

Archivist's Note

XSL10

The archive for XSL10 represents one phase of work within the Crossrail worksite known as the 'Blomfield Box'. The second phase of work in this area was carried out under a different site code (XTB12) although the context, plan and section numbers were continued in the same numbering sequence as for XSL10. Contexts 1 to 15 relate to XSL10, those from 16 to 43 are for XTB12.

Context 6 was voided as it was found to be redeposited material and is mentioned as such in the evaluation report. Single context plan 6 has been removed and the plan of the underlying deposit [7] amended to show that it is overlain by '+'.

A single environmental sample was taken from context [8] which contained animal bone, oyster shell and charred wood. No sample sheet or processing sheet was found for this.
