford, Stoke-on-Trent, Stone, Uttoxeter

TF (Telford) (6) Broseley, Market Drayton, Much Wenlock, Newport, Shifnal, Telford

WR (Worcester) (7) Broadway, Droitwich, Evesham, Malvern, Pershore, Tenbury Wells, Worcester

WS (Wednesbury) (6) Burntwood, Cannock, Lichfield, Rugeley, Walsall, Wednesbury

WV (Wolverhampton) (4) Bilston, Bridgnorth, Willenhall, Wolverhampton

Total = 107 Post Towns

East

CB (Cambridge) (5) Cambridge, Ely, Haverhill, Newmarket, Saffron Walden

IP (Ipswich) (15) Aldeburgh, Brandon, Bury St Edmunds, Diss, Eye, Felixstowe, Halesworth, Harleston, Ipswich, Leiston, Saxmundham, Southwold, Stowmarket, Thetford, Woodbridge

NR (Norwich) (16) Attleborough, Beccles, Bungay, Cromer, Dereham, Fakenham, Great Yarmouth, Holt, Lowestoft, Melton Constable, North Walsham, Norwich, Sheringham, Walsingham, Wells-next-the-Sea, Wymondham

PE (Peterborough) (18) Boston, Bourne, Chatteris, Downham Market, Hunstanton, Huntingdon, King's Lynn, March, Peterborough, St Ives, St Neots, Sandringham, Skegness, Spalding, Spilsby, Stamford, Swaffham, Wisbech

Total = 54 Post Towns

Home Counties

AL (St Albans) (5) Harpenden, Hatfield, St Albans, Welwyn, Welwyn Garden City

BR (Bromley) (7) Beckenham, Bromley, Chislehurst, Keston, Orpington, Swanley, West Wickham

CM (Chelmsford) (16) Billericay, Bishop's Stortford, Braintree, Brentwood, Burnham-on-Crouch, Chelmsford, Dunmow, Epping, Harlow, Ingatestone, Maldon, Ongar, Sawbridgeworth, Southminster, Stansted, Witham

CO (Colchester) (9) Bures, Clacton-on-Sea, Colchester, Frinton-on-Sea, Halstead, Harwich, Manningtree, Sudbury, Walton-on-the-Naze

CR (Croydon) (10) Caterham, Coulsdon, Croydon, Kenley, Mitcham, Purley, South Croydon, Thornton Heath, Warlingham, Whyteleafe

CT (Canterbury) (13) Birchington, Broadstairs, Canterbury, Deal, Dover, Folkestone, Herne Bay, Hythe, Margate, Ramsgate, Sandwich, Westgate-on-Sea, Whitstable

DA (Dartford) (11) Belvedere, Bexley, Bexleyheath, Dartford, Erith, Gravesend, Greenhithe, Longfield, Sidcup, Swanscombe, Welling

EN (Enfield) (7) Barnet, Broxbourne, Enfield, Hoddesdon, Potters Bar, Waltham Abbey, Waltham Cross

GU (Guildford) (24) Aldershot, Alton, Bagshot, Bordon, Camberley, Cranleigh, Farnborough, Farnham, Fleet, Godalming, Guildford, Haslemere, Hindhead, Lightwater, Liphook, Liss, Midhurst, Petersfield, Petworth, Sandhurst, Virginia Water, Windlesham, Woking, Yateley

HA (Harrow) (7) Edgware, Harrow, Northwood, Pinner, Ruislip, Stanmore, Wembley

HP (Hemel Hempstead) (11) Amersham, Aylesbury, Beaconsfield, Berkhamsted, Chalfont St Giles, Chesham, Great Missenden, Hemel Hempstead, High Wycombe, Princes Risborough, Tring

IG (Ilford) (6) Barking, Buckhurst Hill, Chigwell, Ilford, Loughton, Woodford Green

KT (Kingston upon Thames) (19) Addlestone, Ashted, Chertsey, Chessington, Cobham, East Molesey, Epsom, Esher, Kingston upon Thames, Leatherhead, New Malden, Surbiton, Tadworth, Thames Ditton, Walton-on-Thames, West Byfleet, West Molesey, Weybridge, Worcester Park

