The Consultants

Jacob Rock MA PGDip[Dist] HistEnvCons PGCE
Louisa Davidson MA [Dist] HistEnvCons BA(Hons) ALCM AssocIHBC

Rock- Davidson Associates, Historic Building Consultancy, was recently formed to help and advise on all aspects of the historic environment; legislation, historic buildings pre-1970 and conservation matters. With Masters Qualifications, postgraduate degrees with distinctions, in Historic Environment Conservation from the University of Birmingham, Ironbridge Institute, the consultants are up-to-date regarding current practice in all matters relating to the built environment. This course was accredited by the Institute of Historic Building Conservation (IHBC) and Louisa Davidson is an Associate Member of the IHBC. "Accredited in conservation practice that evaluates change in the built and historic environment" and an Affiliate member of the CIfA. The consultants are also members of the Vernacular Architecture Group, the SPAB and the C20 Society.

Rock Davidson Associates [RDA] is a consultancy providing professional and independent historical buildings research, architectural recording, conservation plans, heritage statements and assessment of significance, statements of significance; including third party, conservation area appraisals, designation and listed building advice; including local listing, house history research for house owners or for businesses such as hoteliers and publicans.

The Client

Mr & Mrs Cooper of The Brandy Cask 25 Bridge Street ,Pershore, Worcs WR10 1AJ,

LIMITATIONS

The house is owner occupied so RDA was unable to move furniture or carpets etc. No Liability to third parties is accepted for advice and statements made in this report

Methodology

Documentary Research

A search was made of all relevant published and unpublished documentary sources including historic maps, title deeds, written descriptions with primary and secondary sources at County and Local archives such as trade directories and local history books

This is a desk and web based assessment using current books and written sources and appropriate websites. A site visit to The Brandy Cask 25 Bridge Street ,Pershore, Worcs WR10 1AJ was made on September 16th and 17th 2016

Historic Building Record

The historic building record comprised a detailed visual examination of the exterior and interior of the building and the compilation of a photographic and written record to a level equal to a level 2 record as defined by Historic England A guide to good recording practice (Historic England, 2016) as follows

The Drawn/Visual Record

Pre-existing measured architects plan of principle levels was supplied by the client and checked on site and annotated to indicate significant architectural detail.

The Photographic Record

The photographic record comprised of digital photography using a Panasonic DMC-TZ8 Lumia was used to record both general and detailed shots and exterior elevations, visible structural and decorative details (interior and exterior) and interior view of principal rooms and circulation areas. All photographs were recorded on pro- forma recording sheets with details of subject, orientation, photographer and date photo number. A record of project photographs is included (See Section 4.1/5.1/6.1/7.1/8.1/9.1/10.1/11.1/12.1/13.1 .A register of Photographs) High resolution photographs have also been supplied to client and Archives with Photo IDs matching this report.

The Written Record

To accompany the drawn and photographic records, an organised written account of the building was made as free text this forms the basis of the following description.

(See Section 4.3/5.3/6.3/7.3/8.3/9.3/10.3/11.3/12.3/13.3)

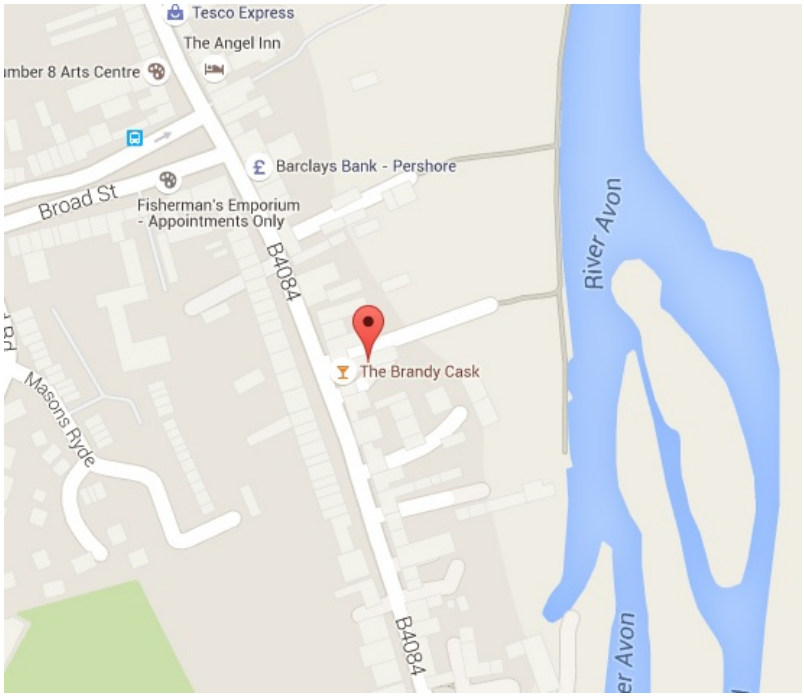
1.1 Introduction

The current report outlines the results of a programme of archival research and historic building recording for Mr & Mrs Cooper of The Brandy Cask 25 Bridge Street ,Pershore, Worcs WR10 1AJ,and has been prepared to provide a record of the site. Wychavon Planning Ref. Application No: 15/01769/PN, regarding a planning application approved on Appeal 1st July 2016 for of Conversion of a public house and manager's accommodation to form eight residential units consisting of seven flats and one dwelling in the courtyard outbuilding.

In order to comply with National Planning Policy Framework section 12 paragraph 141, and SWDP 6 and SWDP 24 'No development shall take place until a programme of archaeological works, including a Written Scheme of Investigation, has been submitted to and approved by the local planning authority in writing. (Planning Reference no 15/01769 Condition 7 & 8 and 15/01770LBC condition no 9 & 10). An analysis to assess the significance was also required.

Site Location
Site Grid Reference OS National Grid Reference: SO9507045621 OS Grid Coordinates: 395070, 245621

The site consists of one a public house and manager's accommodation, two storey former liquor store and building in a courtyard and single storey building until very recently used as a micro-brewery serving the pub.



Source: Googlemap

Summary

The building, most recently used as a Public House and Managers accommodation was probably conceived in the early to mid C18 with adaption to the front façade with stucco render in the early C19 in keeping with the Regency taste at the time. The building may have then been added to principally with the Brewhouse [Ref House Deeds] and outbuildings to the rear probably in the mid to late C18. There is no evidence that the liquor store outbuilding is of any earlier date. When the building became a Liquor store and Tavern in the C19 it underwent further alterations with the addition of a 3 storey canted bay and function room and two bay windows to the street front facade of the original building. The roof of the canted bay has been renewed and has had a change of pitch orientation when in 1943 a Wellington bomber clipped the building and crashed into outbuildings to the rear. The Brewhouse and attached outbuilding although window and door openings have changed over time is principally of original plan form. There are some original C18 fixtures and fittings to the principal building and outbuildings but most belong to the C19 and C20. The single storey outbuilding of probably C19 date opposite the former liquor store outbuilding has undergone more major changes although some C19 fittings remain.

1.2 Designations

1.2.1 Statutory Listing

The Brandy Cask NHLE Building ID: 1386941 [474357] 25 Bridge Street Pershore Worcs WR10 1AJ is Grade II listed as SO9545 BRIDGE STREET 648-1/5/23 (East side) 11/02/65 No.25 The Brandy Cask (Formerly Listed as: BRIDGE STREET(East side)The Brandy Cask). Date first listed: 11 February 1965 The National Heritage List for England list entry states:

"Inn. Reputed to date to 1779; early- and late-C19 alterations. Brick painted or rendered with scored stucco. Left-hand section has shallow-pitched Welsh-slate roof with moulded
eaves cornice and 2 brick end stacks; canted bay has roof concealed behind high, coped, parapet; right-hand bay has replacement plain tile roof with stepped cogged eaves.
EXTERIOR: 3 storeys and cellar; right-hand bay of 2 storeys.In three sections, that on left a 2-window range of 8/8 sashes with painted channelled voussoirs, keystones and sillband to
1st floor; two similar 4/8 sashes above; on ground floor, plinth, steps up to central 6-panel door with Gothick-traceried overlight and wooden architrave flanked by canted bay windows with 2/2 sashes, all under entablature with triglyph frieze.
On right, late-C19 full-height canted bay has basket-arched openings with moulded surrounds; 2-pane sashes; on each upperfloor 4 windows, paired at centre, with cable-moulding; on ground floor, central 6-panel 2-leaf door with overlight flanked by windows; plinth; 1st-floor string and sill band. Lower right-hand bay has 2-light window of paired sashes over segmental-arched carriage entrance.
Rear range includes former liquor store.
INTERIOR: not inspected."

Ref National Heritage List England

1.2.2

The Brandy Cask is flanked either side by two GD II listed buildings The Star Inn and no 27 Bridge Street. Most of the buildings in Bridge Street are GDII listed [See HER Search Report Appendix II]

1.2.3 Conservation Area

The Brandy Cask is within the Pershore Conservation Area. The Pershore Conservation Area Appraisal April 2007 states:-

Inns and Public Houses.
P. 4.59. "These are substantial buildings of three or more bays and two or three storey, often incorporating a carriage entrance to stabling and coach house behind. They date principally from the 18th or 19th centuries, although frequently incorporating earlier timber framed remains. They are typical in their design of their respective architectural periods, with a form, scale and fenestration reflecting the houses of this period, often incorporating design features such as bay windows and entrance doors under prominent porches or hoods. P. 4.60 Inns and public houses are concentrated in Bridge Street, High Street and Newland" [Ref Pershore Conservation Area - Wychavon District Council]

1.3 Scope of report

The report has been prepared to RCHME Level 2/3 of a historic building recording survey of as defined within Understanding Historic Buildings - A guide to good recording practice (Historic England, 2016)

The report was based upon information current to August 2016-October 2016. Site recording was undertaken over a period of two days September 16th & 17th 2016 with archival research carried before and after this date.

2.1 Historical background-the town

The Town of Pershore

Pershore is situated in the rich agricultural land of the Vale of Evesham, roughly mid-way between the city of Worcester and the market town of Evesham. The River Avon flows to the east of the town, cutting into the gravel soils of the floodplain to create a series of low flat terraces. The historic core of the town stands immediately adjacent to the river on one of these terraces, between an ancient crossing point over the river and Allesborough Hill to the north-west. Pershore has considerable historic, architectural and archaeological interest. As a significant monastic centre in the Saxon period, a prosperous market town in the early medieval period and a place of wealth and society in the Georgian period, it has more than a thousand years of settlement history. Each of these principal phases of development has left a wealth of historic buildings and structures overlaying an historic settlement form, with buried archaeological deposits and high potential for artefact recovery. Warehouses and storage barns were built at the rear of properties backing on the west-side of Bridge Street, with wharves, warehouses and storage barns on the east side backing onto the river. Passages and goods entrances were incorporated into the redevelopment of the street frontages. These features and the several warehouses and barns still surviving at the rears of Bridge Street and High Street are tangible evidence of the role of the river in the development of the town we see today and are part of its special interest. P. 3.24 Several coaching inns lined the main High Street/Bridge Street thoroughfare. Many are still present as public houses. Surviving stables and coach houses at the rear are evidence of their former use and role in the town's development. P. 3.25 The limited extent of surviving timber framed structures suggests that the main streets of the town were substantially re-built, with renewed buildings overlaying the footprints of earlier structures. [Ref Pershore Conservation Area - Wychavon District Council]

.

The Victoria County history 1924 discussing trade in Pershore states "The inhabitants of Pershore have probably always been mainly employed in agriculture. Some trade in wool may have existed in the 14th century and there was a fulling-mill on the Avon in the 15th century. Later the stocking trade became one of the principal industries, Defoe in 1753 describing Pershore as 'famous for the stocken trade.' Glove making and tanning were also important, the former employing many of the women until the end of the 19th century. Early in the 19th century there were two establishments for the manufacture of watch springs. Woolstapling and matting were the chief trades in the middle of the 19th century, and towards the end of that century an agricultural machine manufactory and two jam factories were established. These are still carried on, but market gardening and fruit growing are the chief industries at the present day. Pershore tradesmen's tokens of 1664, 1666 and 1667 have been found."

Ref 'The borough of Pershore', in *A History of the County of Worcester: Volume 4*, ed. William Page and J W Willis-Bund (London, 1924), pp. 151-155. *British History Online*http://www.british-history.ac.uk/vch/worcs/vol4/pp151-155 [accessed 13 July 2016].

'The book of Pershore' authors Philip Barrett and Marshall Wilson states:-

"One trade which bought the area in touch with the outside world was wool. Although Pershore was never a great wool town, both Abbeys maintained local flocks of sheep and in the late middle ages Westminster Abbey had a fulling Mill on the Avon. Wall – stapling and matting were important trades right up to the 19th century, and wall stapling barns can still be seen behind various houses on the river side of the high Street and Bridge Street. In the early 17th century a silk weaver is mentioned, and the making of stockings and gloves was for centuries an important part of local life."

[Ref The Book of Pershore Philip Barrett and Marshall Wilson published 1980 Barracuda Books Ltd Buckingham England p 50]

2.2 Brief History of Ownership-The Brandy Cask

1752: is the earliest Deed and Conveyance found in the primary source archive of The Brandy Cask:

Thomas Ashfield and Elizabeth sold the premises described as **Messuage, Brewhouse, Barns,Stables, Garden Orchard and Courtyards with Bankside**[referring to the river frontage] of two bays to James Andrew. He appears to have leased the premises over a number of years.

1797: Indenture Wakeman Long to John House describing the premises in High Street

1803: John House leased the premises to Robert Stephens and it is described as a **Cyder House** with gateway leading from yard extending its length including the Cyder House from the street to the Stable part and the Barn Stable Buildings and Garden.

1820: A Mr Henry Baker is listed in the Pershore Worcs Directory as **Liquor Merchant** Bridge Street

[1840 a local directory shows another Henry Baker as a wine merchant here whilst the 1851 Census describes John Baker, a widower aged 32, born in Pershore, as the wine merchant. He had a housekeeper and servants living with him as well as a six-year-old nephew.] 'Pershore Pubs Past And Present' by Janet Daniels 2002

1861: Census John Baker age 42 Wine & Spirit Merchant [Ref RG9/2106 523]

1867: Sold to Mr John Baker referring to the premises as Messuage, in Bridge Street with the barn stable and buildings adjoining them and the large garden at the rear being in Bridge Street

[1881 the Census defines John Griffin Baker as the wine merchant although his sister, Laura Jane, was designated the head of the household.1913 John Griffin Baker] 'Pershore Pubs Past And Present' by Janet Daniels 2002

1881: Census John Griffin Baker b1858 **Wine Merchant** [Ref Piece 2930 Folio47 Pg3]

[1881 the Census defines John Griffin Baker as the wine merchant although his sister, Laura Jane, was designated the head of the household.1913 John Griffin Baker] [Ref'Pershore Pubs Past And Present' by Janet Daniels 2002]

1884: John Griffin Baker marries Louisa Anne Herbert [Ref Vol no 6c pg 443]

1891: Census John Griffin Baker age 35 b1858 Bridge Street **Wine & Spirit Merchant and Maltster** [Ref Piece 2340 Folio 83 pg 3]

1907: Property passed John Griffin Baker described as Wine Merchant in the Will of the late John Baker-The House and premises in Bridge Street

1919: -Reconveyance John Baker to JG Baker premises in Bridge Street is the last document seen by RDA in the Primary source archive

In 'Pershore Pubs Past and Present' the author Janet Daniels 2002 refers to the Brandy Cask history as follows:-

1921 : these premises had become a pub and purchased by Hunt Edmonds of Banbury. Later Mitchells and Butler bought the property

The Liquor Vaults were then renamed "The Brandy Cask" and the first landlord was Septimus Octavius Collett, an ex-policeman, the seventh son of the eighth child.

1940: Arthur Berry became the licensee followed by Hartland Leigh Gough, and for some 10 to 13 years after that the landlord was Joe Lang Ham.

29 May 1943: during a "wings of victory" fly past, a Wellington bomber crashed into the roof of the Brandy cask killing all five crew. A plaque recording this event was unveiled at the pub in May 2001. The Canadian pilot and British wireless operator are buried in Pershore cemetery. The landlord's wife, Mrs M Berry, was slightly injured but otherwise there were no civilian casualties. It was originally hoped to remove the wreckage by river in the event it was taken out through the archway between the Brandy Cask and its next-door neighbour, The Star, bits of metal work and ammunition from this aircraft were found in the garden years later. *Site of an aircraft crash on the 29th May 1943. At 19:10 hours a Vickers-Armstrong Wellington III serial number X3704 of 23 Operational Unit collided with the roof of No 44 Bridge Street knocking circa 2 feet off the ridge. It then crashed into the roof of The Brandy Cask Hotel and fell in the back garden, demolishing outbuildings and a garden wall and the boundary wall between The Brandy Cask and The Star Hotels. The aircraft was participating in a flying display to mark Pershore's "Wings For Victory" week. [6]* Unpublished document: British Aviation Archaeological Council. 2006. Midland Aircraft Recovery Group Archive. British Aviation Archaeological Council. SWR21494 REF HER Search p.72 Appendix II

1975 to 1987: Percy Newell

1987 to 1990: Major and Maureen Rathbone (not a military man) held the licence.

1990: Spencer and Marianne Cooper the current owners

In 'Pershore Pubs Past and Present' the author Janet Daniels 2002 *says:-*

'Another interesting feature of this pub is the Serpentine Wall that meanders down to the river on the right-hand side. Serpentine walls are rarely found these days although Pershore is lucky in this respect for instance, there is another one that goes from Bridge Street by the site of the Manor house (Q . V.) the idea of these Serpentine's walls was to build a wall of single brick thickness without pillars and thus prove more economic in the use of bricks. They also provided patches of shade for plants' [Ref Pershore pubs past and present' by Janet Daniels 2002]

This type of wall is often referred to as a Crinkle Crankle wall and most often found in East Anglia {ref Brunskill,R 1990 Brick Building in Britain]

Serpentine Wall Brandy Cask Gardens Photo Source: RDA

2.3 Map Regression

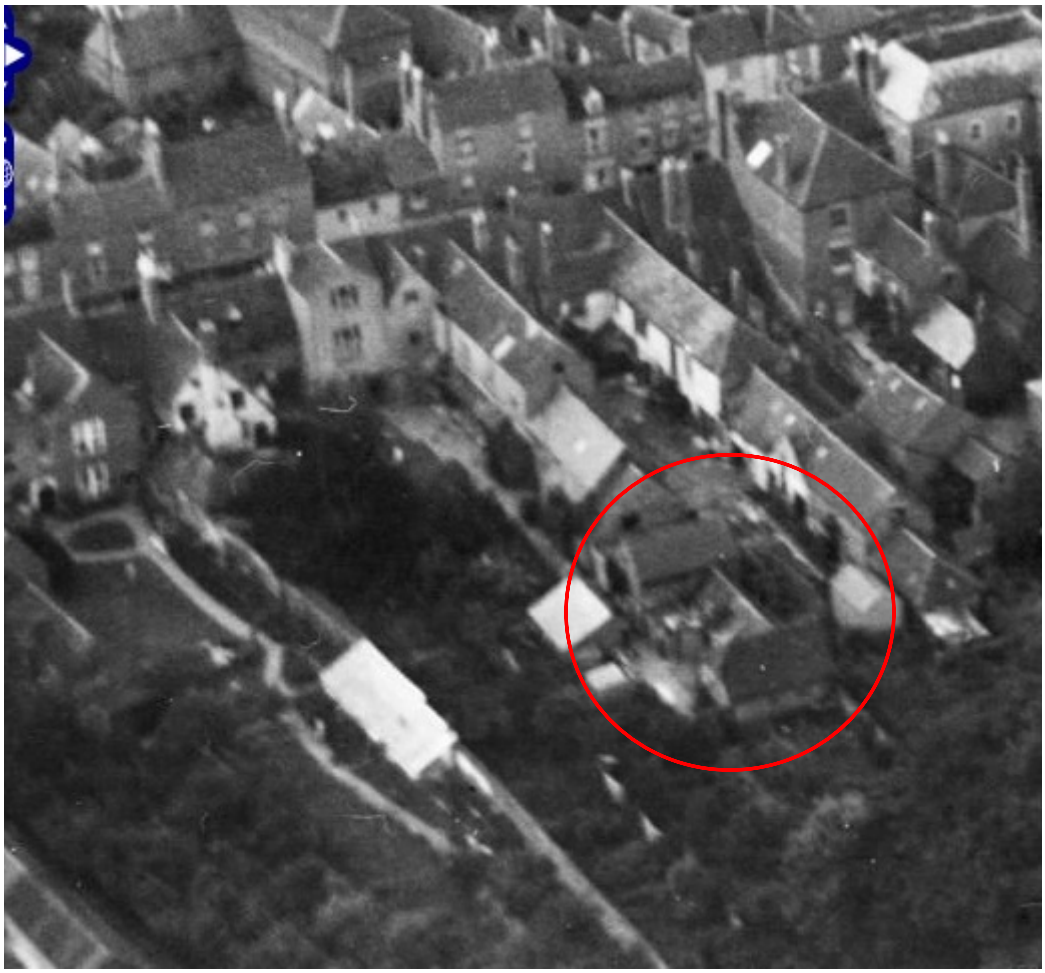
A study of historic mapping was undertaken [Ref HER Report The Brandy Cask pg 10-13 Appendix II] and the earliest found in any detail was the 1842 Tithe map that shows a series of outbuildings behind The Star and The Brandy Cask. The Ordnance Survey 1st Edition, 1885 (Landmark reference number 39so9545. Original scale:25" (1:2500)) / Ordnance Survey 2nd Edition, 1904(Landmark reference number 39so9545. Original scale:25" (1:2500))(Landmark reference number 39so9545. Original scale:25" (1:2500)) and Ordnance Survey 4th Edition, 1938(Landmark reference number 39so9545. Original scale:25" (1:2500)) clearly indicates the location of The Star Hotel and shows these buildings including the Brandy Cask with the south facing gabled outbuilding of the former Liquor Store extending further towards the river frontage with a U shaped barn/s or stabling. These we know were demolished when the Wellington Bomber crashed into the gardens of the Brandy Cask and Star Hotel in 1943. [Ref Unpublished document: British Aviation Archaeological Council. 2006. Midland Aircraft Recovery Group Archive. British Aviation Archaeological Council. SWR21494 REF HER Search p.72 Appendix II]

2.4 Phasing

A study of historical maps and historical photographs, in particular with reference to 'Britain from above' Pershore from the East 1930 EPW033939, prior to the 1943 Wellington Bomber crash, shows a range of outbuildings to the rear stretching further towards the river frontage.[See pg. 14-15] This photograph also shows evidence that the roof pitch orientation of principle street frontage "Late C19 canted bay roof concealed behind high, coped, parapet"; pitch was subsequently changed after 1943. The Left front elevations have been coloured C18 on the diagram below as the interior has evidence of this date even though the frontage was obviously refaced with stucco render probably in the early C19 and windows have been updated. The upper sashes are C20 replicas. The following diagrams show a conjecture of the possible building phases and development of the building(s) although a Level 2 Building Recording does not require detailed analysis and evidence for this conjecture.

Front West Elevations Source: Architects Plans provided by client. Conjecture RDA

Side South Elevations and Rear East Elevations Source: Architects Plans provided by client. Conjecture RDA



The Town Centre Pershore ,from the east. 1930 Image ref EPW033939 'Britain from Above'

Photo has been enlarged considerably and quality has been affected but this image does show a range of outbuildings to the rear stretching further towards the river frontage.

Broad Street and environs Pershore 1928 Image Ref EPW023950 'Britain from Above'

This photograph has been enlarged and shows evidence that the roof pitch orientation of principle street frontage has changed.

Source: Google Earth 2007

These two aerial photographs shows the area where outbuildings once were and the change of pitch of the 3 storey canted bay roof.

Source: Google Earth 2009

3. Building Description

The building, most recently used as a Public House and manager's accommodation was probably conceived in the early to mid C18 with adaption to the front street façade stucco render early C19 is in keeping with the Regency taste at the time. The building may have then added to principally with the Brewhouse [Ref House Deeds 1752] and outbuildings to the rear probably in the mid to late C18. There is a clear building line on the North elevation seen from the Star Inn to suggest this was an addition. There is no evidence that the liquor store outbuilding is of any earlier date. When the building became a Liquor Store and Tavern in the C19 it underwent further alterations with the addition of a 3 storey canted bay and function room and two bay windows to the front street facade of the original building. The roof of the canted bay has been renewed and has had a change of pitch orientation when in 1943 a Wellington bomber clipped the building and crashed into outbuildings to the rear. There are some original C18 fixtures and fittings but most belong to the C19 and C20.

MATERIALS; Brick elevations some rendered and roughcast over slate/stone composite roof tiles.

OUTBUILDINGS:

The rear two storey former Liquor Store, with attic and chimney, {see Brewery Architecture} and attached outbuilding, {See Cider House} although window and door openings have changed over time the building is principally of original layout. Original function unknown although evidence in house deeds and secondary sources of the history suggests brewhouse [Deeds 1752]/cider house [Deeds1803]. There is reference to an Orchard [Deeds1752]. There are some original C18 fixtures and fittings but most belong to the C19 and C20 but none are associated with the brewing industry such as cider presses or hoppers and vats. The single storey outbuilding most recently used as a micro brewery and office of probably C19 date on the north of the central courtyard has undergone more major changes although some C19 fittings remain. Original function unknown

MATERIALS; Brick Elevations over stone composite roof tiles

3.1 Background to Brewing

Commercial brewing began at inns, taverns and alehouses, whose licensing was controlled from around the 1550s by magistrates. The number of common brewers, who did not own pubs themselves, grew rapidly in the 18th century [ref Strategy for the Historic Industrial Environment English Heritage] In the provinces, large common or commercial breweries began to appear from the 1790s…. The Beer Act of 1830 introduced the concept of the beer house, in effect a new type of public house created by allowing any rate-paying householder to apply for a license to sell (and brew) beer on the premises. Within 8 years almost 46,000 beer houses came into being, but they failed to compete with the major brewers in the long run as their beer was unreliable and often produced with poor equipment [ref Strategy for the Historic Industrial Environment English Heritage]

3.1.1Brewery Architecture

The earliest dedicated brewhouses, common by the 16th century, were normally small but well-ventilated structures either standing alone or attached to a cottage, farm or other offices. Inside was a pot surrounded by brick or stone and heated from beneath, along with various tubs and coolers. By the 18th century the purpose-built brewhouse had become an integral part of the offices typically found at the large country house. It was normally a good two storeys in height, with large, unglazed louvred windows and often a ventilation lantern on the roof ridge. The height of the brewhouse allowed full advantage to be taken of gravity during the brewing process, as pumps were either non-existent or inadequate. [Ref Strategy for the Historic Industrial Environment English Heritage]

During the 1870s the typical brewery changed from a rambling collection of low-rise buildings to an eye-catching tower commanding its yard, standing above accommodation for all the varied activities of the modern industrial brewery, from racking, milling and coopering to stabling, offices and the brewery tap. Many of these new breweries were built by architects and engineers who specialised in the construction and fitting out of breweries. [Ref Strategy for the Historic Industrial Environment English Heritage]

3.1.2 Significant features

The most significant sites are generally those which are integrated brewery complexes, comprising a brewhouse and at least one other associated structure, for instance a maltings, stables, fermenting room, copper house, chimney, brewery tap, cooperage, bottling stores, brewer's house or offices. These sites can be small in scale, with just two or three components, or large-scale industrial sites with an almost complete array of buildings, which are often arranged around a courtyard

3.1.3 Cider Houses

A CIDER HOUSE is a building associated with the milling and pressing of cider apples to produce cider (or pears for perry) and for storing the drink in barrels. The growing of apples for cider (or pears for perry) was important in an area extending from the southern West Midlands to east Cornwall. It was also important in other areas, particularly Kent and Suffolk, where few cider houses have been identified.

Typical features Cider houses are frequently incorporated into other buildings ranged around the yard. Where the cider house is a separate building it usually does not have any particular external characteristics, other than a wide doorway allowing for the passage of barrels.

Ref National Farm Building Types [eg Wide doorway to a cider house with a first-floor fruit loft near Bromyard, attached to a stable on the right and at right-angles a hop kiln.]

4.3 Written Description Exterior Elevations

4.3.1 West Elevation

The principal West elevation [the house/pub] on Bridge street, as the list description states are ;brick painted over the arched carriage entrance; followed by a rendered late C19 canted bay with roof concealed behind a high capping wall parapet[P1080834]; followed by a further elevation of earlier C19 stucco scored rendered. [P1080835]The lower bricked painted right hand bay over the arched carriageway has two paired 6/6 timber sash windows; the higher late C19 bay has basket arched openings with moulded surrounds and four 1/1 timber sash windows on each upper floor paired at the centre with cable moulding [like twisted strands of rope sometimes called rope moulding] on the first and second floors. On the ground floor of this bay there is a central 6 panel two leaf door with overlight and to either side a single 1/1 timber sash window. On the left of the late C19 bay the elevation has a two window range of 8/8 timber sash windows with painted voussoirs [wedge shaped stones forming an arch], keystones and sillband to the first floor ;further 4/8 sashes above; on the ground floor plinth with steps up to a central 6 panelled timber door with a Gothick traceried[open pattern work] overlight [P1090042] and wooden architrave to either side are canted bay windows with 2/2 timber sash windows under an entablature[frieze/fascia].

4.3.2 North Elevation

Most of the North elevations can be viewed from the Star Inn Public House under the arched carriageway and in the Carpark. [P1080837/8] The side North elevation of the principal house/pub; Flemish bond brick painted at ground floor. Under the carriageway there is a cast iron soot door in the wall for chimney flue access to the flues and chimney serving the rooms on this side. [P1090044] The first floor extends a further 2 bays East; brick with a timber 6/6 sash window [P1090046] [bathroom]; above this window can be seen the timber eaves and timbers from the C18 roof [P1090045]; lower storey painted brick with a bricked in opening below that may have been a further window.

