Appendix II. Carbonised plant remains from the cremations

by Peter Murphy

Small quantities of charcoal, charred nutshells and cereal grains were extracted from the cremations by dry sieving during laboratory examination of the bones. Cereal grains were recovered from nine of the urns and large nutshell fragments from one. Charcoal occurred more frequently, but many of the fragments extracted are too small to be reliably identified. From the remaining charcoal samples twenty-seven were selected for examination.

The cereals comprise five grains of hulled barley (Hordeum sp), one wheat grain (Triticum sp), one oat grain (Avena sp) and two indeterminate grains. Nutshell fragments equivalent to approximately two hazel nuts (Corylus avellane) came from cremation 2535, a juvenile. These remains of cereals and nuts may simply have been accidental inclusions in the cremation pyres, but it is possible that they represent food offerings to the dead.

Charcoal fragments from the cremations were examined to see what size and species of wood was used as fuel. Many of the charcoal samples examined proved to consist of only one or two charcoal fragments and it is unlikely that these are fully representative of the wood species and stem sizes used as fuel. Furthermore it cannot be assumed that all the charcoal fragments are from fuel: some could represent remains of wooden grave-goods burnt on the pyre. For these reasons full identification of the

charcoal was not undertaken: instead stem diameters were assessed where possible and the more conspicuous species identified, leaving most of the less-readily identifiable (and time consuming) diffuse porous charcoals undetermined.

"	2823	<u>Quercus</u> sp ntw.

Table 13: Some carbonised plant remains from the cremations.

Abbreviations: tw - twigs; ntw - non-twiggy charcoal; s - small fragments, stem diameter uncertain.

The suffix '-type' indicates that the specimen matched a given taxon in its general characteristics and some cellular features, but insufficient features were seen for definite identification.

### Conclusions

The cremation deposits produced small quantities of carbonised plant remains, including cereals and hazel-nuts (which may perhaps have been food offerings) and charcoal. Charcoal fragments from large wood are mainly of oak (Quercus sp) with some hazel (Corylus sp), hazel or alder (Corylus/Alnus sp), hawthorn-group (Crataegus-group), pine (Pinus sp), ash (Fraxinus sp), ?lime (Tilia-type) and indeterminate species, whilst twigs and small fragments of uncertain stem diameter include hazel or alder, oak, ash and Prunus-type (?sloe). These charcoals do not give a reliable indication of local woodland composition, for undoubtedly some woods would have been preferred for use as fuel on pyres, and moreover there is a possibility that some wooden artefacts, perhaps imported to the site from some distance, could have been burnt as grave-goods.

DA-10

Appendix VI. Spong Hill Inhumations, reassessment

Archive report

Inh. 1.

SKULL: Mandible - fragments distal right, body and ramus.

	/	/	/	/	/	/	/	
	8	7	6	5	4	1	4	
R	8	7		5	4			L
			/	/				

Premolars slight occlusal polish. 2nd molar has occlusal wear heavier buccally with 'pin-hole' exposure of dentine. 3rd molar has mesial occlusal wear & bipartite distal root, the root apices just closing. (Brothwell:17-25yrs).

Maxilla - teeth only. Premolars slight polish. Large 1st molar has occlusal wear, 'pin-hole' exposure of dentine especially palatally. 2nd molar polished, especially palatally. (Brothwell: 17-25yrs).

Calculus deposits heavy on anterior tooth crowns. Single line of hypoplasia noted in premolars.

Fragments both petrous temporals. Vault, few fragments.

UPPER/LOWER LIMB: 4 small fragments long bone cortex.

AGE: Young adult.

SEX: ?

PATHOLOGY: 1) Heavy calculus deposits on anterior teeth.

2) Single line of hypoplasia in premolars.

3) Morphological variation; Bipartite distal root in mandibular third molar.

Inh. 2.

SKULL: Tooth crowns only.

	/		/	/				
	8		1	1				
R		7			5	6	7	L
		/			/	/	/	

Mandible - Premolar worn occlusally. 1st molar has flat occlusal wear with 'pin-hole' exposure of dentine. Small 2nd molars, flat occlusal wear with 'pin-hole' exposure of dentine. (Brothwell:17-25yrs.)

