**Brief and Specification for Archaeological Monitoring
(continuous observation of soil-stripping operations)****FLIXTON PARK QUARRY, FLIXTON
TM 307 867**

Although this document sets out the work that will need to be done by an archaeological contractor, the developer should be aware that some of its provisions may impinge upon the general working practices of the development and may have financial implications. The commissioning body may also have Health & Safety responsibilities, see para. 1.7

1. Background

- 1.1 Planning consent has been granted for development of the above land (W/10999/10). The planning authority has applied a condition to the consent requiring the prior implementation of a programme of archaeological works.
- 1.2 Flixton Park Quarry has a rich and varied archaeology that embraces Suffolk Historic Environment Record (HER) numbers: FLN 013, 053, 056, 057, 059, 061, 062, 063, 064, 065, 068, 069, 086 and, currently, 088. An Assessment Report (Assessment 1) for sites FLN 013 and 053 has been compiled (Suffolk County Council Archaeological Service report no. 2000/21) and the full report has now been submitted for publication in the *East Anglian Archaeology* monograph series. Assessment reports (Assessments 2 and 3a) have also been compiled for sites FLN 056, 057, 059, 061, 062, 063, 064, 065, 068, 069, 086 (SCCAS reports nos. 2006/54 and 2006/54a). Agreement is still awaited for their progression to full publication.
- 1.3 As this application involves the expansion of the quarry into previously undisturbed areas there is a need for archaeological monitoring of the soil-stripping operations.
- 1.4 In accordance with the condition on the planning consent, and following the standards and guidance produced by the Institute for Archaeologists (IfA), a Written Scheme of Investigation (WSI) based upon this brief and specification must be produced by the developers, their agents or archaeological contractors. This must be submitted for scrutiny by the Conservation Team of the Archaeological Service of Suffolk County Council (SCCAS/CT) at 9-10 The Churchyard, Shire Hall, Bury St Edmunds IP33 2AR; telephone/fax: 01284 352443. The WSI will provide the basis for measurable standards and will be used to establish whether the requirements of the planning condition will be adequately met. The WSI should be compiled with a knowledge of the Regional Research Framework (*East Anglian Archaeology Occasional Paper 3, 1997, 'Research and Archaeology: A Framework for the Eastern Counties, 1. resource assessment'; Occasional Paper 8, 2000, 'Research and Archaeology: A Framework for the Eastern Counties, 2. research agenda and strategy'; and the Revised Research Framework for the Eastern Region, 2008, available online at <http://www.eaareports.org.uk/>*).
- 1.5 Provision should be included in the WSI for outreach activities, for example (and where appropriate), in the form of open days/guided tours for the general public, local schools, local councillors, local archaeological and historical societies and for local public lectures and/or activities within local schools. Provision should be included for

local press releases (newspapers/radio/TV). Where appropriate, information boards should be also provided during the fieldwork stage of investigation. Archaeological Contractors should ascertain whether their clients will seek to impose restrictions on public access to the site and for what reasons and these should be detailed in the WSI

- 1.6 Following receipt of the WSI, SCCAS/CT will advise the Local Planning Authority (LPA) if it is an acceptable scheme of work. Work must not commence until the LPA has approved the WSI. Neither this specification nor the WSI is, however, a sufficient basis for the discharge of the planning condition relating to the archaeological works. Only the full implementation of the approved scheme – that is the completion of the fieldwork, a post-excavation assessment and final reporting – will enable SCCAS/CT to advise the LPA that the condition has been adequately fulfilled and can be discharged.
- 1.7 There is a presumption that all archaeological work specified for the whole area will be undertaken by the same body, whether the fieldwork takes place in phases or not. There is similarly a presumption that further analysis and post-excavation work to final report stage will be carried through by the excavating body. Any variation from this principle would require justification.
- 1.8 All arrangements for the excavation of the site, the timing of the work, and access to the site, are to be negotiated with the commissioning body.
- 1.9 Before any archaeological site work can commence it is the responsibility of the developer to provide the archaeological contractor with either the contaminated land report for the site or a written statement that there is no contamination. The developer should be aware that investigative sampling to test for contamination is likely to have an impact on any archaeological deposit which exists; proposals for sampling should be discussed with this office before execution.
- 1.10 Before commencing work the project manager must carry also out a risk assessment and liaise with the site owner, client and the SCCAS/CT in ensuring that all potential risks are minimised.
- 1.11 The responsibility for identifying any restraints on field-work (e.g. Scheduled Monument status, Listed Building status, public utilities or other services, tree preservation orders, SSSIs, wildlife sites &c.) rests with the commissioning body and its archaeological contractor. The existence and content of the archaeological brief does not over-ride such restraints or imply that the target area is freely available.
- 1.12 It is the archaeological contractor's responsibility to ensure that adequate resources are available to fulfil the Brief.

2. Brief for the Archaeological Project

- 2.1 In all areas where there will disturbance at subsoil level, archaeological monitoring, as specified in Section 3, is to be carried out prior to any extraction of minerals or other development works.
- 2.2 The objective of the monitoring will be :
 - a) to enable the identification and evaluation of potentially significant archaeological features or deposits (see Section 3);
 - b) to identify, excavate and record features and deposits of lesser archaeological significance (see Section 4).
- 2.3 The academic objective will centre upon the high potential for this site to produce evidence for multi-period settlement and funerary activity.
- 2.4 This project will be carried through in a manner consistent with English Heritage's *Management of Archaeological Projects*, 1991 (MAP2). Excavation is to be followed

by the preparation of a full archive, and an assessment of potential for analysis. Analysis and final report preparation will follow assessment and will be the subject of a further brief and updated project design.

- 2.5 When mineral extraction is phased over a number of years, it is essential that the developer's contractual arrangement with the archaeological contractor does not compromise the ability of that contractor to satisfy the requirements of the recording specification approved by the Mineral Planning Authority. This requires a strict adherence to MAP 2 project stages, i.e:
- i) fieldwork and archive for each phase
 - ii) assessment (of potential for analysis and publication)
 - iii) analysis and archive/publication proposal
 - iv) publication and/or archive

Separate research designs/WSIs are required from the archaeological contractor for each of these stages and these must be approved by the Curatorial Team of Suffolk County Council's Archaeological Service, on behalf of the Mineral planning Authority prior to any contract sums being agreed.

- 2.6 No contract sums should be agreed for assessment, analysis, archive or publication until all fieldwork has been completed or, prior to that, only by agreement with SCCAS Curatorial service.
- 2.7 Developers are advised to set aside sufficient sums (bearing in mind the effects of inflation) for all post excavation tasks at the end of each phase of fieldwork (advice on the size of such sums can be provided by the archaeological contractor or the developers archaeological consultant but must be seen as approximate).
- 2.5 The developer or his archaeologist will give the Conservation Team of Suffolk County Council's Archaeological Service five working days notice of the commencement of ground works on the site, in order that the work of the archaeological contractor may be monitored. The method and form of development will also be monitored to ensure that it conforms to previously agreed locations and techniques upon which this brief is based.
- 2.6 The project manager must consult the County HER Officer (Dr Colin Pendleton) to obtain a HER number for the work. This number will be unique for each project or site and must be clearly marked on any documentation relating to the work.