This elevation clearly shows a building line [P1080839]where the former liquor store; 5 bay two storey with attic gable wing abuts the house/pub; tiled roof ;cogged dentillated brick eaves; elevation of brick English garden wall bond painted on the lower storey. There is another cast iron soot door in this wall below a tall brick chimney. [P1080839] A further lower two 3 bay storey outbuilding abuts this building. [P1080837/8]

4.3.3 South Elevations

The principle South elevation is the two storey with attic former liquor store that faces the inner courtyard.[P1080843]The entrance to this courtyard is under the arched carriage entrance from Bridge street [P1080841]passing the side lower storey south elevation of the main house of painted brick and upper storey brick elevation of C19 together with the single storey brick side elevation of the C20 toilet block extension attached to the main east rear elevation. The principle house has a two two storey small gables of 2 bays of earlier construction probably early C18 of which one elevation faces south to the inner courtyard; roughcast rendered upper storey with added upper storey consisting a C20 timber clad projecting overhang with a C20 timber casement window; ground floor with boxed 8/8 timber original sash window.[P1090021]

The former Liquor Store south facing the courtyard elevations consist of 5 bays; two storeys with attic [P1090027] ; gabled tiled pitched roof; dentillated brick eaves. Elevations are brick but have seen many changes in window and door openings. This elevation has a range of fixed C20 timber windows; two upper storey and one lower storey windows with opening top hung vents with combined fixed lights in a combination frame.[P1080846]. Lower floor; a 1930s half glazed fielded and recessed timber door with 6 fixed frosted lights, entrance to Trade Kitchen; a extraction vent; large two leaf C20 doors under concrete lintel entrance to Freezer and boiler room with side fixed window with extraction vent. A single framed ledged door with concrete lintel entrance to Beer Store; side fixed window with horizontal iron grille; above on the first floor an original probably C18 oak framed fixed window of four lights containing original C18 glass [1080991/1080992]. Attached to the former liquor store is a further lower two storey south facing outbuilding of brick; gable roof with dentillated eaves. This building has again seen changes in window and door openings. Lower storey shows evidence of infilled openings and a former arched brick lintel doorway now bricked in with inserted C20/C21 timber casement window; one brick arched carriage doorway remains with two leaf ledge and brace full length timber doors. Upper storeys; inserted two C20/C21 timber casement windows.

4.3.4 East Elevation

From the driveway looking west the rear of the archway over the carriage way is painted brick over tiled roof; abutting the inserted C19 extension [P1080841] overlooking the courtyard with the change of roof pitch 1940s, as evidenced from the 1930s aerial photographs, tiled roof and brick elevations. [P1080845] Upper storey C19 timber sash window 2/2 with two side lights 2/2 sash; lower storey obstructed by the flat roof single storey brick C20 toilet block. [P1080845] The C19 section is flanked by an earlier two storey roughcast rendered gable with attic[P1080846];inserted C20 timber windows lighting the stairs and stair well; ground floor entrance with ledged timber door to cellarage on one side of the staircase and on the other side entrance to stair lobby and bar.[P1080846]

Looking from the garden facing west, the two gable [east facing] ends of the former liquor store can be seen; the higher gable end cement rendered; the lower brick with evidence of some reconstruction.

[P1090041]

4.3.5 Micro Brewery Outbuilding

This Building also faces the inner courtyard; principle elevation facing North; Flemish bond brickwork. [P1080851] Single storey mono pitched with replacement slate roof brick outbuilding with some C19 origins attached to outbuilding belonging to No 27 Bridge Street. Entrance to Brewery office set back with 6 panelled door [P1090029] with two upper panels glazed with a simple fanlight above. Fixed timber 6/6 timber sash window [P1090029]; projecting further forward an elevation with full double ledge and brace doors possibly of C19 origin but maybe not belonging to the original building[P1090030]; flanked by two C20/C21 timber casement windows. In front a raised area set with perforated tiles [P1090031] to the left of this building on the eastern side is an area of ground with fencing. [P1090032]

5.3 Written Description Interior Cellar [Ground floor house/pub]

The Cellars are approached via an internal lobby /passageway from the rear of the principle house/pub where there is a sliding door access to a barrel shoot and stairs [P1080877/886] that is situated under the main principle staircase of the house above. The Cellars have 4 spaces. The first has a solid concrete floor; lined with painted bricks with a ceiling of renewed timber joists. [P1080878] A door leads to Cellar 2 with solid concrete floor; rendered brick walls; ceiling supported by steel RSJs. [P1080880] A further door leads to Cellar 3 with brick floor; painted brick walls and bay; timber joist ceiling supported on a C20 concrete block column [P1080881]. The final cellar room approached by an arched brick entrance is of brick vault roof construction with 8 brick bays to outside wall and 6 brick bays to inner wall. [P1080885]

6.3 Written Description Interior Ground Floor [house/pub]

The ground floor plan of the original house has recently been used as restaurant/bars/Servery and is open plan having had walls removed probably in the mid C20. There are four entrances; from Bridge street the Pub entrance; a rear entrance behind the Bar Servery to lobby and staircase; another rear entrance with access to the toilets and Bar Area 3. There is also a rear access door via the Trade Kitchen to the Bar Restaurant and this is the circulation route that was taken for this Building recording.

6.2.1 RESTAURANT/BARS/BAR SERVERY

The restaurant area approached via the Trade Kitchen entrance[P1080853]; suspended carpeted floor; walls solid C20 textured plaster probably over brick with mock timbers with some free standing partitions with C20 balusters; north wall has evidence of an alcove with timber [P1080856]; x1 8/8 flush boxed framed mid/late C18 sash window in south wall [P1080855]overlooking inner courtyard; ceiling of papered woodchip wallpaper with timber boxing probably covering main ceiling timbers or steel beams. Leading up steps to *Bar Area 1* suspended carpeted floor; walls solid C20 textured plaster probably over brick with mock timbers; C19 bay x3 2/2 sash windows overlooking Bridge Street with timber match boarding above [P1080857]; ceiling papered lath and plaster. *Bar Area 2* has an internal lobby [P1080860] with two leaf inner early C20 x10 pane glazed and timber doors serving the main entrance doorway from Bridge street, External six panelled timber door [P1080864] with Gothic traciered timber overlight [P1080865],central letterbox and C19 cast iron lock case and C19 bolts; suspended carpeted floor; walls C20 plaster with mock timbering and C19 Bay x3 2/2 sash timber windows with matchboarding above [P1080862] overlooking Bridge Street; ceiling papered lath and plaster. This area incorporates the Bar/Servery of C20 construction [P1080866]; suspended floor. Open doorway with one step down leads to *Bar Area 3*; [P1080868] suspended carpeted floor; walls solid with C20 textured plaster and mock timbering including a dry lined wall over the front central 2 leaf C19 doorway [P1080870]; the far side outer southern wall [the inner carriageway] has C20 fireplace of brick construction[P1080868]; ceiling plaster with woodchip paper. A C20 door leads to the inner corridor and toilet block. [P1080871]

6.2.2 INNER CORRIDOR and TOILET Block

The inner corridor is part of the main house; doors lead off into the single storey C20 toilet block extension and a door leads to an inner lobby/passageway with access to the cellar [P1080875]. Floor solid; partitioned stud walls incorporating the cleaners cupboard and Ladies cubicles; C20 casement windows; plastered ceiling of some height, where still part of the main house. *C20 toilet Block* single storey with flat roof brick construction housing part of the ladies toilets and the Gents.

6.2.3 INNER LOBBY TO CELLAR

A five panelled timber door; the two upper panels clear glazed leads from the inner corridor/toilet block to a passageway/lobby. [P1080876]The passageway has wide timber panelling and plaster to walls and sliding door [P1080875]. ; Cellarage access. Passageway has one external tongue and groove timber door. [P1080876]

6.2.4 INNER LOBBY AND PRINCIPLE STAIRCASE TO FIRST & SECOND FLOOR

A Four panelled C19 external timber door leads to inner lobby behind the Bar Servery with access to the principle and only staircase [P1080887]; cupboard with a raised and fielded x2 panel door that could be C18 under stairs [P1080890] ;later timber C19 panelled door to Bar Servery. The Wall behind Servery; evidence of a larger arched opening and a blind window that may once have been a corridor to the front entrance [P1080888]; probably C19 plaster to walls; possibly earlier original plaster to ceiling of open well closed string winder staircase [P1080893] with half landing lit by a C20 casement inserted window [P1080897] leading [P1080895] to a possible later or altered side enclosed staircase [P1080896] that accesses a Bedroom and the C19 function room. The Principle closed string Staircase probably of C18 with painted white vased shaped balusters [P1080892]*"in the later 18th Century simple columns with minimal decoration top and bottom became common….generally nailed to the handrail…..pine coming into fashion from the later 17th century and throughout the 18th century" [Ref Period Houses Fixtures & Fittings 1300-1900 Linda Hall Published Countryside Books]*; painted possible C18 handrails; simple turned finials and pendants; staircase [brown varnished]continues to second floor [once open; now enclosed with partition walling and possibly 1930s door [see Section 7 P1080935] to the attic rooms ending with a galleried landing with the same turned brown varnished balusters and handrail.[See Section 7]

7. 3 Written Description FIRST FLOOR [House/Pub]

7.3.1 BEDROOMS

*Bedroom 1 [*P1080898] is approached via the secondary stair from the half landing. Timber floor under carpet; papered plaster walls; C20 dado rail and skirting boards and C20 reproduction fireplace *[*P1080899]; plaster boarded ceiling with one exposed timber beam. Original 8/8 timber sash window to front and original mid C18 two panelled fielded door with L hinge and small lock case "*The two panelled door became the normal type at least for superior rooms from about 1670-1730…common in smaller houses until the mid C18"[* Ref *p40 Period Houses Fixtures & Fittings 1300-1900 Linda Hall Published Countryside Books]*; "Plain *L hinge normal throughout C18 and early C19" [Ref p53 Period Houses Fixtures & Fittings 1300-1900 Linda Hall Published Countryside Books]*

Bedroom 2 [P1080900] is approached via the main staircase off a corridor that serves the Office and Bathroom. Timber floor under carpet; papered plaster walls; corner fireplace [blocked] with wooden mantel shelf [P1080902]; lath and plaster ceiling with a boxed in central beam; Original 8/8 timber sash window to front and original mid C18 two panelled fielded door with L hinge and small lock case[P1080901]

7.3.2 OFFICE/CORRIDOOR/BATHROOM WC

A corridor [P1080903] serves the Office Bathroom and WC and leads to further access to the second floor of the former Liquor store where two rooms have been converted for domestic use.[See Section 10] *The office*; timber floor under carpet [P1080905]; solid outer walls brick and plaster with [blocked up] corner fireplace [P1080905]; two inner partition walls to corridor and bathroom with a borrowed light fixed window; ceiling with a central beam encased in plaster that continues into the corridor. A mid C18/early C19 two panelled fielded door with L hinge and small lock case added to with C20 locks that may have been relocated as this wall is partitioned [P1080906]. *The Bathroom* [situated next to the Office]; lino floor; C20 fittings and tiling and door; plasterboard ceiling; 6/6 possibly early C19 inset timber sash window [P1080907]; [lower sash re glazed in C20] that overlooks The Star Inn inner courtyard. [P1090046 P1090045 See Section 4.3]

The WC is opposite the Bathroom off the corridor approached via two wooden steps; timber recessed doorway with mid C18/early C19 door that may have been adapted with x2 upper glazed lights[P1080909]The WC with single vented C20 casement window jetties above the inner courtyard and is clad in timber from the outside [see Section 4]

7.3.3 FUNCTION ROOM

The Function Room is approached via the enclosed staircase off the half landing; An early C19 six panelled fielded door with decorative architrave/doorcase [P1080916] *" standard six panelled doors occur throughout the 18th and the early 19th century, with panel mouldings of varying degrees of complexity"* Ref *p43 Period Houses Fixtures & Fittings 1300-1900 Linda hall Pub countryside books*; timber and carpeted floor that has a raised platform in the Bay [P1080912]; 12inch C19 skirting boards with decorative moulding; solid plaster walls woodchip papered; blocked in fireplace; re plastered ceiling with C20 reproduction ceiling rose; ceiling has decorative plaster cornice typical of C19 [P1080920]. Three 2/2 sash windows to front elevation in the Bay have decorative inside fluted moulding surrounds [P1080918]; rear window late C19/early C20 x3 4/4 timber sash [P1080919].

7.3.4 BOX ROOM OVER ARCH & ROOF

The Box Room is approached off the Function Room down two wooden steps [P1080934] and is over the archway; six panelled fielded door with decorative architrave/doorcase; C20 lever handle [P1080917];carpet over floorboards; walls solid plaster; ceiling plaster board with new timber s attached; x2 late C18/early C19 6/6 timber inset sash windows to front elevation. *Access to roof space* via hatch [P1080930] reveals some original roof structure with some renewed roof timbers ; C20 felt; gable walls of brick [P1080929] apart from where the archway joins No 27 Bridge Street [P1080932]; its wall with possible lower wattle and daub panels [P1080933] between quite substantial timber frame.

8. 3 Written Description INTERIOR SECOND FLOOR [House/Pub]

8.3.1 STAIRCASE & LANDING & VOID

The principle closed string circa mid C18 staircase rises and winds to the second floor but has been boxed in, probably in the 1930s as evidenced by the 1930s style door [P1080936] and 1930s wallpaper [P1080972]. The timber stair treads are uncarpeted; timber balusters and handrail brown varnished. The staircase ends with a galleried landing contained within the gable still displaying the same style handrail and balusters as the lower stairs[P1080939]; lit by a single C20 inserted casement timber window in the gable wall; [P1080942] The landing; wide floor boards ,most likely Elm; lath and plaster walls papered with C19 wallpaper remnants [P1080968/69]to the left a void over gabled roof area that has an opening in the lath and plaster wall [P1080942] Inside void shows the principle purlin of the gable of some size[P1080941]; rafters supported on brick walling.

8.3.2 BOXROOM 1

Boxroom 1 is entered off the Landing via an original C18/early C19 two panelled raised and fielded door with L hinge and small lock case set in a possible C18 timber and battened panelled wall [P1080944]; flooring wide probably Elm floorboards; front wall exposed brick work; C20 replacement 4/8 sash window to street elevation; ceiling exposed to rafters, once lath and plastered, some roof timbers have been recently replaced; changes to roof structure and phasing can be seen. [P1080948] [P1080944]

8.2.3 BOXROOM 2 with Bay

Box room 2 is approached via Boxroom 1 via 3 wooden steps; batten and ledged C19 door with C19 hinges and lock case [P1080951]; decorative doorcase; flooring of narrower pine boards; solid C20 plaster to walls; x4 low to floor 1/1 timber sash windows with decorative C19 window surrounds [P1080949]; ceiling open to rafters; 1940 roof construction [P1080954] and a steel RSJ beam holding the weight of the parapet above. [P1080952]

8.2.4 BOXROOM 3

Boxroom 3 accessed off landing to the South [P1080955] oak timber door frame and opening[no door]; lime plaster to dividing brick wall; wide probably Elm floorboards; C20 replacement 4/8 sash window to street elevation; ceiling open to rafters. East wall open access to small gabled roof area [Boxroom 4] showing main roof purlin and roof rafters [P1080958]

8.2.5 BOXROOM 4

Boxroom 4 [P1080960/1] is a room within the roof space of the 2nd C18 gabled wing section of the main house. Entered via a doorframe with C18 wooden latch fastener [P1080962] Roof construction 2 bays ; A frame with collar [P1080960] large purlin and rafters; the gable end constructed of brick with lath and plaster to which an inspection hole has been knocked through to former liquor store

roof that may have been a former opening[See Section 11.2]. A few wide Elm floorboards remain; ceiling open to rafters with an inserted fixed skylight window.

9. 3 Written Description former Liquor Store Ground Floor

9.3.1 TRADE KITCHEN

Trade Kitchen entered via 1930s half glazed timber door with x6 lights from inner courtyard [P1080974]; suspended floor covered in Lino; walls tiled; alcove cupboard off in North wall [P1080973]; plaster boarded ceiling with central painted timber beam; timber C20 fixed window with vents[P1080974]. This room also has access to the Restaurant Bar [See Section 6.1]

9.3.2 FREEZER & Boiler room

The Freezer/Boiler room accessed from the inner Courtyard via full length two leaf C20 timber doors set in frontage of newer C20 bricks [P1080981]. Raised flagstone floor; flags 24 x36 inches in poor repair [P1080983]; North wall painted C18 brick and timber fillets [P1080980]; Solid partition wall rendered between Trade Kitchen [P1080980]; Wall between this room and the Beer store of C18 brickwork with recessed bricked up doorway with timber lintel [P1080981] possibly former access to the Beer Store. Ceiling covered with hardboard; central C20 timber beam

9.3.3 BEER STORE

The Beer Store entered via a single framed ledged door insulated on inside [P1080985] with concrete lintel entrance from the inner courtyard; side fixed window with horizontal iron grille; floor of blue bricks [P1080986]; all walls completely lined with C20 insulation; ceiling lined with C20 insulation with roof hatch to Storage 1 [P1080984]; X2 oak timber ceiling beams with chamfers on outer edge.

10.3 Written Description Liquor Store First Floor

10.3.1 LOUNGE

Accessed via x3 steps [P1080976] from the principle house via a two panelled C18 field door covered with hardboard on internal side. Timber carpeted floor; solid plastered walls; north wall Mid C20 gas fire on 1950/60s tiled hearth and surround ; door to internal cupboard in northern wall behind chimney[P1080975]; fixed C20 timber window with vents overlooking courtyard; ceiling papered lath and plaster with exposed painted timber beam. Doorway to Kitchen

10.3.2 KITCHEN

Access via the Lounge [P1080978]; wooden floor covered in lino; solid plaster walls; north wall with C20 door to internal cupboard [P1080977]; fixed C20 timber window with vents [P1080979] overlooking courtyard; ceiling papered including a central beam.

10.3.3 STORAGE 1

Access via 9.3.3 BEER STORE ceiling hatch [P1080984]. This storage area at least 4 metres high from floor to ceiling [P1080987] has pine floor boards; exposed C18 brickwork and timber fillets [P1080987] with some evidence of former openings /some later C19 infilling[P1080989] particularly in wall between the now Kitchen/void. The opposite wall has former access to the lower 2 storey outbuilding has a large central opening [P1080990] approx. 1.5 metres from the floor; timber frame and timber lintel P1080990]; evidence of former ledge and brace door with C18/C19 ironmongery [P1080990]; The southern wall of exposed brick and timber fillets has a single fixed oak framed window possibly of C18 origins [P1080991]; access limited as window is at least 2 metres from the floor. Ceiling exposed timber joists flooring and remains of lath and plaster; evidence of former openings to attic above [P1080994]

11.3 Written Description former Liquor Store Second Floor Roof Space

Access to the roof space of the former liquor store was limited. A Photographic record was made by viewing from the Boxroom 4 hole [P1080964] in the wall and from looking up from the hatch in the ceiling from Storage area 1 [P1080995]. It would appear that the roof is 5 bays; trusses supported by the brick walls consisting of tie beams with angled struts to support the purlins of late C18 queen post construction [P1080964]. The roof covering appears to have been replaced by cement composite tiles [P1080970].

Ground Floor

Accessed via one brick arched carriage doorway with a two leaf ledge and brace full length timber doors [P1090027]; floor solid concrete; painted brick rear and side walls [P1080999];wall attached to Former Liquor store with doorway with timber ledge and brace door [P1090001]; C20 inserted window to front. Ceiling, height 2 metres from floor, exposed oak ceiling timbers/joists [P1080999]; past evidence of lathes; x4 chamfered oak beams one supported on a timber post [P1090001].

First Floor

Accessed via a hatch from the ground floor; floor timber boarded [P1090002]; rear north elevation wall lime plastered over brick [P1090004]; wall attached to former liquor store of lime plaster with evidence of the access doorway [P1090002]seen from photo number 154 [P1080990] [Storage 1 Hatch to Second Outbuilding]; east elevation later exposed brickwork [P1090006]; courtyard elevation later brickwork and inserted two C20 timber casement windows [P1090002]. Ceiling covered by three quarters lath and plaster [P1090004].

Roof

Access to the roof space of this outbuilding was limited. King post roof construction 4 bays incorporating recently installed bat loft [P1090005] [P1090007]

13.3 Written Description Micro Brewery Outbuilding Interior

Brewery Office

Accessed via 6 panelled C19 door with two upper panels glazed with a simple fanlight above [P1090008]; floor solid; walls painted brick above half rendered; x1 6/6 C19 fixed timber sash window with original C19 cylinder glass [P1090011]; ceiling lath and plastered with some iron hooks[P1090010].

Brewery

Accessed via the Office through a timber ledge and brace door, late C19 [P1090009]. Access is also via two full length ledge and brace timber doors from the Courtyard possibly late C19 in date [P1090030]. Walls painted brick above half rendered. Front wall brick with X2 inserted C20 timber casement windows. Rear brick wall attached or is the wall to outbuilding No 27. Roof open to rafters with mezzanine floor [P1090018] supported by C20 brick pillars [P1090014] accessed via a ladder; all of C20 construction.

Appendix 1 Assessment of Significance Gazetteer

An analysis to assess the significance was required by LPA Wychavon
Reference no.15/01769 Condition 7 and Reference 15/01770LBC condition no 9. A Gazetteer was proposed in the submitted Written Scheme of investigation by RDA to fulfil this condition.

Significance: The value of a heritage asset to this and future generations because of its heritage interest. That interest may be archaeological, architectural, artistic or historic.

'The English Heritage guidance Conservation Principles on assessing significance sets out the following four areas for consideration:

• Evidential value: the potential of a place to yield evidence about past human activity

[For buildings this is usually associated with architectural features/phasing]

• Historical value: the ways in which past people, events and aspects of life can be connected through a place to the present – it tends to be illustrative or associative.

• Aesthetic value: the ways in which people draw sensory and intellectual stimulation from a place

• Communal value: the meanings of a place for the people who relate to it, or for whom it figures in their collective experience or memory

(English Heritage, 2008) English Heritage, 2008.
http://www.englishheritage.org.uk/publications/conservationprinciples-sustainable-management-historic-environment/.

The following is a simple gazetteer highlighting some of the significant features found during the Building Recording Survey September 16th-17th 2016. The significance has been assessed by RDA by understanding the history of the building and our research and analysis of the site carried out between August-October 2016

External Elevations

Photo West Elevations	Significance: Evidential /Historic /Communal
	Front street elevations display all four Conservation Value categories and are not only protected by national listing and statutory designation but the building is within the Conservation Area. The Building sits between two other statutory Listed Buildings and numerous others in Bridge Street. Significance; Evidential /Historic and also Communal value: collective experience or memory as a Public House/former Liquor Vaults/Liquor Store.
Photo ID Number P1080835	Location Street Elevations
Photo North Elevations	Significance :Evidential /Historic /Communal
	Significance Evidential /Historic; North Elevations protected by national listing and statutory designation and the building is within the Conservation Area. The Building sits between two other Listed Buildings. Original Brick rear walling of former Liquor Store/ brick chimney /early C19 window are all evidential value. Brick rear northern elevation of two storey outbuilding attached. Communal value : collective experience or memory as Public House and Stabling area. Also site of wellington Bomber crash
Photo ID Number P1080838	

Photo South Elevations former Liquor Store	Significance :Evidential Historic Communal
 Photo ID Number P1080843 Photo ID Number P1090041	The South elevations of the former Liquor Store and two storey outbuilding attached. Openings have undergone changes over time. Brick work although significant is in poor repair due to all the changes. Protected by national listing and statutory designation the buildings are within the Conservation Area. Original oak window is the only significant early architectural evidence of past uses/ past human activity, retain if possible. One arched doorway in two storey outbuilding evidence of past use for brewing associations/ past human activity. Retain exposed brickwork and oak window if possible
Photo East Elevations	Significance Evidential & Historic &Communal
 Photo ID Number P1080852	Protected by national listing and statutory designation and the building is within the Conservation Area. Roughcast to C18 elevation and C20 windows and C20 toilet block may detract from Aesthetic value. However removal of roughcast could do more damage to underlying structure. Planning granted to demolish C20 Toilet block

Interior Ground floor

Photo Brick Vaulted Cellar and bays	Significance Evidential
	Evidential Evidence of past use associations for brewing / past human activity. An important reminder of the buildings history as an Alehouse/Liquor store/Liquor Vaults. Architecturally an aesthetically pleasing well built brick structure
Photo ID Number P1080885	
Photo 8/8 Sash window in South Wall	Significance Evidential
	Original architectural feature circa C18 8/8 sash window reminder of the buildings history as a house before becoming a Public House. Retain
Photo ID Number P1080855	
Photo Inner lobby and staircase	Significance Evidential
	Staircase probably of circa C18 with painted white vased shaped balusters turned finials and pendants. Cupboard with a raised and fielded x2 panel door that could be C18 under stairs Original architectural features C18 principle staircase. Retain Arch and Blind window, retain the recesses and moulding. Blind window feature should remain.
Photo ID Number P1080888	

FIRST FLOOR [House/Pub]

Photo Bedroom 1 Door	Significance Evidential
	Original mid circa C18 two panelled raised and fielded door with L hinge and small lock case. Retain door if possible
Photo ID Number P1080899	
Photo Bedroom 2 Door	Significance Evidential
	Original mid circa C18 two panelled raised and fielded door with L hinge and small lock case. Retain door if possible
Photo ID Number P1080901	
Photo Office Door	Significance Evidential
	Original mid circa C18 two panelled raised and fielded door with L hinge and small lock case. Retain door if possible.
Photo ID Number P1080906	

Photo Door to Lounge	Significance Evidential
	Original mid circa C18 two panelled raised and fielded door with L hinge and small lock case. Retain door if possible or re use
Photo ID number P1080904	
Photo Door to WC	Significance Evidential
	Original mid circa C18 two panelled raised and fielded door that may have been adapted to fit this space Retain door if possible or re use in the scheme
Photo ID number P1080909	
Photo 6/6 sash window Bathroom	Significance Evidential
	6/6 possibly early C19 inset timber sash window in northern wall overlooks the Courtyard of The Star Inn Retain
Photo ID number P1080907	

Photo Function Room Door	Significance Evidential
	An early C19 six panelled fielded door with decorative architrave/doorcase Retain door and doorcase if possible or re use in scheme
Photo ID number P1080917	
Photo Function Room to Box Room	Significance Evidential
	An early C19 six panelled fielded door with decorative architrave/doorcase Retain door and doorcase if possible or re use in scheme
Photo ID number P1080917	
Photo Cornice Detail Ceiling Function Room	Significance Evidential
	Decorative plaster cornice typical of C19 in poor repair. Retain if possible. Evidence of phasing when C19 Canted bay section was added to building
Photo ID number P1080920	
WINDOWS Front and Back All windows are protected by listing and should be retained/repaired or have LBC if replaced	Significance: Evidential

SECOND FLOOR [House/Pub]

Photo Second Floor Staircase	Significance: Evidential
	This section of the principle circa C18 staircase has been blocked in probably in the 1930s. Although this is evidence of phasing it would probably be desirable, as this has now been recorded, to open up the staircase as its former C18 open well closed string. Retain all risers balusters and handrails
Photo ID number P1080938	
Photo Box room 1 and partition wall	Significance: Evidential Historical
	C18/early C19 two panelled raised and fielded door with L hinge and small lock case set in a possible circa C18 timber and battened panelled wall. This partition wall and door are an historical reminder of past use of this attic space however it would probably not be practical to keep in situ. A re use of the door in this scheme if possible
Photo ID number P1080944	
Photo example of Floorboards	Significance: Evidential Historical
	Wide floor boards most likely Elm are prevalent in Boxroom 1 3 and 4 This flooring is architecturally and historically important and should be retained and restored if possible.
FLOORBOARDS	

Photo Historic Roof timbers Boxroom 4	Significance: Evidential Historical
	All roof timbers are protected as the building is listed. Of particular significance are the circa C18 roof trusses and timbers on the Landing and Boxroom 3 and 4.
PHOTO ID P1080961	

Former Liquor Store Interior

Former Liquor Store Interior	Significance Evidential Historical Communal
	A large central opening [P1080990] approx. 1.5 metres from the floor; timber frame and timber lintel, shows evidential and historical value of former liquor store/ brewhouse use. The scheme to develop this building could make a feature of this hatch opening and tell a story of its former use.
PHOTO ID P1080987	
Oak window	Significance Evidential Historical Communal
	Single fixed oak framed window possibly of C18 origins. The only original window in the Former Liquor Store and is evidential value of former Liquor Store/brewery/brewhouse use. Could be made a feature in new scheme if condition is viable.
PHOTO ID P1080991	

Ceiling	Significance Evidential Historical Communal
	Ceiling exposed timber joists flooring above and remains of lath and plaster ceiling; evidence of former openings to attic above [P1080994] and evidential value past use as the Liquor store/brewhouse. Retain Timber beams and joists
Photo ID P1080994	
Roof	Significance Evidential Historical
	All roof timbers are protected as the building is listed. Of particular significance are the circa C18 roof trusses and timbers
Photo ID P1080964	

Outbuilding attached to former liquor Store Interior

Outbuilding Workshop Ground floor	Significance Evidential
	Exposed oak ceiling timbers/ceiling joists; x4 large chamfered oak beams. This is the only evidential value left in this building/use unknown and is a reminder of the age of the outbuilding circa C18 Retain
Photo ID P1080999;	

Outbuilding Workshop First floor and roof	Significance Evidential
	All roof timbers are protected as the building is listed. Of particular significance are the possible C18 roof trusses and timbers King post roof construction 4 bays.
Photo ID P1090002	
Outbuilding Workshop First floor and roof	Significance Evidential
	All roof timbers are protected as the building is listed. Of particular significance are the possible C18 roof trusses and timbers King post roof construction 4 bays.
Photo ID P1090006	

Micro Brewery Outbuilding Interior

Photo Micro Brewery Office Window	Significance Evidential
	6/6 C19 fixed timber sash window with original C19 cylinder glass Retain if possible in scheme
Photo ID P1090011	
Photo Micro Brewery Office Door	Significance Evidential
	6 panelled C19 door with two upper panels glazed with a simple fanlight Retain if possible in scheme
Photo ID P1090012

An Historic Environment Record Search for WSM68008 The Brandy Cask, Bridge Street, Pershore

Introduction

The **Historic Environment Record** for Worcestershire is held in a GIS (Geographical Information System). This is a computer system designed to allow users to collect, manage and analyse large volumes of spatially referenced information and associated attribute data. When you request information from us on a particular area, we carry out a spatial search on a grid reference (or a specific area) supplied by you, which will bring up all the records within that area. Unless otherwise requested, the search radius will be restricted to everything within 500m of the centre point of the proposed investigation (or a 250m buffer along pipelines).

