

APPENDIX FOUR: SOUTH TYNESIDE LOCAL LIST NOMINATIONS

The information below is provided to aid interpretation and understanding of the data. The numbered notes correspond to numbers within the spreadsheet column titles.

n.b. Columns A-G of the spreadsheet were provided by the Local Authority Conservation Officer

Key Data Source(s): Local Authority Conservation Officer, Lucy Routledge

Date of collection: Spreadsheet of nominations emailed to the author on 15-Oct-2014

Notes:

1. **Nomination Category:** The nomination form asked for details of assets falling within these 4 distinct categories, with a box to tick for the category type. This was not provided by the Conservation Officer so has been included here for analysis.
2. **Asset Type:** Assets have been categorised according the Historic England Listing Selection Guides, which use the same macro-level categories as the thesauri used within all Historic England databases, as well as Historic Environment Records and databases managed by the Archaeology Data Service (ADS).
3. **Local Interest Type:** The local significance referred to in the applications has been categorised here according to a number of values which became evident during the analysis of National designation applications (Appendix 1). Where more than one value was referred to, the application was categorised according to what appeared to be most prominent within the reasons for applying section.

Where no specific mention is made, e.g. of the site as a landmark, and the information provided by the Conservation Officer only includes details of the form and function of the asset, architecture/history has been chosen.

4. **Future/Continued Use:** Recorded as 'yes' if the application refers to designation ensuring that the asset will remain open, will have to re-open, or would become a community asset etc.