3. Brief for Archaeological Monitoring of Topsoil-Stripping

- 3.1 To carry out the monitoring work the developer will appoint an archaeologist (the archaeological contractor) who must be approved by the Conservation Team of Suffolk County Council's Archaeological Service – see 2.5 above.
- 3.2 The developer will give the appointed archaeological contractor three weeks notice (or any other mutually agreed period of notice) of the commencement of site works.
- 3.3 The topsoil-stripping operations (by the developer or the archaeological contractor) will be carried out using a back-acting machine with a toothless bucket. The depth and method of stripping will need to be agreed in advance with the Conservation Team of SCCAS. Machinery will not cross the stripped area until any possible archaeology has been assessed and fully recorded. Any variation from this will need to be agreed with the Conservation Team.
- 3.4 As areas are stripped, they will be assessed for further archaeological work. The options will include:
- a). A need for further stripping of subsoil layers such hill-wash or other masking deposits.

- b). Evaluation of potentially significant archaeological features or deposits. The scope of this work is to be agreed between the Conservation Team of SCCAS and the developer (or his consultant).

N.B. Further archaeological work arising from this evaluation may require a new Brief and Specification from the Conservation Team of SCCAS.

- c). Moderate scale archaeological excavation to clear features and deposits of lesser significance (e.g. isolated features or small clusters of features).

The minimum standards for this work are set out below in Section 4.

- d). Consideration by the developer of a redesign of the development to avoid major archaeological features.

The decision regarding further work will need to be approved by the Conservation Team of SCCAS.

4. Specification for Moderate-scale Archaeological Excavation (See Section 3.4.c)

The excavation methodology is to be agreed in detail before the project commences, certain minimum criteria are to be met or exceeded.

- 4.1 Fully excavate all features that are, or could be interpreted as, structural. Post-holes, and pits that may be interpreted as post-holes, must be examined in section and then fully excavated. Fabricated surfaces within the excavation area (e.g. yards & floors) must be fully exposed and cleaned.
Any variation from this practice will need to be agreed with the Conservation Team of SCCAS and confirmed in writing.
- 4.2 All other features must be sufficiently examined to establish, where possible, their date and function. For guidance:
- a). A minimum of 50% of the fills of the general features is to be excavated. Note that it is likely that prehistoric features e.g. especially pits, are likely to require full excavation.
- b). Between 20% and 30% of the fills of funerary ring-ditches and between 10% and 20% of the fills of substantial linear features (ditches etc) are to be excavated, the samples must be representative of the available length of the feature and must take into account any variations in the shape or fill of the feature and any concentrations of artefacts.
Any variations from these practices will need to be agreed with the Conservation Team of SCCAS and confirmed in writing.
- 4.3 Collect and prepare environmental samples (by sieving or flotation as appropriate). The Project Design must provide details of the sampling strategies for retrieving artefacts, biological remains (for palaeoenvironmental and palaeoeconomic investigations), and samples of sediments and/or soils (for micromorphological and other pedological/sedimentological analyses. Advice on the appropriateness of the proposed strategies will be sought from the English Heritage Regional Adviser for Archaeological Science (East of England). A guide to sampling archaeological deposits (Murphy and Wiltshire 1994) is available from the Conservation Team of SCCAS.
- 4.4 A finds recovery policy is to be agreed before the project commences and should form part of the Project Design. The use of a metal detector will form an essential part of the finds recovery strategy. The sieving of occupation levels and building fills will be expected.
- 4.5 All finds will be collected and processed. No discard policy will be considered until the whole body of finds has been evaluated.

- 4.6 All ceramic, bone and stone artefacts are to be cleaned and processed concurrently with the excavation, so that the results can inform decision-making on the excavation.
- 4.7 Metal artefacts must be stored and managed in accordance with *UK Institute of Conservators Guidelines* and evaluated for significant dating and cultural implications before despatch to a conservation laboratory within 4 weeks of excavation.
- 4.8 Human remains are to be treated at all stages with care and respect, and are to be dealt with in accordance with the law. They must be recorded *in situ* and subsequently lifted, packed and marked to standards compatible with those described in the Institute for Archaeologists' Technical Paper 13 *Excavation and post-excavation treatment of Cremated and Inhumed Human Remains*, by McKinley & Roberts. Proposals for the final disposition of remains following study and analysis will be required in the Project Design.
- 4.9 Plans of the archaeological features on the site should normally be drawn at 1:20 or 1:50, depending on the complexity of the data to be recorded. Sections should be drawn at 1:10 or 1:20 again depending on the complexity to be recorded. Any variations from this must be agreed with the Conservation Team of SCCAS.
- 4.10 A photographic record of the work is to be made, consisting of both monochrome photographs and colour transparencies.
- 4.11 Excavation record keeping is to be consistent with the requirements of Suffolk County Council's Sites and Monuments Record (SMR) and be compatible with its archive. Methods must be agreed with the Conservation Team of SCCAS.

5. General Management

- 5.1 A timetable for all stages of the project must be agreed before the first stage of work commences.
- 5.2 Monitoring of the archaeological work will be undertaken by the Conservation Team of SCCAS.
Where projects require an unusual amount of monitoring, the Conservation Team reserve the right to make an 'at-cost' charge for monitoring (currently at a daily rate of £150). A decision on the monitoring required will be made by the Conservation Team on submission of the accepted Project Design and will be reviewed during the course of the project. Any decision to charge for monitoring will be notified to the developer or his agent(s).
- 5.3 The composition of the project staff must be detailed and agreed (this is to include any subcontractors). For the site director and other staff likely to have a major responsibility for the post-excavation processing of this site there must be a statement of their responsibilities for post-excavation work on other archaeological sites.
- 5.4 A general Health and Safety Policy must be provided, with a detailed risk assessment and management strategy for this particular site.
- 5.5 The Project Design must include proposed security measures to protect the site and both excavated and unexcavated finds from vandalism and theft.
- 5.6 Provision for the reinstatement of the ground and the filling of dangerous holes must be detailed in the Project Design.
- 5.7 The Institute for Archaeologists' *Standard and Guidance for Archaeological Watching Briefs* and for *Excavations* should be used for additional guidance in the execution of the project and in the drawing up of the report.