If you are conducting research it must be remembered that the results of an HER search are designed to be a starting point, not a complete record. The sources mentioned in the full reports should be consulted in order to fully understand the nature of the archaeology in your search area. We strongly recommend that you come to visit the HER once you have received your search results to consult all the sources mentioned along with other more general information that we hold. The majority of the grey literature reports can now be accessed online at http://www.worcestershire.gov.uk/info/20189/search_our_records, other sources may need to be consulted at the HER offices.

The Worcestershire **Historic Landscape Characterisation** Project (HLC) aims to improve our understanding of the County's landscape, and provide a context for its archaeological sites and monuments. Historic landscape characterisation provides a framework for informed landscape management strategies, spatial planning, development control and conservation issues at a local, regional and national level. HLC underpins historic environment advice given to planners, district councils and other environment or conservation agencies, enabling future changes within the historic environment to be monitored. HLC promotes a framework, a background understanding and a better informed starting point from which to consider issues and proposals. It provides information, not judgements, and does not identify the "best" areas, rather allowing appropriate decisions to be made in the light of proposed change. HLC seeks to identify surviving time-depth - the legibility and past within the present landscape; thus, facilitating the sustainable management of the historic components and setting of the contemporary landscape.

If your site is within, or close to, one of the 'Central Marches Historic Towns', you should consult the CMHTS report for that town. These can be found at:

http://www.worcestershire.gov.uk/info/20189/search_our_records

The report relates to the following towns: Alvechurch, Bewdley & Wribbenhall, Broadway, Bromsgrove, Clifton-Upon-Teme, Droitwich, Evesham & Bengeworth, Kidderminster, Pershore, Redditch, Stourport-on-Severn, Tenbury Wells and Upton-Upon-Severn.

If your search area includes a Historic Farmstead or Outfarm, as identified by English Heritage's 'Historic Farmsteads Project', you should consult the current project publications, including the County summary, online at:

https://content.historicengland.org.uk/images-books/publications/wm-county-summaries/569616/

Please note that we have recently integrated the Historic Farmsteads project data into the HER. Due an automated process, this has resulted in the majority of farmsteads being represented by circles and a certain level of duplication within the records, we aim to rectify this issue in the near

future. In the meantime if you require further clarification regarding farmsteads please get in touch.

If the search has been requested prior to development, you may need to consult the Historic Environment Advisor (HEA) to see how your proposal would affect the archaeology. If any aspect of the development changes after this point, particularly alterations to groundworks on pipeline schemes, then the HEA MUST be informed. The HEA for Bromsgrove, Wychavon, Malvern Hills, Wyre Forest and Redditch DC is Adrian Scruby (ascruby@worcestershire.gov.uk).

The HER search results will remain valid for 3 months only from the date of production, because the HER is constantly being updated as new sites of archaeological importance are identified. It should also be noted that searches are tailored to suit the needs of the client and if these needs change significantly, you may need to contact us again. Another important point to note is that an absence of archaeological sites in a particular area should not necessarily be interpreted as an absence of archaeology. It may be that surviving archaeology has not been identified in the HER for a number of reasons. If it is thought likely that archaeology could exist in such an area, then the HER team or the HEPO will inform you of this.

Guidelines for Access

The **HER** was set up as a planning tool 30 years ago and contained the minimum level of data. Since then the records have been added to and enhanced over the years as more information has come to light. The records, therefore, vary greatly in their detail and accuracy. We are constantly updating and improving these records, however, they are compiled from a range of sources of varying quality and the information they contain should not be seen as definitive. We cannot accept responsibility for the accuracy of any information supplied and the user must accept that information may be outdated or inaccurate.

We ask that all users provide us with any new information that they obtain during the course of their research. Where further archaeological work is required as part of the planning process, we ask that the contractor/developer provide us with a digital copy and one hard copy of the resulting report within six months of its completion. Briefs written by the HEPO after 01/10/2007 now require a digital copy to be submitted to the HER. Our preferred format for digital copies is pdf, however, we are happy to take other formats, from which we will create pdfs. All reports submitted as part of the development control process **will** be included on our **Online Archaeology Library** 3 months after submission unless the report is deemed to be archaeologically or commercially sensitive by the Archive and Archaeology Service Manager.

We will provide details of Scheduled Ancient Monuments, along with maps showing their locations. The boundaries shown on our maps are intended to be a guide only and **the precise location of any SAM must be obtained from English Heritage**. It should also be noted that work cannot be carried out within the boundary of a Scheduled Ancient Monument without consent from English Heritage. This includes non-intrusive work such as geophysical surveys and field walking.

When information is provided in advance of metal detecting, the detectorist must agree to report detailed information for all finds, including an eight or ten figure grid reference, to the Portable Antiquities Scheme (via Angie Bolton, Finds Liaison Officer for Worcestershire and Warwickshire on 01905 721130 or ABolton@worcestershire.gov.uk)

Copyright

The sources referenced in the HER records may require permission from the copyright holder for reproduction. The copyright holder is usually a third party, not the HER. In these instances, the onus is on you to obtain permission for reproduction from the relevant person(s). The HER accepts no responsibility for any user making unauthorized copies of such documents. In some

instances the HER has been granted permission by the copyright holder to give out a copy of a source for reference only. In these instances, you must not copy, pass on or publish that source without permission from the copyright holder.

Many of the sources used within the HER are 'grey literature' reports, produced through the modern planning and development process. Worcestershire HER holds its 'grey literature' library on the Online Archaeology Library (OAL). These sources can downloaded directly from within the HER Search Report provided, however, before doing so please take note of the following copyright statement:

All reports that are produced via the development control process are considered to be within the public domain. However, copyright restrictions (particularly with regard to Ordnance Survey mapping) or the inclusion of confidential or commercially sensitive information means that not all reports can be made freely available over the internet. Other reports have been excluded by request of the copyright holder. The metadata for reports that cannot be accessed online has been included, but you must visit either our offices or Worcester City to view these reports.

The development of an online library can only be achieved if the organisations that supply data can be assured that their own rights are protected. Consequently, use of the library is covered by a variety of legal instruments to protect us, our users and those who supply data to us.

Online Archaeology Library Terms and Conditions:
http://www.worcestershire.gov.uk/downloads/file/4189/online_access_agreement

If Ordnance Survey maps are included in this report, then they are for reference only and require copyright permission from The Ordnance Survey for any reproduction.

Planning Policy

National Planning Policy Framework (NPPF) was published in 2012. It sets out the Government's planning policies, including those on the conservation of the historic environment. It replaces Planning Policy Statement 5: Planning for the Historic Environment (PPS5), which was published in 2010.

If your search is in advance of a planning application, you may be required to describe the significance of any heritage assets affected, including the contribution made by their setting, in accordance Paragraph 128 of NPPF and the Local Authority's Local Plan. The Archaeological Summary below and the sources mentioned in the HER records should be taken into consideration when detailing the significance of the heritage assets. The Archaeological Summary does not consider the effects of any specific development on the historic environment, it lays out the archaeological survival, significance and potential. The statement submitted with a planning application would also need to consider the effects of your proposed development on the historic environment.

The HER data

This document contains two types of report:

1) **The Single Line or Short Report** – this provides the basic information: the WSM Number, the Name/Title of the Record, the monument type, the date range and finally the National Grid Reference (the WSM number is the unique number given to each record within the HER).

2) **The Full Report** – this provides the above information **plus** a more detailed description of the monument/site/find/fieldwork etc. It also contains the sources and references that the record is based upon and gives its relationship (if any) to other associated sites. A 'full' report is not definitive and all sources mentioned should be consulted to gain a full understanding of the record.

This report also contains the location of the records on maps (unless you have requested GIS data in a shape file, which will be sent in an email with this report). Where appropriate/requested we will also include historical maps.

1) GIS Shape Files

We can provide site location data as shape files for use with your own GIS system. This is the best way of sending and receiving complex spatial information. We send this out by email.

In built up areas where there are a large number of records, the data will be sent out in several files. We will provide site location data as individually themed shape files for each type of record. This will allow you to switch on each HER archaeological theme independently and is most appropriate for use by our customers whose projects are located in areas of intense archaeological activity, where there is more likely to be a need to discreetly interrogate the data and examine spatial relationships.

2) pdf Maps

If you do not have a GIS, location maps will be included in this report. The clarity of these maps is not perfect, but they are clear enough to distinguish all the site locations - especially if you zoom in.

The maps will show the location of all the sites in the report, labelled with the WSM number. **Please note:** The labels only give the approximate location of the sites and monuments. The reason for this is that if there is more than one record for a location or there are lots of sites in close proximity – i.e. on a street of historic houses – then the labels overlie each other and cannot be read. We, therefore, move or adjust the labels very slightly to make them easier to see. To get the precise location you must use the grid reference.

The HER is set up with a number of themes or layers. Each theme contains a different type of record e.g. Historic Buildings or Events. This allows us to switch the various themes on and off to look at different types of record separately. The various themes are colour coded to make them easily identifiable (see the key on the maps).

3) Historic Maps

A 1st or 2nd Edition Ordnance Survey map will be supplied with the search based on our own original copies. Where this is not available we will supply a 1st Edition Landmark Digital map based on 1st Edition OS Map. These are drawn from several maps and are referred to as Epochs not Editions. It is important to note that Copyright restrictions mean that they must ***not*** be used in any report and are for research purposes only. If you wish to receive copies of further Epochs we can supply these at an additional cost.

Archaeological Summary for WSM68008 The Brandy Cask, Bridge Street, Pershore

An HER search was carried out on a 500m radius of the provided grid reference on 12/09/2016, as specified in the search request. 270 monuments and 56 archaeological events were recorded within the search area, including 2 scheduled ancient monuments.

The search area sits within the town of Pershore, located on a sloping river terrace comprising of sand and gravel deposits over mudstone geology situated within a meander of the River Avon. Settlement at Pershore dates back as early as the Roman period where archaeological evidence is recorded and by the medieval period documentary evidence demonstrated a prosperous market town surrounding Pershore Abbey. Following the dissolution of the monasteries the town went into decline until the 18th century when a large amount of the current standing buildings were erected. Modern expansion now surrounds the Post-Medieval town but ornamental and recreational ground also forms a large part of the search area.

Within the search area lie 166 Listed Historic Buildings and a further 22 unlisted historic buildings. The majority of buildings appear to be residential dwellings and business premises dating to the 18th century, however the records do include the Medieval abbey church and Pershore bridge, 20th century phone box and buildings related to the defence of Worcestershire during the second world war. The Brandy Cask itself is a late 18th or early 19th century three storey stucco building with slate roof and three storey bay window.

In addition to the built environment there are also monument records for further Second World War defence sites and locations of buildings now demolished. The 18th century is also represented by records for two pleasure gardens. The medieval period is well represented with numerous records for medieval tenements and the monastic site at Pershore Abbey. Earlier periods are not recorded within the search area however a Historic England project to identify the potential for Palaeolithic Archaeology in Worcestershire recorded a number of deposits within the search area with potential for archaeology dating back to 69050BC.

No Portable Antiquity Scheme finds are recorded within the search area however investigations have recovered a number of artefacts including pottery from all period, human remains and a large amount of environmental remains. Roman pottery and an unidentified Iron Age object are also recorded.

There has been a lot of archaeological investigation within the search area which has included the full range of geophysics, watching briefs, evaluations and building recording. Study of Pershore Abbey has been recorded since the 19th century and recent investigations have been focused here as well as on the main high street area of Pershore. Overall there is good survival of above ground remains from the medieval period onwards and excellent preservation of below ground remains with potential for further archaeology from the Roman period onwards.

Statutory and other Designations

Scheduled Ancient Monuments

Scheduled monuments are those considered to be monuments of national importance. The Ancient Monuments and Archaeological Areas Act 1979, supports a formal system of Scheduled Monument Consent (SMC) for any work to a designated monument. Any works within a Scheduled area will require SMC, this includes non-invasive techniques such as geophysics or field-walking. There are 2 Scheduled areas within the search area.*

Listed Buildings

The Secretary of State for Culture, Media and Sport holds a List of Buildings of Special Architectural or Historic Interest, considered to be of national importance. Compiled under the Planning (Listed Buildings and Conservation Areas) Act 1990, the List includes structures from boundary walls and telephone boxes to cathedrals. Listing gives statutory protection and restrictions apply. Consent may be required for works to, or that affect the setting of, a Listed Building and the LPA conservation officer should be consulted if in doubt. There are 166 Listed Buildings within the search area.*

Conservation Areas

A Conservation Area is an area considered worthy of preservation or enhancement because of its special architectural or historic interest, "the character or appearance of which it is desirable to preserve or enhance," as required by the Planning (Listed Buildings and Conservation Areas) Act 1990 (Section 69 and 70). There are additional planning controls over certain works carried out within the Conservation Area. The designation does not preclude development from taking place, but does require that developments preserve or enhance the historic character of the area, for example by ensuring that newly constructed buildings are of a high quality design. Conservation Area status also removes some permitted development rights that apply in undesignated areas. The Conservation Areas are maintained by the relevant Districts. To view the current areas please visit the relevant District's website:

- Bromsgrove -http://www.bromsgrove.gov.uk/council/policy-and-strategy/planning-policies/conservation/conservation-areas.aspx
- Malvern Hills - http://www.malvernhills.gov.uk/conservation-areas
- Redditch - http://www.redditchbc.gov.uk/planning/apply-for-planning-permission/work-in-conservation-areas.aspx
- Wychavon - http://www.wychavon.gov.uk/conservationareas
- Wyre Forest http://www.wyreforestdc.gov.uk/planning-and-buildings/conservation-areas-and-listed-buildings/what-is-a-conservation-area/conservation-areas-in-wyre-forest.aspx
- The Pershore Conservation Area is within the search area.*

Registered Parks and Gardens

Historic England holds a Register of Historic Parks and Gardens of Special Historic Interest. These Registered landscapes are graded I, II* or II, and include private gardens, public parks and other green spaces. They are valued for their design, diversity and historical importance. Inclusion on the Register brings no additional statutory controls, but there is a presumption in favour of conservation of the designated site. Local authorities are required to consult English Heritage on applications affecting sites Registered as grade I or II* and the Garden History Society on sites of all grades. There are no Registered Parks within the search area.*

Registered Battlefields

There are two Registered Battlefields in Worcestershire, The Battle of Evesham and The Battle of Worcester. Unlike Listed Buildings and the Register of Parks and Gardens, Registered Battlefields are not currently graded as a means of ascribing relative significance. They do not carry any statutory designation, but there is a presumption in favour of preservation. There are no Registered Battlefields within the search area.*

Locally Listed Historic Buildings

Worcester City, Redditch Borough and Wyre Forest District have a Schedule of Buildings of Local Interest in Worcestershire. These are buildings that are not of national importance, and therefore not Listed, but are considered to be of local or regional importance and make a significant contribution to the historic environment character of an area. They do not carry any statutory designation, but local policies make it clear that retention of these structures is important to the historic environment. There are no locally listed buildings within the search area.

* Heritage Assets are designated by Historic England (formerly English Heritage). It is possible that the HER is out of date. EH (or the LPA as appropriate) should be consulted for confirmation of designated status.
NB. Other statutory designations may apply to your site, such as SSSI status. The HER does not keep a record of such designations and the onus is on the client to ascertain whether any further restrictions might apply.

Glossary of commonly used terms

AS: The unique number given to each aerial photograph referenced in the HER

Cropmarks: The visible effect of arable crops caused by the presence of below ground historic environment features

HER: Historic Environment Record

HWCM (Herefordshire and Worcestershire County Monument): Unique number given to each HER Record during the period Herefordshire and Worcestershire had a joint County Council. Superseded by WSM.

Monument: an archaeological site either showing as visible remains on the ground or a below ground site revealed by, for example, aerial photography or geophysical survey

National Planning Policy Framework (NPPF): The full statement of the Government's planning policies, including those on the conservation of the historic environment. It replaces Planning Policy Statement 5: Planning for the Historic Environment (PPS5).

Palaeochannels: ancient silted up river channels, or other watercourses that are often associated with well-preserved organic remains and historic environment features

Palaeo-environmental: Organic remains associated with past landscapes. Such deposits can reveal information about climate, the types of fauna and flora in a landscape and past human activity

Ridge and furrow: large-scale earthworks associated with former medieval and post-medieval open-field communal farming that appear as a distinctive corrugated surface

SWR: The unique number given to each report, document, map etc

WCC: Worcestershire County Council

WSM (Worcestershire Sites and Monuments): The unique number given to each monument, building and archaeological event recorded in the HER.

General periods in the HER

The beginning and end of certain periods is a contentious issue. In the HER, the following dates are used. This is a standard convention across all HERs.

Palaeolithic	-500000BC	to	-10001BC
Mesolithic	-10000BC	to	-4001BC
Neolithic	-4000BC	to	-2351BC
Bronze Age	-2350BC	to	-801BC
Iron Age	-800BC	to	42AD
Romano-British	43AD	to	409AD
Post-Roman (Early medieval)	410AD	to	1065AD
Medieval	1066AD	to	1539AD
Post- Medieval	1540AD	to	1900AD
Modern	1901AD	to	2050AD

Name: Pershore Bridge

Grade: **Date Assigned:** **Amended:** **Revoked:**

Legal Description

This record was the subject of a minor enhancement on 19 May 2015. This monument includes a multi span bridge situated across the River Avon south of Pershore. The monument survives as a five-span bridge with additional flood arches at the north eastern and south western ends. The bridge was constructed in the 15th century and was remodelled during the 17th and 18th centuries. The bridge is constructed from sandstone with a red brick parapet and some blue brick. The bridge has a low parapet with a double dog-tooth string course,

saddleback stone coping and brick relief decorations on the exterior. The parapet curves out at the south eastern corner and terminates in brick and stone piers. Of the seven arches spanning the river and flood plain, the central arch is the widest with two arches paired ether side. The principal arches have segmental heads and voussoirs and the central arch has a large keystone. The north eastern flood arch is decorated with a keystone and the south western arch is angled to match the curve of the parapet. On the eastern side of the bridge are five pointed cut waters that rise up to become pedestrian passing places on the top of the bridge. The bridge is approximately 66m long and 4m wide.The original bridge was constructed in the 15th century by monks from Pershore Abbey. The central arch was enlarged by William Sandys about 1635 and the bridge was further repaired after it was damaged during the Civil War. Pershore bridge is Listed Grade II*.Despite partial demolition and the insertion of a road surface, the remains of Pershore Bridge 430m south east of Pershore Cottage Hospital survives comparatively well and contains a number of architectural features of considerable interest. Elements of the original structure will remain concealed behind later stone and brickwork and will provide important information on its construction and rebuilding. [4]

Description

A number of publications provide a commentary on the history and the fabric of the extant church which consists of an apsidal presbytery, north and south aisles, two pairs of chapels with a Lady chapel between the eastern pair, central tower, partially destroyed north transept, and south transept. This is all that remains of the church of the Benedictine Abbey at Pershore. [1][2][3]

After the abbey the Dissolution in 1539 the nave and Lady chapel at the east end of the Benedictine Abbey were pulled down. The north transept collapsed and in 1686 the crossing tower was shored up on that side. The east apse dates from 1847 and there was a general restoration by Sir Gilbert Scott in 1862-5. The extant building is listed as Grade A, the listing noting that the choir transepts were built in 1223 with vaulting of 1330. The tower is a fine example of 14th century work and that there is a 15th century screen in the north transept. It is assumed that the Benedictine abbey at Pershore was founded by King Oswald in about 689. It was destroyed about 976 and restored, and reformed by Ethelwold in 983. In 972 King Edgar restored the land of Pershore Abbey and granted it privileges. [4]

Details of this charter can be found in Finberg, Hooke and Sawyer. [5][6][7]

Nothing is known about date of beginning of Norman rebuilding, but it was probably at the same time as that at Gloucester and Tewkesbury, so a date of about 1090 is indicated. A re-entry of monks after a fire is recorded 1102. A series of fires are known to have taken place with consequent rebuilding. The fire of 1223 is said to have destroyed the church and that of 1288 did grave damage. The chancel was consecrated in 1239 when it was probably complete but the chancel vault is clearly after that date. [1][2][8]

Before the Dissolution the nave of the abbey church contained the parochial altar dedicated to the Holy Cross and this parochial part was taxed as such in both 1340 and 1428. The altar was probably served by a chantry priest. The benefice of Pershore Holy Cross is noted in the Taxatio of Pope Nicholas IV dated 1291. It included the church of Pershore Holy Cross which was valued at £6 13s 4d. The patron is given as Pershore Abbey to whom it was appropriated [WR9396]. In 1572 the 'rectory' of Holy Cross is mentioned. Before 1729 the 'curacy' of Holy Cross had been held as a separate benefice but after this date the vicars of St.Andrew's became curates of Holy Cross which then became a chapelry of St. Andrew's. The patronage passed to the Dean and Chapter of Westminster. The church of Holy Cross however retained the right of sepulture and anyone dying in many of the surrounding parishes had to be buried in the graveyard of the church of Holy Cross, although those without land were buried at Little Comberton.[1]

In 1897 Andrews published a detailed and comprehensive review of both the history and the extant of the claustral buildings. It contains a number of fine line drawings of the extant building as they were in the late 19th century. It also commented on associated chapels, such as that to St.Michael. [3]

Trial excavations carried out in 1984 to enable an assessment to be made of the structural stability of the central tower.

Even with the limited excavations that were possible early it was shown that medieval, or possibly earlier, archaeological evidence remained. In particular was a rubble foundation which appeared to predate the Norman south-western crossing tower. [9]

A Watching Brief carried out in 1992 in advance of replacing central heating. Although it revealed significant archaeological deposits none could be securely dated. [10]

A survey carried out in February 1994 indicated vaults at the west and south-east end, as well as voids adjacent to the pews. Evidence of earlier ground surfaces was indicated. [11]

An assessment of the seven entrances was carried out in 1995. It emphasised the importance of the south transept from a historical, archaeological and architectural point of view. [12]

Excavations carried out in 1996 revealed possible evidence for the Anglo-Saxon church and features dating to the first Norman building of about 1100. Features were found that both pre and post date the fire of 1223 and the fire of 1287. Some indications of work post-Dissolution were observed such as the work carried out after the fall of the north transept in 1686, the building of the eastern apse in 1846 and the restoration of 1862. Brick-lined burial vaults relating to 1700 to 1854 were excavated as well as in situ skeletons.[13]

Note regarding the Haselwood Tombs.[14]

See also aerial photographs. [15][19][20][21][22][23][24][25]

See also. [16]

A 1997 colour brochure of the history of Pershore Abbey. [17]

2012 Archaeologicla evaluation to inform the design of the underpinning of the North-East chapel revealed two articulated human skeletons, both predating the chapel which has early 13th century origins. One of the burials was found with a masonry niche which may represent a cist or the remains of the 13th century Lady Chapel. [18]

Repairs have been carried out on the Jenner Window. [26]

In south transept, free-standing war memorial, Portland stone, 3 square steps, cylindrical pedestal, winged copper alloy figure of immortality on orb holding wreath in left hand, right arm raised, figurative relief plaque depicting dead soldier on stretcher between angel on the left and mourning woman on the right, 126 names, WW1 & WW2. Artist Alfred Drury, 1920/21. [27][28][29][30]

The Historic England Scheduling for this monument was the subject of a minor enhancement on 20 May 2015. This monument includes the monastic buildings of a Benedictine abbey situated on the eastern side of the River Avon at Pershore. The monument survives as the buried foundations of the cloisters, chapter house, southern transept, refectory and calefactory that were constructed of limestone from about 689 with many medieval additions. The features of this monument are known only from archaeological excavations of 1929 and are represented by buried features within the constraint area. The site was known as Pershore Abbey and was founded about 689 and refounded into the Benedictine order in 972. The first abbot was appointed in 984 and the abbey was dissolved in 1540. Parts of the abbey church and further abbey features survive in listed buildings to the north-east of the monument, but are not currently included in the Schedule because they have not been formally assessed. Despite partial destruction, excavation, and the construction of road and path surfaces, the monastic buildings and associated buried archaeological remains survive comparatively well as buried features. CROSS (MEDIEVAL - 1066 AD to 1539 AD)
Evidence STRUCTURE

Description

Stone shafts and steps of medieval cross. [1]

A cross which may have been the High Cross was cleared away in 1840 when Broad Street was opened out. It originally stood at the High Street end of Broad Street in a recess in front of a house cleared way about 1840. A simple cross on a 'cavalry' of several steps. The Abbey churchyard cross may have been the High Cross re-erected. [2]

Churchyard cross. 15th century, probably 1st half. Limestone. Octagonal shaft set in octagonal base on 2 octagonal steps. Cross missing. [3][4]

Description

The church consists of a chancel with north chapel and vestry, nave with north and south aisles, tower at west end with south porch. The earliest part of the building dates from the 12th century. In the 14th century the north aisle was rebuilt and possibly widened. Early in the 15th century the south arcade was rebuilt and the north chapel started. An extensive rebuilding took place in the 15th century. The south porch was built in the 18th or early 19th century. Some restoration and renewal took place in the late 19th century. [1] [2]

It is said that the church was originally built by Edward the Confessor and that it was in existence in 1086. In 1147 the new church of St.Andrew was dedicated and it is possible that the new church which was built within the cemetery of the monastery, was not built on the site of the original one, which was probably in the manor of the Abbot of Westminster. The benefice of Pershore St.Andrews is noted in the 1291 Taxatio of Pope Nicholas IV. It included the church of Pershore St.Andrew with a portion of £5 0s 0d payable to the Abbot of Pershore and another of £8 13s 4d to the Abbot of Westminster. [3]

The present church is now in the parish of Holy Cross. By 1218 the patronage was in the hands of the Abbot of Westminster who gave it to the Abbot and convent of Pershore in about 1241. The Abbot of Pershore obtained a licence to appropriate it in 1306 and again in 1321. A vicarage was ordained in 1327. Another ordination followed in 1331. Soon after the dissolution the rectory was granted to the Dean and Chapter of Westminster. In the 12th century the chapels of Besford, Defford, Wick and Bricklehampton were dependant upon the church of St.Andrew. Only Bricklehamton is now dependent the rest have become parochia. [1]

Regular services ceased to be held in the building in 1957 and since 1961 it has been used as a Parish Hall. [4]

There is a figured relief panel on the east wall of the north aisle. It shows no obvious signs of weathering and seems to depict a man. The north aisle was rebuilt in the 14th century and reconstruction work on the north aisle chapel took place in the early 15th century. The panel is set in a wall that probably reflects 15th century alterations. The date of the panel is uncertain. It is probably Anglo-Saxon no earlier than the mid-eighth century and no later than the tenth century. As the church of St.Andrew only came into existence in the mid-11th century the panel's origins may lie with the Abbey. [5]

During drainage work in 2001 a human skeleton was uncovered. The burial was recorded in situ and is thought to date from the 18th to 19th centuries. [7]

The church ceased to function as a parish church in 1957 but services were occasionally held in it up to 1961. It is now a parish centre. Within it is figured relief on the east wall of the north aisle. This is not noted in the Victoria County History, nor Pevsner's Guide to The Buildings of England. It is possible that it was obscure by an altar. The panel is 36 x 27 cm and may have been cut back during the later medieval period. It shows no obvious signs of weathering. The panel seems to be of a man. The earliest surviving part of the church is the north aisle arcade which is dated to the late 12th century on stylistic grounds. The north aisle was rebuilt in the 14th century and reconstruction work on the north aisel chapel took place in the early 15th century. The panel is set in a wall that probably reflects 15th century alterations. The date of the panel is uncertain. It is probably Anglo-Saxon no earlier than the mid-eighth century and no later than the tenth century. Its origin is also obscure because the church of St.Andrew only came into existence in the mid-11th century. This suggests that its origins may lie with the Abbey. The lower left corner of the panel may exhibit fire damage but several fires are documented at the abbey. [5]

A small fire occurred on the 8th June 1993 in the room on the mezzanine floor within the south aisle, damaging the medieval roof. A building recording and watching brief undertaken in response determined the damage was limited to surface charring, resulting in the loss of surface detail, particulaly in the central bay. The roof remains a substantially intact medieval structure, though visually divided by the insertion of an intrusive concrete block partition of recent date. [6]

Church, now used as parish hall. Late-12th century nave and north arcade; 15th century chancel, south aisle and tower; 18th

century porch; internal re-ordering mid-20th century. Limestone with brick porch. Plain tile roof with stone coping. PLAN: chancel, 5-bay nave with north and south aisles, south porch, and 2-stage west tower. EXTERIOR: chancel has single-light east window and, to S, 2-light cusped windows under square-headed hoodmould. North aisle: a NE extension has 2-light mullioned window with leaded quarries, and deep moulded parapet; 2 windows with renewed Perpendicular tracery and 2 pointed-arched windows, one of 2 trefoil-headed lights; pointed-arched north door with replacement door; moulded plinth and eaves course. South aisle: 2- and 3-light square-headed windows with hoodmoulds and Perpendicular tracery; moulded plinth course; buttresses with offsets. Dentilled gable to brick south porch. West end of north aisle has large 3-light window with geometrical tracery. West tower: embattled and with corner gargoyles; offset buttresses incorporating grotesques; moulded string courses at parapet, first-stage, and plinth level; projecting stair tower on north; ringing chamber has ogee-headed openings each with three louvred trefoil-headed lights; Perpendicular 4-light west window with deep splay and hoodmould; other chamber and stair lights; remodelled 4-centred-arched south tower door; defaced niche in south wall. INTERIOR: transitional north arcade has round piers with stylised leaf capitals and single-chamfered arches; Perpendicular south arcade, now blocked off, has octagonal piers and castellated capitals (it originally incorporated a former south transept and encroached on the nave leaving this narrower than chancel); 4-centre-arch with moulded surround to north wall of chancel; Perpendicular tower arch of 4 orders. Waggon roofs to chancel and nave; principal rafters and heavy-scantling chamfered purlins to north aisle; tie-beams, struts, heaily-moulded ridge-beam and purlins to south aisle. FITTINGS: include crocketed niche with angel corbel and small piscina at east end of north aisle; and royal arms over former chancel arch (now blocked). The interior was divided mid-20th century to form a series of rooms on 2 levels with staircase inserted at west end. (BoE: Worcestershire: Harmondsworth: 1968-). [9][10]

