

Table 1: Gazetteer and Guide to Lithic Sites

Explanation

1. The sites have been numbered according to which map they occur in, working from west to east, and from south to north, for ease of reference. Thus, Sites 3-8 are on Map 3(Figure 5), Sites 13-22 on Map 4 (Figure 6), Sites 27-38 on Map 5(Figure 7), Sites 39-54 on Map 6 (Figure 8), Sites 50-66 on Map 7 (Figure 9), and Sites 67-75 on Map 8 (Figure 10). Within each map, sites are arranged according to their NGR, first by easting, then by northing. Where Feather records several sites at the same or much the same NGR, these have been individually numbered to avoid confusion.

^a: a small number of sites (14, 20, 33 and 36) are only a small distance off the maps provided: to have included them on their own maps would have increased the number of maps with only one or two sites on each

^b: several sites (17, 19, 22, 42-6, 55, 60 and 66) have no clearly identified NGR other than a generic or local site name given by Feather, e.g. Site 46 Oxenhope Moor, Cock Hill 'stream? site past radar station', even when the lithics collected are known. For this reason, they are entered on the database above, but not on the accompanying maps

^c: site recorded in Feather's diaries but no lithics were available for analysis (41)

^d: sites recorded on Feather's maps (34, 52, 63-4): lithics collected by him but not available for analysis

^e: sites recorded on Feather's maps (39, 62, 67-74): lithics collected by others (Crowther, Slater, Turner, etc.) but not available for analysis. As these sites occur on the same or immediately adjoining areas, they are included here for the sake of completeness: this applies to all of the sites shown on Map 6.

^f: sites identified by Gilks (56); for further details, including an analysis of the lithics, see Gilks 1994.

2. The left-hand number refers to the number of the site on the accompanying maps

3. The name is the name given either by Feather himself to the site or subsequently by the current author to aid clarity

4. The NGR is taken directly off Feather's annotated maps: in cases, where there is a wider than usual scatter of lithics, the NGR represents the appropriate or estimated centre of the scatter

5. Parish is self-explanatory and often information recorded or required by HER records

6. 'SF Map' refers to the series of 6in:mile maps annotated by Feather:

K: SD93NE

N: SE03SW

Z: SE02NW

Thus, N8, N13 means Map N (SE03SW), Sites 8 and 13

7. The final column is the description of the site if one is given by Feather on the annotated map

Table 1: Gazetteer of lithic sites

No.	Name	NGR	Ht. O.D.	Parish	SF Map	Details
Map 3 Laneshaw Bridge: Combe Hill						
3	Onion Bank 1	SD 9557 3881	387m	Laneshaw Bridge CP	K	workshop site
4	Onion Bank 2	SD 9557 3881	387m	Laneshaw Bridge CP	K	workshop site
5	Onion Bank (scattered)	SD 9557 3881	387m	Laneshaw Bridge CP	K	scattered finds
6	Combe Hill 1	SD 958 392	410m	Laneshaw Bridge CP	K	few finds
7	Combe Hill 2	SD 958 392	410m	Laneshaw Bridge CP	K	few finds
8	Wolf Stones	SD 968 392	410m	Laneshaw Bridge CP	K	single waste flake