6. Archive Requirements

- 6.1 Within four weeks of the end of field-work a timetable for post-excavation work must be produced. Following this a written statement of progress on post -excavation work whether archive, assessment, analysis or final report writing will be required at three monthly intervals.
- 6.2 An archive of all records and finds is to be prepared consistent with the principles of English Heritage's *Management of Archaeological Projects*, 1991 (*MAP2*), particularly Appendix 3. However, the detail of the archive is to be fuller than that implied in *MAP2* Appendix 3.2.1. The archive is to be sufficiently detailed to allow comprehension and further interpretation of the site should the project not proceed to detailed analysis and final report preparation. It must be adequate to perform the function of a final archive for lodgement in the County SMR or museum.
- 6.3 A clear statement of the form, intended content, and standards of the archive is to be submitted for approval as an essential requirement of the Project Design (see 2.5).
- 6.4 The site archive quoted at *MAP2* Appendix 3, must satisfy the standard set by the *Guideline for the preparation of site archives and assessments of all finds other than fired clay vessels* of the Roman Finds Group and the Finds Research Group AD700-1700 (1993).
- 6.5 Pottery should be recorded and archived to a standard comparable with 6.3 above, i.e. *The Study of Later Prehistoric Pottery: General Policies and Guidelines for Analysis and Publication*, Prehistoric Ceramics Research Group Occasional Paper 1 (1991, rev 1997), the *Guidelines for the archiving of Roman Pottery*, Study Group for Roman Pottery (ed. M G Darling 1994) and the *Minimum Standards for the Processing, Recording, Analysis and Publication of Post-Roman Ceramics*, Medieval Pottery Research Group Occasional Paper 2 (2001).
- 6.6 All coins must be identified and listed as a minimum archive requirement.
- 6.7 The data recording methods and conventions used must be consistent with, and approved by, the County SMR. All record drawings of excavated evidence are to be presented in drawn up form, with overall site plans. All records must be on an archivally stable and suitable base.
- 6.8 A complete copy of the site record archive must be deposited with the County SMR within twelve months of the completion of fieldwork. It will then become publicly accessible.
- 6.9 Finds must be appropriately conserved and stored in accordance with the UK Institute of Conservators Guidelines.
- 6.10 Every effort must be made to get the agreement of the landowner/developer to the deposition of the finds with the County SMR or a museum in Suffolk which satisfies Museum and Galleries Commission requirements, as an indissoluble part of the full site archive. If this is not achievable for all or parts of the finds archive then provision must be made for additional recording (e.g. photography, illustration, analysis) as appropriate. If the County SMR is the repository for finds there will be a charge made for storage, and it is presumed that this will also be true for storage of the archive in a museum.
A statement regarding the final destination of the finds must be included in the Project Design.

7. Report Requirements

- 7.1 Finds must be appropriately conserved and stored in accordance with UK Institute of Conservators Guidelines. The finds, as an indissoluble part of the site archive, should be deposited with the County HER Officer if the landowner can be persuaded to agree

to this. If this is not possible for all or any part of the finds archive, then provision must be made for additional recording (e.g. photography, illustration, analysis) as appropriate.

- 7.2 The project manager should consult the SCC Archive Guidelines 2008 and also the County HER Officer regarding the requirements for the deposition of the archive (conservation, ordering, organisation, labelling, marking and storage) of excavated material and the archive.
- 7.3 The WSI should state proposals for the deposition of the digital archive relating to this project with the Archaeology Data Service (ADS), and allowance should be made for costs incurred to ensure proper deposition (<http://ads.ahds.ac.uk/project/policy.html>).
- 7.4 A report on the fieldwork and archive, consistent with the principles of MAP2, particularly Appendix 4, must be provided. The report must summarise the methodology employed, the stratigraphic sequence, and give a period by period description of the contexts recorded, and an inventory of finds. The objective account of the archaeological evidence must be clearly distinguished from its interpretation. The report must include a discussion and an assessment of the archaeological evidence, including palaeoenvironmental remains recovered from palaeosols and cut features. Its conclusions must include a clear statement of the archaeological value of the results, and their significance in the context of the *Regional Research Framework* (East Anglian Archaeology, Occasional Papers 3 & 8, 1997 and 2000) and the *Revised Research Framework for the Eastern Region* (2008; available online at <http://www.eaareports.org.uk/>).
- 7.5 A copy of the report, clearly marked DRAFT, must be presented to SCCAS/CT for approval within six months of the completion of fieldwork unless other arrangements are negotiated with the project sponsor and SCCAS/CT. Following approval, two hard copies, as well as a digital copy, of the report must be presented to SCCAS/CT
- 7.6 A summary report, in the established format, suitable for inclusion in the annual 'Archaeology in Suffolk' section of the *Proceedings of the Suffolk Institute of Archaeology and History*, must be prepared and included in the project report or submitted to the Conservation Team by the end of the calendar year in which the work takes place, whichever is the sooner.
- 7.7 County HER sheets must be completed, as per the County HER manual, for all sites where archaeological finds and/or features are located.
- 7.8 Where appropriate, a digital vector trench plan should be included with the report, which must be compatible with MapInfo GIS software, for integration in the County HER. AutoCAD files should be also exported and saved into a format that can be imported into MapInfo (for example, as a Drawing Interchange File or .dxf) or already transferred to .TAB files.
- 7.9 At the start of work (immediately before fieldwork commences) an OASIS online record <http://ads.ahds.ac.uk/project/oasis/> must be initiated and key fields completed on Details, Location and Creators forms.
- 7.10 All parts of the OASIS online form must be completed for submission to the County HER. This should include an uploaded .pdf version of the entire report (a paper copy should also be included with the archive).

1 Background

- The Field Team of the Suffolk County Council Archaeological Service (SCCAS) have been commissioned by The Guildhouse Consultancy (on behalf of Cemex) to undertake a programme of archaeological monitoring and, if necessary, open piece excavation on land forming part of the existing quarry permission (app. no. W/10999/10) at Flixton Quarry, Flixton, Suffolk (TM 3077 8680) (Figure 1).
- The area designated for stripping in 2011 effectively forms part of New Quarry Phases 17 and 18 (Figure 2). This WSI covers that work only. The need for new documentation to cover subsequent areas of the current permission will be assessed and agreed between SCCAS Conservation Team Archaeologist Edward Martin (representing the MPA) and Adrian Havercroft (The Guildhouse Consultancy representing Cemex).
- A Brief and Specification for these works was prepared by SCCAS Conservation Team Archaeologist Edward Martin (in his role as archaeological advisor to the MPA) in a document dated 18th February 2011. All SCCAS Field Team work will adhere to the requirements of this document.
- This work is effectively the continuation of an extensive programme of monitoring and excavation required under a condition on planning application W/10999/10 and has been undertaken by the SCCAS Field Team annually since 1995.
- This phase of fieldwork will be carried out by members of SCCAS Field Team under the supervision of Senior Project Officer Stuart Boulter who will also undertake the project management.
- It is proposed that the work will be undertaken in the February and March of 2011 with soil-stripping initially projected to last for one week. Clearance works will run concurrently with the strip, although, depending on the level of archaeology encountered, may need to continue on beyond that time as set piece excavation.