BRIDGE (LATE 11TH CENTURY AD to 21ST CENTURY AD - 1066 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main Building Material	STONE

Description

A listed and scheduled medieval stone bridge spanning the River Avon. The picturesque bridge is mainly constructed of Cotswold limestone with a brick parapet. It has a triangular refuges and cutwaters on the upsteam side only, and has been much patched and repaired over the centuries. It still bears the scars of Pershore's loyalty to the King during the Civil war when the troops central arch was damaged by Royalist troops fleeing from their enemies. This section, destroyed 5th June 1644, was rebuilt in red sandstone. The masonry at the base of the piers has been repaired in the past with materials which are not related to the original fabric. When the modern brick skin was removed from of these areas, a much older surface of large limestone blocks was revealed. This was recorded and the resulting drawings used as a template for new limstone facing. [1]

Pershore Bridge, spanning the River Avon south of Pershore. Built by monks of Pershore Abbey towards the end of the 15th century it is the only remaining monastic bridge in the county. Broken down during the Civil War, but subsequently rebuilt using stone brought fron the ruins of Elmley Castle. The bridge no longer bears traffic. The main river bridge has a large round headed arch alongside side smaller ones, and there is a furrther arch across a now dry flood channel to the east. The parapet is of a narrow brick finished with stone, with a triple course of triangular and relief set bricks on the outside relating to the road level inside. The lower parts of the bridge are mainly stone, mostly yellow but some red sandstone in places. Patching of this stone has been done with old brick, some vitrified blue. On the north side there are four passsing bays which go right down to river level forming cutwaters. There are some areas of modern brick replacement. Pevsner's description of 1968 is puzzling, implying two furtehr arches than are now visible; but no obvious alterations of that magnitude are detectable. [2][3]

The bridge is comprised of three sections: Section One - Two modern arches south of the river constructed of concrete and hadn made brick. Section Two - the Great Bridge consisting of one main arch and five smaller ones spanning the river. There are cutwaters and refuges on the upsteam elevation only. There is an additional arch spanning a flood channel to the southeast of the bridge. Section Three - three medieval flood relief arches to the north of the river with cutwaters and refuges on both sides. The downstream elevation has been widened and refaced in brick. The inverts below the arches are cobbled. The Victorai County History describes a fourth section with "three semicircular arches with split water piers and refuges on the east side which is of stone; the west side is of brick." The modern road now occupies this area but two of these arches can be seen on Thomas Sanders engraving of 1779. [1] [1: figure 4]. [4][9]

The first documentary evidence of the bridge dates to 1290 when Sir Nicholas de Mitton left 12d for its repair. It was recorded as being in a ruinous state in 1322 and remained in a dangerous condition unitl an agreement was drawn up in 1351 making repair of the bridge the joint responsibillity of the Abbot of Westminster and the people of the town. Unfortunately this arrangement did not work for long and it was in ruins again by 1388. The bridge was repaired in the 16th century with stone taken from the abbet and ruins of Elmley Castle. Already recorded as being in a dilapidated state in 1607, the bridge was severley damaged during the Civil War. The central portion was destroyed on 5th Jun 1644 by Royalist troops fleeing Waller after an attempted siege at Oxford. Pershore remained loyal to the King and the bridge represented a strategically important river crossing. The building of locks in 1635 made this stretch of river navigable for the flat bottomed sailing barges which transported coal from the mines of Staffordshire and the Forest of Dean and provided grain to the mills dotted along the river banks. These have left their mark on the bridge in the form of grooves worn in the coping stone by tow ropes. The river became unnavigable for a short time after World War Two until 1951 when it was taken over by the Lower Avon Navigation Trust. It is now mainly used by pleasure craft. A new bridge relief road was built in 1926 to carry the increased traffic load. The old bridge is now only used as a footbrodge and for its anemity value. [1][5][6]

Excavation in 1998 revealed a pitched limestone road surface and blue lias setts contemporary with the 1644 replacement of the central arches and a metalled surface ascribed to the late 18th century and the turnpike period. [10]

The bridge was integrated into the Avon Stop Line during the Second World War and fortified with Stent pillboxes, ammunition store, barbed wire, road-blocks and anti-tank emplacements. The anti-tank cylinders that remain at either extent of the bridge are not however in their original position, having most likely been moved from the modern bridge immediately to the southwest. [7][12][13]

In his 1675 map of the road from London to Aberystwyth John Ogilvy described Pershore bridge as having "six great and

several small arches. It appears to changed very little since that time. [1: Figure 2]

The bridge is evident on the 1840 Holy Cross Tithe map. [11]

Bridge in its original landscape context prior to the construction of the new bridge is evident on the 1885 1st edition OS mapping. [8]

Bridge. Probably late 15th century, remodelled 17th and 18th century. Stone piers and arches; red brick parapet with deep saddleback stone coping; some repairs in blue brick, mostly in English or English Garden Wall bond. 5 main elliptical stone arches with voussoirs, the central widest with keystone, also flood-arch with keystone at north end and further angled flood-arch at south end. 5 cutwaters and 5 refuges on east side, none on west side. Parapet has double dogtooth string-course at base; brick and stone end piers; parapet curved at south-east corner to accommodate abutment, flood-arch and east approach, and extending south to border main approach. Central arch enlarged by William Sandys c.1635 when Avon made navigable from Tewkesbury to Stratford via Pershore, and bridge further repaired/remodelled after damage in Civil War. See also Wick CP. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 243; Country Life: November 17 1960). [14][15]

The Historic England Scheduling for this record was the subject of a minor enhancement on 19 May 2015. This monument includes a multi span bridge situated across the River Avon south of Pershore. The monument survives as a five-span bridge with additional flood arches at the north eastern and south western ends. The bridge was constructed in the 15th century and was remodelled during the 17th and 18th centuries. The bridge is constructed from sandstone with a red brick parapet and some blue brick. The bridge has a low parapet with a double dog-tooth string course, saddleback stone coping and brick relief decorations on the exterior. The parapet curves out at the south eastern corner and terminates in brick and stone piers. Of the seven arches spanning the river and flood plain, the central arch is the widest with two arches paired ether side. The principal arches have segmental heads and voussoirs and the central arch has a large keystone. The north eastern flood arch is decorated with a keystone and the south western arch is angled to match the curve of the parapet. On the eastern side of the bridge are five pointed cut waters that rise up to become pedestrian passing places on the top of the bridge. The bridge is approximately 66m long and 4m wide.The original bridge was constructed in the 15th century by monks from Pershore Abbey. The central arch was enlarged by William Sandys about 1635 and the bridge was further repaired after it was damaged during the Civil War. Pershore bridge is Listed Grade II*.Despite partial demolition and the insertion of a road surface, the remains of Pershore Bridge 430m south east of Pershore Cottage Hospital survives comparatively well and contains a number of architectural features of considerable interest. Elements of the original structure will remain concealed behind later stone and brickwork and will provide important information on its construction and rebuilding. [14]

Description

The house of Ann Thomas of Pershore was liscensed for Anabaptist worship in 1723. The Baptist Chapel in Broad Street however was founded in 1658. John Ash the lexicographer became minister in 1746. It was rebuilt in 1839. [1]

The Baptist Chapel, though free Gothic, manages to fit in its facade of 1888 well. The chapel itself is of 1843. [2]

The church was founded in 1658 and had long met in a converted malthouse on the present site. This was replaced in 1841 by the existing chapel now concealed from the road by a schoolroom added at the front in 1889. The walls are of brick and the roof is slated. Unusually the baptistry is sited at the opposite end of the pulpit. [3]

Recently a vault and arches were briefly uncovered, but the date is unknown. [4]

Graves, bones and a lead-lined coffin, retaining some silk and wood, were exposed in the garden of The Manse (Corner House) and reported to the Department in 1996. Also found were glazed medieval floor tiles. [5]

Description

House, now offices. Mid-late 18th century with later alterations. Red brick in Flemish bond. Hipped plain tile roof mostly concealed behind brick parapet and deep painted modillion eaves cornice; brick end-stacks. EXTERIOR: 3 storeys and cellar. 3-window range with 2 wings to rear. Sill-bands. Central bay breaks forward slightly and has sash windows to each upper floor, of 3/3 panes to 2nd floor, 6/6 panes below, each with painted channelled voussoirs and keystone. To outer bays on 2nd floor, Diocletian windows with painted surrounds, central 3/3 sashes, and 2-pane side-lights. Below are 2-storey canted bay-windows with swept lead roofs, 4/4:6/6:4/4 sashes, and painted moulded cornices. At centre on ground floor, 2 small cambered-headed lights flank entrance which has Classical architrave with 3/4 Ionic columns and dentilled open pediment, round-arched door surround with panelled reveal, fanlight with radial glazing bars, 6-panel door, decorative wrought-iron handrails and 4 nosed stone steps. Painted brick plinth with blocked cellar openings. Clock on bracket projecting from centre of 1st floor. Rear: long right-hand (north) wing has timbers and render to left (south) side; left-hand (south) wing of part-chequered blue and red brick. INTERIOR: dog-leg staircase with stick balusters to rear right; moulded elliptical hall arch; some dado rails, shutters, and panelled reveals; in north wing, former later billiard room. HISTORICAL NOTE: originally built for a tanning family with tannery to rear. Records refer to rebuilding c1800. District Council occupation was from 1937-1990; some decoration and furnishings removed at that time were restored 1992. The design of the building is related to that of nearby Caldewell, near Pershore. [1][2][3]

Excavations to the rear of the building were carried out in 1992. There was significant evidence for industrial activity especially tanning, and refuse pits. The area would have formed part of at least one medieval burgage plot. [4]

Intitial headquarters of the Evesham Battalion LDV and later Home Guard for the 4th Worcestershire Battalion from 18th May to 20th August 1940 when the headquarters was moved to 66 Bridge Street, Pershore. [6]

Clock & slate dedication plaque. A replacement for the original memorial clock installed 18 October 1953 in memory of those who gave their lives in WW2.[7]

OFFICERS MESS (World War Two - 1939 AD to 1945 AD)
Evidence DOCUMENTARY EVIDENCE

Description

Early 19th century building of Ashlar with Welsh slate roof and overhanging eaves. Three storeys, sash windows. Broad street elevation has a prominent wrought iron verandah on 1st floor ([1], p.55) and has 5 windows.

Hotel; now restaurant, shops and offices. Early 19th century with later alterations. Limestone ashlar. Welsh slate roof, partly hipped, with deep eaves soffit and 3 brick ridge stacks. EXTERIOR: 3 storeys; 3x5 bays. 1st-floor sill band; painted plinth. On corner site. Bridge Street elevation: 3 bays. On 2nd floor, 6/6 sashes flanking central replacement 6:6-pane casement window. 1st floor: multi-pane full-length sashes incorporating margin lights and having finely-jointed flush voussoirs and keystones. Ground floor: two 10/10 sashes with flush voussoirs flanking central porch. Porch has rectangular columns with neck mouldings; pilasters; bracketed oversailing cornice; 2-leaf part-glazed door; fanlight with radial glazing bars; panelled reveal. Broad Street elevation: 5 bays. Windows as before, those on 1st floor with lintels, opening dado panels, and giving access to full-width decorative wrought-iron verandah with swept roof and wooden floor supported by iron and wooden brackets. Ground floor at right end has round-arched 20th century doorway giving access to remodelled courtyard and 20th century shop front. INTERIOR: extensively remodelled, although moulded window architraves and wooden dados survive on first floor. [2][3][5]

Hotel requesitioned by Army and RAF. Housed the Officers Mess for aircrews of no.23 of T.V. Bomber Command 1941-4 and aircrews No.1 Ferry Training Unit, Ferry Command 1944-47. [4]

MONASTERY (POST ROMAN to PRE CONQUEST - 690 AD to 1065 AD)
- Evidence DOCUMENTARY EVIDENCE
- Evidence FIND

Description

Said to have been founded about 690. In 972 it received from Edgar a new charter as a house of Benedictine monks. [1]

Trial excavations in 1984 at junctions of the tower, had in one area foundations under 2 phases of Norman masonry, suggested that this might be part of the Saxon structure. [2]

The extent of the Anglo-Saxon urban form has been defined and mapped. Although the monastic precinct can be identified with some confidence, the extent of occupation is uncertain and therefore the limits of the Anglo-Saxon form has been provisionally mapped as coincident with the medieval urban form [3].

Proposed area of Saxon Abbey Precinct. The only evidence for the location of the Saxon Abbey is the pre-Norman walls under the Norman abbey [4] and the suggestion that St.Andrew's church was built in the graveyard of the Saxon monastery in 1147. There is evidence to suggest that the present church of St.Andrew's is not on the original site. [4][5]

The line is intended to encompass rather than to define the extent of this enclosure. [6]

Description

A mill is shown on the Tithe Maps of 1842. [1]

Grade II listed building before demolition (21/589). 18th century corn mill. The original is mentioned in the Domesday Book. Georgian with semi-circular headed windows. [2]

A medieval watermill was granted in a lease from Pershore Abbey to the vicar of St Andrew's in 1526. The mill was completely destroyed by a fire in 1976. It was a large building on an ancient foundation and with 'much old stonework remaining'. [3][4]

Site visit report, 1992, details the situation. The lock and weir adjacent to the mill were still in use at that time. [5]

Documented as 'Avon Flow Mills', established in 1840. Photograph shows four storey building. [6]

Building Recording of Mill House, 1997. [7]

A Watching Brief on the sluice carried out in 1998. [8]

During WWII the mill guarded a vulnerable point. The mill was loopholed and sandbagged to provide a defence post overlooking the weir. [9][10]

HER Number	Site Name	Record Type
WSM10043	Site of Possible Medieval Fishponds, West of Abbey, Pershore	Monument

Monument Types and Dates

FISHPOND (MEDIEVAL - 1066 AD to 1539 AD)
Evidence EARTHWORK

Description

Fishponds (possibly medieval) aligned north-south within precinct of Abbey. Maps from tithe award onwards show two ponds, on the edge of later field boundaries. Northern pond lies to the west of the abbey buildings and another to the south (not linked). [1]

The land is now a public park. The site of the northern pond is uncertain on the ground, but two substantial willow trees may be indicators. The southern pond may still be marked in a slight dipping in the general area. A children's playground has recently been (re?)built in this area with fencing etc. An evaluation in 1995 located deposits that could derive from a fishpond but would equally well be compatible with progressive silting of the former river channel. It is probable that the ponds were a modification of the existing channel. [2]

Site of National Significance - considered for scheduling by English Heritage. [3]

The fishponds are said to have been filled in during landscaping in 1947. [4]

A silty layer revealed by an evaluation in 1994 was consistent with a ditch fill but could possibly have indicated an artificial watercourse, possibly a leat between the two medieval fishponds. [5]

MONASTIC PRECINCT (MEDIEVAL - 1066 AD to 1539 AD)

Evidence	CONJECTURAL EVIDENCE
Evidence	DOCUMENTARY EVIDENCE
Evidence	SUB SURFACE DEPOSIT

Description

In 1838 Styles wrote: 'The entrance to the Abbey was on the north of the Church yard, under a lofty archway, which having become ruinous, was taken down a few years since by order of the gentleman who owns the property. Adjoining to it appear traces of a building, possibly from its situation the almonry; and on this side was also the second or inferior quadrangle, the last vestiges of which, an arched doorway and narrow loop-hole window, have but a short time since fallen beneath the unsparing hand of modern improvement. The site of the Abbey occupied ten acres, exclusive of the Abbey garden on the south bank of the moat'. [1]

Foundation trenches dug to the north west of the Abbey in 1974 revealed evidence for a abandoned Flandrian river channel, with the possibility of medieval fishponds lying within this feature. [2]

A large area of Abbey Park was subject to a geophysical survey in 1993. Resistance measurements, magnetometry and ground-penetrating radar were used. The results suggested the presence of stone structures, a large enclosed area, and various boundary features and holloways in the southern part of the park. Most features observed may relate to the medieval period or post-medieval period when the area was private gardens and orchards. [3]

An evaluation which took place in 1994 confirmed the presence of a river former river channel running through the west side of the park. This was modified in the medieval period to form fishponds. A possible medieval building was identified, with its large size indicating it may have been a tithe barn. [4]

A watching brief was carried out in 1994 during works for footpath lighting. The only notable obsevation was an area of dark silt, possibly a ditch fill. It was concluded that features previously recorded by geophysical survey lay below the topsoil. [5]

Report relating to work carried out by Stratascan in 1996. Its objective was to determine the extent of the foundations of the demolished nave etc. The survey demonstrated a good correspondence with the the results of an evaluation also completed in 1996. [6]

An evalution in 1996 demonstrated that significant deposits survive in the area adjacent tomthe west end of the abbey church, but that these deposits may be located beneath very shallow modern deposits. [7]

A watching brief in 1998 recorded part of a 19th century building called 'The Abbey', but no earlier deposits or structures were recorded. [8]

A watching brief carried out in 2002, during groundworks for a path, failed to reveal any definite archaeological features. [9]

Discrepancy noted between scheduling information and HER polygon shape, the latter being based on geophysical survey results. [10]

Vertcal aerial photograph of Pershore, 1964. [11]

Evidence BUILDING

Description

The Victoria County History notes that under the premises of the Capital and Counties Bank is a stone-roofed cellar or crypt divided into two apartments by a cross-wall with a wide four-centred arch. The southern division "seems to have served as a chapel, as in the south wall is a well preserved piscina". In the west wall are the jambs of two original openings, one terminating in a pierced quatrefoil. In the north wall of the northern apartment is a square-headed locker. Between the two rooms is a large vice of which only one step remains. The walls are ashlar-faced and the vault is elliptical and plain. The date is probably 15th century. [1]

Nash notes that within the parish of Pershore are many manors and chapelries and that in the town was a chapel dedicated to St.Michael ([2], p.249). He also notes a manor "Pershore Porchmouth" as belonging to the dean and chapter of Westminster ([2], p.249). It is possible that this undercroft was the chapel of St.Michael, recorded in 1302 when Adam the chaplain was cited for performing a clandestine marriage ceremony in it. It has also been suggested that it may be the site of the manor of Pershore Portsmouth which in 1690 was decribed as being in the High Street next to "The Swan". This Inn should not be confused with the one at 36 High Street, which was previously known as "Quiet Woman" ([3], p.28). [2][3]

A photograph and short article relating to the undercoft appeared in the Evening News 12/08/1955. [4]

Andrew includes a note regarding this chapel. [5]

Visual Inspection in 1994 revealed a wide barrel vault roof of limestone. [6]

MINT (PRE CONQUEST - 1000 AD? to 1065 AD)
Evidence DOCUMENTARY EVIDENCE

Description

A mint is said to have existed here in the early days of Edward the Confessor. [1]

A single coin of Edward the Confessor dated to 1059-1062 of 'Hammer Cross' type bears the mint name of PERESC. This is usually taken to mean Pershore. [2]

EVENT (PRE CONQUEST - 901 AD to 1065 AD)
Evidence UNSTRATIFIED FIND

Description

A copper alloy censer cover dating to the late 10th or early 11th century. "It resembles a church tower with a plinth at the base. Decorated on all four sides with punched ornament". Full description photograph and bibliography in exhibition catalogue. In British Museum MLA 1960, 7-1,1. [1]

It is probable that two such artefacts have been found in Pershore. Andrews writes that " a thirteenth century bronze thurible was dug up last century and now in the British Museum; a portion of possibly another thurible of Anglo-Saxon date, whereabouts unknown. [2]

Shaw writes that a Saxon censor was said to have been found during excavations for a cellar in the middle of the town in the 19th century. [3]

Barrett notes that it was found in the Abbey grounds in 1840. [4]

WSM15753	Perrott House, Bridge Street, Pershore	Building

Monument Types and Dates

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1760 AD to 2050 AD)
Evidence BUILDING

Description

House. Circa 1760. Possibly by Robert Adam. For Judge Perrot (Baron of the Exchequer). Red brick, with some yellow, in Flemish bond, the rear and left return stuccoed; painted and part-rendered stone dressings. Hipped roof, of plain tile and Welsh slate, with brick end-stacks, a small off-ridge stack, and another to rear.

EXTERIOR: 3 storeys; 3 bays. Moulded plinth; rusticated end-pilasters supporting deep moulded cornice and linked by 1st-floor plat- and sill-bands. Central bay projects under corniced pediment. On 2nd floor, tripartite windows with bracketed sills, pilasters, cornices and sashes of 4/4:6/6:4/4 panes. On 1st and ground floors outer bays have 2-storey corniced canted bay windows with pitched lead roofs; tripartite windows with 4/4:6/6:4/4-pane sashes on 1st floor; and Venetian windows below, which have 4/4:11/6:4/4-pane sashes with radial glazing bars to centre, pilasters and moulded cornices. Similar Venetian window with bracketed sill to centre on 1st floor. Cellar grilles. Central doorcase has 3 nosed steps up to 8-panel door below deep fanlight with decorative glazing and archivolt with block voussoirs; side-lights with octagonal panes flanked by corniced pilasters supporting entablature and rising from deep plinth. Iron scraper. Rear: main wing has Venetian windows on ground and first floors, triple sashes above, and central octagonally-paned glazed door up stone steps with side-lights and arched hood supported by wrought-iron brackets.

INTERIOR: fine plasterwork to walls and ceilings in Adam style; mahogony 6-panel doors, reportedly replacements of earlier painted pine doors; panelled doors and shutters throughout. "Adam Room" to rear left has richly decorative plasterwork ceiling and walls; oval mirror in plaster frame above grey-marble fireplace with decorative mantelshelf; chair rail; panelled walls. Dining Room to front left has ceiling with painted reclining Classical figure and busts; decorative cornice; grey-marble fireplace with Adam surround. Front Hall has octagonal-paned glazing to lobby similar to rear entrance. Library to front right has remodelled marble fireplace with inset steel firebasket; cornice; replacement chair rail. Dog-leg stair with stick balusters, moulded handrail, restrained panels and glazed skylight. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 242; Country Life: Little B: Georgian Beauty in an Abbey Town). [1][2][3][4][6]

Now an Antique shop and promotional literature has photographs of the interior. [5]

Location of SMR card unknown. [8]

Evidence STRUCTURE
DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)
Evidence BUILDING

Description

House. Late 18th century, incorporating probably 17th century timber-framing. Red brick in Flemish bond with painted ground floor. Welsh slate roof with eaves band and brick ridge stack.

EXTERIOR: 3 storeys and cellar; 3-window range. To the second floor, 4/8 sashes in painted reveals with painted sills. On the first floor, 18-pane 2-light casements, that at centre blocked, with painted sills, channelled voussoirs and keystones. On ground floor: continuous moulded hood; 2 canted bay windows, of 4/4:6/6:4/4 sashes (on left) and 8:12:8-pane fixed glazing with single-pane casement (on right); two doorways, one between bay windows with moulded doorcase, 4-panel door, and 2 stone steps; one on left, with barred overlight and 6-panel door; cellar grille breaks painted plinth.

INTERIOR: not inspected but reported to be timber-framed. [1][2][3][6]

Site visit to rear of property in 2001 revealed the possible existence of a well. [4]

Location of SMR card unknown. [5]

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)
Evidence BUILDING

Description

House, now part restaurant. 18th century-early 19th century frontage with probably 17th century timber-framed rear wings, one of which is listed separately; alterations and repairs circa 1973. Painted red brick in Flemish bond. Plain tile roof with moulded eaves cornice and brick stacks to right end and side.

EXTERIOR: 3 storeys. Single-window range of 8/8-pane boxed sashes with channelled voussoirs, keystones and sillbands, the second floor window smaller. Ground floor has remodelled shopfront bay window with multipane glazing and vestigial sillband. Segmental-arched doorway on left with 20th century door.

Rear: 3-storeyed 17th century wing has square-panelled timber-framing with painted brick nogging and jettied first floor; plain tile roof.

INTERIOR: not inspected. House wing was listed on 23.5.73 [1], [2], [3].

Location of SMR card unknown [5].

Site of an aircraft crash on the 29th May 1943. At 19:10 hours a Vickers-Armstrong Wellington III serial number X3704 of 23 Operational Unit collided with the roof of No 44 Bridge Street knocking circa 2 feet off the ridge. It then crashed into the roof of The Brandy Cask Hotel and fell in the back garden, demolishing outbuildings and a garden wall and the boundary wall between The Brandy Cask and The Star Hotels. The aircraft was participating in a flying display to mark Pershore's "Wings For Victory" week. [6]

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)
Evidence BUILDING

Description

House divided into 2. Late 18th century/early 19th century with later alterations. Red brick in Flemish bond. Welsh-slate gable-facing 2-span roof concealed by high parapet with 3 rendered blind oculi above painted cornice; 4 brick side and end stacks; dogtooth eaves to left return.

EXTERIOR: 3 storeys and cellar; 3-window range. Painted rusticated quoins and rendered chamfered plinth. On second floor, segmental-arched 3/3 sashes; on first floor, flat-arched 3/9 sash on left and horned 6/6 sash on right; central window on each floor blocked, and all with painted channelled voussoirs, keystones, and sills. Ground floor: on right, 3/9 sash similar to that above; on left, added canted bay-window with plate glass sashes and pitched leaded roof; cellar grille below each window; at centre, paired entrances, to no 56 on right and to no 58 on left, each having Classical architrave with 3/4 Tuscan columns on plinths, corniced entablature, fanlight with radial glazing bars, 6-panel door, and 3 stone steps.

INTERIOR: curved dividing wall. The building formerly housed a dissenting meeting house. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 242) [1], [2], [3].

Location of SMR card unknown [5].

Monument Types and Dates

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)
Evidence BUILDING

Description

House. Approx 1780 with later alterations. Red brick in Flemish bond. Hipped plain tile roof with 2 central leaded gullies, painted modillion cornice to front, and stepped dentilled eaves to sides; brick stacks, one to end of ridge, one external, and 2 lateral.

EXTERIOR: 3 storeys and cellar; 3-window range. Painted sill bands and moulded rendered plinth. On second floor, central 3/6 sash with painted channelled voussoirs and keystone, flanked by tripartite windows with 2/4:3/6:2/4 sashes and corniced surrounds. 1st and ground floors have, to outer bays, 2-storey canted bay-windows with pitched leaded roofs, cornices, and 4/4:6/6:4/4 sashes. On first floor, central 6/6 sash with painted channelled voussoirs and keystone. On ground floor at centre, curving double flight of 6 moulded stone steps with iron hand rail up to 6-panel door below Gothick-traceried fanlight with infilled panelled reveal and Classical architrave which has 3/4 Doric columns on plinths, entablature with paterae, and open pediment. Later brick extension on right. Some lead hoppers and downpipes. Rear elevation has 2-storey canted bay-window with 4/4:6/6:4/4 sashes; 2 staggered rectangular staircase windows with margin lights; and tripartite sashes above.

INTERIOR: 6-panel doors with wide architraves and deep reveals; in front left room, panels with re-entrant curved corners, moulded dado rails, triglyph cornice, Adam-style fireplace with fluted pilasters; in front right room, wooden panelling with billet moulding; central dog-leg staircase with wreathed handrail, grooved balusters, and upper floor frieze. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 242). [1][3][4]

Beautiful early Georgian scheduled house of great character. [2]

HOUSE (18TH CENTURY AD to 21ST CENTURY AD - 1750 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main building material	BRICK
Main building material	WELSH SLATE

Description

House, now divided into 2. Mid-late 18th century, altered 19th century. Red brick in Flemish bond with painted lower courses to left. Welsh-slate roof with stone coping, painted moulded eaves cornice and 2 brick end stacks.

Exterior: 3 storeys and cellar; 3-window range. Painted sill bands. Three 3/6 sashes to 2nd floor, two 6/6 sashes on first floor, all having painted channelled voussoirs and keystones. To right on first and ground floor, a 2-storey canted bay-window with pitched leaded roof and sashes, 2/2 x 3 of plate glass sashes on first floor, 4/4:6/6:4/4 below.

Ground floor has second canted bay window on left, similarly fenestrated and with cornice and pitched leaded roof. Central Classical doorcase (to No.66) has 3/4 Doric columns, entablature with paterae and open pediment, decorative fanlight, 6-panel door, iron hand rails, and 4 stone steps of which 3 are nosed. Door at left end (to No.68), with slight incursion onto facade of The Old Malthouse, has fluted round-arched architrave with paterae and open pediment, decorative fanlight, 6-panel door and 4 stone steps, 3 nosed. Part-painted part-rendered plinth with cellar grilles below windows. Rear wing with brick dentilled eaves.

Interior: not inspected. [1][2]

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)
Evidence BUILDING

Description

Pair of houses. Late 18th century/early 19th century. Red brick in Flemish bond. Welsh slate roof with eaves band, dentilled gable verge and central brick ridge stack.

EXTERIOR: 3 storeys and cellar. 2-window range, on first floor of 8/12-pane full-length sashes with narrow glazing bars, curved wrought-iron balconies, painted reveals, stepped rusticated voussoirs and decorative keystones. Similar smaller 4/8 sashes with painted sills on first floor, and 8/8 sashes on ground floor. At each end, porches which have Doric columns, on deep plinths, and pilasters; inward-curving entablatures; decorative fanlights; 6-panel doors; and 3 nosed stone steps, those on right (to No.70) renewed. Painted brick plinth with cellar grilles below windows.

INTERIOR: not inspected. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 243). [1], [2], [4]

A Watching Brief at the rear in 2000 revealed post-medieval garden soil in the northern part and an old cellar in the southern part [3].

Location of SMR unknown. [6]

Description

House, now bank and offices. Late 18th century, converted 1929 and with subsequent alterations. Red brick in Flemish bond. Welsh slate roof with coped parapet and brick end stacks.

EXTERIOR: 3 storeys and cellar. 7-window range, central bay breaks forward. All 3 storeys have horned 6/6 sashes with moulded surrounds, painted sills and gauged brick flat arches, the central windows with keystones; infilled segmental-arched openings to cellar. Central tripartite doorcase with fluted pilasters and rosettes on capitals, painted gauged brick round arch with lion mask, large fanlight with decorative leading, 2 stone steps, iron scraper. Right-hand bay has 20th century decorative door under painted gauged brick flat arch leading to side passage. Painted plinth. Windows restored late 20th century - earlier photograph shows three 2nd-floor windows bricked in and plate glass sashes below.

