# PREHISTORIC MONUMENTS IN THE PEAK AN UPDATE

## By JOHN BARNATT and ANN HALL

(Cultural Heritage Team, Peak District National Park Authority, Aldern House, Baslow Road, Bakewell, Derbyshire DE45 1AE)

### INTRODUCTION

### Archaeological Survey for the Peak District National Park Authority

Over the years there has been much recording of the prehistoric remains of the Peak District (Barnatt 1986, 1990; 2000b; 2008; Barnatt and Collis 1996), with the various published corpuses of sites last updated in the late 1990s (Barnatt 1996; 1999). New appraisals of specific areas have also been published (Barnatt 2009; Barnatt, Bevan and Edmonds 2017).

With the cessation (hopefully temporarily) of field survey by staff of the Peak District National Park Authority and the imminent retirement of one of the authors (JB, in Dec. 2016), this seems an opportune time to update the lists of known sites, giving new discoveries made since the 1999 updates were published. Ann Hall compiled the data on individual sites from numerous unpublished reports and other archives held in the National Park office at Bakewell.

With chambered tombs and round barrows, the system of numbering sites adopted in the original barrow survey (Collis and Barnatt 1996) has been continued and numbers allocated to new discoveries.

### THE UPDATES

### **Chambered Tombs**

The large barrow on Bolehill above Bakewell, excavated by Bateman when badly disturbed but with seven chambers or cists remaining, was assumed to have been subsequently destroyed (Barnatt and Collis 1996, pp. 91, 192: Site 6:9). However, one of the seven stone structures has recently been identified under a hawthorn tree (Plate 1) just beyond the edge of reworked mineral workings on Mogshaw Rake, located further from the hilltop than previously assumed from Bateman's vague description of its siting. This exciting discovery confirms that this was indeed a chambered site, with a large but damaged chamber either of passage grave type as found at Five Wells or Minninglow, or the closed chamber type as at Tideslow or Ringham Low (following Barnatt and Collis 1996); Ringham Low is located only *c*. 2km away to the south-west (Barnatt and Collis 1996, p. 89, site 8.2). In the late 1980s permission to visit this site was refused but subsequently it has been surveyed and details of its current state are given below.

Site Name and Barrow Survey number	Map reference	Description
Bolehill	SK18316777	Previously Bateman has recorded
6.9		seven disturbed 'cists' of unstated
		size excavated in 1843 and 1859 in an

### **The Limestone Plateau**

	already largely removed and ruinous barrow. What is visible today, under a mature hawthorn tree, is a vestige of 'chamber' built of limestone slabs de- fining two sides of a large rectangular structure oriented roughly north-west south-east. Two slabs, placed end to end, define a north-east side which is 3.9m long. A third slab matches one of these on a south-west side, whilst there is no sign of a presumed miss- ing fourth slab matching that oppo- site. The chamber width is 1.4m and the interior is slightly lower than the surrounding ground. All three slabs comprise fissured limestone set on edge, with between 0.4 and just over 0.5m visible height; they may have originally have been higher before weathering. There is no clear sign of a surrounding mound or other related surface features (John Barnatt field observation).	
Ringham Low 8.2	<ul> <li>56642 The south-eastern end of this mutilated barrow survives within a small plantation. Here the mound is 32-34m wide and the current length is 43m but beyond the northwestern plantation wall the mound has been removed. Within this wall there is a vertically-set slab which is 1.22m long and 0.22m high; this may well be the side of one of the large cists recorded in the 19th century. The south-eastern end of the mound appears intact and appears to have two horns flanking a possible forecourt.</li> <li>The mound sides to the southwest and north-east are straight; the interior is uneven with pits and</li> </ul>	SK16956642
	there is a vertically is 1.22m long and may well be the sid large cists recorded century. The south- mound appears inta have two horns flat forecourt. The mound sides to west and north-eas

