Context Description

A deposit of Stone placed onto the normal clay. In places only one stone deep. Other places 2 stones deep. Stones vary in size 0.1 x 0.1m to 0.3m x 0.1m. Seems to be limestone. Pottery, glass, pipe stems, bone found in between. Appears to overlay culvert 026 to the NW

Drawing Nos. 9 sheet 4 Photographs 12 sheet 1 Digital 29-33 Slide 71-75 Print	Levels Highest 190.11 Lowest 189.94	<table border="1" style="width:100%; border-collapse: collapse;"> <tr> <th colspan="2">Finds</th> <th>Other</th> <th>SMF Nos</th> <th>Samples</th> </tr> <tr> <td>Lithics</td> <td><input type="checkbox"/></td> <td>Pot</td> <td></td> <td></td> </tr> <tr> <td>Metal</td> <td><input checked="" type="checkbox"/></td> <td>CBM</td> <td>Pipe</td> <td></td> </tr> <tr> <td>Bone</td> <td><input checked="" type="checkbox"/></td> <td>Hazelnut</td> <td></td> <td></td> </tr> <tr> <td>Glass</td> <td><input checked="" type="checkbox"/></td> <td>Leather</td> <td></td> <td></td> </tr> <tr> <td>Coarse Stone</td> <td><input type="checkbox"/></td> <td>Wood</td> <td></td> <td></td> </tr> </table>	Finds		Other	SMF Nos	Samples	Lithics	<input type="checkbox"/>	Pot			Metal	<input checked="" type="checkbox"/>	CBM	Pipe		Bone	<input checked="" type="checkbox"/>	Hazelnut			Glass	<input checked="" type="checkbox"/>	Leather			Coarse Stone	<input type="checkbox"/>	Wood

Interpretation Possible structure that ~~was~~ seen in the Eval stage. Appears to originate from E side of trench 5. Could be a collapsed wall / could be a floor surface as no cut seen for a wall - industrial. Possibly related to the chert mine nearby as small amount

Checked Interpretation <i>found in between limestone.</i>	Initials <i>re</i> Date <i>26/1/15</i> Checked By Date

Truncated? Y by modern curbs	Has the upper surface been exposed to weathering?	22
Root Penetration? Y	Is the deposit a laminate?	
Bioturbation (e.g. Worm, mole etc?) Y	Has the deposit been created in a single episode?	likely
Is the upper surface distinct, graded, uneven etc? D	Has the deposit accumulated over a long period?	unlikely
Is the upper surface compacted? N	Is there evidence of waterlogging?	N
Is the deposit sealed? Y	Has deposit been formed by flowing water/standing water/wind?	N

Context Description **Different to 011** this seems to be formed of thin layer / heaver (0.5m x 0.5m x 0.1m) blocks of limestone. These again are only one / two courses deep and set into rammed clay. Deposit (010) overlays 012, and seems to have the same kind of prob.

Context Description *Initially looked like a possible wall foundation removal. On clearing voids were visible. Removing the large small stones/clay revealed large sections of limestone set on top of flat limestone pieces with rough limestone construction at the sides, water could be seen still seeping running SE → NW. Truncated by modern concrete (SE) + service trench (NW)*

Is the deposit sealed?	Has deposit been formed by flowing water/standing water/wind?

Context Description

Cut for stone culvert **026**.

Truncated to the NE - seems to disappear into the natural clay, but also truncated by an earlier evaluation trench.

The SW end disappears into Ewa trench 5.
