EUROPEANS & ARCHAEOLOGY

A survey on the European perception
of archaeology and archaeological heritage

This booklet was created as part of a European cooperation programme called NEARCH, supported by the European Commission. The NEARCH partnership is designed to create new scenarios for archaeology and heritage; to foster the relationship between contemporary European societies and our realm of expertise. It aims to understand what citizens think and expect of their relation with heritage; involve communities in our processes, our decisions; and understand what it means for us as professionals. We are trying to create contexts to rethink our discipline and open our field to more collective and inclusive practices.

European citizens' opinion

In order to obtain an objective view of the perception of heritage and archaeology we asked European citizens about their relation to it directly. Working with the poll survey institute Harris Interactive, we set up a survey across nine European countries.

The results showed us that the Europeans are quite well informed about archaeology and heritage and want a closer relationship with it.

When we asked them “What is archaeology?”, responses were quite precise, revealing a good understanding of the discipline, and its association with a scientific activity.

The role of archaeology is clearly associated with understanding the present and passing down this knowledge to younger generations.

What a responsibility this is for us!

We understood also that citizens do not have a very precise view of an archaeologist’s daily tasks and activities. They understand why we need archaeologists but what we really do is not very clear. This point is important for us; we have to better explain “How” we construct the past.

Citizens are clearly moved by heritage and keen to support archaeology has a useful discipline. They also want a governmental role in maintaining the discipline as a common good and for the common benefit. This is great news but again a great responsibility for us. It was a surprise that citizens did not identify the economic role of the heritage and archaeological sector. This is our fault; we must better explain how important heritage is for development in our countries, in terms of employment and income, but also well-being.

We also learned through the poll that upper socio-demographic profiles have stronger knowledge of archaeology and heritage, which did not surprise us, but this is unacceptable as long as we assume our European past is a common good. This is an ongoing challenge for our profession to speak to all citizens without exception, it is our duty.

In this booklet you will find an easy to use synthesis of the results of this survey, to be used and reused within your own context.

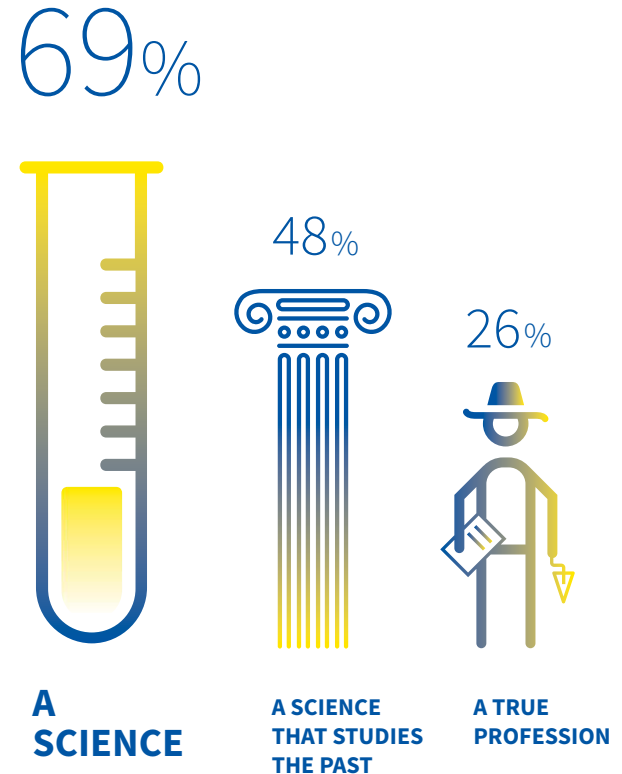

To conclude, through this journey into how heritage and archaeology is perceived from outside the discipline, we understand that we must move forward, as people love and expect a lot from archaeology and heritage, and therefore us.

We will continue analysing what is expected from us by our fellow citizens, and will try to more closely align ourselves with their expectations, keeping in mind the huge responsibility we have to scientifically construct knowledge about our past, which is often misused in our current political climate.

