FULL ANALYSIS OF HUMAN REMAINS FROM FIELD 133 OF THE A1 WIDENING SCHEME

Sophie Newman and Malin Holst

Summary

During excavations by Northern Archaeological Associates, two contexts of burnt bone were recovered from Field 133 of the A1 Leeming to Barton Joint Venture for widening of the A1. Upon analysis it was determined that the quantity of bone recovered was too small, and the bone too fragmentary, to determine if they were human or animal in origin (Table 1). Therefore, no further analysis was undertaken.

Table 1 List of contexts containing burnt bone

Context No.	Feature type	Artefacts and inclusions	Notes
6127	INSERT INFO	INSERT INFO	One fragment of burnt bone, weighing 0.1g, can't determine if human or animal
6128	INSERT INFO	INSERT INFO	Eight small fragments of burnt bone, weighing 0.3g, can't determine if human or animal