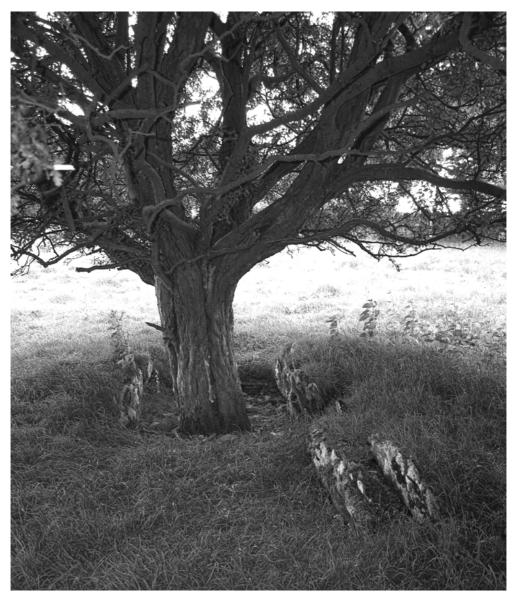

Plate 1: Remains of Bolehill barrow above Bakewell, a chambered site excavated by T. Bateman in 1843 and 1859

### **Round Barrows**

Nine newly-identified certain or probable barrows are recorded scattered across the Peak District and are listed in Table 2. In addition, a large number of possible or postulated barrows are given in Table 3 for completeness sake; the majority are open to alternate and sometimes more likely interpretation.

Of the good sites, some are obvious large mounds that have been in plain view from public footpaths, as at Sheldon and Bole Hill near Eyam, but have not previously been entered into the Historic Environment Records. On the north-western gritstone uplands three certain barrows have been identified, including one long-known locally at Shaw Cairn which was excavated by local enthusiasts several decades ago, with their trenches more recently reopened to evaluate the partial records they kept. Another at Cown Edge, with a partially-removed interior, has recently had evaluation excavations undertaken by the Glossopdale and Longdendale Archaeological Society to demonstrate it is indeed a barrow. This is surrounded by a scatter of small probable clearance features that have survived in the surrounding semi-improved pasture, but these have still to be evaluated as the current landowners did not want this aspect of the work to proceed.

Site name and allocated Barrow Survey number	Map reference	Present diameter	Description
Burton Moor 6.18	SK20536716	11.5 x 9.0m	Probable barrow, 0.4m high on low knoll. Long axis coincident with the line of a removed field boundary. Shallow pit in centre. (Barnatt 2002, p. 208, feature 8.41).
Sheldon 6.20	SK17226867	24 x 22m	Probable barrow, 1.5m high. Shallow quarry pit to north- east. A few exposed boulders at centre (John Barnatt field observation).
Alsop Moor 9.42	c. SK16505728	c. 10m	A well-shaped mound, c. 1m high, in a plantation well south of mine workings here (John Barnatt field observation).
Upperwood 10.65	SK 28825799	c. 20m	A probable barrow identified on a Lidar image, comprising a circular 'shadow' at the edge of a slightly raised area in improved ground, crossed to one side by a field wall with an earthwork beyond defining the rim of the mound (Malone 2016).

#### **The Limestone Plateau**

### The Western and Northern Gritstone Uplands

Mount Famine	SK05238504	c. 20m	A circular bank, a little over
18.27			0.5m high, which is almost
			certainly the rim of a barrow,
			with an irregular interior with
			two visible stones suggesting

			it had a kerb. Probably robbed for stone for wall building (John Barnatt and Jamie Stone field observation).
Cown Edge 19.3	SK 01259047	26 x 24m	An obvious cairn, which is up to 2.5m high, with vestiges of a kerb but substantial stone robbing over much of its interior. Evaluation excavations were undertaken in 2013-14, which demonstrated a Bronze Age date with a possible multi- phased build, with the centre disturbed by antiquarian diggings. Two possible cists, two jet buttons, 68 jet and shale beads and a sherd of cord-impressed pottery were found in the general central area in 2013-14 (Noble in prep.).
Shaw Cairn 21.5	SJ 98708752	<i>c</i> . 15m	This cairn was partially excavated in the 1970s-80s but never published (Mellor 2000). Evaluation excavations in 2008-09 found it was built in two phases. The first was a 0.6m high stone cairn with outer kerb and a cist associated with an amber spacer-plate necklace. In the second phase the mound was enlarged by 1.5 to 3.0m and a new kerb built. There was a sequence of 12-15 cremation burials, some in small cists and stone settings; finds included a food vessel and other sherds, a plano-convex knife and other lithics (Noble 2010). Surrounding features have also been investigated (Johnson <i>et</i> <i>al.</i> 2012).