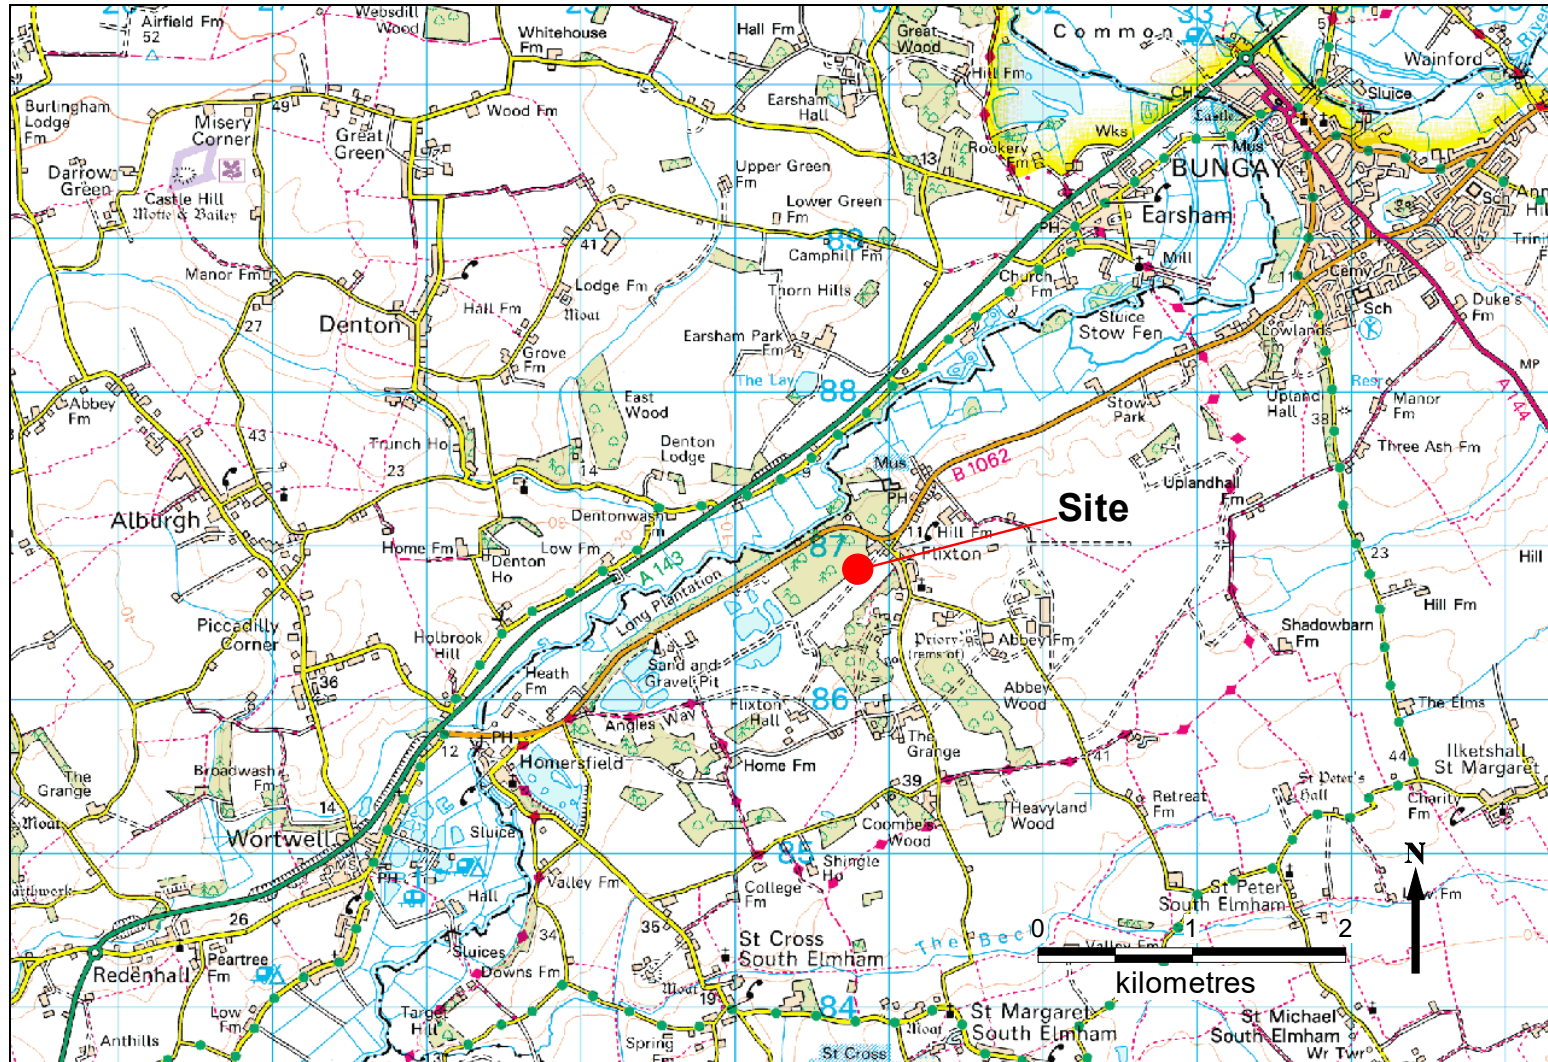

2 Project Objectives

PO1: To undertake archaeological monitoring where there will be disturbance at subsoil level and prior to extraction of mineral or other development works.

PO2: To enable the identification and evaluation of potentially significant archaeological features or deposits.