WHAT IS ARCHAEOLOGY?

Europeans, who are quite interested in archaeology, consider it “a science that studies the past”. For 26%, especially the youngest respondents, archaeology is a true profession.

WHAT IS THE PURPOSE OF ARCHAEOLOGY?

While considered useful by the respondents, they spontaneously replied that above all it serves to teach us about our past (history, civilisations, human origins, etc.). Europeans do not identify all the economic values of archaeology, but nonetheless recognise other, more social values, which remain to be precisely defined.

EUROPEANS REGARD

WHO MANAGES ARCHAEOLOGY?

The management of archaeology was identified as a prerogative of the public sector, but attributed to diverse entities depending on the administrative organisation of the country.

For example: it is more centralised in France and Italy, and more regional in Germany and Spain. Archaeological associations are also identified as participants in the management of archaeology, especially in Greece, Poland and the United Kingdom.

WHO CONDUCTS ARCHAEOLOGICAL RESEARCH?

When we asked European citizens to identify more precisely who is conducting archaeology from an operational perspective, respondents indicated the public sector. Inside this broad field, they clearly believe universities and public research institutes are the main actors in the archaeological field.

WHAT DOES AN ARCHAEOLOGIST DO?

The persons surveyed have a very broad vision of what archaeologists do. Their work is not seen as being limited to excavating. Europeans associate archaeologists with many activities: writing, teaching, organising exhibits, etc.

98%

THEY CARRY OUT
ARCHAEOLOGICAL
EXCAVATIONS

96%

THEY INTERPRET
THE TRACES OF THE PAST

95%

THEY CONTRIBUTE TO KNOWLEDGE
ABOUT CIVILISATIONS

84%

EXHIBITIONS

WHAT ARE YOUR CULTURAL PRACTICES RELATED TO ARCHAEOLOGY?

When questioned about how they experience the archaeological domain, Europeans first mention television. In Greece, Italy and Spain there are particularly well developed activities within the archaeological domain, while in the UK and Netherlands, citizens devote less time to such activities. We observe a significant difference in terms of practices depending on gender and socio-professional categories of the respondents, with men and upper socio-professional categories reporting more intensive activities.

WHAT ARE YOUR SOURCES OF INFORMATION ABOUT ARCHAEOLOGY?

Europeans describe television as their primary source of information about archaeology, far more so than visiting sites and exhibitions, the press or social media. Very few people get information from conferences.

56%

**DOCUMENTARY PROGRAMS,
NEWS REPORTS ON TV, RADIO**

**VISITS TO SITES
AND EXHIBITIONS**

**NATIONAL AND
REGIONAL PRESS**

SOCIAL MEDIA

HOW DO YOU FEEL ABOUT ARCHAEOLOGY?

The citizens surveyed have a very positive image of archaeology, including its value, utility and emotional impact. Europeans recognise a high value for archaeology at the local and national levels.

The great majority of those surveyed also believe that citizens should have archaeological knowledge and that the discipline should be taught in school.

64%

OF EUROPEANS THINK THE DISCIPLINE SHOULD BE TAUGHT IN SCHOOL

85% IN GREECE

14% IN THE NETHERLANDS**

... AND PREVENTIVE ARCHAEOLOGY?

Europeans know little about the notion of preventive archaeology or development led archaeology. The Polish and Italians are the most familiar with the expression “preventive archaeology”. Once the principle of preventive archeology is explained, Europeans are unanimously in favor of it, particularly for protecting archaeological remains and preventing irreversible damage. Most Europeans think the management of preventive archaeology should be entrusted to the public sector to “avoid serving particular interests”; to “guarantee the same norms in all regions”; or “because only the national government can guarantee the preservation of heritage”.

METHOD & DATA

EUROPEANS & ARCHAEOLOGY

A survey on the European perception of archaeology and archaeological heritage

In the framework of the European NEARCH project, Inrap and its European partners conducted a study of the perception of archaeology and archaeological heritage by the European public. To realise this extensive study, the project partners enlisted Harris Interactive, a firm specialising in conducting opinion polls.