# **The Derwent Valley**

high, poorly defined on the northern side. Probable barrow, with views over the rest of Carlton Pastures.	Calton Pasture 31.16	SK23426913	16.5 x 13.0m	northern side. Probable barrow, with views over the rest of Carlton Pastures. (Barnatt 2000a, p. 171, feature
--	-------------------------	------------	--------------	--

# The East Moors

Bolehill, Eyam 30.35	SK 21507738	24m	A well-shaped barrow, c. 0.3m high to the north side rising to 2.5m high to the south. side, immediately upslope and slightly truncated by deep quarrying to the south (John Barnatt field
			observation).

Table 2: Certain and Probable Barrows - An update to the published barrow corpus for the Peak District corpus (Barnatt and Collis 1996, pp. 180-263; Barnatt 1999, pp. 61-66).

### **The Limestone Plateau**

Site name and allocated Barrow Survey number	Map reference	Present diameter	Description
Gautries Hill 1.19	SK09838099	Bank 12 x 10m. Mound 5 x 4m	Possible unusual barrow or the site of a recent animal feeder. A 0.2m high bank has a 0.2m high mound within the centre space (Ullathorne 2001d, p. 5, feature 10).
Eldon Hill 1.20	SK11518097	Not known	Possible barrow or possible lead mining hillock, on the south-east flank of Eldon Hill, up to 1m high with a depression in centre (Ullathorne 2003c, p. 7, feature 10).
Cartledge House Farm 3.13	SK17877778	10m	Possible barrow, 0.6m high but with the mound truncated to south and west, near farm buildings and alternatively

			made from material from their construction, adaptation or demolition (Ullathorne 2001b, p. 2, feature 2).
Grundy House Farm 3.14	SK16867708	12.5m	Possible barrow up to 0.4m high, with possible excavation pit in the centre that is 0.5m deep. Mound truncated to north by field boundary wall (Ullathorne 2001c, p. 3, feature 9).
Holme Bank 4.28	SK21256937	15 x 19m	Possible barrow or natural knoll, 0.6m high, on ridge above River Wye (Barnatt 2000a, p. 150, feature 41.18).
Cracknowl Pasture 4.29	SK21387012	19 x 16m	Possible barrow or natural knoll, with wide views to north, east and west (Barnatt 2000a, p. 154, feature 41.38).
Longstone Edge 4.30	SK18587299	10m	Possible barrow or lead mining waste on a ridge top, 0.5-0.7m high, with a field wall running over it and an uneven top (Taylor 1999b, p. 4, feature 28).
High Fields 4.31	SK21537484	10m	Possible ploughed down barrow or quarry spoil heap, 0.4m high, in prominent location on edge of deeply incised dale (Robbins 2000, p. 12, feature 6).
High Fields 4.32	SK21677457	15m	Possible barrow or natural outcrop, 0.6 – 1.0 m high, with field wall running over the mound. It has a stone getting hollow in the top on north side of wall. In a prominent location on edge of deeply incised dale (Robbins 2000, p.14, feature 23).
Eyam Fields 4.33	SK20377617	11 x 13m	Possible barrow or natural knoll, 0.5-0.75m high, on the edge of a deeply incised dale commanding extensive views to north, east and west (Taylor