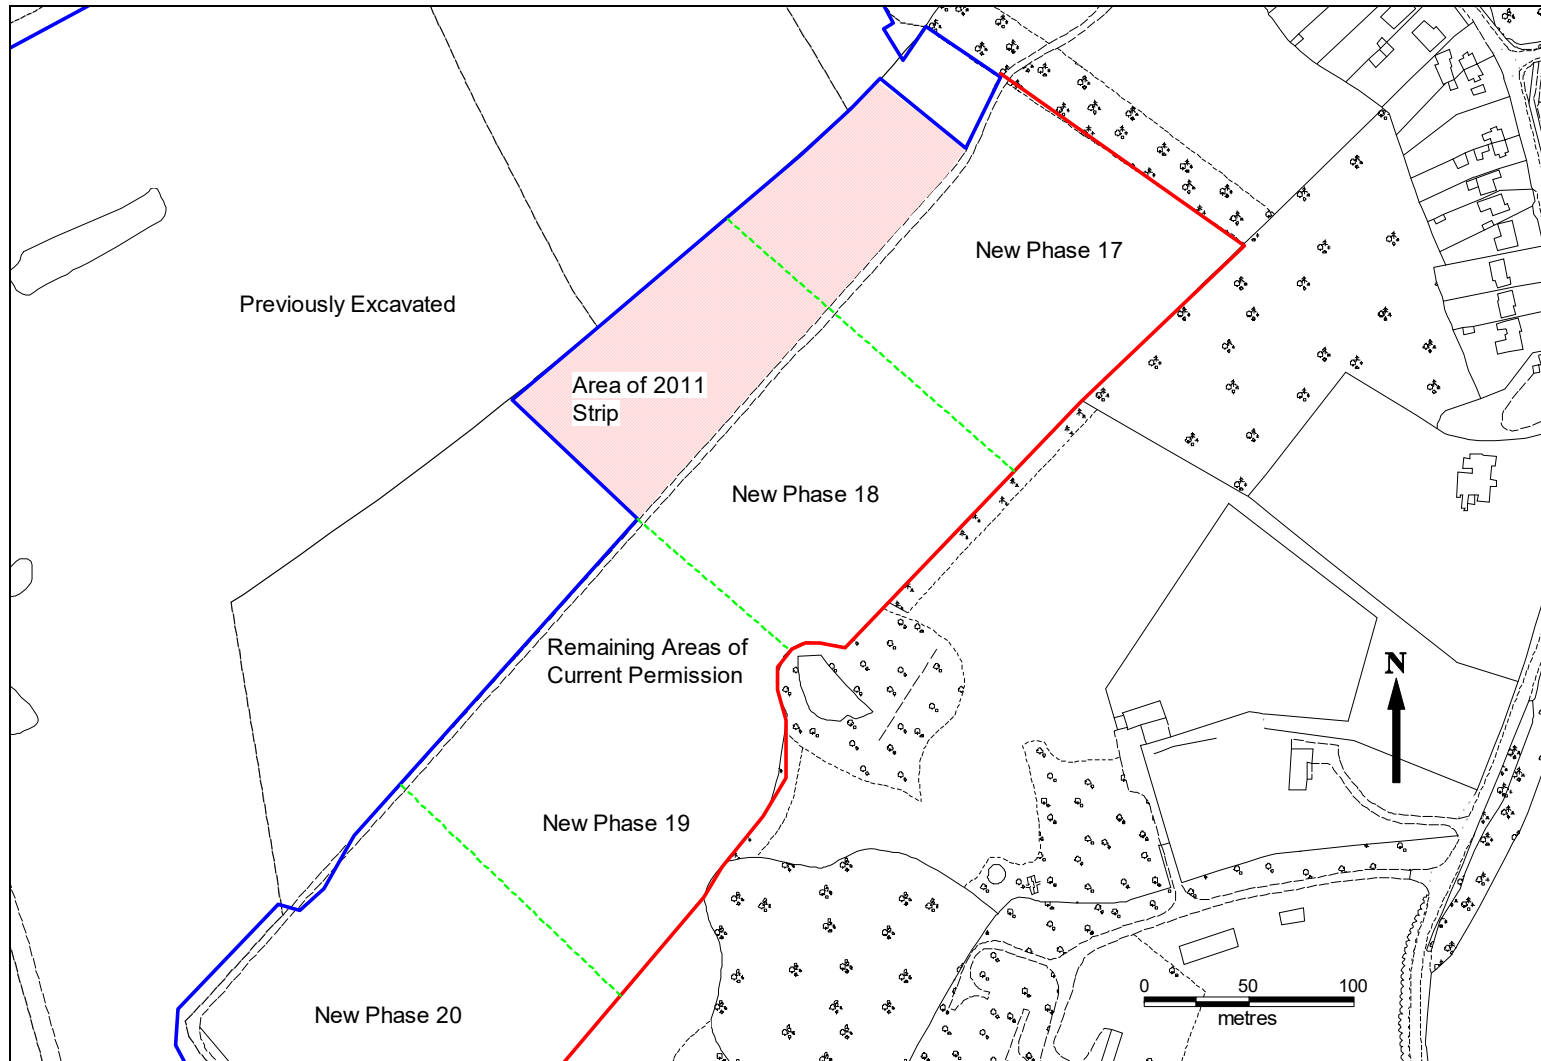

PO3: To identify, excavate and record features and deposits of lesser archaeological significance.

PO4: The principal academic objective revolves around the potential of the site to produce evidence for multi-period settlement and funerary activity.

4 Archaeological method statement

- The archaeological fieldwork will be carried out by members of the SCCAS Field Team led by Stuart Boulter. The primary team of two will include an experienced metal detectorist/excavator from a pool of suitable staff at SCCAS.
- While all outreach activities will be considered, allowing outside personnel onto a working quarry site would have considerable Health and Safety implications. However, requests for non-site based outreach (e.g. lectures/talks) will be viewed favourably.
- The area of investigation comprises up to 1.9 hectares of agricultural land towards the eastern end of the existing quarry permission (Figure. 2). Soil-stripping will commence at the northern end of this area, removing c.8m wide strips along the north-west to south-east face.
- All mechanical excavation will be undertaken using a toothless ditching bucket for a good clean cut. Mechanical plant will not be allowed to track over the stripped area until any exposed archaeological features have been excavated and recorded.
- After the initial removal of topsoil, the stripped areas will be rapidly assessed for further archaeological work. The options will include:
 - a) A need for further soil-stripping. There may be the need to remove additional masking subsoil layers such as hillwash (colluvium).
 - b) The need for more detailed evaluation/assessment of potentially significant archaeological features or deposits (scope to be agreed between the SCCAS Conservation Team and the developer or his consultant). Additional work resulting from this assessment could result in a new Brief and Specification from the SCCAS Conservation Team.
 - c) The excavation and recording of archaeological features of lesser significance (isolated features or small groups of features).
 - d) *In extremis*, consideration by the developer to redesign operations to avoid significant archaeology (the decision for further work will need to be agreed by SCCAS Conservation Team).

- Excavation methodologies will be agreed in detail before the project commences. However, the following minimum requirements will be adhered to or exceeded. Any variation from these procedures would need to be agreed with SCCAS Conservation Team:
 - a) After sectioning, features that are, or could be, interpreted as structural will be fully excavated. Any fabricated surface (floors, yards etc.) will be fully exposed and cleaned. Occupation levels and building fills will be sieved.
 - b) All features will be examined in enough detail to try and establish their date and function. As a guide, 50% of general features will be excavated, with prehistoric features likely to require 100% excavation.
 - c) Between 20 and 30% of funerary ring-ditches and 10 and 20% of other linear features (ditches etc.) will be excavated with the sample representative of the available length and taking into account local variations in shape, fill and artefact concentrations.

- While it is considered unlikely that there will be deep holes left open on the site, where necessary high visibility safety fencing will be employed.

- In order to obtain palaeoenvironmental evidence, bulk soil samples (30-40 litres each) will be taken from selected archaeological features, particularly those which are both datable and interpretable, and retained until an appropriate specialist has assessed their potential for palaeoenvironmental remains. Decisions will be made on the need for further analysis following this assessment. If necessary advice will be sought from Dr Helen Chappell, English Heritage Regional Advisor in Archaeological Science, on the need for specialist environmental sampling.

- The site will be recorded under the HER site code FLN 090. All archaeological features and deposits will be recorded using standard pro forma SCCAS Context Recording Sheets. Record keeping will be consistent with the requirements of Suffolk County Council's HER and be compatible with its archive. Methods will be agreed with SCCAS Conservation Team.

- Site plans will be drawn at a scale of 1:20 or 1:50 with an overall feature plan at 1:100. Section drawings will be executed at a scale of 1:10 or 1:20. Decisions on scale will be related to the complexity of the archaeology. All drawings will be in pencil on plastic drafting film.
- A photographic record (high resolution digital and monochrome prints) will be made throughout the fieldwork.
- Metal detector searches will be made at all stages of the project.
- All pre-modern finds will be kept and no discard policy will be considered until all the finds have been processed and assessed. Finds on site will be treated according to 'First Aid For Finds' and a conservator will be available for on-site consultation as required.
- All finds will be taken to the SCCAS Bury St. Edmunds office for processing, quantifying, packing and, where necessary, preliminary conservation. The archive consolidation work will be subject to a separate costing provided after the fieldwork phase is complete. However, provision has been made for finds processing to run concurrently with the fieldwork in order that the results can be used to inform on-site decisions regarding the excavation.
- In the event of human remains being encountered on the site, guidelines from the Ministry of Justice will be followed and, if deemed necessary, a suitable licence obtained before their removal from the site. Human remains will be treated at all stages with care and respect, and will be dealt with in accordance with the law. They will be recorded *in situ* and subsequently lifted, packed and marked to standards compatible with those described in the IFA's Technical Paper 13 Excavation and post-excavation treatment of Cremated and Inhumed Human Remains, by McKinley & Roberts. Following full recording and analysis, where appropriate, the remains will be reburied.
- Fieldwork standards will be guided by '*Standards and Guidance for Archaeological Watching Briefs*' and '*Excavation*' (IFA, 1995, revised 2001) and '*Standards for Field Archaeology in the East of England*' (EAA Occasional Papers 14).

