

K1438 Condition Report

Conservation Started: 17/06/2013

Conservation Finished: 17/06/2013

Conservator: Cymbeline Storey

Time Taken: 1 hour

Including digital photography, report, conservation and packing.

Catalogue number: 691

Fragment A (square):

Dimensions: (L) 5mm (W) 4mm (D) 1mm

Weight: 0.03g

Fragment B (rectangular):

Dimensions: (L) 5mm (W) 3mm (D) 1mm

Weight: 0.02g

Digital photography:

Taken with a Keyence VHX-1000 3D digital microscope with LED and/or fibre optic lights (20-200x magnification). Taken before and after.

Annotation on any of the storage bags or boxes: None

Description: Visual and microscopic examination using Meiji stereo microscope 7-75x magnification

Two fragments (all edges breaks) of undecorated, completely corroded copper alloy.

Associated Objects: TBC

Pre-Conservation Condition: Visual and microscopic examination using Meiji stereo microscope 7-75x magnification

The objects appear to be completely corroded. All edges appear to be old breaks. The fragments are clean and stable; no conservation is required.

Treatment: None

Post-Conservation Condition/Findings:

The objects did not undergo any conservation treatment. As such, there are only pre-conservation photographs.

Key Features:

- Two completely corroded fragments of copper alloy
- Undecorated

Samples:

None