			1998c, p.24, feature 62 and Robbins and Ullathorne 2003, p. 15, feature 47).
Monsal Head 4.34	SK18367142	c. 25m	Possible barrow comprising an ill-defined mound up to 0.3m high, overlooking the Wye valley gorge (John Barnatt and Ann Hall field observation).
Burton Moor 6.17	SK20506738	c. 15m	Possible barrow or remnant of a natural limestone knoll, 1.5m high, over half removed by a quarry (Barnatt 2002, p. 207, feature 8.32).
Bradford 6.19	SK21676455	15.5 x >13.0m	Possible barrow within lead mining hillocks, 0.6m high with a regular, gently domed profile without mineral present on its surface (Ullathorne 2001a, p. 4, feature 7).
Bank Top 7.64	SK10996499	<i>c</i> . 10m	Possible ploughed-down barrow, or a lead mining hillock or quarry disturbance, 0.3m high (Taylor 1999a, p. 15, feature 18).
Hitter Hill 7.65	SK08756676	17m	Natural knoll possibly modified into a barrow, up to 2m high (Ullathorne 2003b, p. 6, feature 14).
Carder Low South- East 7.66	SK13736221	13m	Possible barrow or natural knoll, 0.6m high with shallow quarry pits at its base; poorly defined and may be ploughed- over. Crossed by a field wall. (Ullathorne 2001e, p. 9, feature 44).
Carder Low South- East 7.67	SK13826214	9 x 7m	Possible ploughed-over barrow, 0.30m high, oval with probable natural hollow to north-west that is up to 0.2m deep (Ullathorne 2001e, p. 10, feature 45).
Vincent House 7.68	SK13916327	8 x 10m	Possible barrow or upcast from adjacent stone quarry pit, 0.4m high (Speight 2009c, feature PD.49).

Vincent House 7.69	SK14076312	10 x 8m	Possible barrow or grassy knoll, 0.4m high (Speight 2009c, feature PD.54).
Vincent House 7.70	SK14376277	10 x 15m	Possible barrow or feature associated with silica-sand quarry, 0.2m high (Speight 2009c, feature PD.59).
Vincent House 7.71	SK14066293	Not known	Low mound, less than 0.2m high (Speight 2009c, feature PD.64).
Vincent House 7.72	SK13966288	Not known	Low mound, less than 0.2m high (Speight 2009c, feature PD.65).
Vincent House 7.73	SK13266315	Not known	Possible barrow or possible upcast from farming activity, comprising a grass-covered earthen mound, 0.5m high (Speight 2009c, feature PD.78).
Vincent House 7.74	SK13236319	Not known	Possible barrow or possible upcast from farming activity, comprising a grass covered earthen mound, 0.4m high (Speight 2009c, feature PD.79).
Ricklow Quarry 8.42	SK16566614	4.5 x 7.5m	Possible barrow, a natural knoll or quarrying upcast, 0.5m high, with regular shape and flat top (Taylor 2000b, p. 13, feature 12; Barnatt 2005, p. 90, feature 28).
Monyash 8.43	SK15676709	c. 12m	Possible ploughed-down barrow, with a slight mound that is 0.3m high (Taylor 2000c, p. 2, feature 17).
Monyash 8.44	SK15726694	<i>c</i> . 10m	Possible barrow with 0.2m high circular mound, in a shelter belt. Possible drystone walling and a lintel stone in a small hollow to one side suggesting it may be a dilapidated limekiln (Taylor 2000c, pp. 2-3, feature 18).

Long Gallery Plantation 8.45	SK18856131	Not known	A possible barrow with low oval mound, with exposed limestone on west side, containing small to medium boulders defining the edge of what may be a trapezoidal cist that is paved with tabular limestone pieces. There is a possible kerb of small boulders to north and a low curvilinear bank defines the south-western corner (Rylatt 2004a, p. 3, feature 16).
Bostern Grange 9.41	SK15385313	Not known	Possible round barrow (Rylatt 2005, feature 26).
Gotham 10.61	SK18875849	7m	Possible barrow or more probably a later agricultural feature, 0.5m high, overlain by a field wall, next to site 10.63 (Taylor and Robbins 1999, p. 3, feature 15).
Winster Moor 10.62	SK24385999	8 x 12m	Possible low barrow flattened by ploughing, 0.2m high, on a high point with good views in all directions (Taylor 1998b, p. 21, feature 37).
Gotham 10.63	SK18875849	10m	Possible barrow or more probably a later agricultural feature, 0.6m high, overlain by a field wall, next to site 10.61 (Taylor and Robbins 1999, p. 3, feature 15).
Roystone Grange 10.64	SK19635615	<i>c</i> . 12 x 10m	Possible barrow or later tip related to adjacent quarry, with irregular mound, up to 0.8m high, with two depressions and associated spoil tips, truncated to south by a post-medieval track (Rylatt 2004b, p. 14, feature 31).
Gateham 11.62	SK12515666	12 x 13m	Possible barrow or possible lime kiln or quarry debris. Sub-circular mound, 0.5m