LU (Luton) (3) Dunstable, Leighton Buzzard, Luton

ME (Maidstone) (11) Aylesford, Chatham, Faversham, Gillingham, Maidstone, Queenborough, Rochester, Sheerness, Sittingbourne, Snodland, West Malling

MK (Milton Keynes) (5) Bedford, Buckingham, Milton Keynes, Newport Pagnell, Olney

RH (Redhill) (17) Betchworth, Billingshurst, Burgess Hill, Crawley, Dorking, East Grinstead, Forest Row, Gatwick, Godstone, Haywards Heath, Horley, Horsham, Lingfield, Oxted, Pulborough, Redhill, Reigate

RM (Romford) (9) Dagenham, Grays, Hornchurch, Purfleet, Rainham, Romford, South Ockendon, Tilbury, Upminster

SG (Stevenage) (15) Arlesey, Baldock, Biggleswade, Buntingford, Henlow, Hertford, Hitchin, Knebworth, Letchworth, Much Hadham, Royston, Sandy, Shefford, Stevenage, Ware

SL (Slough) (8) Ascot, Bourne End, Gerrards Cross, Iver, Maidenhead, Marlow, Slough, Windsor

SM (Sutton) (5) Banstead, Carshalton, Morden, Sutton, Wallington

SS (Southend-on-Sea) (11) Basildon, Benfleet, Canvey Island, Hockley, Leigh-on-Sea, Rayleigh, Rochford, Southend-on-Sea, Stanford-le-Hope, Westcliff-on-Sea, Wickford

TN (Tunbridge Wells) (24) Ashford, Battle, Bexhill-on-Sea, Cranbrook, Crowborough, Edenbridge, Etchingham, Hartfield, Hastings, Heathfield, Mayfield, New Romney, Robertsbridge, Romney Marsh, Rye, Sevenoaks, St Leonards-on-Sea, Tenterden, Tonbridge, Tunbridge Wells, Uckfield, Wadhurst, Westerham, Winchelsea

TW (Twickenham) (13) Ashford, Brentford, Egham, Feltham, Hampton, Hounslow, Isleworth, Richmond, Shepperton, Staines, Sunbury-on-Thames, Teddington, Twickenham

UB (Oxbridge) (6) Greenford, Hayes, Northolt, Southall, Uxbridge, West Drayton

WD (Watford) (7) Abbots Langley, Borehamwood, Bushey, Kings Langley, Radlett, Rickmansworth, Watford

Total = 279 Post Towns

South

BH (Bournemouth) (11) Bournemouth, Broadstone, Christchurch, Ferndown, New Milton, Poole, Ringwood, Swanage, Verwood, Wareham, Wimborne

BN (Brighton) (18) Arundel, Brighton, Eastbourne, Hailsham, Hassocks, Henfield, Hove, Lancing, Lewes, Littlehampton, Newhaven, Peacehaven, Pevensey, Polegate, Seaford, Shoreham-by-Sea, Steyning, Worthing

GL (Gloucester) (28) Badminton, Berkeley, Blakeney, Cheltenham, Chipping Campden, Cinderford, Cirencester, Coleford, Drybrook, Dursley, Dymock, Fairford, Gloucester, Lechlade, Longhope, Lydbrook, Lydney, Mitcheldean, Moreton-in-Marsh, Newent, Newnham, Ruardean, Stonehouse, Stroud, Tetbury, Tewkesbury, Westbury-on-Severn, Wotton-under-Edge

OX (Oxford) (17) Abingdon, Bampton, Banbury, Bicester, Burford, Carterton, Chinnor, Chipping Norton, Didcot, Kidlington, Oxford, Thame, Wallingford, Wantage, Watlington, Witney, Woodstock

PO (Portsmouth) (24) Bembridge, Bognor Regis, Chichester, Cowes, East Cowes, Emsworth, Fareham, Freshwater, Gosport, Havant, Hayling Island, Lee-on-the-Solent, Newport, Portsmouth, Rowland's Castle, Ryde, Sandown, Seaview, Shanklin, Southsea, Totland Bay, Ventnor, Waterlooville, Yarmouth