Maxilla - fragments one 2nd incisor and a premolar. Flat occlusal wear in premolar. Small 3rd molar polished occlusally.

Calculus deposits on all crowns.

AGE: Young adult.

SEX: ?

PATHOLOGY: Calculus deposits on all crowns.

COMMENT: Bronze staining on all crowns.

Inh. 3.

SKULL: Tooth crowns only.

R	7 6	L
	/ /	

Mandible - Slight occlusal polish in buccal cusps of 1st molar, especially mesially. No wear to 2nd molar, possibly unerupted? Hypoplastic line in cervical region of 2nd molar crown.

AGE: Older juvenile/young subadult.

SEX: ?

PATHOLOGY: 1) Hypoplastic line in cervical region of 2nd molar crown.

Inh. 4.

SKULL: Tiny fragments, unidentifiable.

AGE: ?

Inh. 5

AXIAL: Cervical, vertebra with pitting in left superior articulation process, bronze stained. Fragment of one other.

Thoracic, fragments minimum 3 vertebrae. One with pitting in right superior articulation process & another with pitting in right rib facet with slight osteophytes on margins. Bronze stained.

Rib shaft fragment. Bronze stained.

Innominate: fragment ischial tuberosity.

UPPER LIMB: Clavicle, right shaft.

Humerus, shaft fragment (deduced partly from plan).

Ulna, right distal shaft & articulation surface. Bronze stained.

AGE: Older mature/older adult.

SEX: ?

PATHOLOGY: 1) Osteoarthritis in cervical and thoracic vertebrae, and in costo-vertebral articulation.

COMMENT: Bronze staining on many of bones, probably why they survived.

Inh. 8.

SKULL: Vault, few small fragments.

LOWER LIMB: Femur, right proximal shaft fragment.

AGE: Adult.

SEX: ?

Inh. 9.

SKULL: Mandible - large molar crown (unclear which one), pronounced cervical bulge, unworn. Fragments one other crown with no wear.

Maxilla - left/right 1st incisor, 1st & 2nd premolars, fragment one other crown. Slight occlusal polish in buccal cusps of premolars.

AGE: Older subadult/young adult.

SEX: ?

Inh. 11.

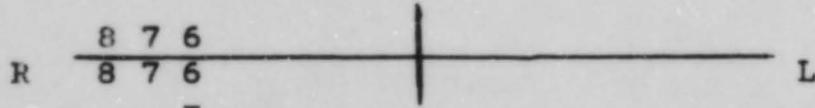

UPPER/LOWER LIMB: Tiny fragment cortical bone with bronze staining.

AGE: ?

COMMENT: Bronze staining on bone.

Inh. 13

SKULL: Mandible - robust right condyle. Fragment distal right body.

Heavy occlusal wear in 2nd molar with exposure of dentine in all cusps especially buccal. Heavy occlusal wear in 3rd molar, especially disto-lingual, with 'pin-hole' exposure of dentine in three of the five cusps. (Brothwell:25-35yrs.)

Maxilla - right distal fragment. Heavy occlusal wear in 1st molar with total exposure of dentine. Heavy occlusal wear in 2nd molar, especially palatal, with total exposure of dentine. Flat occlusal wear in 3rd molar with 'pin-hole' exposure of dentine. (Brothwell:30-45yrs).

Slight periodontal disease in alveoli.

Fragment right temporal bone. Fragment right frontal, coronal suture well fused. Fragment occipital.

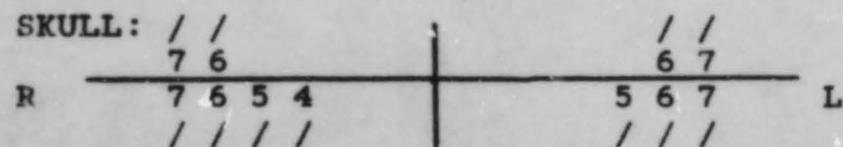

UPPER/LOWER LIMB: few fragments cortical bone.

AGE: Older mature/older adult.

SEX: ?