- Due to the limited nature of the job, SCCAS staff will work from their vehicle. Welfare facilities will be provided by Cemex, although it may be necessary to hire in a portable toilet if the excavation work utilises a larger digging team.

Post-excavation

- Post-excavation finds work will be managed by Richenda Goffin (Bury St. Edmunds Office) with the overall post-excavation managed by Stuart Boulter (Ipswich Office).
- While the initial finds processing is programmed to run concurrently with the fieldwork, the subsequent archive consolidation works will be subject to a costing prepared after the excavation has been completed. A full programme of assessment and analysis will ultimately be required and will be subject to its own documentation that will adhere to Section 7 of the current Brief and Specification.
- The site archive will be consistent with '*Management of Archaeological Projects*' (English Heritage, 1991).
- All site data will be entered on a computerised database compatible with the County HER. All site plans and sections will be copied to form a permanent archive on archivally stable material. Ordnance Datum levels will be on the section sheets. The photographic archive (both film and digital) will be fully catalogued within the County HER photographic index.
- All finds will be processed, marked (HER site code and context number) and bagged/boxed following ICON guidelines and the requirements of the County HER.
- Bulk finds will be fully quantified on a computerised database compatible with the County HER. Quantification will fully cover weights and numbers of finds by OP and context with a clear statement for specialists on the degree of apparent residuality observed.
- Provision will be made at the assessment/analysis stage for the digital site archive to be deposited with the Archaeology Data Service (ADS). In addition, an OASIS online record will be created for the project.

- Metal finds on site will be stored in accordance with ICON guidelines, initially recorded and assessed for significance before dispatch to a conservation laboratory within four weeks of the end of the excavation. All pre-modern silver, copper alloy and ferrous metal artefacts will be x-rayed and coins will be x-rayed if necessary for identification. Sensitive finds will be conserved if necessary and deposited in bags/boxes suitable for long term storage to ICON standards. All coins will be identified to a standard acceptable to normal numismatic research.
- The quarry operators (Cemex) will be asked to agree to deposit the finds in the county HER. Should this not become the case, then provision will need to be made for additional recording (photography, drawing etc.) required by SCCAS Conservation Team.

The subsequent assessment phase of the project will require the preparation of specialists reports which will be done in-house or commissioned as necessary to meet the following requirements:

- The site archive will meet the standards set by *'The Guideline for the preparation of site archives and assessments of all finds other than fired clay vessels'* of the Roman Finds Group and Finds Research Group AD700 - 1700 (1993).
- The pottery will be recorded and archived to a standard consistent with the Draft Guidelines of the Medieval Pottery Research Group and Guidelines for the archiving of Roman Pottery, SGRP (ed. M.G. Darling, 1994).
- Environmental samples will be processed and assessed to standards set by the Regional Environmental Archaeologist (Dr Helen Chapell) with a clear statement of potential for further analysis.
- Animal and human bone will be quantified and assessed to a standard acceptable to national and regional English Heritage specialists.
- An industrial waste assessment will cover all relevant material (i.e. fired clay finds as well as slag).

5 Health and Safety

The project will be carried with full regard to Cemex Health and Safety regulations. In addition, when not conflicting with the above, Suffolk County Councils own Health and Safety policies will be followed at all times.

No work will be undertaken without the requisite Permit to Work documentation in place.

All project staff will be signed in and out each day at the quarry office. In addition, a record will be maintained by SCCAS of site staff and visitors on a daily basis (see Section 6).

Particular hazards to SCCAS staff identified with this project are as follows:

- **Outdoor working** – hazards to staff from weather conditions and uneven ground.
- **Manual excavation** – the main hazards are to staff from the use of tools, shallow holes and the resultant trip hazards, live services and ground contamination.
- **Mechanised excavation** – the most significant hazard from this activity is working in close proximity with plant machinery.

Specific risk assessments for each are provided in Appendix 3.

All SCCAS Field Team staff are experienced in working under similar conditions and on similar sites and are aware of all SCCAS H&S policies. All permanent SCCAS Field Team excavation staff are holders of CSCS (Construction Skills Certification Scheme) cards and SPA Quarry Safety Passports. All staff will be issued with a copy of the project's risk assessment and will receive a safety induction from the Project Officer.

From time to time it may be necessary for site visits by external specialists, SCCAS Conservation Team members and other SCC staff. All such staff and visitors will be issued with the appropriate PPE and will undergo the required inductions. PPE required in this case will be safety footwear, hard hat, hi visibility clothing (minimum of tabard) and gloves.

Site staff, official visitors and volunteers are all covered by Suffolk County Council insurance policies (see Appendix 2).

Welfare facilities for SCCAS Field Team staff have kindly been provided by Cemex. Additional facilities (e.g. portable toilet) will be hired in when required.

Environmental controls

Suffolk County Council maintains an internal Environmental Management System run in accordance with the ISO14001 standard by a dedicated EMS officer. The council has a publicly available [Environment Policy](#), which commits us meeting all relevant regulatory, legislative and other requirements, and preventing pollution, and to the continual improvement of our environmental performance, as well as:

- Preventing environmental pollution and minimise waste.
- Reducing our carbon emissions.
- Continually improving our energy efficiency and reduce our use of resources.
- Reducing the impact of vehicle travel by county council employees.
- Implementing sustainable procurement.
- Minimising the impact on the environment of all existing and planned county council activities.
- Enhancing biodiversity, conserve distinctive landscapes and protecting the historic environment.

The council has also published its [Environmental Action Plan](#) online, together with the [monitoring report](#) from the previous plan.

Between 2005 and 2010, the county council was certified to the ISO14001 standard by BSI for all services except schools. We were the first, and until 2009, only council to achieve this. During the eleven external audits undertaken during this period, only two non-conformities were identified. Partially because of this, and also in order to make cost savings, in 2010 a decision was taken to not continue with the certification.

However the council will continue to run its internal auditing system, which carries out around 40 audits a year to check issues such as legal compliance and performance against our environmental objectives, and will also participate in an auditor exchange programme with Norfolk County Council to ensure continued external oversight of our system.

Hazardous Substances

COSHH assessments for hazardous substances that staff could come into contact with are listed in Appendix 4.