RG (Reading) (12) Basingstoke, Bracknell, Crowthorne, Henley-on-Thames, Hook, Hungerford, Newbury, Reading, Tadley, Thatcham, Whitechurch, Wokingham

SO (Southampton) (9) Alresford, Brockenhurst, Eastleigh, Lymington, Lyndhurst, Romsey, Southampton, Stockbridge, Winchester

SP (Salisbury) (6) Andover, Fordingbridge, Gillingham, Salisbury, Shaftesbury, Tidworth

SN (Swindon) (10) Calne, Chippenham, Corsham, Devizes, Faringdon, Malmesbury, Marlborough, Melksham, Pewsey, Swindon

Total = 135 Post Towns

South West

BA (Bath) (16) Bath, Bradford on Avon, Bruton, Castle Cary, Frome, Glastonbury, Radstock, Shepton Mallet, Street, Templecombe, Trowbridge, Warminster, Wells, Westbury, Wincanton, Yeovil

BS (Bristol) (8) Axbridge, Banwell, Bristol, Cheddar, Clevedon, Wedmore, Weston-super-Mare, Winscombe

DT (Dorchester) (9) Beaminster, Blandford Forum, Bridport, Dorchester, Lyme Regis, Portland, Sherborne, Sturminster Newton, Weymouth

APPENDIX 6

Ken J. Smith's list of Post Offices by county (North London District example)

[The following is a verbatim extract from p. 69 and 70 of the London volume, compiled by K.J. Smith April 1998]

POST OFFICES LISTED BY COUNTY

For each office, I have listed the opening date, or earliest reference; the issue dates of Penny Post marks; the undated circles to 1860; and rubber date stamps; the dates of establishment of Money Order & Savings Bank facilities and of Telegraph facilities; changes of Post Town / Postal Address; periods of closure; and final closure date, where applicable. My original aim was to keep a record of office closures as they occurred, and I should be grateful for any further information on closures.

There are two publications in particular which contain useful information. James Mac-bay's book on "Scottish Post Offices" has a lengthy introduction, detailing types of Post Office and sources of information, as well as a handy glossary of abbreviations used by the Post Office. The Midlands (GB) Postal History Group published their 'Undated Circular Marks of the Midland Counties' in 1985, and the third edition of 1989 has a useful introduction explaining the changes in the postal system around 1840, and the Penny Post system. Between 1840 and 1860, all offices were issued with a postal mark, either dated or undated, depending on the amount of business transacted annually. The 'Undated Circles' used by the smaller offices were withdrawn in 1859-60, leaving the non-Money Order offices without any type of postmark. When an office was granted MO-SB or Telegraph facilities, a circular datestamp (CDS) would be issued. In addition, from 1885 onwards, rubber datestamps ('Climax Daters') were issued to offices which were not MO-SB or Telegraph Offices, but which were permitted to sell Postal Orders. In 1904, the remaining offices, which had no mark were finally issued with a rubber datestamp, in some cases after more than half a century without any mark. From 1904 onwards, some offices used their rubber datestamps on mail, as well as counter use. Rubber datestamps were phased out in the early 1930s, and they were replaced by steel datestamps. James Mackay's book on Rubber Datestamps is most informative. The 1930s saw a great expansion in the number of post offices, but since the 1970s there has been a reduction in the number of offices, particularly in rural areas, and it appears that the Post Office does not keep central records of closures. A recent trend has been the closure of many Branch Offices, and relocation in stores, as Franchise P O s or Modified Contract Sub-Post Offices (MSPO). Abbreviations used in the list of Post Offices:

- B.O. Branch Offices, sometimes referred to as 'Crown Offices'.
- P.P. Penny Post 'Receiving House', pre-1840, exchanging mail with its Head Office. H.O. Head Office
- S.O. Independent Sub-Offices. These evolved in the second half of the Nineteenth Century, being less important than the Head Offices, but having independent addresses. When the term 'Railway Sub-Office' was abolished in 1905, these too became S.O.s. until 1-4-1909, when the letters S.O. were dropped from the postal address, and they became 'Post Towns' (P.T.)
- SSO 'Salaried Sub Offices': from 1906, some Head Offices were downgraded, while remaining Post Towns, and this process continued through to the 1970s.
- RSO 'Railway Sub-Office', 1856 – 1905. These were offices which received some, or all, of their mail from a Travelling Post Office (TPO) without the mail having to pass through the Head Office. Many RSOs were not on the line of a railway, but received some of their mail by rail.

