

## **Survey and Levels Data**

**XTH12**

The locations of the watching brief areas were recorded by Crossrail surveyors who provided the data to MOLA. This information was transferred onto the Ordnance Survey grid.

Levels data was based on Above Tunnel Datum (ATD) data provided by Crossrail surveyors. ATD is calculated as being 100m above Ordnance Datum, e.g. 1m OD = 101m ATD. The heights of archaeological features and deposits were recorded relative to this datum.