Appendix 1. Suffolk County Council Health and Safety Policy

Suffolk County Council Statement of Health and Safety Policy

Aim

Suffolk County Council aims to ensure that standards of health, safety and well-being for all our staff, service users and others who may be affected by what we do, are comparable with those of the best and most responsible organisations in the country.

- We recognise that good health and safety management benefits our organisation and the citizens we serve.
- The County Council exists to provide quality services to the citizens of Suffolk. The delivery of these services relies on people throughout the organisation. The protection of our human resource is therefore essential to maintaining service delivery and contributing effectively to partnerships.

Objectives

To meet this aim, we will:

- Conduct all our activities safely and in compliance with legal requirements and good practice.
- Provide a safe and healthy working environment.
- Promote a positive culture towards health, safety and welfare issues.

Working together

People, not regulations, are the key to safe and healthy workplaces. Everyone has a responsibility for health and safety.

- Achieving our aim and objectives requires everyone to play their part.
- This depends on everyone having a common understanding of the identification, assessment and control of risks based on competence (i.e. knowledge, skill and behaviour). We will therefore ensure that all staff are appropriately trained to enable them to work safely.
- Managers and supervisors at all levels are directly responsible for ensuring that the council's health and safety policy is known and acted upon. This responsibility cannot be discharged by delegation.
- Employees must take care of their own health and safety and that of others who may be affected by what they do, or fail to do, at work.

Implementation

The Corporate Health and Safety Management Board will:

- Set the county council's strategy for effectively managing health and safety risks
- Promote high standards of health and safety throughout the organisation
- Monitor the implementation, operation and effectiveness of corporate health and safety arrangements

All services will allocate sufficient time and resources to enable health and safety to be managed effectively, within operational parameters.

I am personally committed to making Suffolk County Council one of the safest and healthiest places to work, and I expect a similar level of commitment from all employees to help me achieve this goal.

Andrea Hill, Chief Executive.
February 2009.

SUFFOLK CONSTABULARY

1.1.1.1.1.1.1.1 CONTROL OF SUBSTANCES HAZARDOUS TO HEALTH REGULATIONS

ASSESSMENT Kuwait and Charrington-Hargreaves Diesel Gas Oil

[B] Work Activity

- a) *Accidental exposure during unexpected leakage from machine*
 - b) *Clearance/control of spillage from above*
-

[C] Substance Usage

- a) *Compression ignition engine fuel for sub-contractor's plant*
-

[D] Substance Information

See manufacturer's Data Sheets

[E] Exposure Information

- a) *Highly inflammable*
 - b) *Avoid contact with skin, eyes and excessive inhalation*
 - c) *No special ventilation measures (outdoor use)*
-

[F] Control Measures

- a) *Ensure no naked flame in proximity of any spillage/leak.*
 - b) *If contact is necessary use gloves. Safety glasses if splashing anticipated.*
 - c) *Contain all spillages.*
-

[G] Assessment of risk due to work activity

Risks anticipated on present project are medium (6), [likelihood 3 x severity 2] and control measures must be adhered to at all costs.

[H] Information for Employees/Users

Eyes *Irritant – wash with clean water. Obtain medical attention if irritation continues.*

Skin *Irritant if exposure is prolonged - wash with soap and water and remove contaminated clothing. Obtain medical attention if irritation continues.*

Inhalation *Not considered a risk in the circumstances of this project.*

Ingestion *Irritant to digestive tract – do not induce vomiting. If emptying of stomach is required, can only be carried out under experienced medical supervision.*

Fire *Use dry chemical foam CO2. Do not use direct water jet.*

Spills/Leakage *Do not flush into public drainage.*

Use sand or active clay to absorb.

Once absorbed remove and dispose to authorised waste location only.

ASSESSMENT BP Vanellus C3 Multigrade; BP Energrease L2; BP Vanellus M40; BP Vanellus M30

[B] Work Activity

- a) *Accidental exposure during unexpected leakage from machine*
 - b) *Clearance/control of spillage from above*
-

[C] Substance Usage

- a) *Heavy duty multigrade crankcase oil (BP Vanellus C3 Multigrade) for sub-contractor's plant*
 - b) *Lithium based grease for general machine and automotive use (BP Energrease) for sub-contractor's plant*
 - c) *Diesel engine lubricant (BP Vanellus M40) for sub-contractor's plant*
 - d) *Diesel engine oil (BP Vanellus M30) for sub-contractor's plant*
-

[D] Substance Information

See manufacturer's Data Sheets
NB used crankcase oil contains polycyclic aromatic hydrocarbons formed during combustion process

[E] Exposure Information

- a) *Mineral oils harmless if swallowed in small amounts.*
 - b) *Toxicity of greases if single high exposure is low (main hazard is from accidental pressure injection injury via grease guns).*
 - c) *NB USED OILS – laboratory tests have found that prolonged skin exposure may cause cancer*
 - d) *Mineral oils harmless to the eyes.*
 - e) *Mineral oils harmless to the skin unless very prolonged exposure.*
-

[F] Control Measures

- a) *If contact is necessary use gloves. Safety glasses if splashing anticipated. Good personal hygiene to avoid unnecessary prolonged exposure.*
 - b) *Contain all spillages.*
-

[G] Assessment of risk due to work activity

Risks anticipated on present project are low (3), [likelihood 3 x severity 1]. Control measures must be adhered to at all costs.

[H] Information for Employees/Users

Eyes *Irrigate with running water until clear. Obtain medical attention if irritation develops.*
Skin *Wash with soap and water. Clean contaminated clothing before re-use.*
Inhalation *No significant risk.*
Ingestion *Do not induce vomiting. If emptying of stomach is required, can only be carried out under experienced medical supervision.*
Fire *Use dry chemical foam CO2.*
Spills/Leakage *Do not flush into public drainage.

Appendix III.i. Small finds catalogue

SF No.	Context No.	Type	Material	No.	Description	Period
2001	0133	?Nail frags	Iron	3	Three small and snapped fragments of possible nail shank. One fragment is tapered. All are corroded. Awaiting results of x-ray analysis.	Unknown
2002	0082	Sling shot	Ceramic	1	Rounded piece of fired clay which is oxidised (dirty on surfaces). Slingshot	Iron Age
2003	0066	?Weight	Stone	0	A haf fragment of heat affected micaceous stone (sandstone?). It has rounded surfaces. The surface at the remaining end looks to have been deliberately shaped. The stone has possibly been used as some form of weight.	Unknown
2004	0001	?Loomweight frag	Ceramic	1	An abraded fired clay fragment which has one area of flat/irregular surface. It is patchily oxidised with a black core. The fabric is medium sandy with occasional larger pieces, such as iron rich fragments. A partial pre-fired hollow is present. The fragment appears slightly triangular or simply tapered at one end.	Unknown
2005	0414	Arrowhead	Flint	1	Unusual, oblique arrowhead with one barb. Worked along one edge, unworked along the opposite one.	Pre
2006	0189	?Loomweight frags	Ceramic	79	Fired clay fragments, most of which are buff/oxidised in colour. They are abraded to slightly abraded and the fabric is medium sandy with rounded voids (?chalk) as well as iron rich clay fragments. Three irregular/flat surfaces are present. Only the largest fragment has been measured, which tapers to a rounded end but is broken in half so no complete depth can be measured.	Unknown

