

K1223 Condition Report

Conservation Started: 23/11/2015

Conservation Finished: 23/11/2015

Conservator: Kayleigh Fuller

Time Taken: 0.75 hour

Including digital photography, report, conservation and packing.

Dimensions: (L.) 26mm; (W). 18mm; (Th. base edge) 2.5mm (top) 2mm, (Hole L.) 5.5mm; (W). 4.mm

Weight: 6.17g

Nail – 0.94g

Catalogue number: 592

Digital photography:

Taken with a Keyence VHX-1000 3D digital microscope with LED and/or fibre optic lights (20-200x magnification).

Annotation on any of the storage bags or boxes: None

Description: Visual and microscopic examination using Meiji stereo microscope 7-75x magnification

Silver tab fragment that joins to cheek-piece K97/[Warks Arch find], the pair to K594. It flares out at its base and is rounded at the top. It has a sub-rectangular slot, cut-out below its top, for the attachment of the cheek-piece to a helmet. It has traces of gilding at its base.

Associated Objects: TBC

Pre-Conservation Condition: Visual and microscopic examination using Meiji stereo microscope 7-75x magnification

The break edge is worn. Heavily pitted by corrosion.

Treatment: None

Post-Conservation Condition/Findings:

The object did not undergo any conservation treatment; as such only 'before' conservation photos were taken.

Key Features:

- Cheek piece tab

Samples:

None