			high, with small shallow hollow in the centre (Johnson 2000, p. 5, feature 35).
Gateham 11.63	SK11665686	20m	Semi-circular flat-topped mound, 0.6m high, possibly the remaining half of a barrow or a natural mound (Johnson 2000, p. 2, feature 9).
Castern 11.64	SK11905351	Not known	Possible small barrow, above the Manifold Valley (Ullathorne 2005, feature PD.442.13).

# The Southern Fringes

Fenny Bentley 14.10	SK17715055	17m	Possible barrow or a natural limestone formation, with regular 0.6m high domed mound on ridge top (Ullathorne 2003a, p. 4, feature 5).
Barrel Edge 14.11	SK 29385536	15 x 13m	A low disturbed mound of surface gathered stones, surmounted by a triangulation pillar, is a possible barrow (John Barnatt field observation).

# The Northern and Western Gritstone Uplands

The Ashes 19.2	SK05818619	15 x 13m	Possible barrow or later stone clearance. Sub-circular in plan, 0.5m high, with overlying field wall (Bevan 1999, p. 41, feature 115; Bevan and Ullathorne 2005, p. 11, feature 62).
Eaves 20.8	SK06887999	18 x 10m	Possible ploughed-over barrow, 0.25m high, overlain by wall (Bevan 2005b, feature PD.436.1).
Hurst 25.10	SK11165945	<i>с</i> . 10 х бт	Possible barrow, comprising a smooth grassy mound, 1.2m high, with overlying field wall (Speight 2009b, feature PD.501.06).

Hurst 25.11	SK12065842	Not known	Possible barrow or natural feature, comprising a smooth grassy mound, c. 1m high, truncated by gully to south (Speight 2009b, feature PD.501.30).
Rocher Head 27.26	SK25619386	14 x 6m	Possible barrow or natural mound, 1.5m high (Taylor 1998d, p. 15, feature 16).
Rocher Flat 27.27	SK25529359	Not known	Possible barrow or natural feature (Speight 2009a, feature PD66.16).
Rocher Flat 27.28	SK26879343	Not known	Possible barrow or landslip/ quarry waste, comprising a grassy mound, c. 1m high (Speight 2009a, feature PD500.21).
Rocher Flat 27.29	SK26919357	Not known	Possible barrow or overgrown later clearance, comprising a large grassy mound, c. 1.5m high, with stone visible (Speight 2009a, feature PD500.26).

# The Derwent Valley

Pilsley 31.14	SK25007164	10m	Possible barrow or fortuitous mound, comprising an amorphous ploughed-over rise, 0.3m high (Barnatt, 2000a, p. 88, feature 36.12).
Calton Pasture 31.15	SK23476939	6 x 7m	Possible barrow or more recent mound of unknown interpretation, comprising an amorphous mound, 0.2m high (Barnatt 2000a, p. 134, feature 38.58; Barnatt and Bannister 2009, Fig. 88).
Calton Pasture 31.17	SK24476869	17.0 x 13.5m	Possible barrow or unusual modern clearance heap. Flat- topped mound on slope, made from soil containing many small pieces of sandstone, with no height on the upslope side and 2m high on

			downslope side, with possible low attached platform and possible robber pit, 0.1m deep (Barnatt 2000a, p. 183, feature 44.20; Barnatt and Bannister 2009, Fig. 88).
Calton Pasture 31.18	SK24336799	9.5 x 6.0m	Possible small barrow or of more recent date, comprising an oval ploughed-over mound, 0.5m high (Barnatt, 1999- 2000, p. 187, feature 44.32; Barnatt and Bannister 2009, Fig. 88).
Ashford Hall 31.19	SK20387003	<i>c</i> . 10 x 15m	Possible ploughed-down round barrow, <i>c</i> . 0.2-0.3m high, at top of gradual slope with good views to north, south and west (Taylor 1998a, p. 19, feature 29).