2104	1748	Brooch	Copper alloy	1	Colchester derivative rear hook type. Missing the spring and pin, damage to the catchplate fold and on areas of the bow; elsewhere in good condition. Patches of corrosion on the back of the wings (more on the right side when viewed at the back) may represent material to hold the spring. The front of the wings are decorated with two rounded bead mouldings and three sharp ribs on each side. The bow is flat backed with fairly steep sides; the central band is recessed with two reserved zigzag lines along it. It tapers slightly to a flat-ended very narrow foot defined by a sharp groove. The catch plate is solid and plain. Width 30.5mm, length 57.7mm. Weight 17.75gm. Date range AD 43 - 65	Rom

2105	1748	Brooch	Copper alloy	1	Brooch pin, with two turns of a small spring surviving. Diameter 1.9mm, tapering to a damaged point. Surviving length 38mm. Weight 1.37 gm. It is not possible to establish the type of bow brooch that this comes from, but it is probably 1st or 2nd century.	Roman
2106	1747	Brooch	Copper alloy	1	One piece Nauheim derivative type brooch, missing most of the spring and the pin, and with damage to the edge of the bow and missing the fold on the catchplate. The flat bow has a longitudinal groove at each side on the front, and a transverse groove defining the foot area; it tapers from 6.3mm wide to a point. Length including the single surviving spring coil is 39.4mm. Weight 1.43 gm. This is one of the relatively late one piece brooches dating c. 43 - 85.	Rom
2107	1646	Nail	Iron	4		
2108	1748	Brooch	Copper alloy	2	Aucissa type, in two pieces comprising the the bow with hinge but largely missing the catchplate and very corroded along much of its length and a pin fragment with broken hinge loop and missing the pointed end. The head is apparently folded over a copper-alloy hinge bar (this is no clearer in the X-ray) and it has a decoration of V-shapes, probably with hatching, that would have been flanked by single 'eye' dot and ring motifs, traces of the one to the right survive. The bottom of the head plate is defined by two transverse lines. The rest of the narrower and thicker bow is extremely corroded with no surviving surface except for a small area of transverse grooves at the bottom of the strongly arched bow. The footknob and catchplate are also largely destroyed by corrosion. The width at the hinge is 16.5mm, length surviving 45.4mm. The pin is 1.9mm in diameter and survives 30mm long. Weight of main	Rom

2111	1654	Brooch	Copper alloy	7	Colchester derivative rear hook type. Missing half of the spring, some fragments of which remain separately, as does the pin. The rest is generally in good condition except for the catchplate which is missing the fold. Four turns of the spring remain in situ on the right (viewed from the back) half of the wing; there were probably two more turns on this side (this supports the idea that the springs on rear hook types were often glued in some way on this side). On the front the wings have a narrow bead flanked by grooves and thin ribs at each end, with a concave moulding between these and the bow. The bow has a flat back and tapers to a flat end. The sides, forming a triangular section, are stepped and there is a central longitudinal rib with horizontal hatching; the hatching continues as notches on the projection that forms the rear hook. The catchplate is solid. The detached pin, 1.8mm in diameter, tapers to a broken point; at 23mm long it barely reaches the top of the catchplate. Width (wings) 19.5mm, length 38.3mm. Weight 6.94gm, pin 0.35gm, fragments 0.37gm, total 7.66gm. Date AD43 - 65.	Rom
2112	0001	Brooch	Copper alloy	1	Rosette type brooch of Leontomorphe type with very devolved 'lion' (Mackreth LEO 5b/5c). Missing the pin, and two surviving fragments of spring, one with axis bar, are detached. Damaged at the lion rear and around the margins, with only a slight stub of the	Roman

SF No.	Context No.	Type	Material	No.	Description	Period
2112 Cont.					catchplate and much damage to the lozenge-shaped plate and its sheet covering. The brooch is made of four elements held by a central rivet below the lion head: the spring cover and lion shaped upper bow, an openwork sheet, covering the separate lozenge plate and the foot with catchplate. The spring cover has two incised lines across the top and at least one at each end, with finely incised angled lines flanking a centre line (as commonly on standard Rosette types). The lion head has punched crescents for the mane, the front legs have become a plain discoidal terminal over the rivet. The sheet plate has traces of six oval cut-outs, the most complete one bordered by two fine incised lines. The lozenge plate has at least two rows of punched dots forming lines along the edges. The foot has longitudinal reeding, consisting of three sets of two grooves with broad concave mouldings between them. On the back the stub of the catchplate shows that it had two pierced rectangular holes; near the top on the right hand side there is a side notch, function unknown (?for fitting the pieces together?) just above the rivet and there are lines running parallel with the catchplate. Date c. AD 25-50. Surviving width of spring cover 21mm, length 54.7mm. Weight 10.58, spring fragments 1.52, total 12.1gms.	
2113	1899	Coin	Copper alloy	1	A contemporary copy of an as of Claudius I with Minerva reverse, as RIC 100. Worn and corroded. Diameter 26mm, weight 6.16gm. Date: AD 43-65	
2114	1915	Brooch	Copper alloy	8	A very large and elaborate Colchester derivative rear hook type. 2114 <i>Cont.</i>					condition apart from a few areas of corrosion. The surviving spring on the right hand side (viewwed from rear) has ten turns; a fragment of the chord is held by the 4mm wide rear hook. However the presence of a separate axis bar through the middle of the spring, and otherwise not attached, is unusual in the rear hook type. The front of the wings has a relief curvilinear decoration, symmetrical about the bow and joined by a curving line below the bow; the edge of the wing is slightly thickened to form a frame for the design. The bow has a flat back and vertical flat sides and tapers slightly to a flat end. A central recessed longitudinal band has a pair of reserved notched lines giving zigzags, flanked by concave mouldings; the design is only clear at the top of the bow as it is very worn along the front. At the foot there may be a transverse groove. The large catchplate again has curvilinear decoration formed by piercing the plate, designed to be best viewed from the left hand side. Width 39mm, length 76mm. Weight 38.5 gm plus spring fragments 0.69gm, total 39.19gm. Date c.43-60

Project details

Project name FLN 091, Flixton Quarry Assessment 4a

Short description of the project This project covers the archaeology excavated by Suffolk Archaeology CIC within a c.1.5 hectares area of Flixton Park Quarry under the HER code FLN 091. Two phases of fieldwork were undertaken; the first in 2016 and the second in 2017. The area represents a small extension to that previously excavated under the same HER code between 2012 and 2015 which has already been presented in Assessment 4 (Boulter 2017). The principle periods represented within the overall FLN 091 area were as follows: Neolithic and Bronze Age: long enclosure, formal pit group, pit circle and other pits. Late Bronze Age and Iron Age: limited occupation deposits. Late Iron Age and Roman: occupation deposits indicating sustained occupation during these periods. Post-medieval: predominantly boundary ditches relating to Flixton Hall and its surrounding parklands, along with a discrete associated with WW II military activity, including buildings. The information presented in the assessment will be used to put together a programme of analysis and publication to include the results of Assessments 3b, 4 and 4a.