INTERIOR: Adam-style plaster ceiling moulding to remodelled ground floor; fluted doorcases with paterae; dog-leg staircase with decorative Gothick plain wooden balusters; moulded basket-arched hall archway; eared marble and wood fireplace on first floor; panelled reveals to windows.

HISTORICAL NOTE: converted from house to bank 1929; previously known as Laughern House. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 242; Country Life: Little B: Georgian Beauty in an Abbey Town). [1], [2], [3]

Location of SMR card unknown. [5]

Description

Formerly known as: Fire Station BRIDGE STREET. Warehouse, later fire station and house, now house and shop. 18th century, restored/converted 1973. Red brick in Flemish bond. Welsh slate roof and eaves cornice to left section; plain tiles, brick stack to right end, and brick dentilled eaves to taller right-hand bay. 2 separate adjoining frontages.

EXTERIOR: that on left of 2 storeys, 2 bays: horned 6/6 horned sashes (late 20th century) with rendered channelled voussoirs, keystones and small wrought-iron balconies to first floor; on ground floor, 2 round-arched doorways with 20th century doors and fanlights and 2 high round-arched vehicle doorways now glazed. On right, 1-bay range of 3 storeys and cellar: 8/8 sash with gauged brick flat arch and painted sill to ground and 1st floors; similar smaller 4/8 sash above; cellar grille. Painted plinth.

INTERIOR: not inspected.

HISTORICAL NOTE: originally a warehouse belonging to draper opposite before conversion to fire station. Frontage substantially renewed in conversion although right side corresponds with old photos. [1], [2], [4]

The Fire Station was used during WWII by AFS/NFS.[3]

Location of SMR card unknown. [6]

Description

18th century of brick construction. Moulded eaves and cornices. Modern tiled roof. Three storey with three sash windows with keystones and voussoirs. Door with three-quarter Tuscan columns. On the left is a carriage entrance. [1][2]

House. c1800, refaced 1825. Red brick in Flemish bond with painted stone dressings. Renewed plain tile roof, hipped at rear, with moulded painted eaves cornice and two brick end stacks, ashlar coping to right gable. EXTERIOR: 3 storeys and cellar; 3-window range of 8/8 sashes to 1st and ground floors, 4/12 sashes above, all with painted channelled voussoirs, keystones and sill bands. Doorcase to left of centre has 3/4 Tuscan columns, open pediment, decorative fanlight, 6-panel door, 2 stone steps with nosings, and iron scraper. Elliptical-arched carriage entrance further left has rendered roll-moulded surround with imposts and double 12-panel doors. Moulded painted plinth with cellar grille. Date-plaque "ID 1825" records refacing. Side elevation: partly of brick in English garden wall bond and partly stuccoed, with dentilled eaves; 3 side-doors; one Gothick window; stone voussoirs and keystones over sash windows; rear wings of 3,2 and 1 storeys. Rear elevation has full-length 20-pane sash to ground floor. INTERIOR: many early-19th century features including shutters, fireplaces, doors, floorboards, staircase and plaster mouldings. HISTORICAL NOTE: documents record clearance of site 1799. [3][4]

The source associated with [1] is unknown. [5]

Description

Formerly the Coach and Horses. 18th century of brick construction with slate roof. Three storey. Three sash windows with keystones and voussoirs. Ground floor bay windows and carriage entrance. [1][2]

Formerly known as: Coach and Horses Public House. Hotel. Early 19th century with later alterations, incorporating earlier timber-framed structure with a reputed foundation date of 1470. Red and yellow brick in Flemish bond with stone and timber-framing in carriage-entrance wall. Shallow-pitched Welsh-slate roof with moulded rendered eaves cornice and brick stacks to right end and ridge. EXTERIOR: 3 storeys and cellar; 3-window range, the right bay recessed. Windows are boxed sashes, on 2nd floor of 4/8, 4/8 and 3/6 panes, on 1st floor of 8/8, 8/8 and 3/6 panes, all having painted channelled voussoirs and keystones, stone sills on 2nd floor, sillband on 1st floor. Ground floor: 2 canted bay-windows with plate and coloured glass fixed glazing, enriched cornices and pitched roofs flanking doorcase which has pilasters, bracketed moulded hood and double 3-panel doors; carriage entrance to right; sill band; rendered plinth. Wrought-iron sign fittings. Rear wings. INTERIOR: timber-framing with heavily-moulded stopped beams and partition timbers; 17th century staircase with barley-twist balusters and contemporary wooden treads. (Inn booklet). [3][4]

DWELLING (19TH CENTURY AD to 21ST CENTURY AD - 1801 AD to 2050 AD)
DWELLING (19TH CENTURY AD to 21ST CENTURY AD - 1850 AD to 2050 AD)
Evidence BUILDING

Description

Early 19th century. Stucco with slate roof, parapet and cornice on right hand side. On the left the building is three storeys with two sash windows. Ground floor has two bay windows with continuous frieze and cornice and six panel door with "Gothic" transom light. On the right is a Victorian three storey bay with small cambered headed windows. [1][2]

Inn. Reputed to date to 1779; early - and late -19th century alterations. Brick painted or rendered with scored stucco. Left-hand section has shallow-pitched Welsh-slate roof with moulded eaves cornice and 2 brick end stacks; canted bay has roof concealed behind high, coped, parapet; right-hand bay has replacement plain tile roof with stepped cogged eaves. EXTERIOR: 3 storeys and cellar; right-hand bay of 2 storeys. In three sections, that on left a 2-window range of 8/8 sashes with painted channelled voussoirs, keystones and sillband to 1st floor; two similar 4/8 sashes above; on ground floor, plinth, steps up to central 6-panel door with Gothick-traceried overlight and wooden architrave flanked by canted bay windows with 2/2 sashes, all under entablature with triglyph frieze. On right, late-19th century full-height canted bay has basket-arched openings with moulded surrounds; 2-pane sashes; on each upper floor 4 windows, paired at centre, with cable-moulding; on ground floor, central 6-panel 2-leaf door with overlight flanked by windows; plinth; 1st-floor string and sill band. Lower right-hand bay has 2-light window of paired sashes over segmental-arched carriage entrance. Rear range includes former liquor store. INTERIOR: not inspected. [3][4]

Evidence	BUILDING
Main building material	BRICK
Main building material	STONE
Main building material	TIMBER

Description

Abbey almonry, then residential (probably 2 dwellings), now one house. Probably early 16th century, converted to dwelling late 16th/early 17th century, with later alterations; restored 1973 by Worcstershire Building Preservation Trust. Square-panelled timber-frame with rendered infill on stone plinth. Renewed plain tile roof with large brick stack to rear roof pitch. 16th century building with timber-frame and painted brick nogging. Tiled roof. 2-storeys. 3 windows. Modern casements. 2 modern doors. Stone plinth. Old Almonry of Abbey and being restored in 1971. [1]

EXTERIOR: 2 storeys; 4 framed bays with through-passage, lower wing added on right (west). North side: first floor has three renewed windows, within timber-framing divisions, with 2-light 6/6-pane casements, paired to right-hand bays. Ground floor: two small-pane 1-light windows to left bay; two 3-light 6/6/6-pane windows to right bays; 20th century door to through-passage; close-studding below mid-rail; plinth of coursed rubblestone. Lower wing, on right, blind. Rear (S elevation): 6/6-pane casement windows; 20th century door to through-passage. INTERIOR: not inspected. [2][3]

Description

Rebuilt in 18th century. Of brick construction. Moulded cornice and parapet. Rusticated quoins. Three storeys. Five sash windows with cambered heads and enriched keystones. An exceptionally well proportioned façade. Ground floor, rusticated stucco, four 18-pane sashes. [1][2]

House now bank. 18th century partly remodelled 20th century. Red brick in Flemish bond with stone dressings, rusticated stucco ground floor and quoins. High brick and stone parapet has stone coping with deep moulded eaves cornice concealing plain tile roof; 2 lateral brick stacks.

EXTERIOR: 3 storeys and cellar; 5-window range. Windows on 1st and 2nd floors have: 6/6 sashes; segmental-headed moulded architraves; deep, gauged brick, segmental arches with heavy carved keystones; stone sills; 2nd-floor windows smaller. On ground floor: four boxed 9/9 sashes with large moulded pseudo-keystones and deeper reveals; doorcase on left with decorative overlight and 20th century door; deep moulded plinth with cellar grilles. Left return, part rendered and part painted, has segmental-headed sash windows with sills and wooden keystones. Rear has double-depth wing. INTERIOR: not inspected. HISTORICAL NOTE: formerly partly occupied by bank and partly a draper's business. Old photograph shows present parapet is reduced by 2 courses. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 243;). [3][4]

Main building material	STUCCO

Description

Stucco. Old Inn refronted in 1920 with two-storey bow windows. Parapet and moulded cornice. Inside, inlaid over mantel and painted figure dated 1575. [1][2]

Inn. Probably originally 16th century, part 18th/early 19th century, and refronted and remodelled 1920. Brick with stucco render. Left-hand section has plain tile roof concealed by parapet and moulded eaves cornice; right-hand bay has steeply-pitched roof of old tiles behind parapet; 3 brick stacks, at centre of left-hand section and to ends of right-hand bay, with others to rear.

EXTERIOR: 2 storeys and cellar. Main, left-hand, section of 3 bays (four 1st-floor windows) with previously-separate single bay to right; long rear wing. Left-hand section: outer bays have 2-storey bow-windows of 5 transomed lights with leaded glazing and casements and paterae frieze; to centre on first floor, inn sign with relief lettering and motif within segmental-arched frame, flanked by 2 small leaded casements; below, central entrance has moulded architrave, canopy supported by heavy consoles, leaded sidelights, and 4 stone steps; deep plinth with 2 cellar openings. Right-hand bay: 2/2 sash with projecting sill to 1st floor; carriage-entrance below. Rear wing is of brick, partly stuccoed, with old-tile roof to part; dogtooth eaves to part; vestigial timber-framing to rear right angled wing.

INTERIOR: has some heavy-scantling timber posts and spine-beams, some chamfered and stopped. Fireplace of 1575 (see Pevsner). (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 243). [3][4]

Description

19th century building of painted brick. Welsh slate roof. Two storeys. Three sash windows. Ground floor has old multipane shop and modern shop front. Group value. [1][2][3]

House, now shop and offices. Probably 16th century, much altered and refronted early 19th century, with further 20th century alterations. Timber-framed, 19th century work of painted brick in Flemish bond. Steeply-pitched Welsh-slate roof with brick dentilled eaves; no visible stacks. EXTERIOR: 2-storey 3-window range with rear wing at right angles. Main range: 8/8 sashes. Ground floor: 20th century plate glass shop-windows to outer bays, that on left with central door; at centre, 20th century doorway giving acces to passage between the two present properties with remains of gauged brick flat arch above. Rear: wing has timber-framed gable and old tile roof. INTERIOR: not inspected, but noted as having square-panelled timber-framing, one post, exposed joists, and beams, some chamfered. [3][4]

INN (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)

Evidence	BUILDING
Main building material	STUCCO

Description

One building of 18th to 19th century construction. Stucco. Tiled roof. Two storeys. Three casement windows and ground floor bay windows. Gabled dormer. Group value. [1][2]

House, part formerly an inn, now 2 shops and offices. Late 18th-early 19th century incorporating earlier, probably 17th century work, and with later alterations. Brick rendered with lined stucco. Renewed plain tile roof with 3 gabled dormers. EXTERIOR: 2 storeys; 3-window range with three parallel rear wings at right-angles, that on right (to No.51) extending further. Main range: first floor has 9-pane segmental-headed windows each with one central casement and some further top-hung casements. Ground floor: right-hand shopfront 20th century with central part-glazed door flanked by plate-glazed canted-bay windows, all under pitched tile roof. Left-hand shop front has leaded modillion cornice; fascia; pilaster on right below bracketed gablet; plate glass shop-window with canted corner, 3 moulded mullions and moulded sill; 20th century shop door to right side, within passage; and 4-panel door to through-passage. Rear: main wing has stack, old tile roof, part dentilled eaves; two further gabled wings with old tile roofs. INTERIOR: not inspected. HISTORICAL NOTE: the right-hand part of the building was the former Ship Inn, and the 1st floor of the left-hand part housed a former Masons' lodge. [3][4]

The source associated with [1] is unknown. [5]

Evidence	BUILDING
Main building material	STUCCO

Description

A single 18th century building of three storeys. Stucco with four sash windows. Six panel door with fanlight, pilaters and cornice. Modern shops. [1][2][4]

An evaluation at the rear of 64-6 High Street in 1994 demonstrated that no medieval deposits survive in this area. The excavated area probably lies beyond the probable limits of burgage plots fronting Church Street and High Street. The area may have been occupied by gardens or orchards. [3]

House, now shops. Early 19th century, altered. Brick rendered with lined stucco. Plain tile roof with boxed eaves and brick end-stacks. EXTERIOR: 3 storeys. 4-window range of 8/8 sashes to 1st floor, smaller 4/8 sashes above, all with projecting sills. Ground floor: 3 shop fronts, that to left of plate glass inwardly splayed with central 20th century glazed door, side pilasters and deep corniced fascia; that to centre having 2 bay-windows with moulded rounded glazing bars and 4-centred-arched panes flanking recessed central entrance all below moulded leaded cornice; that to right, 20th century, of plate glass inwardly splayed, with deep fascia. At left end, entrance has Classical architrave with pilasters and moulded leaded cornice; decorative fanlight; decorative panelled reveals; 6-panel door; and 2 stone steps. Plinth. INTERIOR: not inspected. [4][5]

The source associated with [1] is unknown. [6]

Description

Three storey brick building with a tile roof and sash windows which look to have been replaced with uPVC. Previously listed as LB III [1].

This description seems to be incorrect as when looked at on Google Streetview, it is a two storey building with a shop frontage and two modern windows on the upper floor. [2][3]

Location of SMR card unknown [2].

Evidence BUILDING

Description

House, now part restaurant. Probably 17th century, much altered and refronted late 18th century, with further alterations later. Timber-framed, refronted in brick with lined stucco render. Plain tile roof. EXTERIOR: 2 storeys; single-window range with small, early, gabled wing to rear. First floor: boxed 6/6 sash with projecting sill; inserted 20th century window on left. Ground floor: 20th century shopfront with door and passage doorway to left. INTERIOR: exposed timber-framing to right-hand wall; it is probable that much of the original timber-framing survives beneath the present partition walls and plasterwork. [3][4]

Location of SMR card unknown [2].

Description

Three storeys. Brick. Slate roof. LB III. [1]

Not found in Listed Building list of 1972. [2]

Two storey building of possible 19th century date. The roof appears to be tiled with two chimney stacks at either gable. The upper floor originally had three windows but the middle one has been bricked up and the outline can still be seen. The existing upper floor windows are 4 light sash windows with horns. Part of the lower floor has been converted to a shop. Adjacent to the shop front is the front door to the rest of the property and comprises a 6 panel door with a flat topped pediment with columns on either side and two steps. [3][4]

The sources associated with [1] and [2] are unknown. [5]

Description

18th century building of brick construction with Welsh slate roof to central portion which has three storeys. Three sash windows with on the 2nd floor three-light windows on the outsides. Ground floor bay windows and a door with fanlight and side lights. Either side are 2-storey wings with tiled roofs and Venetian windows. [1]

Detached house with wings, now three. Early 19th century, altered. Red brick in Flemish bond. Welsh slate roof to main house with brick dogtooth and dentilled eaves and brick end stacks, hipped plain tile roofs to wings with external stack left. EXTERIOR: central 3-storey 3-bay house with flanking 2-storey 2-bay wings, that on left higher, and 4 gabled wings to rear. Central range: brick surrounds, mullions to upper-floor windows, and sill bands; painted plinth courses. On 2nd floor, central 3/6 sash flanked by tripartite windows with 3-pane sidelights and central 3/6 sashes, all having painted cornices. On 1st floor, central round-arched sash with Gothick-traceried head and painted keystone and imposts, flanked by Venetian windows with 3-pane side-lights, central sashes with Gothick-traceried heads, and painted keystones and cornices. On ground floor, added tripartite bow windows with 4/4:6/6:4/4 sashes, shallow-pitched leaded roofs and concrete sills, flanking central doorway which has 2-pane side-lights below painted cornices, wide half-glazed door in panelled reveal, gothick-traceried fanlight, and keyed archivolt. Left wing: similar 1st-floor Venetian window with wooden mullions and stone sill; below, canted bay-window with 4/4 sashes to sides, central sash with Gothick-traceried head, shallow-pitched leaded roof and stone sill. Right wing: 6/6 sash with stone lintel and tile sill above similar but smaller canted bay-window with concrete sill. Right return: 6/6 boxed sash and remodelled doorcase with gabled tile roof and 20th century door. Left return: rear wing has 6/6 sashes; ground-floor canted bay-window of 6/6:8/8:6/6 sashes; and doorcase with 3-pane overlight, 4-panel door, and trellis porch. Rear: two 2-storey wings and two single-storey with tile roofs, brick stacks and further extensions. INTERIOR: No.1 has moulded stamped plasterwork cornice; flagstones; panelled doors and moulded doorcases; some crown glazing. HISTORICAL NOTE: the plot was bought for development in 1809. [2][3]

Evidence BUILDING

Description

Two houses and shops, part of a continuous row with Nos 24 & 26 (qv). Mid 18th century with later alterations. Brick rendered with stucco. Plain tile roof with 2 roof dormers and painted brick dentilled eaves; no stack visible. EXTERIOR: 2 storeys and attic; 4-window range. Dormers gabled and with 4:4-pane casements. Plat bands to each floor. 1st floor: segmental-headed 9/9 sashes with thick glazing bars, exposed boxes, sills, and shallow moulded keystones. Ground floor: to centre and right, a double shopfront of 2 plate glass bay-windows, each of 2:6:2 panes, flanking paired remodelled entrances with 20th century glazed doors, all under continuous fascia and dentilled cornice supported by end pilasters. At left end, a further shallow bay shop-window with moulded glazing bars, decorative heads to plate glass lights, deep cornice, and doorway on right with part-glazed 20th century door. Rendered and painted plinth. Rear cross-wing. INTERIOR: not inspected. [1][2][3][4]

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)
Evidence BUILDING

Description

18th century building in brick, tiled and timber frame at back. Two storeys. [1][3]

16 Broad Street visited by Worcestershire Archaeological Society on 13 February 2001 [2]. Building is timber framed of two storeys with a cellar, being 1 room wide, with a room at the back on two floors. The front of the building was originally jettied timber construction, the remains for the framing timber beams can still be seen on the ground floor. The front wall has been rebuilt in brick, probably in the 19th century, and at the same time the next door (on the west) was similarly rebuilt. At the time of the front rebuild, possibly before, the front wall was raised and the gables extended on one slope, to raise the height sufficiently to form an attic room at this second floor level. The cellar is of masonry construction and includes a number of carved stones possibly derived from demolished portions of the abbey. These would be available after 1450. The west wall contains two small recesses about 0.35m deep, edged by moulded stonework. This appears to be of two distinct periods, firstly Norman masonry pieces comprising arch segments adorned by pellets or discs. Six further segments are built into the walls, all of similar radius. The left hand square niche has a roll-moulding of typical Norman edge profile, though the head is of 15th century type. No function for the niches is known.

Pair of houses, now partly offices. 17th century, much altered and refronted late 18th century/early 19th century. Timber-framed, rebuilt in red brick in Flemish bond. Plain tile roof with painted brick dentilled eaves, no stack visible. EXTERIOR: 2 storeys; 2-window range. 1st floor: 3/6 sashes with painted channelled voussoirs, keystones and sills. Ground floor: two shallow bay-windows, that on left canted, with 20th century multi-pane glazing; to each side, a renewed doorcase and 20th century door with a segmental brick arch and stone steps. Painted rendered plinth. INTERIOR: square-panelled timber-framing with passing braces in side and party walls; heavily-chamfered spine beams; exposed joists; partly stone-flagged floor. The timber-framing survives well in No.16, including chamfered joists, altered roof pitch, rear cross-wing, and internal chimney which open fireplace with decorative mantelpiece and cast-iron grate. [3][4][5]

Monument Types and Dates

STABLE (18TH CENTURY AD to 21ST CENTURY AD - 1701 AD to 2050 AD)

Evidence	BUILDING
Main building material	BRICK

Description

18th century stable wing at the rear of 62. Two storeys of red brick construction. Double doors with eliptical arch. Brick dentil eaves. Casements. Old tile roof with hipped end. Group value. [1]

Formerly stables to No.60 Stanhope House (qv), now house and garages. Probably late 18th century, remodelled 20th century. Red brick in English garden wall bond. Old plain tiles to roof which is hipped to left and has stepped dentilled eaves and 2 brick ridge stacks. EXTERIOR: single storey, originally with loft, with later inserted attic with extended dormer. Blocked former loft windows. On right, two 2-light 3-pane casement windows under brick segmental arches with blue brick sills flanking plank door with 8-pane overlight. To left, 2 wide entrances with timber lintels and strap-hinged double plank doors flanking segmental-arched carriage-entrance with stone springers, plinth stones, and double plank door. Blue-brick plinth course to right end. INTERIOR: not inspected. [2][3]

WSM16006	Manor House Hotel, Bridge Street, Pershore	Building

Monument Types and Dates

INN (19TH CENTURY AD to 21ST CENTURY AD - 1850 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main building material	STUCCO

Description

Mid 19th century building. Stucco, slate roof with overhanging eaves with ornate bargeboards. Three storeys. 4 windows to road elevation, casements with dripmoulds. Castelleated porch with gothic traceried windows and dripmoulds, pointed arch doorway. 3 storied bay. Forms a group with all buildings on west side of Bridge Street. [1]

Heavy fire damage 1998/9. [2]

Hotel. Mid 19th century. Stucco. Welsh-slate roof with oversailing verges with bargeboards and deep eaves soffits, 4 brick ridge stacks. Victorian Tudor style. EXTERIOR: Bridge Street elevation: 3 storeys and cellar; 4-window range. Rusticated quoins and chamfered plinth with 2 cellar openings. Windows are 2-light mullion-and-transom with plate glass casements, hoodmoulds, rusticated surrounds, and projecting sills. Doorcase, on right, has hoodmould, rusticated surround, overlight, decorative 4-panel door, and 2 stone steps. Main, south, elevation (left return) is of 3 bays, the left bay recessed, lower, and with additions to left and front; the central bay with projecting 2-storey castellated bay; the right bay gabled and with full-height bay-window. Rusticated quoins. Windows mostly as on Bridge Street elevation. Right bay: bay window on 1st and 2nd floors is 5-sided and has mullion-and-transom windows of 2:3:2: lights with plate glass casements, and deep cornices below pitched roofs; on ground floor, 4 French windows in rusticated surround. Central bay: castellated bay has moulded strings, 2-light 1st-floor window with Gothick tracery, gabled porch with pointed-arched entrance below hoodmould, inner door with side-lights, and 2 windows on each floor of returns. Left bay has quasi dormer with enriched barge boards and end stack on left. 3 further 2-storey wings, one with decorative tiled roof and dormers. INTERIOR: not inspected. An early example of Victorian Tudor style. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 243). [3][4]

TIMBER FRAMED HOUSE (17TH CENTURY AD to 21ST CENTURY AD - 1601 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main building material	STUCCO
Main building material	TIMBER

Description

17th century building of timber framed construction with stucco. Two storeys. Two windows with casements. Tile roof. Exposed timber frame on right hand gable end. [1]

House, now shop and office, occupying corner site. Probably 17th century, remodelled early 19th century. Timber-framed, rendered with lined stucco. Plain tile roof, slightly swept, with brick dentilled eaves and central brick ridge stack. EXTERIOR: 2 storeys; 2-window range. On 1st floor, 4/4-pane casements, that on left with irregular glazing bars and metal opening casements. Ground floor: to left, two 1/1 sashes with segmental-arched heads, channelled voussoirs and keystones, flanking central doorcase with similar head and renewed door. To right, double 1/1 sash with similar head, and blocked former door. Painted shallow plinth. Right return: 20th century shopfront; the gable previously described as having exposed timber-framing, but now rendered. INTERIOR: exposed beams and joists on ground floor; and 1st-floor timber-framed partition wall to No.10. [2][3]

VICARAGE (19TH CENTURY AD to 21ST CENTURY AD - 1801 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main building material	STUCCO

Description

Early 19th century building. Stucco. Two storeys. Three windows. 12-pane sashes. Bay window on ground floor right. Centre door framed with pilasters. Hipped slate roof. A plain building added because of its proximity to the Abbey and St Andrews Church. [1]

Detached house. c.1840. Brick, main and garden elevations rendered with lined stucco. Hipped Welsh-slate roof with deep eaves soffit and moulded eaves cornice; rendered ridge stacks and further brick stacks to wings. EXTERIOR: 2 storeys; 3x3 bays, with wing set back on left, and further wings to rear. Main (entrance) elevation: 6/6 sashes with projecting sills, right-hand ground-floor window an oriel with Gothick tracery and moulded lead roof. Wide central entrance has Classical architrave with corniced pilasters, frieze and leaded cornice; panelled reveals, soffit and dado; and recessed part-glazed 6-panel door with side-lights. On left, brick wing has blocked windows with deep flat arches. Right return (garden elevation): full-height canted bay-windows to outer bays, on 1st floor with 1/1:2/2:1/1 horned sashes and sill bands, flanking central 2/2 horned sash; on ground floor, full-height 3:6:3-pane windows incorporating French doors. Church Street elevation has further 12-pane segmental-headed sashes with stone sills and gauged-brick segmental arches. INTERIOR: not inspected. [2][3]

Main building material	BRICK

Description

Abuts the rear of Abbey Place. Late 18th century building of red brick ronstruction. Slate hipped roof. Three storeys. Sashes, with rusticated stucco lintels. [1]

House. Mid-late 18th century, remodelled c 1840. Red and yellow brick in Flemish bond. Hipped Welsh-slate roof with deep eaves soffit to left section; 3 brick stacks, to ridge, off-ridge, and to right end. EXTERIOR: 3 storeys; 3 bays, that on left recessed. Central window on each floor is tripartite having, on 2nd floor, 1/1 sashes; on 1st floor, 3/3:1/1:3/3 sashes; on ground floor, 2/2:6/1:2/2 sashes. Flanking windows on 2nd floor are 8/12 sashes, that on right with metal balcony, and on 1st floor 12/12 sashes. All have painted sills and, on lower floors, painted channelled voussoirs and keystones. On ground floor to left, wide doorcase with fluted pilasters, leaded entablature, side-lights with coloured glass margin lights, and 4-panel door.To right, tall gauged brick segmental archway, now glazed and with narrow glazing bars. Left return has further 12/12 sashes with narrow glazing bars. To rear, 3-span roof, brick dentilled eaves and horizontal-sliding sash. INTERIOR: c1840 staircase, doors, doorcases, and window frames with folding shutters. Adjoins Abbey Place, and 20th century ownership division of No.3 (qv) extends into Preston House. HISTORICAL NOTE: in the early 19th century the two buildings comprised a school with single-storey wash-house to left, the latter raised to form the left bay of the existing house c1840. [2][3]

CROSS (MEDIEVAL - 1066 AD to 1539 AD)
Evidence DOCUMENTARY EVIDENCE

Description

There were at one time four crosses in Pershore, Holy Cross, Bowyer's Cross, Newland Cross, and Hampton Cross. The location of all four is unknown but Holy Cross may have stood at the High Street end of Broad Street in a recess in front of the houses which were demolished about 1840. It may have been re-erected in the Abbey precinct south of the church. Early prints do not show it in this present position. It may have been moved there for safety. [1][2]

Location has been interpolated from text ([2], p.26) and plan ([2], p.20) [3].

