THE WATER SUPPLY OF
BYZANTINE CONSTANTINOPLE

CROW, BARDILL
AND BAYLISS

THE WATER SUPPLY OF BYZANTINE CONSTANTINOPLE

James Crow, Jonathan Bardill
and Richard Bayliss

SOCIETY FOR THE PROMOTION OF ROMAN STUDIES
JOURNAL OF ROMAN STUDIES MONOGRAPH NO. II
2008

ONE OF THE GREATEST
achievements of Roman
engineering, Constantinople's
system of water supply and storage
included the longest known aqueduct
channels and the most complex system
of urban water collection in the ancient
world.

This monograph presents the results
of over ten years' fieldwork and research,
providing a historical account of the
development of the system, a detailed
description of the water channels and
bridges outside the city, a bibliographical
concordance of over 150 urban cisterns
and reservoirs, and a comprehensive
collection of translated historical texts
bearing on water supply, storage and use.

The volume is extensively illustrated
by detailed maps, elevations and
photographs documenting the course of
the channels through the hinterland, and
the structure, decoration and masons'
marks of the great water bridges. Inside
the city, the cisterns are plotted in detail,
enabling for the first time an appreciation
of the hydraulic infrastructure in its
topographical context.

The result is the most detailed record
and analysis yet available of an
engineering achievement that some
later Byzantine writers rightly ranked
amongst the Seven Wonders of the
World.

The Society for the Promotion of Roman
Studies is the leading organization in the
United Kingdom for those interested in
the study of Rome and the Roman
Empire. Its scope is wide, covering
Roman history, archaeology, literature
and art down to about A.D. 700. It has a
broadly based membership, drawn from
over twenty-five countries and from all
ages and walks of life.
