

Figure 10. The Archaeological features and control points traced onto acetate film attached to the photograph (NCC Photo Index 7062/069).

- Prepare a paper copy of the relevant area of the background map and mark on the same control points.
- Processing through AERIAL4. Register the paper map on a digitising tablet. Digitise the map control points and then the corresponding photo control points. Note the given error readings, if these exceed 3m for any one point amend accordingly

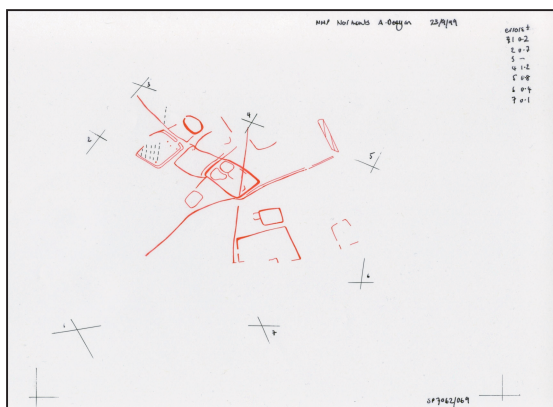

Figure 11. The acetate film, detached from the photographs and completed for archiving.

- When a transformation with acceptable errors is achieved note the errors against a list of the control points on the acetate sheets. Then digitise features with the standard headings.