The source associated with [3] is unknown. [4]

Evidence DOCUMENTARY EVIDENCE
PARK (19TH CENTURY AD to 20TH CENTURY AD - 1850 AD to 1947 AD)
Evidence DOCUMENTARY EVIDENCE

Description

A private house called 'The Abbey' stood to the south-west of the Abbey church and buildings. It was built in the mid-19th century in the Gothic Revival style. By the 1930's it was dilapidated and had been demolished by 1947. It may have stood on the site of the monastic infirmary or the Abbott's Lodging. Scant remains of its ice-house lie about 137 metres to the west-south-west. [1]

Conveyance plans show location of building and extent of the garden. [2]

A geophysical survey was conducted in 1993. Linear anomolies that might relate to the Victorian house were seen as well as confirmatory evidence of preferential survival of monastic features. [3]

A Watching Brief in 1996 at the Octagon recorded part of the 19th century building called "The Abbey". No earlier deposits or structures were recorded. [4]

EVENT (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)

Description

When the foundation trenches for Phase 2 of the Development of Central Pershore were dug in 1978 it was unexpectedly discovered that the expected gravels thinned out and were replaced by thick deposits of silt. These silts formed part of the fill of an abandoned river channel incised into the gravels of Avon No.2 age. In places they were 4 metres thick and a small pond (WSM10043) persisted until about 1860. Three broad sedimentologies were revealed. Level C comprised the mixed sands and gravels of the channel bed, Level B is a predominantly medieval fill and Level A the post-medieval build up of loams to the present ground surface. A rim sherd of a Severn Valley ware wide-mouthed jar, an anciently broken Iron-Age antler comb and a bitruncated retouched flint flake were stratified either at the surface of the gravels or at the base of the loam capping them. Only one artefact was recovered from Level C. This is a humanly-shaped pebble of indurated palaeozoic siltstone with an appearance of a Neolithic axe. A radiocarbon date from a root stem gave an age of 3950±100 bp (Birm-965). The channel fill (Level B) had poorly developed stratification and an indurated layer in the Roman fill was thought to be cess. The principal period of fill probably began early in the 13th century and within a century was almost equal to the modern land surface. The channel cover (Level A) was probably humanly spread undoubtedly the layers of bunter pebbles between Levels A and B are humanly spread as are hollows in the fill containing roofing tiles, floor tiles and ridge tiles. If pottery is contained it is nearly exclusively 18th century. There is therefore a hiatus in the ceramic record of about 400 years which might indicate that the area was too foul or intractable to encourage human settlement. Distinctive pottery types in this level were Midlands Purple Ware, Cologne Stoneware, Ashton Keynes Ware, Cranham Earthenware, Nottingham Stoneware, and Herefordshire-Gloucestershire post-medieval ware. The fill in Level B can be conveniently divided into Romano-British and Medieval. Pottery from the Romano-British period included Severn Valley ware of the 3rd to 4th century, a 4th century Oxford mortarium rim, black-burnished ware, Gloucester TFS ware etc. The assemblage is later than that found at the nearby Newlands site. Also found were numerous fragments of stone objects such as a rubbing stone and a pot-boiler. One dark blue-green fragment of glass was recovered. Bones include those from horse, pig, sheep, red deer, raven and domestic fowl. There were no goat bones. Only Chironomus spp. were found. The medieval material included Gloucester Fabric TF41B, Bath fabric, and unidentified tile sherds. Some flat-headed nails, a small iron rod and a flat iron ring were amongst the metal objects recovered as was a highly polished antler point or awl. Bones from animals include dog, cat, pig, wild boar, sheep, red deer, and domestic oxen. Also found were detached horn-cores. The absence of all aquatic and amphibious species supports the case for foul conditions. The pottery evidence suggests that later medieval occupation was scarce, as is that of the 16th or 17th centuries. Beyond the reach of the channel fill (Level B) but cut into Level C was a circular pit with stepped floor. Sherds of Severn Valley ware were found in the fill as were some sherds of undated grass-tempered ware. A sherd from a 13th century cooking pot is considered intrusive. The fill of the pit also contained sheep, pig, ox, and dog bones. The pit is dated to 5th to 9th century. Sections in Little Priest Lane were bottomed to gravel and revealed seven road levels dating from the 17th to early 19th centuries. [1]

Area mapped has been interpolated from figure 1 from source [1]. [2]

Monument Types and Dates

MONASTIC PRECINCT (MEDIEVAL - 1066 AD to 1539 AD)

Description

The religious house of Pershore Abbey contains medieval monastic buildings including church and claustral buildings (WSM05407). Other sites include the fishponds (WSM10043) and precinct (WSM11870). The medieval extent of the precinct boundary was defined partly by walls and is mapped by Bond and Hunt. Domesday references indicate the presence of the abbots lodging, bakehouse, brewery, warming house, tithe barn, possible dovecote, and gardens. Also a gatehouse (WSM16043). A fair was obtained by the abbot of Pershore in 1226 and held within the churchyard of Holy Cross on 6th to 8th July. [1]

A bronze thurible was found within the Abbey Park. Possible finds of 12th to 13th century pottery (WSM16058). [2][3]

GATEHOUSE (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1825 AD)
- Evidence CONJECTURAL EVIDENCE
- Evidence DOCUMENTARY EVIDENCE

Description

Documentary study by Bond and Hunt located a possible site of the great gatehouse of the abbey. It is to the north-west of the abbey church at the junction of Newlands and Church Row. [1]

Documentary reference of 1838 to gatehouse north of the churchyard demolished in the early 19th century by the owner of "The Abbey" and marked by site of entrance to "The Abbey." [2]

The mapped location must be seen as tentative. [3]

The source associated with [3] is unknown. [4]

Monument Types and Dates

CHURCHYARD (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)
Evidence DOCUMENTARY EVIDENCE

Description

St.Andrew's Churchyard lies east of the abbey and contains St.Andrew's church and the graveyard for St.Andrew's parish. [1]

The churchyard lies east of Holy Cross church in the parish of St.Andrew's and forms part of an enclave within Holy Cross parish. It contains St.Andrew's church (WSM05409), dedicated in 1147, supposedly within the monastic cemetery. Part of the 19th century cemetery (WSM17556). It is likely to be the site of St.Andrew's church from 1065. [2]

Originally built for the tenants of Westminster Abbey in Pershore. Later in the possession of Great Malvern Priory and granted to Pershore Abbey in 1327. After the Dissolution Westminster Abbey acquired St.Andrew's and it became the parish church. [3]

WSM16045	Pershore: Medieval/Post-Medieval Component; Market Place	Monument

Monument Types and Dates

MARKET PLACE (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)

Description

The market place is a rectangular area west of the abbey precinct. This area (Broad Street) was used for the medieval market and was clearly planned as such, divided down the middle between the manors owned by Pershore Abbey and Westminster Abbey. [1]

It is documented as 'Chepyngestret' and 'Rotherchepyng' in the medieval period ([2], p.22). It is possible that Broad Street was not the original or major market place [3]. Documentary evidence indicates that it was the focus of the market by the late 14th century and it was infilled with shops and stalls ([2], p.17). Broad Street was the location of a weekly market on Sunday before 1219 and later on Tuesdays until the 1870's. The parish boundary between St.Andrew's and Holy Cross ran down the middle. The market declined in the 15th century but continued into the 1870's [2]. The market possibly existed pre-1065 and then split or created post 1065 after the division of town between the abbeys of Pershore and Westminster [2]. The market appears to post-date the layout of WSM16048 and WSM16049 due to common boundaries [3]. There were stalls and shops in the market place by the early 15th century. Demolished by 1836. [2]

Monument Types and Dates

MANOR (MEDIEVAL - 1066 AD to 1539 AD)

Description

Two manorial enclosures are identified and defined; a third is identified but cannot be precisely defined. The two defined sites belonged to the Abbey of Westminster. [1]

Tenement plots at south end of the High Street on the east side form a trapezium of short plots. The former parish boundary between Holy Cross and St.Andrew's enclosed this on three side. This block is identified as the curtilage of Pershore Portsmouth Manor-house. [2]

Also includes surviving medieval undercroft WSM15294.

At the Dissolution manorial court loses its function. [2]

Area of street frontage is built up during post-medieval period. [3]

Monument Types and Dates

TENEMENT (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)

Description

An extensive area of tenements can be deduced from the tithe map and Ordnance Survey 1st Edition maps. These show regular plot boundaries aligned on the main streets and regular back-lanes and rear boundaries. A total of nine different monument areas were defined. An analysis of Bridge Street and High Street area showed that there are variations in plot width in different areas which was interpreted as due to different dates of planning, with the tenements east of Bridge Street predating those to the west [1], [2].

All lay within the former parish of St.Andrew. The northern boundary is determined by manorial enclosure WSM16046 [3].

Tenements curved in C-shaped arch, possibly old plough strips [2].

Possibly 11th century within the part of Pershore owned by Westminster Abbey [3].

Monument Types and Dates

TENEMENT (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)

Description

An extensive area of tenements can be deduced from the tithe map and Ordnance Survey 1st Edition maps. These show regular plot boundaries aligned on the main streets and regular back-lanes and rear boundaries. A total of nine different monument areas were defined. An analysis of Bridge Street and High Street area showed that there are variations in plot width in different areas which was interpreted as due to different dates of planning, with the tenements east of Bridge Street predating those to the west. [1][2]

Western limit defined by back lane shown on the 1st edition Ordnance Survey map (now altered). The pattern of plots is complex and the significance of the central footpath and the alignment to the market place (WSM16045) is not clear. [3]

Slater states that these plots are planned differently to those on the east side of Bridge Street WSM16047 and that WSM16048 post-dates WSM16047. He also notes that WSM16048 is laid out in a similar fashion to WSM16049. [2]

An analysis of Bridge Street and High Street area showed that there are variations in plot width in different areas which was interpreted as due to different dates of planning, with the tenements east of Bridge Street predating those to the west. [1][2]

Plots are of decreasing length from south to north. Tenement back aligns with that in WSM16049 and WSM16048. Area to west probably gardens, crofts etc.[3]

No evidence of pre-11th century planning. Saxon occupation of some kind is inferred from proximity to the market and the presence of 5th to 7th century pottery. [4]

See also [5] and [7].

An archaeological watching brief was undertaken at Pershore Library, Pershore, Worcestershire (NGR ref SO 9484 4589; HER ref WSM 48248). It was undertaken on behalf of Pershore Town Council, who obtained permission for an extension to the library subject to conditions including a programme of archaeological works. Groundworks for the foundations of the extension were monitored. Within the limited window that the excavation provided, medieval and post-medieval deposits were observed. Above natural gravel and clay deposits were a number of undated layers, interpreted as buried sub and gardensoils from the early medieval period. Cutting through the higher of these deposits was a large cesspit to the west and, in the east, a post hole and a remnant of a garden wall. The wall incorporated a piece of column masonry, potentially from the Pershore Abbey, suggesting a post-1540 date. The wall was partially robbed of masonry in the 17th - 18th centuries. The layers of material in the east of the observed trench were suggestive of more domestic activity than the garden soils in the west, and this change, whilst obscured by later truncations, occurs near the remains of the garden wall.[6]

HER Number	Site Name	Record Type
WSM16055	Medieval/Post Medieval Street System of Pershore	Monument

Monument Types and Dates

Description

The medieval street system of the town consists of the major north-south axis of High Street and Bridge Street, related back-lanes and other tracks leading out of the urban area. Documentary evidence indicates the names of medieval streets 'le Hierstret' - High Street, 'Lichestret' - Priest Lane and Little Priest Lane, 'le Hedtrete' - Haed Street, and 'la Newlonde' - Newland. There are also a number of unidentified medieval streets and lanes ([1], p.18-24). The system can be reconstructed through cartographic analysis and documentary evidence. There is documentary evidence for three crosses which may have stood at the edges of town but their precise sites are unknown. A cross stood at the east end of the market place, the remains of which are probably those now to the south of the abbey. [1][2]

The medieval street system in Pershore deduced from documentary records and morphological analysis.[3][4][5]

HER Number	Site Name	Record Type
WSM16056	Medieval Component, Manorial Enclosure, Binholme Manor, Pershore	Monument

Monument Types and Dates

MANOR (MEDIEVAL - 1066 AD to 1539 AD)

Description

Two manorial enclosures are identified and defined; a third is identified but cannot be precisely defined. The two defined sites belonged to the Abbey of Westminster. [1]

Binholm was the chief manor of the abbot of Westminster and the manorial enclosure was a central place in the east. In the post-medieval period the site of the manor or one of its farmhouses is described in a deed of 1690. Area of enclosure is between the monastic precinct to the west and back-lane to the east. In the post-medieval period the house and land appear to loose their original importance and Defford Lane bisects it. [2]

WSM16057	Site of Binholme Manor House, Pershore	Monument

Monument Types and Dates

MANOR HOUSE (MEDIEVAL - 1066 AD to 1539 AD)
- Evidence CONJECTURAL EVIDENCE
- Evidence DOCUMENTARY EVIDENCE

Description

Binholme was the chief Worcestershire manor of the abbots of Westminster and the manor-house formed the administrative centre of its estates. In 1418-19 it was leased to two Pershore tradesmen and it seems to have been continuously leased during the 15th century. No remains of the house remain above ground. It seems to have lain near a close named "Great Calcroft". In a deed of 1690 it is said to be on the west side of the town. The most recent history locates the manor-house on Pershore Grower's Market. The West estate plan shows a couple of buildings keyed as "Binholme Farm" on either side of a gate across the line of the present path following the burgage backs west of Bridge Street. [1]

Its mapped location must be seen as tentative. [2]

In an evaluation in 1996 at the former GMS depot significant archaeological deposites were revealed in limited areas. Access to the site was restricted due to standing buildings. The truncation is not so extensive to have removed all traces of a building as substantial as Binholme Manor; the evidence points therefore to it lying at the northern end of the site close to the Mason Ryde/Defford Road junction. [3]

A Watching Brief on the GMS site demonstrated the survival of at least one building which has been associated with Binholm Manor. Deposits relating to to the abbey precinct boundary and the manorial enclosure continue to survive the new housing development. [4]

WSM16060	Tenement Plots, East of High Street, Pershore	Monument

Monument Types and Dates

TENEMENT (LATE 11TH CENTURY AD to 18TH CENTURY AD - 1066 AD to 1800 AD)

Description

An extensive area of tenements can be deduced from the tithe map and Ordnance Survey 1st Edition maps. These show regular plot boundaries aligned on the main streets and regular back-lanes and rear boundaries. A total of nine different monument areas were defined. An analysis of Bridge Street and High Street area showed that there are variations in plot width in different areas which was interpreted as due to different dates of planning, with the tenements east of Bridge Street predating those to the west. [1][2]

The layout of the tenements is unusual along this section of the High Street (See WSM16053) as they do not appear to be aligned along the road. [3]

WSM16062	Pershore: Medieval/Post-Medieval Component, Bridging Point	Monument

Monument Types and Dates

BRIDGE (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)
Evidence STRUCTURE

Description

The bridging point over the River Avon consists of the bridge itself and a causeway. The main axis of the street system is aligned with this bridging point [1].

A causeway leads from Bridge Street over the flood plain to the bridge. Circumstantial evidence from the 11th century but probably earlier [2].

Bridge contains medieval and post-medieval stonework (WSM05574). [3]

HER Number	Site Name	Record Type
WSM16063	Site of Pershore Mill, Pershore	Monument

Monument Types and Dates

MILL (LATE 11TH CENTURY AD to 19TH CENTURY AD - 1066 AD to 1900 AD)
- Evidence CONJECTURAL EVIDENCE
- Evidence DOCUMENTARY EVIDENCE

Description

There were three, possibly four mills in the parish in medieval times. There are however considerable problems of location and identification. Both Pershore and Westminster Abbeys held mills in Pershore. If the modern mill near the bridge was on the site of any of the mills it is likely to have been one of those belonging to Westminster and not Pershore Abbey. Westminster Abbey are said to have had three mills in Pershore in 1086. The mill building was destroyed by fire in July 1976 and its remains demolished. [1]

Defence of Britain site report form documenting the location of a vulnerable point. Pershore Mill was guarded by the Local Defence Volunteers and later the Home Guard From May 1940 onwards. This tall building would also have made an ideal Observation Post and snipers position, providing cover for Pershore's bridges, although no evidence for this has been found. [4][5][6][7]

WSM16066	Open Space Associated with the Abbey Precinct, Pershore	Monument

Monument Types and Dates

CHURCH PRECINCT (POST MEDIEVAL - 1540 AD to 1900 AD)
Evidence DOCUMENTARY EVIDENCE

Description

In 1539 the site of the monastery with certain buildings, crops etc. Granted to Anthony Southwell for 21 years. The last abbot, John Stonewell was granted houses, garden and two apple orchards. These are likely to have been the abbots lodging already occupied by him. These may have been destroyed in 1645 by Parliamentary forces. A new "abbey house" was built no later than the 18th century which may have been on the same site. [1]

The mid 19th century house was possibly built on the same spot as the 18th century house (WSM16035) which was demolished prior to 1976. [2]

The majority of the precinct was a park belonging to various " abbeys" during the post-medieval period. The layout of fields and gardens and names of different plots are shown on a conveyance of 1887. [3]

Evidence	EXTANT BUILDING
Main building material	BRICK
Main building material	SLATE
Main building material	TIMBER

Description

House, now shop and store. 16th or 17th century much rebuilt and refronted late 18th/early 19th century; 20th century alterations. Red brick in Flemish bond with some surviving timber-framing. Welsh-slate roof with deep rendered eaves cornice and brick end-stack on left. EXTERIOR: 3 storeys and cellar. 2-window range, of horned 6/6 sashes to 1st floor, smaller unhorned 3/6 sashes above, all with painted channelled voussoirs and keystones. Sill-bands. Ground floor: on left, shopfront has plate-glazed bay-window, 20th century glazed door, and deep enriched cornice obscured by 20th century fascia and blind; carriage entrance to right; rendered plinth, with cellar grille below window. Light-scantling square-panel timber-framing visible in side-passage wall. Rear: painted brick wing also partly timber-framed. INTERIOR: not inspected, but noted as having square-panel timber-framing and fireplace with bracketed hood. Front elevation relates to that of Nos 21 & 23 (qv). The side-passage marks the line of the old parish boundary and the beginning of the former leather quarter. [1][2]

18th century building of brick construction. Moulded cornice. Three storeys. Five windows in all (sash with keystones and voussoirs). Ground floor has various shop windows, and double Doric doorcase. Under numbers 21 and 23 is said to be a 14th century piscina and vaults of St Michael's chapel (WSM15294). [3]

Evaluation in 1994 at the rear of No.25 revealed substantial evidence of at least four medieval burgage plots. The earliest deposits date to the 13th/14th century. As well as domestic activity a substantial medieval oven was recovered. The evidence suggests that the medieval building line may have ran a considerable distance back from the High Street frontage, perhaps with buildings faced onto a court. The cellar to 25 is built of re-used stone including two corbels depicting faces. The cellar entrance is not original but is 17th century brick. [4]

Images of corbels from 1994 Evaluation. [5]

Main building material	BRICK

Description

Tollhouse identified by industrial monuments survey 1978. [1]

Toll house now private house. c.1860. Red, yellow and blue brick in Flemish garden wall bond with stone dressings. Tile roof, with bands of fish-scale tiles to left range; 2 staggered cross gables with renewed decorative bargeboards and finials; and tall brick central ridge stack. EXTERIOR: single storey. To left, 6-pane canted bay-window with moulded stone mullions, transoms, sill and embattled parapet. To right, 2-light window with moulded stone surround, mullions, sill and hoodmould; one metal casement; iron window bars. Central semi-integral embattled porch with similar smaller side-window and round-arched doorway with rusticated, keyed, surround; fanlight with radial glazing bars; panelled door with metal outer door; and 2 stone steps. Inner former stable-type door. Rusticated stone quoins, stone plinth and blue brick plinth course. Left elevation has further similar mullioned windows with metal bars, and wing with blue and yellow brick pattern in gable. INTERIOR: has an elaborately carved fireplace surround. HISTORICAL NOTE: built for the Trustees of the Pershore Division of the Evesham First District of Turnpike Roads on land conveyed by the Dean and Chapter of Westminster Abbey. [3][4]

WSM22328	Site of Anti-Tank Cylinders, North End of Pershore Old Bridge, Pershore	Monument

Monument Types and Dates

TANK TRAP (World War Two - 1940 AD to 1945 AD)
Evidence DOCUMENTARY EVIDENCE

Description

Pershore Bridge had three sets of road-blocks/anti-tank obstacles. These were cylindrical concrete blocks placed across the approaches to the old bridge. Four concrete cylinders with socket-tops were removed from the Pershore end of the bridge and moved at the end of the war to block off the approach road. They still exist and have been photographed. There are scars of modern concrete at the east end of the bridge that may mark the site of corresponding defences on that side. The modern bridge was apparently defended by removable barriers. The southernmost block was probably of concrete cubes. [1][2][3][4]

HOUSE (18TH CENTURY AD to 21ST CENTURY AD - 1750 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main building material	BRICK
Main building material	WELSH SLATE

MILITARY HEADQUARTERS (World War Two - 1940 AD to 1941 AD)

Evidence	DOCUMENTARY EVIDENCE

Description

House, now divided into 2. Mid-late 18th century, altered 19th century. Red brick in Flemish bond with painted lower courses to left. Welsh-slate roof with stone coping, painted moulded eaves cornice and 2 brick end stacks. Exterior: 3 storeys and cellar; 3-window range. Painted sill bands. Three 3/6 sashes to 2nd floor, two 6/6 sashes on 1st floor, all having painted channelled voussoirs and keystones. To right on 1st and ground floor, a 2-storey canted bay-window with pitched leaded roof and sashes, 2/2 x 3 of plate glass sashes on first floor, 4/4:6/6:4/4 below. Ground floor has 2nd canted bay window on left, similarly fenestrated and with cornice and pitched leaded roof. Central Classical doorcase (to No.66) has 3/4 Doric columns, entablature with paterae and open pediment, decorative fanlight, 6-panel door, iron hand rails, and 4 stone steps of which 3 are nosed. Door at left end (to No.68), with slight incursion onto facade of The Old Malthouse, has fluted round-arched architrave with paterae and open pediment, decorative fanlight, 6-panel door and 4 stone steps, 3 nosed. Part-painted part-rendered plinth with cellar grilles below windows. Rear wing with brick dentilled eaves. Interior: not inspected. [1][5]

During WW2 the building was the Headquarters of the 4th Worcestershire (Evesham) Battalion of the Home Guard from 20/08/1940 to 11/04/1941 when it moved to Wick House. [2][3][4]

Evidence BOTANICAL FEATURE
PARK (19TH CENTURY AD to 20TH CENTURY AD - 1801 AD to 2000 AD)
Evidence BOTANICAL FEATURE

Description

Avon Bank, now the Pershore Institute of Horticulture, was known in 1822 as Grove House (Greenwood). Its park and grounds were taken out of the park of Wick House at about this time, the land retaining its park etc. on the north side of the Pershore/ Evesham road. A c. 1820 Map and Survey of the Estate belonging to Thomas Hudson Esq., (County Record Office ref: 5240/14) shows Avon Bank as amounting to 192 acres with a pool in the north east corner close to the London road and 5 plantations also along this road. There is a shrubbery and garden south of the house, and land called Paddock, north and west of the house, is marked as park (House with Paddock = 37 acres). The grounds were developed during the 19th century and continue to develop, e.g. with an arboretum established in the 1950s (Marriott's Bank - Sidwell,79/80). The park is defined on the 1884 OS 6 inch, then directly adjoining the small park of Lower Hill/Bryn Issa on its east side. The park boundary is taken from the 1905 41SE OS 6 inch map. [1]

MILITARY HEADQUARTERS (World War Two - 1939 AD to 1945 AD)

Evidence	DOCUMENTARY EVIDENCE

Description

Chapel with attached parish room and manse. Chapel founded 1658, present building 1843, altered; extended towards road (this part now the Parish Room) and manse built 1888. Brick with Welsh-slate and plain tile roofs.

EXTERIOR: chapel of one storey, 1x4 bays, with gabled 2-storey Parish Room added at front, and to right of this the manse which has a 3-storey range, gable end to road, with a 2-storey, 2-window wing projecting from right side but set back and with a single-storey porch in the angle. Original chapel: of red brick in Flemish bond having Welsh-slate roof with stepped dentilled eaves. Tall 4-centred-arched recesses, the arches of rubbed brick with keystones, contain tall similarly-arched windows which have stone cills and 7/4-pane sashes with arched glazing bars in heads. Parish Room: of red brick and ashlar; plain tile roof with stepped, raised, verge. Stepped gable with moulded ashlar coping and finial. Upper window of 5 stepped lights with transoms and stepped hoodmould; panelled band below. Ground floor has 3-light window and entrance on right with double door and mullioned over-light. Manse: red brick in Flemish bond with white-brick "quoins", decorative bands, eaves and jambs; decorative stone cills and lintels; oversailing Welsh-slate roof with dentilled and moulded eaves, barge boards, and brick stacks with offsets. Windows are 2/2 sashes, paired on ground floor, with a 3-light canted bay-window to gable end of wing.

INTERIOR: of chapel: 3-sided gallery supported by cast-iron columns and brackets with blind Gothick-arched panelled fronts, 3 tiers of pews to sides and 1 at back; Gothick-panelled north-west gallery door; south-west staircase has narrow balusters, curved treads, and handrail with spiral curtail; pointed-arched double-door on ground floor at east end; main 4-centred-arched entrance at west end; further pointed-arched doorways; flat ceiling, divided into squares by deep ribs springing from bosses on side walls, has 4 moulded ceiling roses with metal grilles; ground-floor refurbishment of 1980s resulted in removal of most original fittings. Furnishings include candle lamp of 1843, early 19th century wall monuments, and under-floor baptistry. [1][2]

Building was requisitioned during WWII and used as a Military Headquarters. [3]

WSM32000	Serpentine Wall at Nos 70 to 78 Bridge Street and 1 - 3 Manor Gardens, Pershore	Building

Monument Types and Dates

SERPENTINE WALL (19TH CENTURY AD to 21ST CENTURY AD - 1820 AD to 2050 AD)

Evidence	EXTANT BUILDING
Main building material	BRICK

Description

Garden boundary wall, mid 19th century. Orange coloured brick in English bond. Serpentine on plan, on south and west sides of former garden. About 2m high and approximately 170m in overall length. Two-canted arch doorways on south side and south-west corner. Formerly the garden boundary wall of the mid 19th century Manor House (hotel) on Bridge Street. [1]

All information contained in report. [2]

Crinkle-crankle wall. Early-mid 19th century. Red and yellow brick in stretcher bond. Partly-moulded brick coping including some blue brick. At corner, pointed-arched doorway with moulded brick surround, stone jamb and plank door. Further similar blocked-in doorway on south side. 2 buttresses and further vestigial doorway with piers on west side. Boundary wall to grounds formerly wholly, and now partly, occupied by No.78 Manor House Hotel (qv). [3][4]

BENEDICTINE MONASTERY (LATE 11TH CENTURY AD to 16TH CENTURY AD - 1090 AD to 1538 AD)
- Evidence DEMOLISHED BUILDING
- Evidence DOCUMENTARY EVIDENCE
- Evidence EXTANT BUILDING

Description

The Benedictine abbey at Pershore was founded about 680 by King Oswald, destroyed about 976 and then restored and reformed by Ethelwold in 983. In 972 King Edgar restored the land of Pershore Abbey and granted it privileges. Details of this charter can be found in Finberg, Hooke and Sawyer ([1], p.116), ([2], p.177), & ([3], Grants by Edgar).

Nothing is known about date of beginning of Norman rebuilding, but it was probably at the same time as that at Gloucester and Tewkesbury, so a date of about 1090 is indicated. A re-entry of monks after a fire is recorded 1102. A series of fires are known to have taken place with consequent rebuilding. The fire of 1223 is said to have destroyed the church and that of 1288 did grave damage. The chancel was consecrated in 1239 when it was probably complete but the chancel vault is clearly after that date ([4], p.159), ([5], p.235), [6].

Many publications provide a commentary on the extant remains of the abbatial church. This consists of an apsidal presbytery, north and south aisles, two pairs of chapels with a Lady chapel between the eastern pair, central tower, partially destroyed north transept, and south transept [4], p.159), [5], p.235) & [7].

The extant building is listed as Grade A [8, p.154).

In 1831, Styles published an account of the history of the abbey church and discussed the claustral and other buildings [6] p.21).

Before the Dissolution the nave of the abbey church contained the parochial altar dedicated to the Holy Cross and this parochial part was taxed as such in both 1340 and 1428. The altar was probably served by a chantry priest. The benefice of Pershore Holy Cross is noted in the Taxatio of Pope Nicholas IV dated 1291, the church of Holy Cross which was valued at £6 13s 4d ([4], p.162), [9].
Excavations to the south of the extant church were carried out in 1929. It recovered partial plan of abbatial buildings. Discusses the Chapter House and cloister garth. The calefactory was tentatively identified as was the frater [10][19]

Excavations carried out in 1996 revealed possible evidence for the Anglo-Saxon church and features dating to the first Norman building of about 1100. Features were found that both pre and post date the fire of 1223 and the fire of 1287. Some indications of work post-Dissolution were observed such as the work carried out after the fall of the north transept in 1686, the building of the eastern apse in 1846 and the restoration of 1862. Brick-lined burial vaults relating to 1700 to 1854 were excavated as well as in situ skeletons.
Church (11).

Trial excavations carried out in 1984 to enable an assessment to be made of the structural stability of the central tower. Even with the limited excavations that were possible early it was shown that medieval, or possibly earlier, archaeological evidence remained. In particular was a rubble foundation which appeared to predate the Norman southwestern crossing tower [12].

A geophysical survey was conducted in 1993. Linear anomolies that might relate to the Victorian house were seen as well as confirmatory evidence of preferential survival of monastic features [13]

A Watching Brief carried out in 1992 in advance of replacing central heating within the extant building. Although it revealed significant archaeological deposits none could be securely dated [14].

Survey carried out in February 1994. It indicated vaults at the west and south-east end of the extant building, as well as voids adjacent to the pews. Evidence of earlier ground surfaces was indicated [15].

Evaluation in 1996 showed that medieval buried deposits survive in the vicinity of the wrought-iron gates. It demonstrated however that the evidence recorded in the 1920's should be treated with caution as some of the building lines shown then are not an accurate record of buried remains [16].

Report relating to work carried out by Stratascan in 1996. Its objective was to determine the extent of the foundations of the

demolished nave etc. The survey demonstrated a striking correspondence with the excavated evidence [17].

Evaluation carried out in 1997. Significant archaeological deposits recovered but truncation may have removed shallow features. Deposits pre-dating the Norman nave were recovered and the outline of the west end of the nave has been securely defined [18].