METHOD

Applying the methodological standards used for opinion polls, this quantitative survey was conducted from December 29, 2014 to January 6, 2015. Its participants consisted of 4,516 adults, aged 18 and older, from nine European countries (approximately 500 individuals per country) including Germany, Spain, France, Greece, Italy, the Netherlands, Poland, the United Kingdom and Sweden. The survey was conducted on-line via an administrative system that enabled the persons surveyed to use different types of devices (computer, mobile phone, tablet) to respond to a questionnaire consisting of twenty-eight questions and requiring 15 to 20 minutes to complete.

Sample frame of the population interviewed

The Harris Interactive and Toluna (ITWP Group) access panel is currently known as the most reliable and representative sample of population, guaranteeing the representativity

and reliability of the results. It is composed of 9 million panelists distributed across all continents, including 2.5 million in Europe.

The representativity of a sample is based on socio-demographic criteria on the shared European base “Eurostat”, which provides transversal criteria associated with the inhabitants of different European countries: gender, age, social category and place of residence. For each country, a population of 500 persons was surveyed (except for 516 persons in Greece to constitute a representative sample of the population). Often used in large-scale European or international studies, a sample of 500 individuals is considered as sufficient to provide results that are representative of a population at the scale of a country.

Socio-demographic criteria

The following sociodemographic criteria were used in this study:

- Gender (male/female)
- Age (18-24, 25-34, 35-44, 45-59, 60 and older)
- Socio-professional categories:
 - SPC -: employee, manual laborer
 - SPC +: farmer, business owner, artisan, merchant, self-employed, manager, corporate executive, public service executive, upper intellectual and artistic professions, intermediary professions
 - Inactive: housewife, househusband, student, retiree, seeking first employment, unemployed
- Place of residence

Questionnaire design

The questionnaire, identical in the nine countries surveyed, was realised in collaboration with Harris Interactive by the NEARCH project partners in accordance with their research questions and themes. Composed of twenty-eight questions, the survey included open-ended and closed-ended questions. The aim of the first part of the questionnaire was to interrogate the participants on their knowledge and interest

in archaeology, how they perceive it, and their cultural practices relative to the field. The aim of the second part was to understand their perception of the organisation and funding of archaeology, and their expectations in this domain. Initially constructed in French and English, the questionnaire was translated into seven languages to ensure that access to the questions would be identical in all the surveyed countries.

Processing of the results

At the end of the fieldwork phase, data adjustment methods were applied to overcome potential differences between the representativeness of the socio-demographic criteria and the sample frames in each country. In the case of this study, only very minor adjustments were necessary since the sample structure of the respondents was naturally closely representative.

The responses to the open-ended questions were analyzed to identify the topics most frequently addressed. A codification plan was then implemented and applied to the set of answers. This guarantees a similar treatment and the possibility of sorting according to variables. This produces statistical results similar to those for closed questions.

For further information on the method used:

Harris Interactive

DATA

The summary table displays the main results of the survey presented in this booklet, along with the questions raised in it. It includes the average European results and the results from each country.

This study resulted in a series of survey reports:

- A global report presenting the average European results compared to the results of each country
- Nine country reports presenting the results of each country in comparison to the European average

When relevant, the results in the reports are presented according to the socio-demographic criteria used in the survey.

NEARCH PROJECT

Archaeology and cultural heritage management have undergone significant scientific and professional developments over the last 25 years.

The NEARCH project aims to study the various dimensions of public participation in archaeology today and to propose new ways of working and cooperating in a profession strongly concerned by the current economic crisis.

Coordinated by the French National Institute for Preventive Archaeological Research (Inrap), NEARCH relies on a European-wide cooperation network. The project is supported by the European Commission for 5 years (2013-2018) in the framework of the “Culture Programme”.

The NEARCH project has been funded with support from the European Commission.

This publication reflects the views only of the author, and the Commission cannot be held responsible for any use which may be made of the information contained therein.