PATHOLOGY:1) Slight periodontal disease in maxillary alveoli.

Inh. 14.

Mandible - Premolars polished occlusal surfaces. Occlusal wear with 'pin-hole' exposure of dentine in all cusps of 1st molars, especially buccal. Small 2nd molars with occlusal polish, especially buccally.

Maxilla - left/right 1st incisor and 2nd premolar. Premolar polished occlusally. Occlusal polish in 1st molars especially palatally with dentine exposed in disto-palatal cusps & 'pin-hole' exposure in other cusps. Occlusal polish in 2nd molars, especially palatally. (Brothwell:17-25yrs).

Slight calculus deposits on all molar crowns.

AXIAL: Rib shaft fragment.

UPPER LIMB: Scapula, fragment inferior angle.

AGE: Young adult.

SEX: ?

PATHOLOGY: 1) Slight calculus deposits on all molar teeth.

Inh. 16

SKULL: Mandible - right 2nd or left 3rd molar (large if latter).  
No wear, ?unerupted.

AGE: Subadult.

SEX: ?

Inh. 17.

SKULL: Fragments minimum two molar tooth crowns, one polished other unworn - ? unerupted.  
Vault, few fragments.

AGE: Older subadult/young adult.

SEX: ?

Inh. 18.

COMMENT: Three fragments cremated/burnt bone (? from fill), including human mid-shaft ulna (poorly cremated) and ? animal bone.

Inh. 19.

SKULL: Mandible - left distal body fragment.

R ————— | ————— 8  
                  7 8 L  
                  r -

Maxilla - left fragment. Left/right 1st premolar crown, large ?3rd molar crown & fragments two other 2nd/3rd molar crowns. Heavy occlusal wear to dentine in 1st premolar. Heavy occlusal wear with total exposure of dentine well through the crown of the 1st molar. 2nd molar fragment with occlusal wear exposing dentine in all cusps, heavy in two. ?3rd molar has flat occlusal wear exposing dentine in 3 cusps. (Brothwell:35-45yrs).

Bronze staining in some crowns.

Fragment occipital with slight external protuberance. Fragments petrous portion of temporal.

UPPER LIMB: Scapula, fragment spine/neck. Bronze stained.

UPPER/LOWER LIMB: Fragment unidentifiable long bone.

AGE: Older mature/older adult.

SEX: ?

COMMENT: Bronze staining in tooth crowns & scapula.

Inh. 20.

COMMENT: Two fragments cremated long bone including tibia shaft. Cremation disturbance from grave fill.

Inh. 22.

SKULL:		/				/	/	/	/				
		2				4	5	7	8				
R	8	7	6	5	4	2	1	1	2	6	7	8	L
	/	/	/	/	/	/	/	/	/	/	/	/	

Mandible - Incisors worn through to dentine. Premolars polished. 1st molars worn occlusally, especially lingual with 'pin-hole' exposure of dentine in all cusps. Occlusal polish in 2nd molars, especially buccal. 3rd molars unworn - ?unerupted. (Brothwell:17-25yrs).

Both 1st molars have a small mesio-lingual accessory cusp. The right 2nd molar has a 5-cusp variation like a small 1st molar. The left 3rd molar has the usual 4-cusp form but with many accessory grooves, the right 3rd molar has a 5-cusp form with many accessory grooves.

Maxilla - Dentine exposed in incisor. Premolars polished occlusally, especially buccal, with 'pin-hole' exposure of dentine. 2nd molar polished. 3rd molar unworn -- ?unerupted.

Mild calculus deposits on most crowns.

AGE: Young adult.

SEX: ??female

PATHOLOGY:1) Mild calculus deposits on most crowns.

2) Morphological variations: a) mandibular first molars have a small mesio-lingual accessory cusp. b) Mandibular right second molar has a 5-cusp variation. c) The left mandibular third molar has the usual 4-cusp form but with many accessory grooves, the right mandibular third molar has a 5-cusp form with many accessory grooves.

COMMENT: Fragment cremated long bone, probably from Urn 1946.

Inh. 23.