## **The East Moors**

Brampton East Moor 29.69	SK29576922	с. 6т	Possible barrow or fortuitous rise, which is very low and earthen (Barnatt 1998, p. 93, feature 16.25).
Birchen Edge 29.70	SK28427236	9m	Possible barrow, with 0.3m high earthen mound (Barnatt 2006, feature PD.460.108).

Table 3: Possible and Postulated Barrows - An update to the published barrow corpus for the Peak District corpus (Barnatt and Collis 1996, pp. 180-263; Barnatt 1999, pp. 61-66).

# **Stone Circles and Ringcairns**

No new discoveries have been made.

## **Standing Stones and Stone Settings**

A fine standing stone hidden in a conifer plantation on Matlock Moor, outside the National Park, has long been known to local people but it slipped through the net in the author's (JB) previous lists.

Site Name	Map reference	Description
Burbage Moor		Probable standing stone, or earthfast boulder, 1.1 x 1.8 x 0.8m high with possible

		packing stones, within a cairnfield (Bevan 2006, p. 47 feature 431.24).
Farley Moor	SK29966302	Fine <i>c</i> . 2m high standing stone in a conifer plantation. Marked as 'stone' in open moorland on O.S. first edition 25in. to 1 mile, surveyed in 1879. However, heavy fluted weathering at the top shows it has been standing since antiquity (John Barnatt and Frank Robinson field observation 2003; Derbyshire HER 9871).

Table 4: An update to the published standing stone and stone setting corpus (Barnatt 1986, table 7; Barnatt 1999, 59-60).

## **Small Isolated Cairns**

Further scattered small cairns around Over Owler Tor, Gardom's Edge and the nearby Birchen Edge, complement those studied on the Chatsworth moorlands (Barnatt 1999, pp.70-71; Barnatt and Bannister 2009, pp. 29-30, 37).

The	Upper	Derwent	Valley
-----	-------	---------	--------

Site name	Map reference	Present diameter	Description
Crookstone Hill	SK15068795	4.5 x 2.5m	A possible prehistoric funerary cairn, oval with flat top, 0.3m high, or a later boundary cairn (Barnatt 1993, p. 54, feature 404; Bevan 2001, p. 21, feature 3; Bevan 2005a, p. 105, feature 91.404).

## **The East Moors**

Site name	Map reference	Present diameter	Description
Over Owler Tor	SK25158099	7 x 4m	Possible funerary cairn or clearance cairn, oval and flat-topped, 0.5m high, with rounded boulders surrounded by larger blocks. There are two

			other possible cairns nearby and they may all be associated with a cairnfield c. 80m to the east (Bevan 2006, p. 44, feature 431.15).
Over Owler Tor	SK25158089	8 x 5m	Oval cairn, 0.3m high, situated on a prominent knoll (Bevan 2006, p. 47, feature 431.23).
Over Owler Tor	SK25128069	2.2 x 1.8m	Oval cairn, 0.25m high of rounded boulders surrounded by larger blocks (Bevan 2006, p. 47, feature 431.25).
Winyards Nick	SK25598094	7 x 6m	A cairn, 0.5m high, on a gentle slope below the Winyard's Nick cairnfield (Bevan 2006, p. 47).
Gardom's Edge	SK27187290	2.5 x 1.5m	A probable funerary cairn, 0.1-0.2 m high, with crude boulder kerb (Barnatt 2006, feature PD.460.4).
Gardom's Edge	SK27367319	4.0 x 4.5m	A small two-phase monument, 0.3m high, built initially as a small cairn over a grave-shaped pit. In a second phase the mound was slightly enlarged and bounded by a kerb. Excavated as part of Gardom's Edge Project (Barnatt, Bevan and Edmonds 2017).
Gardom's Edge	SK27717377	2.5m	A possible funerary cairn, 0.1-0.2m high (Barnatt 2006, feature PD.460.47).
Birchen Edge	SK28227352	9 x 8m	Stone-built, flat-topped mound, probably a funerary cairn 0.3m high with probable robbed centre (Barnatt 2006, feature PD.460.58).

