## FULL ANALYSIS OF HUMAN REMAINS FROM FIELD 164 OF THE A1 WIDENING SCHEME

### Summary

During excavations in 2014, three contexts of burnt bone were recovered from Field 164 of the A1 Leeming to Barton Joint Venture for widening of the A1. Upon analysis it was determined that the quantity of bone recovered was too small, and the bone too fragmentary, to determine if they were human or animal in origin (Table 1). Therefore no further analysis was undertaken.

**Table 1** List of contexts containing burnt bone

Context No.	Feature type	Artefacts and inclusions	Notes
4554	Deposit in kiln/oven [4583]	Domestic pot	Six small fragments of burnt bone, weighing 0.1g, can't determine if human or animal
4598	Fill of [4596], possible dumping deposit associated with collapsed oven	Pot sherds	Approximately seven small fragment of burnt bone, weighing 0.7g, can't determine if human or animal
4600	Fill of [4596], possible dumping deposit associated with collapsed oven	Pot sherds	100+ fragments of burnt bone, weighing 9.3g, can't determine if human or animal, but some fragments definitely animal