SKULL:	R												L
						2	d						
						^	/						
						/							

Mandible - Large 1st molar, occlusal surface polished, especially lingual.

Vault, fragments parietal & frontal, sutures fused.

LOWER LIMB: Fragments long bone including femur & tibia shaft.

E1

No. Individuals: Two.

AGE: 1) Older infant/young juvenile 2) Mature/older adult

SEX: ?

COMMENT: Collection also contained few fragments cremated long bone including tibia shaft, probably from Urn 1912 which cut the inhumation.

The grave plan does in fact illustrate this double, side-by-side burial of an adult individual, with the smaller cut for the immature individual appended to the south side.

Inh. 24.

UPPER/LOWER LIMB: Fragment bronze stained long bone, probably from upper limb.

AGE: ?

COMMENT: Bronze stained fragment upper limb.

Collection also contained a cremated metacarpal/tarsal shaft (adult/subadult), probably from a disturbed cremation.

Inh. 26.

UPPER LIMB: Clavicle shaft fragment with bronze & iron stains.

AGE: Subadult/adult.

SEX: ?

COMMENT: Bronze & iron stains on Clavicle.

Stored/recorded with grave-good 5 were fragments of cremated bone, probably from 1941 which cut the grave.

SKULL: Right supra-orbit with medium margin & slight brow ridge. Vault, fragments frontal.

LOWER LIMB: Fragment cuneiform.

AGE: adult.

Inh. 28.

SKULL: Fragments.

UPPER/LOWER LIMB: Fragments shaft.

AGE: >infant

Inh. 29.

SKULL: Mandible - fragment condyle. Fragment body with molar tooth roots 'in situ'.

Left mastoid portion with medium sized, slightly pointed process. Large fragment occipital with negligible external protuberance.

AXIAL: Rib shaft fragment with bronze stains.

UPPER LIMB: Clavicle, left shaft fragment with bronze stains.  
Ulna, mid-shaft fragment with bronze stains.

AGE: Adult.

SEX: ?female

COMMENT: Bronze stains on axial & upper limb fragments.

Inh. 39.

SKULL: Mandible - 2nd molar tooth crown, polished occlusally.  
Maxilla - two premolars, one with 'pin-hole' exposure of dentine, other polished.

UPPER LIMB: Radius, shaft fragment.

AGE: Young adult.  
SEX: ?

Inh. 42.

SKULL: Teeth only, all small & bronze stained.

	/ /		/ /	/ /	
	5 4		4 5	7 8	
R	5		5 6 7 8		L
	/		/ / / /		

Mandible - Premolars and 1st molar worn flat occlusally. 2nd molar polished with 'pin-hole' exposure of dentine in 3 cusps. 3rd molar worn flat occlusally in two cusps. (Brothwell:>17-25yrs).

Third molar usual 4-cusp but with one diminutive cusp giving triangular form.

Maxilla - fragments 1st & 2nd incisors. Premolars have flat occlusal wear with 'pin-hole' exposure of dentine in one pair. Dentine exposed in all cusps of 2nd molar & palatal cusps of 3rd. (Brothwell:25-35yrs).

AGE: Young/younger mature adult.  
SEX: ??female

COMMENT: Uneven pattern of wear between mandibular & maxillary teeth & between sides - maybe as a result of some undetected dental lesion? Teeth bronze stained.

Inh. 44.

Crouched inhumation, on right side.

SKULL: Mandible - small & gracile, minus left ramus.

	/		/	
	^ / / / / / / /		/ / / / / / /	^
	8 7 6 5 4 3 2 1		1 2 3 4 5 6 7 8	
R	8 7 6 5 4 3 2 1		1 2 3 4 5 6 7 8	L
	^		-	^

Dentine exposed in 1st incisor. 2nd incisor & premolars polished. 1st molars polished with 'pin-hole' exposure of dentine in 2 of buccal cusps. 2nd molar slightly polished, right heavier on buccal cusps. 3rd molar crowns complete, roots forming. (Brothwell:17-20yrs).

Maxilla - Dentine exposed in 1st incisors. 2nd incisors & premolars polished. 1st molars worn occlusally, especially palatal with exposure of dentine. 2nd molars slightly polished, especially buccal. 3rd molar crowns complete, roots forming. (Brothwell:17-20yrs).