- TRO Town Receiving Offices: These only appeared in the Post Office Guides, pre- 1907, if they were Money Order or Telegraph Offices. They can usually be found in local directories, such as Kelly's Directory. From 1892 they were known as Town Sub-Offices (TSO).
- MO-SB Money Order & Savings Bank. These offices were issued with steel datestamps for counter work, and some datestamped their own mail.
- T.O. Telegraph Offices: in 1870, the telegraph system was nationalised, and administered by the Post Office. Each telegraph office was allocated a two or three letter code, and these remained in use until they were phased out in the 1960s. These code letters sometimes appeared in postal markings and parcel labels, in the early Twentieth Century
- POG Post Office Guides: these were published quarterly from 1856. giving information on all Post Office services, as well as lists of offices. From 1916 they were published half-yearly, and from 1937 annually, as two publications, the 'Post Office Guide' and 'Post Offices in the U.K.' Publication ceased during the Second World War, and afterwards they were published at roughly two-year intervals, until the last edition of PO/UK appeared in Nov. 1977.
- POC 'Post Office Circulars' ; these were weekly instructions to postmasters, giving also the opening of Money Order and Telegraph Offices and changes of postal address. The opening of the non MO-SB / TO offices was not given in the Circulars, however, though from 1885. lists of Postal Order Offices appeared from time to time From 1925 to 1937, the opening and closing of ALL offices is given in the Circulars. From the 1970s, the Post Office Gazette (POGaz) gives some information on office openings and closures.
- T.C. Temporary Closure. If an alternative location cannot be found, this then becomes the date of the permanent closure.

London N. Post Offices

- NI: Arundel Place, Bamsbury 1-5-1872: MO-SB Replaced by 'Westbourne Rd,Bamsbury' 1-7-1880 (see N7)

- ⁵⁷ The public office and administration offices, a long, low box, were placed, conventionally, in front of the sorting office, but innovatively, the two departments were divided by a light sectional partition. The back wall of the sorting office was a light, framed, removable structure, and thus either or both spaces could be extended into the other, in response to changing requirements, without diminishing the overall space of either department. ENGLISH HERITAGE RESEARCH DEPARTMENT

English Heritage undertakes and commissions research into the historic environment, and the issues that affect its condition and survival, in order to provide the understanding necessary for informed policy and decision making, for sustainable management, and to promote the widest access, appreciation and enjoyment of our heritage.

The Research Department provides English Heritage with this capacity in the fields of buildings history, archaeology, and landscape history. It brings together seven teams with complementary investigative and analytical skills to provide integrated research expertise across the range of the historic environment. These are:

- * Aerial Survey and Investigation*
- * Archaeological Projects (excavation)*
- * Archaeological Science*
- * Archaeological Survey and Investigation (landscape analysis)*
- * Architectural Investigation*
- * Imaging, Graphics and Survey (including measured and metric survey, and photography)*
- * Survey of London*

The Research Department undertakes a wide range of investigative and analytical projects, and provides quality assurance and management support for externally-commissioned research. We aim for innovative work of the highest quality which will set agendas and standards for the historic environment sector. In support of this, and to build capacity and promote best practice in the sector, we also publish guidance and provide advice and training. We support outreach and education activities and build these in to our projects and programmes wherever possible.

We make the results of our work available through the Research Department Report Series, and through journal publications and monographs. Our publication Research News, which appears three times a year, aims to keep our partners within and outside English Heritage up-to-date with our projects and activities. A full list of Research Department Reports, with abstracts and information on how to obtain copies, may be found on www.english-heritage.org.uk/researchreports