Scheduled by English Heritage [20]

Monument Types and Dates

EVENT (12TH CENTURY AD to 13TH CENTURY AD - 1101 AD to 1300 AD)
Evidence UNSTRATIFIED FIND

Description

It is possible that two thuribles have been recovered in Pershore, one being in the British Museum (WSM15751), the other now lost. Andrews writes that " a thirteenth century bronze thurible was dug up last century and now in the British Museum; a portion of possibly another thurible of Anglo-Saxon date, whereabouts unknown. [1]

Shaw writes that a Saxon censer was said to have been found during excavations for a cellar in the middle of the town in the 19th century but that no further details available. [2]

- Evidence DOCUMENTARY EVIDENCE

Description

A Watching Brief in 2001 at the GMS site demonstrated the survival of at least one building which has been associated with Binholm Manor. Deposits relating to to the abbey precinct boundary and the manorial enclosure continue to survive the new housing development. More modern features were found which included the foundations of the former school. [1]

The Old Schools were used during WWII as the location of a first aid post. [2]

WSM36151	Site of Post Medieval Tannery, 37 High Street, Pershore	Monument

Monument Types and Dates

TANNERY (POST MEDIEVAL - 1540 AD to 1900 AD)
Evidence SUB SURFACE DEPOSIT

Description

Excavations carried out,in 1992, prior to the construction of a new retail development revealed the remains of a post-medieval tannery. The remains included two brick built basements and a series of wooden based, clay lined pits. [1][2]

HER Number	Site Name	Record Type
WSM37434	Atlas Works, High Street Pershore	Building

Monument Types and Dates

FACTORY (19TH CENTURY AD to 21ST CENTURY AD - 1850 AD to 2005 AD)

Evidence	EXTANT BUILDING
Main building material	BRICK

Description

By 1850 it is likely that there was some industrial development here, as an 1850 trade directory makes reference to Edward and Thomas Humphries as engineers and machinists in the High Street which is the beginning of the Atlas Works in Pershore. The whereabouts of this industrial site is unclear but it could have been on the site of the proposed development area. Edward Humphries was also instrumental in bringing gas light to Pershore in the 1850s (Barrett and Wilson 1980, 51), and his interests presumably extended to the gasometers also situated at this end of Pershore from the 19th century.
1871-1885
In 1871 the Atlas Works operated from a second larger factory site (later Abbey Garage;(Barrett and Wilson 1980, 50) where over 100 were employed, and from 1883 a still larger site near the railway station was established (Trollope 1986). The 1871 works, therefore, can be equated with the surviving Victorian factory building.
This company made agricultural machinery, especially threshing machines, and became famous exhibiting at national and international shows and winning first prize such as at the Bath and West Show in 1854 for their threshing machine driven by a 7hp engine (Barrett and Wilson 1980). In 1885 the Atlas Works in the High Street are shown as disused (OS first edition dated 1885).
Post 1885 to early 1900s
A view of the north end of High Street c1900 (Figs 5-6) shows houses on the proposed development area and fronting onto the High Street, which were of similar character to those surviving today on the opposite side of the High Street. By 1904 the former Atlas Works had been taken over by the Pomona Preserve Works (OS map dated 1904), which lasted into the 1930s at least.
By 1938
In 1938 the former Atlas Works was still standing with a track along its north side along which it had originally been built. However, another road off the east side of the High Street had now been opened up by removing at least one of the houses on this side of the road (OS 25-inch sheet 41-12 revised 1938). It is clear that this had been done to provide access to long behind buildings on this side of the High Street for the building of residential properties and some of these houses, off what was to later become King George's Way had already been built. The road-name implies that this process of the laying out of new roads and houses here was well under way by circa 1936. More of the tenements and cottages just north of the former Atlas Works were eventually removed. [1]

Proposed for demolition and site redevelopment in 2007. [2]

WSM37500	Post Medieval Well, Back Yard of 6 Bridge, Pershore	Monument

Monument Types and Dates

WELL (POST MEDIEVAL - 1540 AD to 1900 AD)
Evidence EXTANT BUILDING

Description

A site visit to 6 Bridge Streeet, 3/5/01, was initiated by a telephone call from the current owner Ian Tredgold. During maintenance works in the backplot of the property a slate surface was discovered which was followed to the north revealing an aperture through this surface and a void below.

The slate surface appeared to be disturbed in the area of the aperture, as if repaired , otherwise a ground surface composed of substantial slate flags overlain by an area of concrete and an area of sand to level with modern flags above. The aperture exposed a 19th century brick built dome over a brick lined well (?). Several digital photographs were taken of the hole and then some of the interior as well but without sight the quality of these is very poor. The hole was very small making it difficult to be definitive about this interpretation. [1]

GRAVE (POST MEDIEVAL to 19TH CENTURY AD - 1540 AD to 1854 AD)
Evidence SUB SURFACE DEPOSIT
BURIAL VAULT (17TH CENTURY AD to 19TH CENTURY AD - 1650 AD to 1854 AD)
Evidence EXTANT BUILDING

Description

Phase 8 relates to the late-17th/early 19th century burials up to 1854. A number of brick-lined burial vaults were recorded. These had been added between the late 17th century and 1854 when the last burial was recorded. Also discovered were the in situ remains of eight skeletons probably dating to between 1539 and the mid-19th century. None of the graves were excavated. All of the vaults were rectangular and built to take up to six coffins. Five vaults were excavated, in one was a burial dated 1854. [1][2][3]

Description

The earliest features consisted mainly of pits and postholes which were either cutting the natural or layers that directly overlay the natural subsoil. Features to the rear of the site (west) were two probable gullies. In the main area one pit was truncated by another and both features cut by a gully running east to west. Further south was another pit of which only the base was seen. Other pits were present as was a stone and clay lined well. This was not excavated and was truncated by post-medieval features. A wide ditch running north to south was seen as a boundary ditch. Several medival layers sealed some of these features. Numerous other pits were revealed one with a possible padstone set into it. Postholes were also revealed.

The post-medieval phase was characterised by domestic and industrial features. These included a possible well and a small building complex housing a hearth. Pits and postholes were also revealed. A brick structure was found of uncertain function in a cut and two later circular cuts were brick-lined and were obviously industrial in nature. In the area of the lift pit within the standing building were one, possibly two earlier phases of post-medieval building were identified.

The survival of medieval features and deposits was high across the site and there was up to one metre of post-medieval deposits which have protected the underlying medieval deposits. The ditch (179) excavated at the east end of the site was at the bottom of the stratigraphic sequence and although no datable finds were recovered its north to south alignment suggests that it was in use before the tenements were laid out in the 13th century. It is also on a slightly different alignment to the High Street so it is even possible that it predates the laying out of the High Street in the 10th or 11th centuries.

The east west gullies at the north of the site could be a feature that represents the northern boundary of an early tenement block, but they could equally well just be for drainage. The medival pits are probably of a domestic nature and would appear to have been filled with material associated with reasonably high status occupation. The early post-medieval stratification points to the continuation of the site for domestic purposes. The later post-medieval period is characterised by industrial as well as domestic activity, with possible hearth and brick-lined tanning pits being in use.
Less than 10% of the pottery was medieval or early post-medieval dominated by wheel-thrown Malvernian ware. [1][2]

INHUMATION (POST MEDIEVAL - 1540 AD to 1900 AD)
Evidence ENVIRONMENTAL REMAINS

Description

A skeleton was uncovered during drainage works at St Andrew's Parish Centre, Pershore. An archaeologist recorded the burial in situ and it is believed the remains date from the 18th or 19th century. The proposed site of the manhole was moved southwards so the skeleton could be left in situ. A layer of builders sand then gravel was placed over the burial to protect it before the drain was laid on top. [1]

COTTAGE HOSPITAL ((between) 19TH CENTURY AD to 21ST CENTURY AD - 1895 AD to 2050 AD)

Covering Building Material	TILE
Evidence	EXTANT BUILDING
Main Building Material	BRICK

Description

From the brief historical information available on Pershore Cottage Hospital, it can be seen that the original building was erected in 1895 following local fundraising initiatives and encouragement from Florence Nightingale. It is believed that she had a role in designing part of the original Cottage Hospital. The original building contained two beds and a cot. In 1905 the building was occupied by eight beds and was extended during a period of the early 1900's as recorded on the enclosed Landmark Historical Maps appended to this report. A new wing for operating theatre, rooms for anaesthetics, sterilising and x-ray equipment was erected in 1937. In 1948 the hospital became part of the National Health Service. From the historical plans the building annexed to the south was seen in 1967 as a separate building and since that date became linked to the hospital as part of the development. A further extension in 1976 for a physiotherapy department was added. [1]

DWELLING (18TH CENTURY AD to 21ST CENTURY AD - 1750 AD to 2050 AD)

Evidence	BUILDING
Main building material	BRICK

Description

Late 18th century building of brick with tile roof. Two storeys and four sash 16-pane windows. Modern shops. Brick dentil eaves. [1]

House, now shops and offices. Late 18th/early 19th century with later alterations. Mostly red brick in Flemish bond with painted ground floor. Plain tile roof with brick dentilled eaves and brick stack to centre of ridge. EXTERIOR: 2 storeys. 2-window range of boxed 8/8 sashes. Ground floor: two 20th century plate-glazed shopfronts with doors to left and right sides; further doorcase at left end with brick segmental arch and renewed plank door leading to side passage. Rear: gabled wings and attached outbuildings. INTERIOR: not inspected. [2][4]

An evaluation at the rear of 64-6 High Street in 1994 demonstrated that no medieval deposits survive in this area. The excavated area probably lies beyond the probable limits of burgage plots fronting Church Street and High Street. The area may have been occupied by gardens or orchards. [3]

Description

Two houses and shops, part of a continuous row with Nos 28 & 30 (qv). Mid 18th century with later alterations and rear extensions. Brick with lined stucco render. Plain tile roof, partly renewed, with 2 roof dormers, brick dogtooth eaves and rear off-ridge stack. EXTERIOR: 2 storeys and attic; 6-window range (2 blocked). Gabled dormers have 6-pane casement windows. Plat band to each floor. 1st floor: segmental-headed windows, 2nd and 5th blind, having 9/9 sashes with thick glazing bars, exposed boxes, projecting sills, and shallow moulded keystones. Ground floor: 2 partly-remodelled 19th century shopfronts. That on right has a shallow bay-window with plate glazing, deep corner mullions, overlight, panelled dado; and entrance on left with 20th century part-glazed door, blocked overlight, wooden architrave, and 2 stone steps; all under bracketed wooden cornice with dentils. Left-hand shopfront is similar, but has 4-pane window with thick glazing bars, and 20th century door with overlight in deep planked reveal. At left end, a plate glass sash with segmental head and sill. At right end, wooden-framed plank door leading to side-passage which has vestigial light timber-framing in wall. Deep rendered plinth. INTERIOR: not inspected. [1][2]

WSM47482	Crash Site of a Vickers Wellington Mk II W5356, near Drakes Broughton	Monument

Monument Types and Dates

AIRCRAFT CRASH SITE (World War Two - 1939 AD to 1945 AD)
Evidence DOCUMENTARY EVIDENCE

Description

Crash site of a Vickers Wellington Mk III serial number X3704 of 23 Operational Unit on the 29th May at 19:10. The aircraft was participating in a flying display to mark Pershore's "Wings For Victory" week. A wing and engine broke off as the machine flew low over the cricket ground and the 'empties' yard of Pershore Fruit Market. The aircraft hit the roof of No.44 Bridge Street, knocking about 2 feet off the ridge. It then crashed into the roof of The Brandy Cask Hotel and fell in the back garden, demolishing outbuildings and a garden wall and the boundary wall between The Brandy Cask and The Star Hotels. Both members of the crew were killed alongside three passengers comprising of the aircraft's ground crew. One civilian was injured.

D Griffith visited the site in October 1980 and was allowed to search flower beds and the overgrown parts of the garden with a metal detector. Tiny pieces of duralamin and one .303" round were located. [1]

HER Number	Site Name	Record Type
WSM66974	Two Grave Cuts, a Post Medieval Grave Slab and a Charnel Pit, Pershore Abbey, Pershore	Monument

Monument Types and Dates

GRAVE (16TH CENTURY AD to 19TH CENTURY AD - 1501 AD? to 1864 AD)
- Evidence: EXCAVATED FEATURE

GRAVE (POST MEDIEVAL - 1540 AD to 1900 AD)
- Main Building Material: STONE

CHARNEL PIT (MODERN - 1901 AD? to 2050 AD)
- Evidence: EXCAVATED FEATURE

Description

The two grave cuts identified during ground works lie within the line of the former north aisle of the nave, potentially predating the demolition of the nave and therefore possibly representing pre-dissolution activity.

The existing post-medieval grave slab was observed to be set upon a brick plinth, indicating either that there is a chamber beneath the slab or reflecting a need to level up the slab to lie flush with the earlier paved surface.

The small charnel pit contained inclusions relating to the levelling deposits that were used in the formation of the bedding layers for the existing paved surface, suggesting that the pit relates to relatively modern activity after the existing paved area was constructed. [1]

Main Building Material	BRICK

Description

2 houses, now shops and offices. Mid-18th- early-19th century with later alterations and medieval cellar, partly 13th century. Red brick in Flemish bond. Welsh-slate roof with deep rendered eaves cornice and 3 brick stacks, to ends and ridge. EXTERIOR: 3 storeys and cellar. 3-window range, central bay breaking forward, of horned 2/2 plate glass sashes, smaller and boxed on 2nd floor, all with painted channelled voussoirs and keystones. Sill-bands, vestigial on ground floor. Ground floor: on right, canted bay-window with 20th century plate-glazing; to left, shallow bay-window having plate-glazing with decorative mullions and arched heads, deep up-swept dentilled cornice, and rebuilt brick plinth with cellar grille; at centre, paired round-arched doorways in Classical architrave with three 3/4 Doric columns on deep plinths supporting corniced entablature with triglyph and paterae frieze, plain fanlights, 6-panel doors, nosed stone steps; deep moulded plinth. Left return, visible in side-passage, has some light-scantling timber-framing. Rear: brick wing forms courtyard with No.19 (qv). INTERIOR: at front, below both properties, is an ashlar tunnel-vaulted basement. In the section below No.21 there are two arches; a 13th century trefoil-headed piscina with deeply-moulded surround in the south wall; in the central bay, 3 disused steps leading down from street level with grooves in the stone; and a 4-centred archway to former newel stair. (BoE: Pevsner N: Worcestershire: Harmondsworth: 1968-: 243;). [1][2]

Description

The mission at Pershore was founded in 1913 by the Rev Norman Holly, who was serving as private chaplain to the Berkeley family at Spetchley Park. A 1880s iron chapel which had become redundant after the building of the new Church of St Mary and St Egwin at Evesham in 1912 was brought to Pershore and re-erected in Priest Lane. After Fr Holly's departure in 1917 the congregation remained without a priest and was subsequently served from Upton until 1943, with a dwindling congregation. After the Second World War, a Catholic revival took place in Pershore, and in 1957 a new church was planned by the new priest, Fr James Crichton, for which the diocese offered a loan of £10,000.

Fr Crichton was a significant writer on the liturgy, who in 1943 had written an article for the Society of St Gregory on his 'dream church', highlighting the centrality of the altar in church design. From 1952, he was editor of the Society's journal, Liturgy. Fr Crichton attended the International Congress on the Pastoral Liturgy at Assisi in 1956, where Pope Pius XII was the keynote speaker. Fr Crichton brought back ideas of the liturgical movement being developed on the continent, which had to date made little impact in Britain, but which he determined to put into practice at Pershore. Hugh Bankart, FRIBA of Bath was commissioned to design an inexpensive church which would incorporate these modern ideas of church planning. The brief resulted in a simple rectangular design with a square plan, with a central altar to encourage full and active participation of the congregation in the liturgy. The altar was set forward to allow for Mass to be said with the priest facing the people. The Blessed Sacrament was reserved in a separate chapel. The font was placed on the central axis of the church in the vestibule. A planned detached campanile adjacent to the NW corner of the building was never constructed, but otherwise the design was executed in accordance with Bankart's model published in the Catholic Building Review for 1957 (see SOURCES). The church opened in time for Easter 1959. It was agreed that all the fittings should be made by individual artists and craftspeople, rather than catalogue items, and these were installed over the following months.

MATERIALS Red brick, laid in Flemish bond, with artificial stone dressings; the roof structure is of steel, covered in clay Roman tiles.

PLAN A simple rectangular plan.

EXTERIOR The church is a high single storey, the long elevations of five bays divided by brick buttresses, each bay with a rectangular window with hollow chamfered surround set high in the wall, with small, rectangular paned metal windows. The west front has a flat-roofed narthex across most of its width, with the roof continuing beyond on either side to form canopies over the side doors. Above the narthex is a tripartite window with coloured glass. In the gable is a corbel for a statue, though no statue appears ever to have been installed. To the east the chapels flanking the sanctuary have flat roofs, and set lower, flat-roofed vestries run across the east end of the building.

INTERIOR The main entrance opens to the baptistery with its stone font, centrally placed in the narthex in line with the altar. To the right are confessionals. The main worship space has a composition stone floor, plain plastered and painted walls and a cambered ceiling. The sanctuary is set on a shaped platform against the blind east wall, and is flanked by round-headed openings to the small side chapels, which have circular windows to their sides and are top-lit by circular roof-lights.

PRINCIPAL FITTINGS The principal original furnishings include the Portland stone high altar and the ALTARS in the Blessed Sacrament and Lady chapels, all carved by Joseph Cribb of Ditchling. The hammered anodised FIGURE of the Risen Christ against a cross and the altar fittings in the side chapels are by Michael Murray. The octagonal stone FONT is by John Skelton and is set within a sunken circle. The low-relief Portland stone STATIONS OF THE CROSS (two of which had been exhibited at the Royal Academy in 1959) were carved by Rosamund Fletcher of Oxford. The stained GLASS roundels in the Blessed Sacrament chapel (Last Supper) and Lady Chapel (Annunciation) are by Philip Brown. Later furnishings include the wrought iron and copper RAIL around the font by Alan Evans of Stroud, and the three-light dalle-de-verre GLASS

west window, by Dom Charles Norris of Buckfast Abbey.

The reasons for designation are:
* Historic interest: the church, designed by Bankart to principles developed by Fr James Crichton, represents an important, early response to liturgical change, before such ideas became widespread through the Second Vatican Council;
* Architectural interest: the building is not of great intrinsic interest, but is in a pleasant, Arts and Crafts-influenced style which allows clear focus on the sacrament;
* Fixtures and fittings: the church has a good suite, all designed and made by individual artists and craftspeople, including Joseph Cribb, Rosamund Fletcher and Dom Charles Norris. [1]

Description

Salvage recording identified only late post-medieval deposits, probably relating to land raising and levelling of uneven ground in preparation for a hard surface. Finds of 18th to 19th century brick, tile and glass were recovered. However changes in the type of alluvium deposited on the site corresponds with similar changes noted at sites in the lower Severn-Avon valleys which may indicate the onset of forest clearance and ploughing in this area, possibly dating to the Iron Age.[1]

Description

Evaluation under P.1091 of land at rear of site revealed only post-medieval deposits. A mixed brick and pebble layer probably represents the bedding layer for overlying tarmac surface. Below this layer was a charcoal rich dark grey-brown loam conaining brick fragments, glass, coal and china of recent date. This probably represents levelling deposits to form a base for the car park. This layer sealed a light grey brown silty clay containing animal bone, oyster shell and 16th to 17th century pottery. It probably represents early post-medieval material incorporated into the top of the natural. It probably is the result of dumping domestic rubbish. A single cut feature was recorded at the south end of the trench. It was not investigated and was clearly modern. [1]

Description

Watching brief during excavations for ducts for the lighting of footpaths to south and west of the Abbey. The only deposit encountered apart from topsoil was a dark silty layer consistent with a ditch fill. This was only observed in the area adjacent to the junction of Abbey Road and Farleigh Road. It seems likely that the ditch represents an artificial watercourse, a leat between the two medieval fishponds (WSM10043) and therefore possibly medieval. [1][2]

Name: Evaluation in 1994, Abbey Car Park, Pershore

Report prepared by Worcestershire HER. Tel 01905 765560 or email archaeology@worcestershire.gov.uk.
Information valid for three months from date of production.

Civil Parish Pershore, Wychavon, Worcestershire

Description

Evaluation under P.1126 in 1994. Two trenches were stripped of crushed stone surfacing. The trench nearest the Abbey was then machine excavated to just over one metre. Four sondages were then hand-dug. In the second trench three five metre lengths were excavated by mechanical excavator to 1.3 metres and then selected deposits excavated by hand. A third trench was excavated between the present carpark and Bowling Club but was found to lie between live services so could not be completed. The only discrete feature was a compact deposit of stone rubble interpreted as an almost completely robbed wall footing. It is suggested that this was of a building about 45 x 15 metres in size and in view of the insubstantial footings was probably of timber resting on a sleeper wall. It is suggested that this may be the tithe barn of the abbey. The dump deposits originate from the domestic waste of the abbey. The range of fabrics were as expected with pottery from the 12th to 16th century represented; the majority being 12th to 13th century. A worn copper alloy coin was provisionally dated to 330-361. It was in an unstratified context. There was a comparatively large bone assemblage mostly cow sheep or goat. Many show signs of butchery and most parts of the carcass are represented. A peat layer could not be conclusively attributable to a fish-pond, but it must have been derived under still or slow-moving water. A significant amount of domestic waste had been dumped. [1]

Three pollen samples were analysed by James Greig. They indicate that the area was not a dense woodland and that as the deposit did not contain Centaurea cyanus, it was probably lain down before the 12th century. [2][3]

Description

Evaluation at the former GMS Depot, in 1996 (P1314). Deposits in trenches 1,2 and 8 represented 19th to 20th century dumping, probably associated with the Co-operative market. A wooden post found was dated to the 19th century. All pottery was modern. Trench 4 revealed short lengths of two ditches running parallel with the present southern boundary. Sherds of Worcester-type unglazed ware dating to the 12th of 13th centuries were found. The ditches probably represent the position of the monastic precinct boundary. Limestone lumps in the in the initial fills indicate a rubble-stone wall stood along the central bank. Trench 5 revealed a cellar, back-filled with 18th to 19th century demolition deposits, that possibly belonged to a building shown on a 1750's estate map, and believed to be part of Binholme Farm. The brick fragments had no mortar attached and the lining of the cellar had been completely stripped. Some pottery and wine bottles found in the cellar date from the 18th century. The latest sherd was from a possibly Mocha ware teapot spout. Although the demolition debris above the cellar was 18th to 19th century the presence of flat-tile and stone roofing fragments in the lower fill may indicate an earlier origin for a building rebuilt in the 18th to 19th century. Trench 6 contained finds of mid 17th to 19th century date and include a clay pipe-bowl, and bowl/pancheon with no direct parallels. Deposits in Trench 7 had been truncated by a substantial footing of Victorian date, probably associated with the National School founded in 1840. Trench 9 also exposed Victorian footings of the school. A graveled yard surface was also exposed and this was sealed by crushed animal bone, domestic waste and cessy green material. The yard itself sealed a deep and partially waterlogged deposit. It was devoid of secure dating evidence. The limited evidence points to the site of Binholme Manor lying towards the northern end of the site, close to the road junction. The fills of the ditches were devoid of quantities of domestic waste which suggests either regular cleaning or that they lay some way from an occupied building. [1]

Description

Evaluation in 1996 under P1255 carried out to determine the depth and location of buried remains immediately to the west of the wrought-iron gates that mark the supposed site of the west door of the abbey church. Although anticipated no trace of the church building was recorded and the west end must therefore lie to the east of the wrought-iron gates. However significant archaeological deposits were recovered. A series of stone and pebble surfaces were recorded that formed part of the medieval trackway aligned north-south. It is clear that this trackway formed part of the abbey precinct. A number of postholes were also recorded which may be associated with a period of construction or repair to the medieval church. A rubble surface was recorded and dated to the 16th century. This has been interpreted as a consequence of the demolition of the abbey shortly after 1535. Subsequent activity was extensive. A number of linear trenches were revealed which are interpreted as post-medieval horticultural features. [1][2]

attempt two trenches were excavated and the investigation was limited to determining the exact position and form of the west end of the nave. Trench 1 exposed two small areas of surviving wall foundation and extensive patchs of mortary material. These had been cut by a numver of trenches, identified as those of the 1930's excavation.. However a north-south feature running under the west end has been tentatively identified as a ditch dating to the late Anglo-Saxon period and it appears to have been filled in shortly before construction began. It proved possible to reconstruct the west end of the nave. The north aisle wall was defined only in plan. The second trench exposed a stone footing believed to be the former churchyard wall which was still extant in the 1950's. The artefacts recovered were mainly from contexts where they were residual. Decorated floor tile was very fragmentary. The most striking ceramic find was a large unabraded grass-tempered ware sherd dated to the 5th century. The range of fabrics recovered was fairly typical of pottery recovered from the Abbey and the town. The pottery fell into two groups one suggesting a latest date of 1150, the second beginning in the 14th century. Environmental remains show that the ditch received deposits of cereal crop waste and animal bone. The remains probably derive from fully processed crop material with oat and bread/club wheat being the product. [2][3]

Description

An archaeological evaluation was undertaken in 1998 to inform proposals to enhance the bridge and its surroundings. Four trenches were excavated on the bridge. Trench 1 was designed to locate and identify any remains of World War II activity at the southern end of the bridge, while Trenches 2, 3 and 4 were designed to identify former road surfaces on the bridge. Trench 5 was located to identify World War II activity (specifically a spigot mortar emplacement) to the south west of the bridge. Six phases were identified. Phase 1 comprised an undated deposit, but waspossibly contemporary with Phase (late 18th century?). Phase 2 dated to the mid-17th century and consisted of a surface made up of blue lias setts, and limestone. Phase 3, dating to the late 18th century, was a compacted layer of pebbles and sand and appeared to have been lain over the whole of the bridge. Phase 4, a sandy layer with small pebbles, dated to the early 19th century and was only found in Trench 4. Phase 5, early 20th century and World War II, was identified in Trenches 1, 4 and 5; in Trench 1 was the base of a massive concrete and brick structure, thought to have been an ammunition store, positioned midway between

Report prepared by Worcestershire HER. Tel 01905 765560 or email archaeology@worcestershire.gov.uk. Information valid for three months from date of production.

two pill-boxes. Trench 5 exposed a deep, possibly circular, cut feature filled by copious quantities of mid-20th century domestic debris. It was presumed that the cut related to the spigot-mortar trench but this could not be proved conclusively. Phase 6 was modern and comprised the modern tarmac surface. The report concluded that two surfaces of primary importance were exposed. One was the turnpike surfacing of the late 18th century, the other the mid-17th century pitched limestone and blue lias setts. Their survival owes much to the bridge being by-passed in 1926. [1]

Description

Watching brief carried out in 1996. Part of the 19th century building called 'The Abbey' was observed, but no earlier deposits or structures. The well-preserved footings of a building were recorded and different structural phases identified. The southern structure was stone built and consisted of a single room. It appears to have extended south beyond the recorded area. The northern structure was brick built and consisted of a range of four rooms, one of which had a floor of blue engineering brick. Around its northern end a stone boundary wall was recorded. Part of another structure was recorded to the west of the southern structure, lying within an area of rough cobbling that was identified as a yard. [1]

Description

Assessment of proposed resewerage works, Pershore. The High Street and Bridge Street follow the line of a saltway which was in existence by 1086. The line of the present High Street was formalised in the late 11th century. Broad Street was used as the market place for the town in the medieval period. The Anglo-Saxon market place is thought to have been north of the abbey. The fieldwork consisted of four boreholes which were observed in November 1998. Borehole 3 demonstrated that undated, waterlogged, organic-rich deposits in the High Street do survive. No unequivocal evidence for pre-11th century activity was identified, nor for medieval activity in Broad Street, although not all the boreholes reached natural. Deposits dating to the 17th to 19th centuries were observed 0.3 metres below the present ground surface. [1]

Name: Watching Brief in 1999, Former GMS Depot, Defford Road, Pershore

Report prepared by Worcestershire HER. Tel 01905 765560 or email archaeology@worcestershire.gov.uk.
Information valid for three months from date of production.

Watching Brief undertaken in 2000 under P1623. Within the foundations of plots 1-8 were many linear features with similar fill. Although some were intercutting no relationship could be determined. Most had profiles consistent with them being anthropogenic features. They are unlikely to be contemporary with post-medieval occupation of Binholme Farm. They could represent Roman or Prehistoric activity. One of the features, that running north to south, might be a continuation of the abbey precinct ditch identified in 1996. It is probable that they are potentially of Anglo-Saxon date. A cellar, with walls of brick and limestone, found in plot 12 relates well with a building shown on the Ordnance Survey map of 1884 and which was demolished after this date. The upper levels of brick suggest a 17th century date. No floor surface was found. Two post-holes were identified. A single unstratified rim sherd was the only definite post-medieval artefact found. Numerous modern features were found including the former school foundations and a brick well. [1]

Description

A mill is recorded at Pershore in the Domesday Survey of 1086. The tithe map of 1842 shows a mill as an L-shaped building with the Meeting Room of the Plymouth Brethren adjoining the northern elevation. Phase 1 of the building comprises an "L-shaped" single-pile residence of three bays. The main entrance is in the central bay of the south elevation. The brickwork is Flemish bond. This phase dates to before 1842. The second phase comprises the Meeting Room which is of irregular shape. Minor works took place in the 19th century and an out-building was constructed on the northern side of the yard. [1]

Description

A small fire occurred on 8th June 1993 and the aim of this building recording was to study the roof of the south aisle prior to repair work. The roof form suggests a 15th century date, but extensive disassembly and relocation has taken place. As originally constructed the roof would have been too narrow. Its width has been increased by lowering the pitch and lengthening the northern pitch. This has resulted in an off-centre ridge-line. This was probably needed following bulging of the masonry of the southern exterior wall, The reconstruction of the southern arcade would have required the complete dismantling of the roof and the repairs appear to be late 19th century. The line of an earlier, steeper pitched roof is visible as a scar in the stonework of the east face of the tower.[1]

immediately to the east of the surviving undercroft of a suspected medieval chapel (WSM15293). The site encompassed a substantial area including parts of at least four medieval burgage plots. Deposits were deep and generally undisturbed by modern intrusions. The earliest deposits identified dated to the 13th-14th centuries and occupation has been continuous since that time. The deposits were typical of back-plot locations, being principally associated with waste disposal, but also including evidence of commercial activity in the form of a substantial medieval oven. The oven's location suggested that the building line may have run a considerable distance back from the High Street frontage, perhaps with buildings facing onto a court. [1]

Description

Desktop study carried out in 1997. In 1940 infantry weapon pits were dug on the north side of the meadow as well as road blocks. Also in 1940 two Type 26 concrete pillboxes were constructed and an anti-tank gun emplacement. This still remains within a building now used as a pump-house by Pershore College of Horticulture. In 1941 five emplacements for spigot-mortars were constructed. In 1942 it is almost certain that a trench system would have been constructed around the Pershore Bridges. [1], [2] [3], [4].

Description

A survey of the bridge was undertaken in the autumn of 1990 when repairs were carried out with scheduled monument consent. Renovation work included repointing 75% of the parapet and minor stone replacement. The bridge, which is first documented in 1290, is mainly constructed of Cotswold limestone with a brick parapet. It has triangular refuges and cutwaters on the upstream side. The central arch was damaged by Royalist troops fleeing from their enemies during the Civil War. This section, destroyed on 5th June 1644, was rebuilt in red sandstone. The masonry at the base of the bridge's piers had been repaired in the past with materials that are not related to the original fabric. When the modern brick skin was removed from one of these areas, a much older surface of large limestone blocks was revealed. This was recorded and the resulting drawing used as a template for new limestone facing. [1]

Description

A number of intercutting medieval and early post-medieval pits were exposed. They presumably relate to activity to the rear of buildings fronting onto the High Street. Several of the features may have been post-holes associated with early timber structures. The principal area of activity was the western are of Area F but was largely absent from the eastern area. Several of the pits were sealed by the remnants of a wall composed of stone slabs possibly of late medieval - early post-medieval date. A cut may be a robbed return wall. Subsequent alterations in the line of brickwork point to the structure continuing after the establishment of tanning activity. The post-medieval tanning complex comprised two brick-built basements, to the west of which were a series of clay-lined tanning pits. The final phase on the site is represented by the newly demolished building which overlay the earlier tanning complex. It is noticeable that the building overlies the earlier wall. If this was a property boundary it was clearly no longer operational. Pottery indicates that the site was occupied from the 12th century, but the 17th century is less represented. Roof tile was recovered. A worked stone object was probably a whetstone of Eidsborg Schist/Norwegian Rag from the Telemark area of Norway. Similar examples have been recovered from Droitwich. A Saxon or medieval date would be appropriate. [1][2][3]

Description

Report prepared by Worcestershire HER. Tel 01905 765560 or email archaeology@worcestershire.gov.uk. Information valid for three months from date of production.

