

## ASSESSMENT OF WORKED STONE FROM Cross Rail, XRX10

18 March 2011

by Ruth Shaffrey

### Summary and Quantification

A total of 12 pieces of stone were retained during the excavation.

### Methodology

The stone was examined by eye, weighed and recorded in an Access database.

### Description

Eleven fragments of slate roofing were retained (1.2kg). These did not retain any original features, such as nail holes, but seem certain to have been used for roofing. A thick block of slate (3054) has one cut edge but is of unknown function; it is possibly raw material.

Box	Contex	Descrip	Notes	Size	Weig	Lithology
ST 01	3015	Roof slate fragment	1 fragment	Measurements are indeterminate	93	Slate
ST 01	3020	Roof slate fragment	2 fragments	Measurements are indeterminate	199	Slate
ST 01	3054	Roof slate fragments	3 fragments	Measurements are indeterminate	352	Slate
ST 01	3001	Roof slate fragments	3 fragments	Measurements are indeterminate	369	Slate
ST 01	3022	Roof slate fragment	1 fragment	Measurements are indeterminate	30	Slate
ST 01	3030	Roof slate	1 fragment, now square	Measures 96 x 96b x 4mm	118	Slate
ST 01	3054	Worked stone	Thick chunk of slate with one cut edge. Raw material?	Measures 84 x 79 x 26mm	365	Slate

### Statement of Potential

The stone has limited potential to add to our understanding of the archaeology of the site.

### Recommendations for further work

No further work is recommended, although the slate fragments should be mentioned in any future publication report.