Right maxillary 2nd molar has two small accessory cusps disto-palatal. Maxillary 3rd molars small, multi-cusped variations with

many accessory grooves. Strong lines of hypoplasia in centre of left maxillary 1st molar, cervical portion of 2nd molar & centre of canine. Mild/medium calculus deposits on all crowns.

Rest of skull all present except for fragment basal portion of occipital which is unfused. Narrow margins to supra-orbit with flat brow & high frontal. Mastoid processes so small as to almost non-existent. No external occipital protuberance. Vault generally very gracile & smoothly contoured. Fragments petrous temporals. Right malar process was all that remained of facial bones.

Inferior right parietal & temporal bones badly warped & flattened as a result of being laid on that side.

AXIAL: Axis, fragment superior articulation surface.

Cervical, articulation process.

Rib shaft fragment.

UPPER LIMB: Scapula, fragments lateral border & neck/spine.

Humerus, fragment very small, gracile mid & distal shaft.

Metacarpal shaft fragment.

LOWER LIMB: Femur, very small, gracile shaft fragment.

AGE: Older subadult.

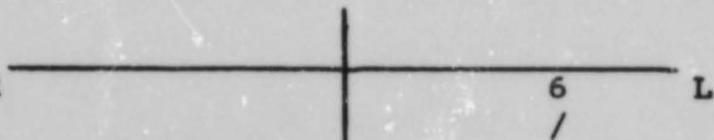

SEX: female.

PATHOLOGY: 1) Strong, single lines of hypoplasia in the left maxillary canine, first and second molars.

2) Mild/medium calculus deposits on all crowns.

3) Morphological variations: form of tooth crowns - right maxillary 2nd molar has two small disto-palatal accessory cusps. Both maxillary 3rd molars are small, multi-cusped with many accessory grooves.

Inh. 45.

SKULL: R  L

Mandible - occlusal polish, especially buccal.

LOWER LIMB: Femur, shaft fragment.

AGE: Older subadult/young adult.

SEX: ?

Inh. 46.

SKULL: Fragments two premolars, heavy occlusal wear with exposure of dentine precludes closer identification.

UPPER LIMB: Clavicle shaft fragment.

AGE: Older mature/older adult.

SEX: ?

EG

Large, rounded mastoid processes.

Large vault with slight sagittal cresting. Right side of vault warped & flattened where it had been laid. Upper sutures well open, internal sutures not fully fused. Several small wormian bones in superior portion of both sides of lambdoid suture.

AXIAL: Atlas, anterior arch with osteophytes on margins of facet, especially inferior portion.

Innominate: fragment of right with ilium, acetabulum & greater sciatic notch, angle difficult to judge but fairly acute.

UPPER LIMB: Scapula, neck/spine fragment.  
Radius, proximal shaft with tuberosity.

LOWER LIMB: Femur, fragment both shafts with distal articulation surfaces (poorly preserved).

Tibia, fragments shaft including left proximal with condyles.

Fibula, left proximal & distal shaft fragments with heads.

Tarsals: fragments calcaneum, talus & cuboid.

AGE: Mature adult.

SEX: Male

PATHOLOGY: 1) Slight osteoarthritis in atlas vertebra.

2) Morphological variations: a) Several small wormian bones in superior portion of both sides of lambdoid suture. b) Slight sagittal cresting.

Inh. 51.

SKULL: Left petrous temporal. Occipital with very slight external protuberance. Fragment right parietal. Two small wormian bones - 11x5mm- situated 20mm & 40mm from the sagittal junction in the right lambdoid suture.

UPPER/LOWER LIMB: Fragments unidentifiable long bone.

AGE: Adult.

SEX: ??female

PATHOLOGY: 1) Morphological variation: Two small wormian bones in the right lambdoid suture.

Inh. 54.

SKULL: Vault, 3 thin fragments.

UPPER/LOWER LIMB: Fragments unidentifiable long bone.

AGE: ?

SEX: ?

Inh. 55.