Birchen Edge	SK28367354	7 x 6m	A stone-built mound, either a funerary cairn or a large clearance feature. (Barnatt 2006, feature PD.460.64).
Birchen Edge	SK27967305	c. 3m	A small cairn, 0.3m high (Barnatt, 2006, feature PD.460.81).

Table 5: An update to the published small isolated cairns on the East Moors corpus (Barnatt 1999, pp. 70-71).

## Cairnfields

The only important new discoveries are at Wimberry Moss and Cown Edge to the north-west and at Barbrook Reservoir on the Eastern Moors. At the former area, evidence for cairnfields is rare and uncertainly interpreted; the new discovery at Cown Edge lies towards the southern end of the same high ridge as the possible cairnfield at Coombes Edge which is of unknown date and has post-medieval quarrying nearby (Barnatt 1999, pp 53, 57). Whimberry Moss appears to be atypical in that it has scattered small cairns on very high ground at over 450m OD and thus may be funerary. The small Barbrook Reservoir cairnfield slipped through the net during the author's field survey of the Eastern Moors in the 1980s (Barnatt 1986).

Alphin Pike	SE 004027	A loose scatter of eight small cairns, all on a high ridgetop, which may well be funerary in character; they range in diameter from 6.0m to 1.2m. One comprises a ring of stones around a boulder. There is also a possible stretch of linear clearance but this may be later in date (Allen 2004).
Cown Edge	<i>c</i> . 011905	Two small possible clearance cairns were identified in 2005 (Ullathorne 2003d, p. 4, feature 10). Subsequent fieldwork has identified around 20 scattered, probable and possible, small clearance features surviving over a wide area in semi-improved grassland (John Barnatt and Peter Noble field inspection; Noble in prep.); these await adequate assessment.
The Ashes	SK05858670	Two adjacent oval clearance cairns of unknown date, with long axes aligned, are possible vestiges of prehistoric clearance but are more likely to be later in date (Bevan, B. and Ullathorne, A. 2005, p. 10, feature 57).
Barnsfold	SK02758789	A single small cairn next to a field wall, is possibly prehistoric clearance but far more probably later and associated with the wall building (Ullathorne 2002a, p. 3 feature 11).

### The Northern and Western Gritstone Uplands

Offerton	SK21038106	Two small cairns of unknown date and interpretation,
		of 4.0m and 6.0m diameter, close together in semi-
		improved ground (Ullathorne 2002b, p. 2, feature 3).

### **Derwent Valley**

#### **The East Moors**

Barbrook Reservoir	SK	A small cairnfield with 13 small cairns and possible cairns in a north-west/south-east band on a low ridge west of Barbrook and north of the old reservoir (ArcHeritage 2011)
-----------------------	----	--

Table 6: An update to the cairnfield corpus (Barnatt 1986; Barnatt 1999, pp. 50-58).

#### ACKNOWLEDGEMENTS

Ann Hall, assisted by Angie Johnson, undertook the onerous task of trawling through a large quantity of reports and other archives to identify the sites listed above. Field surveyors who identified the new sites were John Barnatt, Bill Bevan, Ann Hall, Angie Johnson, Graham Robins, Heidi Robins nee Taylor, Jim Rylatt, Kathy Speight and Alice Ullathorne. Bole Hill chambered cairn was identified by John Tanner. Barrows at Mount Famine and Cown Edge were shown to JB by Jamie Stone and Peter Noble respectively. The newly discovered cairnfield near Barbrook Reservoir was show to JB by Rowan May. The standing stone on Farey Moor was shown to JB by Frank Robinson. Information on the possible barrow at Upperwood was supplied by Dave Barrett and David Knight. Ann Hall revisited barrows at Bole Hill (Eyam), Sheldon and Monsal Head to take measurements.