The report provides a summary of the phasing of the standing fabric and the following is a very brief overview of a complex report. The excavations revealed nine phases the first of which related to underlying subsoil. Phase 1 is the Anglo-Saxon church which is represented by several small stretches of foundation possibly being of the sanctuary. Phase 2 is that of the Norman church of about 1100. Four elements of the Romanesque abbey were recorded. All the foundations were of roughly cut limestone. A linear feature is thought to relate to the construction of the transept. Phase 3 relates to the eastern chapels built in the 1220's before the fire of 1223. All that was recorded from this phase was the foundation below the north arch of the Lady Chapel which comprised of roughly dressed limestone and lias bonded in buff mortar. Phase 4 relates to the remainder of the choir built after the fire of 1223. Foundations for both the north and south choir arcades were recorded. Phase 5 relates to 13th century additions after the fire of 1287/8. Only a single feature from this phase was recorded, namely the masonry surround of the doorway into the sacristy (St.Eadburga's Chapel). Phase 6 relates to the post-dissolution period after 1539, the only feature noted for this phase being the blocking of the entrance into the sacristy in the south wall of the south choir aisle. Phase 7 relates to additions after the fall of the north transept in 1686. This was represented by the partial blocking of the arch at the west end of the north aisle. Phase 8 relates to the late-17th/early 19th century burials up to 1854. A number of brick-lined burial vaults were recorded. These had been added between the late 17th century and 1854 when the last burial was recorded. Also discovered were the in situ remains of eight skeletons probably dating to between 1539 and the mid-19th century. None of the graves were excavated. All of the vaults were rectangular and built to take up to six coffins. Five vaults were excavated, in one was a burial dated 1854. Phase 9 relates to the 19th and 20th century restorations and additions. In 1846/7 the eastern apse was built across the site of the original Lady Chapel. In 1862-1864 there was a major programme of works and some elements were recorded. In 1871 pinnacles were added to the tower. Between 1912 and 1914 the south transept was consolidated and flying buttresses added. [1][2]

An overview of the work has been published in Current Archaeology. [3]

Description

Survey carried out in 1993 using Magnetometer, Resistivity and some Ground Penetrating Radar. Resistivity produced interesting results, with inexplicable diagonal features (R12 and R13, possible rubble from a monastic building outside of the suspected monastic area (R14) and a rectangular feature (R15). A number of linear anomolies might derive from the demolished Victorian house (R16-19). Others might represent old field boundaries (R20-1). One area was possibly an old rubbish dump with possible access roads (R26-7). Some anomolies remain enigmatic (e.g. R33 and R31). The Magnetometer survey revealed field boundaries, a pipeline, and a possible old fence. An area feature was probably associated with demolition rubble from the old house, also a possible curving path was indicated. Enigmatic responses wer also detected (e.g. M24, M13-16, M11, & M12). One particularly enigmatic anomoly was M1. The Ground Penetrating Radar indicated a ditch or holloway and a possible wall footing. It also provided evidence for preferential survival of monastic features [1][2].

Description

The survey indicated a number of vaults clustering at the west end and and at the south-east (the report notes north-east). It also revealed the known voids adjacent to the pews and the service duct at the west end. The survey also revealed two features interpreted as foundations for the two columns on either side of the apse. It suggests that these appear divorced due to inaccuracies in the drawings used for the plots. Several other areas were revealed which could be floors, foundations, robber trenches etc. A feature in front of the altar is interpreted as a floor. [1]

Description

Radar survey carried out in 1996 at west end of Nave, to link with evaluation trenches. The survey suggested that the area can be divided into two almost equal parts. The western part are predominantly sub-horizontal reflections, most within the first metre below the surface. These upper layers are interpreted as spreads of rubble derived from the demolition of the mansion which lay to the west of the area surveyed. The eastern half indicated rectilinear features which may derive by buried foundations. A broad anomaly running north to south-west of the gates was proved by excavation (WSM23957) to be a sequence of cobbled and rutted medieval roads. [1][2][3]

A subsequent letter from Stratascan adds some comments about the survey [4].

Description

Study took place in 2001. The Study indicated that the site lay outside the Saxon, Medieval and post-Medieval cores of Pershore. It is probable that the site has been agricultural land from the Saxon period to the present day. Roman activity has been established nearby, but excavation to the north of the site found no evidence for this period. A plan of Binholme Manor dated 1753 shows the area of the site as part of "The Bottom" in the manor of Binholme. It is probable that the site has been agricultural land until its present day usage as a sports field. Any earlier landscaping to create the modern sports club may have damaged any present archaeological deposits. [1]

Description

A site visit to 6 Bridge Streeet, 3/5/01, was initiated by a telephone call from the current owner Ian Tredgold. During maintenance works in the backplot of the property a slate surface was discovered which was followed to the north revealing an aperture through this surface and a void below. The slate surface appeared to be disturbed in the area of the aperture, as if repaired , otherwise a ground surface composed of substantial slate flags overlain by an area of concrete and an area of sand to level with modern flags above. The aperture exposed a 19th century brick built dome over a brick lined well (?). Several digital photographs were taken of the hole and then some of the interior as well but without sight the quality of these is very poor.The hole was very small making it difficult to be definitive about this interpretation. [1]

Description

The earliest features consisted mainly of pits and postholes which were either cutting the natural or layers that directly overlay the natural subsoil. Features to the rear of the site (west) were two probable gullies. In the main area one pit was truncated by another and both features cut by a gully running east to west. Further south was another pit which only the base of was seen. Other pits were present as was a stone and clay lined well. This was not excavated and was truncated by post-medieval features. A wide ditch running north to south was seen as a boundary ditch. Several medival layers sealed some of these features. Numerous other pits were revealed one with a possible padstone set into it. Postholes were also revealed.

The post-medieval phase was characterised by domestic and industrial features. These included a possible well and a small building complex housing a hearth. Pits and postholes were also revealed. A brick structure was found of uncertain function in a cut and two later circular cuts were brick-lined and were obviously industrial in nature. In the area of the lift pit within the standing building were one, possibly two earlier phases of post-medieval building were identified.

The survival of medieval features and deposits was high across the site and there was up to one metre of post-

medieval deposits which have protected the underlying medieval deposits. The ditch (179) excavated at the east end of the site was at the bottom of the stratigraphic sequence and although no datable finds were recovered its north to south alignment suggests that it was in use before the tenements were laid out in the 13th century. It is also on a slightly different alignment to the High Street so it is even possible that it predates the laying out of the High Street in the 10th or 11th centuries.
The east west gullies at the north of the site could be a feature that represents the northern boundary of an early tenement block, but they could equally well just be for drainage. The medival pits are probably of a domestic nature and would appear to have been filled with material associated with reasonably high status occupation. The early post-medieval stratification points to the continuation of the site for domestic purposes. The later post-medieval period is characterised by industrial as well as domestic activity, with possible hearth and brick-lined tanning pits being in use.
Less than 10% of the pottery was medieval or early post-medieval dominated by wheel-thrown Malvernian ware. [1][2]

Description

A skeleton was uncovered during drainage works at St Andrew's Parish Centre, Pershore. An archaeologist recorded the burial in situ and it is believed the remains date from the 18th or 19th century. The proposed site of the manhole was moved southwards so the skeleton could be left in situ. A layer of builders sand then gravel was placed over the burial to protect it before the drain was laid on top. [1]

Description

The path in question was 13.5 x 1.2 metres in dimension. The old surface was removed and material removed to expose a section up to 0.3 metres in depth. Artefacts recovered dated mostly to the post-medieval period, all re-deposited. The regrading of the slopes on either side of the path resulted a limited impact on the adjacent graveyard area. A quantity of bone and assorted finds were recovered the largest group being roof tile of between 13th and 18th century. The assemblage was both unstratified and too small to draw many conclusions about the site. A lead service pipe was found at the northern end of the path which served a Victorian gaslight which was still a feature of the graveyard to the east side of the path [1].

Description

Excavation in 1974. The site had been cleared and awaited development and lay at the corner of Newlands and Little Priest Lane. Nos.12, 14 and 16 Newlands had previously occupied the site. The southern end, No.12 was formerly the White Hart and its large cellar, along with a large storm-water drain had seriously disturbed the site. Therefore an area 10 metres square was opened immediately on the street frontage. In the south-east corner a brick-lined well was discovered but was not excavated. Five phases were identified along with an uncertain pre 2nd-3rd century A.D. layer. Phase 1 was dated to the Romano-British period and revealed ditches of unclear function. Finds and the unbraded nature of the pottery suggests that they were settlement boundaries. Amongst the pottery were six small sherds of Samian ware. Phase 2 was 12th to early 13th century and revealed shallow pits, some possibly dug to extract gravel others to collect rubbish. A deep sub-rectangular pits though contained a burnt post-stump, and another possibly decayed post. Both on the line of stone walls. The pottery from Phase 2A was almost exclusively derived from two sources, Malvern Chase and Worcester. Pottery from Phase 2B included sherds of oxidised, glazed wheel-thrown Malvern Chase jugs. Phase 3 comprised the stone walls which were probably cills for timber-framed structures. A 14th century date is suggested. Phase 4 was dated 16th to early 17th century. It revealed a stone-lined pit, almost certainly a rubbish-pit. It was probably abandoned in the 16th century. A well also had a short life being filled-in during the early 17th century. The majority of the sherds are from Malvern Chase wares but also included Cistercian and Tudor Green wares. The fifth phase dates to the late 18th-19th centuries. Some buildings were reconstructed in brick which was of a type that was commonly used from the 1840's. Pits were also noted as were post-holes. These latter may have formed part of an ancillary lean-to structure. A large amount of mainly Staffordshire wares date this phase which also included imported Chinese blue-and-white porcelain. [1]

Reported in Worcesters Evening News: Michael Shaw organiser "We found a very good collection of 17th century pottery which will be useful because some of the articles are more complete than one usually finds…..Some of the most exciting finds were some pieces of household pottery found in pits inside the house. One stone-lined pit probably from the 16th - 17th century had a decayed basket work lining". Mr Shaw thought the pits were rubbish of cesspits and perhaps had gravel extracted from one or two. One unusual discovery was a charred timber mostly under a 16th or 17 century stone house [2].

Civil Parish Pershore, Wychavon, Worcestershire

Description

When the foundation trenches for Phase 2 of the Development of Central Pershore were dug in 1978 it was unexpectedly discovered that the expected gravels thinned out and were replaced by thick deposits of silt. These silts formed part of the fill of an abandoned river channel incised into the gravels of Avon No.2 age. In places they were 4 metres thick and a small pond (WSM10043) persisted until about 1860. Three broad sedimentologies were revealed. Level C comprised the mixed sands and gravels of the channel bed, Level B is a predominantly medieval fill and Level A the post-medieval build up of loams to the present ground surface. A rim sherd of a Severn Valley ware wide-mouthed jar, an anciently broken Iron-Age antler comb and a bitruncated retouched flint flake were stratified either at the surface of the gravels or at the base of the loam capping them. Only one artefact was recovered from Level C. This is a humanly-shaped pebble of indurated palaeozoic siltstone with an appearance of a Neolithic axe. A radiocarbon date from a root stem gave an age of 3950±100 bp (Birm-965). The channel fill (Level B) had poorly developed stratification and an indurated layer in the Roman fill was thought to be cess. The principal period of fill probably began early in the 13th century and within a century was almost equal to the modern land surface. The channel cover (Level A) was probably humanly spread undoubtedly the layers of bunter pebbles between Levels A and B are humanly spread as are hollows in the fill containing roofing tiles, floor tiles and ridge tiles. If pottery is contained it is nearly exclusively 18th century. There is therefore a hiatus in the ceramic record of about 400 years which might indicate that the area was too foul or intractable to encourage human settlement. Distinctive pottery types in this level were Midlands Purple Ware, Cologne Stoneware, Ashton Keynes Ware, Cranham Earthenware, Nottingham Stoneware, and Herefordshire-Gloucestershire post-medieval ware. The fill in Level B can be conveniently divided into Romano-British and Medieval. Pottery from the Romano-British period included Severn Valley ware of the 3rd to 4th century, a 4th century Oxford mortarium rim, black-burnished ware, Gloucester TFS ware etc. The assemblage is later than that found at the nearby Newlands site. Also found were numerous fragments of stone objects such as a rubbing stone and a pot-boiler. One dark blue-green fragment of glass was recovered. Bones include those from horse, pig, sheep, red deer, raven and domestic fowl. There were no goat bones. Only Chironomus spp. were found. The medieval material included Gloucester Fabric TF41B, Bath fabric, and unidentified tile sherds. Some flat-headed nails, a small iron rod and a flat iron ring were amongst the metal objects recovered as was a highly polished antler point or awl. Bones from animals include dog, cat, pig, wild boar, sheep, red deer, and domestic oxen. Also found were detached horn-cores. The absence of all aquatic and amphibious species supports the case for foul conditions. The pottery evidence suggests that later medieval occupation was scarce, as is that of the 16th or 17th centuries. Beyond the reach of the channel fill (Level B) but cut into Level C was a circular pit with stepped floor. Sherds of Severn Valley ware were found in the fill as were some sherds of undated grass-

tempered ware. A sherd from a 13th century cooking pot is considered intrusive. The fill of the pit also contained sheep, pig, ox, and dog bones. The pit is dated to 5th to 9th century. Sections in Little Priest Lane were bottomed to gravel and revealed seven road levels dating from the 17th to early 19th centuries. Dating of the earliest levels appears to be purely on size of cattle bones. There is no published evidence of pottery. [1]

A collection of material from this excavation consisting of mainly animal bone is being assessed by Alan Jacobs in 2006/7. No report yet received.[2]

In 2013 research was performed by Worcestershire Archive and Archaeology service for the National Heritage Protection Plan Project "Putting the Palaeolithic into Worcestershire's HER". No further information was recorded for the palaeolithic tooth but it was suggested it dates to Marine Isotope Stage 3 to Stage 2. [3]

Description

Five small trenches were built to study the extent and condition of the foundations of the standing church. The location of each was not determined by archaeological considerations. Ten phases of activity were recorded of which five could be correlated with building phases observable in the fabric of the Abbey church. Area 1 was at the eastern end of south aisle. Beneath the concrete paving slabs of Area 1 was a layer of uncompacted ash and red sand, and below this a browny silt. This had been laid as bedding for the slabs laid in 1961-4. All earlier deposits had been truncated. The paving and its make-up covered a small trench identified on the basis of local information as part of a urinal demolished just prior to laying the paving. Also recovered were three features interpreted as foundation trenches for masonry structures. One of these pre-dates the foundation for the Norman south aisle which Pevsner considered as the earlier than the nave, it thus predates the construction of the crossing tower. Another contained a masonry fragment and whilst no date can be put on the feature it is possible that it is a fragment of the pre-conquest building. Area 2 was at the eastern end of the north aisle. Other than a possible foundation trench for the medieval building, nothing else was noted. Area 3 was at the external angle between the north wall of the north aisle of the chancel. Below the modern features was an irregular pit with a high concentration of human bone in its fill. It is interpreted as a charnel pit for human bones disturbed during building operations. It could not be dated. Area 4 was in the external angle of the north wall of the 19th century apse. All features were post-medieval and at no point were medieval foundations visible. A trench contained no datable finds but was cut by loose soil which contained human burials and 17th to 19th century pottery. The burials were not excavated. Area 5 was located in the external angle between the east wall of the south transept and south wall of the south aisle of the chancel. Below modern deposits was a gravel surface cut by a small pit or posthole and clearly predated the construction trench of the Norman south transept. The excavation indicated more than one technique of foundation construction, trench built foundations of the Norman period and a much less substantial approach taken by the 13th century builders. Area 1 revealed possible evidence of activity separated from the construction of foundation trench. The only datable artefact was a single sherd of an unglazed red fabric thought to be of Roman date [1].

Description

Observations limited to area excavated by contractors replacing central heating system. The present floor surface comprised flagstones laid onto a sand and grit bedding. This bedding contained small amounts of mortar, concrete, human bone and thin 17th/18th century half-bricks. Beneath this four layers were observed. The first was decayed concrete. No datable finds were recovered from it. The second layer was a sandy-loam and again no datable finds were recovered. The third layer was of concrete and the fourth was demolition debris with brick, tile, mortar and cement. No datable finds were found in these two layers either. A pair of brick-lined features aligned north to south were observed. Both were cut from below the flagstone surface and one had the remains of a stone capping. No datable finds were recovered. A brick-built feature aligned east to west was observed in the base of the trench. It was not disturbed. A substantial construction of irregular mortared limestone blocks sitting on a mortared rubble foundation was observed at the western end of the trench. Part was removed by the contractors. No datable finds were recovered [1].

Description

This survey and description is from the late 19th century and contains many fine drawings of the elevations. It notes the discovery of a lead coffin of Earl Odda when the Lady Chapel was being erected in 1259. It records the dates of numerous fires in the building, that just before 1002, that of 1102 and another in 1223 and yet another in 1288. The survey contains descriptions of various standing structures as well as the documentary history. It infers that the church had apsidal eastern chapels of an early date. The wide arch in the south transept evidently opened out into such a chapel (as at Tewkesbury) which was pulled down and the arch blocked in the 14th century. It notes the foundation of a Chantry to Sir Adam de Hervington on the south side of the church, probably the one at the end or the one breaking out of the south choir aisle. The chapel of St.John the Baptist is also existed as did a chapel dedicated to St.Michael. Andrews draws attention to the apartment now forming a cellar in the High Street which contains a piscina. He notes that if it was a chapel then it must have been a late institution as it contains fragments of moulded 13th century stone work. Above it was once a hall about 40 feet long with a circular stair case to approach the chapel below. Mention is made of the font, probably original, which 'now' ornaments a lawn at "The Nash" in Kempsey. A full extract from the Valor Ecclesiasticus as it concerned Pershore Monastery is also provided. [1]

Description

The report notes that at the time of the excavations the only plan of the abbey buildings of about 1875 which was based on conjecture along customary Benedictine practice. An exploratory trench was cut across the cloister garth which soon revealed the presence of its alley walls. It was obvious that earlier, somewhat erratic excavations had already taken place. It was obvious that practically all of the stone had been robbed and recovery of the general plan of the abbatial buildings would be exceedingly difficult, and in many positions impossible. The report records that a lot of vaulting fragments were recently noted at Defford. The excavations recovered the position of the cloister and the fact that it was small - only 90 feet square with 9 foot alleys. The Chapter House was shown to be circular and not oblong. Also recovered was the approximate position of the refectory and a few other apartments. The report discusses the Chapter House in some detail and makes comments about its construction. The cloister garth was small - only 70 feet from north to south but evidence for its western walls is indistinct. No details of the bay-spacing or buttressing could be seen. The Warming House is usually to the south of the Chapter House and wall lines were found indicating a building 40 feet wide. Wall indications show the refectory as being about 30 feet wide bad whilst there is little evidence of its length but a fire-place or oven suggests it was about 50 feet long. To the west of the Frater wall traces were recovered but they were too indefinite for their purpose. There was evidence of walls on the western side of the cloister but again no identification was possible. Only one in situ internment was recovered. This was of a man buried just within the cloister garth. A number of bones were found in various places. Few finds of note were found. A bronze tweezer with jewels in a silver setting being unexpected. It is said to be Roman or 4th century and found near the entrance to the refectory. Near to the west wall, at about the centre of the eastern alley the lid of a heart-coffin of

crude workmanship, was found. The lines of the nave walls were followed for about 175 ft from the crossing westwards. The report concludes that the "Abbey House" does not stand on the site of any abbatial buildings. [1][2]

Description

The assessment was reported on in 1995 and was a result for a perceived need to improve the church's entrances and emergency exits. Seven doorways were described in detail and a plan for improvements put forward. Emphasis was put on the need to preserve the south transept as the remains of the 15th century chapel created under the Norman arch are significant historically, archaeologically and architecturally. [1]

Description

Trenching had to be restricted as the existing building was in use at the time of the mitigation excavation. In Trench 1 the earliest deposit may represent cultivated subsoil or a pit fill. No artefacts were recovered. Also exposed was a pit with typical cess-pit fill. Within this was found a near intact, and functional twin-handled pot. This was dated to the 14th/15th century and appeared to have been used as a cooking pot and then subsequently as a chamber-pot. It was impossible to recover any artefacts from Trenches two to five and 12 and 13. Trench 6 showed a number of shallow pits and three post-medieval brick structures were noticed. A small rectangular brick vaulted cellar or cistern was exposed, the brickwork appearing to be 18th century. There was a suggestion of the remains of an out-house. In the eastern arm a circular brick-domed structure filled with 20th century demolition debris was encountered. Its date was probably late 18th/early 19th century and it may have been a small ice-house. In Trench 7 a large pit of medival date was observed. Trench 8 exposed two pits, possibly resulting from gravel extraction or cellarage. Only limited examination of Trench 11 could be carried out. It exposed an east - west boundary feature possibly a medival plot boundary. It also contained an area of burnt clay fragments possibly an oven of 13th to 14th century date. A burnt fragment of stone may derive from a quern suggesting bread making. The pottery assembalge displayed a standard range of form and fabric types for a Worcestershire site of the medival period. A single residual sherd of Roman Severn Valley ware (Fabric 12) was found. The medival pottery was of a standard domestic nature. Two sherds of post-medival pottery were found (Fabric 91) [1].[2]

Description

Observations of the exposed surfaces revealed a sequence of inter-cutting pits, cut into a buried topsoil and sealed beneath a deep and well-developed layer of modern garden topsoil. The pits were well-preserved with little evidence of later truncation and were dated to the later post-medieval period. These features also appear to represent the earliest phase of occupation on the site as no earlier features or residual finds were observed. [1]

Description

An archaeological watching brief was undertaken by WHEAS in 2005 under Project P 2759. It concluded that substantial archaeological remains are well preserved not far below the present surface outside the north-eastern corner of the vestry. There are substantial below ground remains of the eastern wall of the 12th century northern transept and at least two phases of internal mortared floor surfaces. The partial remains of an earlier Christian burial lie in a well-preserved state not far below the surface, though truncated by the 12th century wall foundations. Although considerable disturbance has taken place during the insertion of the large buttress and the modern concrete foundations for the present vestry, there are still considerable remains that will help to establish the original ground plan of the early medieval northern transept and, burial practice prior to the 12th century [1]

Description

A desk-based assessment by Worcestershire Historc Environment and Archaeology Service in 2005 under Project P2768 in advance of possible development. Its aims were to summarise the character and extent of any identified features of the historic environment, indicate their significance, the impact of the proposed development and identify mitigation measures, where appropriate. Relatively little historical information was available about the site except from the 19th century onwards. By the early 19th century at least one building was present on the High Street frontage within the proposed development area, together with a cul-de-sac lane. The style of surviving tenements and cottages in this part of Pershore suggests that more buildings probably existed along this side of the High Street from this time, though whether they ever extended onto the site is uncertain. By the second half of the 19th century an industrial works (Atlas Works) had been built immediately adjacent the lane, and this was later converted to a jam works (Pomona Preserve Works) which continued into the mid 20th century. Today the proposed development site is occupied by a variety of workshops and businesses, which have adapted the Victorian works as well as adding new buildings. [1]

Description

An archaeological watching brief was undertaken by WHEAS under Project P.2822. A hand-dug test pit was monitored at the corner of the early 13th century north-east, St Johns chapel. This revealed four inhumations with associated disarticulated bone, the concreted sandstone rubble foundation course of the chapel and a further foundation for a possible buttress or adjacent structure. Two of the burials pre-dated the chapel foundations and one appeared to post-date the discrete foundation course. No dateable artefacts were recovered during the investigation, and all human bone was retained on site either for immediate reburial in situ or reinterment at the end of works. No osteological analysis was undertaken although all of the identified individuals appeared to be adults. [1]

Description

Evaluation undertaken in advance of work to replace steps with an access ramp in July 2011. Five trenches were excavated at the west end Pershore Abbey. The evaluation area had been extensively remodelled in the 20th century and re-deposited material, including fragments of medieval floor tile and post-medieval pottery was found in the evaluation trenches. No archaeological deposits were revealed.
Finds as follows: Single piece of medieval undecorated yellow window glass. From Deposit 103. Five fragments of flat roof tile, probably medieval and from Worcester. One fragment with clear tan glaze. From Deposit 104. Eight fragments of floor tile with inlaid decoration, not possible to distinguish the design. Two fabrics identified: Malvernian and from Bredon. From Deposit 104. One fragment of undecorated floor tile from Deposit 203. Unstated number of sherds of post-medieval pottery, including sherd of Staffordshire mottled ware (mid 18th century) and piece of clay pipe (1720s). Found in Deposit 104. [1]

Description

Headland Archaeology excavated two test pits at the east end of Pershore Abbey. The North-East Chapel is suffering from subsistence and the test pits were excavated to inform the design of a program of underpinning. Two articulated human skeletons were revealed which predate the chapel, which has early 13th century origins. One of the burials was found within a masonry niche which may represent a cist or the remains of the 13th century Lady Chapel. [1]

Description

Archaeological Excavation in 2012 at Pershore Abbey, Pershore undertaken by Headland Archaeology. WSM number issued to Mike Kimber 30/06/2012. An archaeological excavation and watching brief was carried out at Pershore Abbey Church as a result of underpinning work being undertaken at the north-east chapel. A total of 29 burials were recovered within the excavation area all of which were supine, in an extended position and aligned roughly east-west with the head situated at the west of the grave in the typical Christian manner. A full osteoarchaeological assessment was carried out. Any archaeological material impacted upon was recorded and excavated in order to avoid destruction by future underpinning works. No archaeological deposits pre-dating the use of the site as a burial ground were revealed during the course of the excavation. [1]

Description

This development site lies within the heart of medieval Pershore and the findings of this watching brief confirm that preservation of remains from this period here is good, at approximately 0.70m depth. A single piece of 11th to 12th century pottery was recovered from a stratified, possible cess layer, and although the other features were not dateable, they are considered to be broadly contemporary, as they were all sealed below a soil layer.

The site constraints limited the amount of information which could be obtained from the exposed features and deposits, such that they could not be fully characterised or interpreted. However, their presence and good state of preservation, indicates that there is the likelihood for deposits of similar earlier medieval date and sate of preservation to survive within the immediate vicinity. The archaeological potential of the site therefore remains high.[1]

Description

Headland Archaeology conducted ground-monitoring works at the west end of Pershore Abbey in order to record any archaeological remains exposed during the construction of a new access ramp to replace the existing steps and refurbishment of the paved area adjacent to the modern church entrance. The area of current works lies within the former nave of the abbey.

During the works, a small charnel pit and two truncated grave cuts were identified beneath the paved area and associated levelling deposits at the west end of the abbey.

The identified grave cuts had been truncated by the drainage system for the original paved area. The charnel pit had been excavated directly beneath the original paved surface and was probably modern.

Cartographic, photographic and archaeological evidence indicate that the area of the steps was extensively remodelled during the 20th century. Re-deposited material was identified including brick rubble and both disarticulated human and animal bones. [1]

Description

An archaeological watching brief was undertaken at Pershore Library, Pershore, Worcestershire (NGR ref SO 9484 4589; HER ref WSM 48248). It was undertaken on behalf of Pershore Town Council, who obtained permission for an extension to the library subject to conditions including a programme of archaeological works.

Groundworks for the foundations of the extension were monitored. Within the limited window that the excavation provided, medieval and post-medieval deposits were observed. Above natural gravel and clay deposits were a number of undated layers, interpreted as buried sub and garden soils from the early medieval period. Cutting through the higher of these deposits was a large cess pit to the west and, in the east, a post hole and a remnant of a garden wall. The wall incorporated a piece of column masonry, potentially from the Pershore Abbey, suggesting a post-1540 date. The wall was partially robbed of masonry in the 17th - 18th centuries.

The layers of material in the east of the observed trench were suggestive of more domestic activity than the garden soils in the west, and this change, whilst obscured by later truncations, occurs near the remains of the garden wall. [1]

Description

An archaeological watching brief was undertaken of the groundworks associated with the construction of Pershore Weir Turbines.
A typical soil profile was seen through most of the areas monitored, with occasional waterlogged clays. An old river channel filled with organic-rich material was observed during the excavation of the turbine trench, orientated north-east to south-west. A column sample and spit samples for radiocarbon analysis were taken. There were also pockets of very dense mollusc deposits within the area of the new leat that connected to the existing river Avon. The dominant species was Dreisenna polymorpha, the Zebra Mussel, which was probably introduced into the UK in the early 1820s.

A radiocarbon date of 385 to 165 cal BC was obtained from the upper deposit of the palaeochannel, indicating a Middle Iron Age date for silting up of this feature. It was not possible to date the lower deposits.

Plant macrofossil assemblages were of low significance for interpretation of the surrounding environment, although there is tentative indication of a change in environment from the earlier to later channel fills, despite the small size of the assemblage's low species diversity.

The pollen remains in the uppermost sample (0.5m deep), are regarded as having medium significance for understanding the wider Iron Age environment, due to their well preserved and anthropogenic nature. However, the preservation of the lower samples indicated that the pollen may well have been transported. This, coupled with the problems of obtaining dated material from the lower profile, means that drawing any meaningful, local interpretation is not possible for the site and the pollen assemblage can be considered to have low potential.

No further finds, features or archaeological deposits were found in the area apart from post-medieval and later material relating to the manuring and agricultural usage of the land. [1]