SKULL: Mandible - body fragment with sockets. Right/left ? 2nd molar, flat occlusal wear with 'pin-hole' exposure of dentine. (Brothwell:20-30yrs).

Maxilla - Left 2nd molar with flat occlusal wear & dentine exposed in all cusps. Left/right? 3rd molar, dentine exposed in buccal cusp. (Brothwell:25-30yrs).

Gracile left malar process. Occipital fragment with small external protuberance. Temporal fragment with petrous portion. Vault, various fragments, upper sutures well fused.

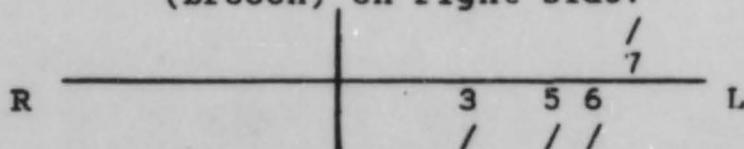

AXIAL: Fragments ilium & acetabulum.

LOWER LIMB: Femur, head fragment.  
Fragments unidentifiable long bone.

AGE: Mature adult.  
SEX: ?

Inh. 56.

SKULL: Mandible - body fragment bronze stained from grave-good 6 (brooch) on right side.

Premolar flat occlusal wear with dentine exposed in buccal cusp. 1st molar worn flat occlusally with 'pin-hole' exposure of dentine. (Brothwell:17-25yrs).

Dental hypoplasia in canine & premolar crowns, very strong line mid-way in canine & two very strong lines in superior portion of premolar crown.

Maxilla - fragments 1st & 2nd incisor crowns with dentine exposed. 2nd molar, polished occlusally. (Brothwell:17-25yrs).

UPPER LIMB: Ulna shaft fragment.

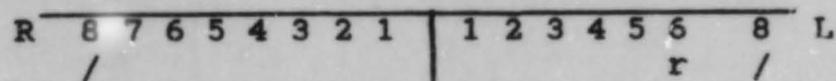

AGE: Older subadult/young adult.  
SEX: ?

PATHOLOGY: 1) Dental hypoplasia in canine & premolar crowns. Very strong line mid-way in canine and two very strong lines in superior portion of premolar crown.

COMMENT: Mandible bronze stained.

Inh. 57.

SKULL: Mandible - most intact, small.

Incisors & canines heavy occlusal wear through dentine. 1st premolars dentine exposed buccally, 2nd premolars dentine exposed buccal & lingual. 1st & 2nd molars heavy occlusal wear with dentine totally exposed, especially lingual. 3rd molars, very small, occlusal wear with 'pin-hole' exposure of dentine. (Brothwell:35-45yrs. except 3rd molars = 25-35yrs. late eruption? lower occlusal surface?).

Vault fragments including temporal & occipital with very slight 'ridge' external protuberance. Upper sutures fusing.

AGE: Older mature/older adult.  
SEX: ?female

Inh. 58.

SKULL: Few fragments vault.

UPPER/LOWER LIMB: Fragment unidentifiable long bone.

AGE: Adult.

SEX: ?

Key to grid square & context tables:

s. skull            u. upper limb  
a. axial            l. lower limb  
un\burnt unburnt & burnt bone.

NB. In all cases where both burnt & unburnt human & animal bone was recorded, it was the animal bone which was unburnt.

These collections were made in grid squares across the site and include bone from areas of disturbance where the bone could not be attributed to any discrete urn. The grid square collections were examined briefly in order to extract any grave goods formerly overlooked, to ascertain whether the collection comprised human or animal bone, burnt or unburnt, and to record the weight of the bone to aid estimation of minimum numbers. In a few cases, collections could be and were attributed urn numbers, these were transferred (see Table 2).

Miscellaneous and grid-square multiples were not considered to be worth appraising.

The context bone collections presented more of a mixture of animal and human bone than the grid square collections, with an emphasis on the animal. Animal bone from the contexts is presented in Rickett (forthcoming). Only the contexts which contained human\cremated bone have been recorded here. Where mixtures of unburnt animal & cremated human bone occurred the human element was separated out by the writer.
