

Survey and Levels Data

XSW11

The locations of the trenches and areas of excavation were recorded by JV (Hochtief/Murphy) and MOLA Surveyors using GPS. These results were tied in to the Ordnance Survey grid and the London Survey Grid. A survey report was produced by MOLA Geomatics.

Levels data was based on Above Tunnel Datum (ATD) data provided by JV (Hochtief/Murphy). ATD is calculated as being 100m above Ordnance Datum, e.g. 1m OD = 101m ATD. The heights of archaeological features and deposits were recorded relative to this datum.

Four handwritten pages of survey and levels data relating to the location and levelling of individual trenches have been included in the archive in addition to the Geomatics survey report.
