

Archivist's Note

XSP10

This project consisted of four phases of work: An evaluation and borehole watching brief from November 2010 to September 2011 (Report C257-MLA-X-RGN-CRG02-50069), a watching brief on utilities diversions from April to December 2011 (Report C257-MLA-X-RGN-CRG02-50130), a watching brief on sewer diversions and OSD from February to June 2012 (Report C257-MLA-X-RGN-CRG03-50044) and an excavation from March 2012 and November 2013. The final phase of work was reported in a joint Post-Excavation Assessment report covering both XSP10 and XRZ10 (C257-MLA-T1-RGN-CRG03-50039).

Two registered finds were missing from the archive: Coppery-alloy object <4> and worked stone <5>. The former may have fallen out of the punched hole in the finds bag in which it was stored.
