ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overlaid)

Oval shaped pit used as a burial cut for the crouched burial of a middle aged woman, possibly late iron age.

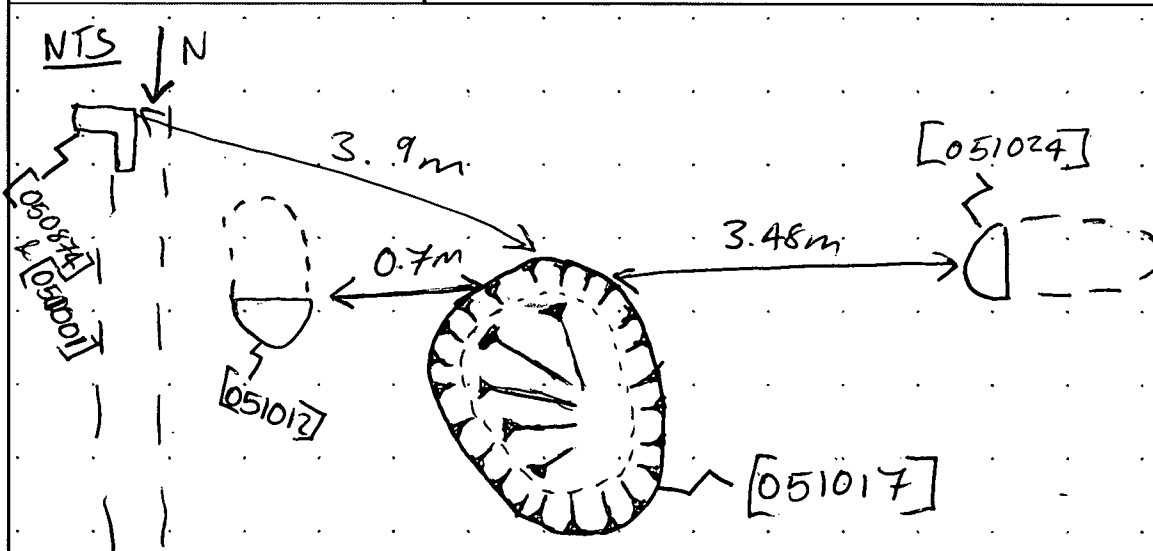

The Cranium was at the southern end of the cut and the feet at the northern end. The slope of the base ~~was towards the northern end~~ was with the higher portion at the southern end & the lower portion at the northern end.

Two nails were placed in the photos & surveyed in to give the alignment of the grave cut after the remains had been removed. See below

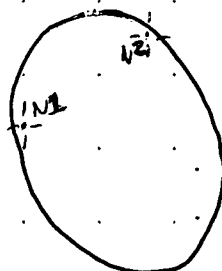

Refer to context (051019) for section

If present, the sternum can be grouped with either rib side and the hyoid bone can be grouped with the mandible.
Use the diagram for further information - shade bones present and mark extent of truncations.

This form is incomplete if fields marked with ▽ are empty. Please turn over for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Crouched burial of middle aged woman (based on teeth wear & mandible shape) in a roughly NW-SE orientation, with head in the SE facing towards southwest.

Most bones present though entire knee joints are missing. Due to overlapping feet these were excavated together and identification of elements sides done were possible. No lumber Vertebrae were present

Based on pottery in the fill above, the burial is possibly late iron age. A copper alloy (Bronze?) pin/stylus was also present (F55628)

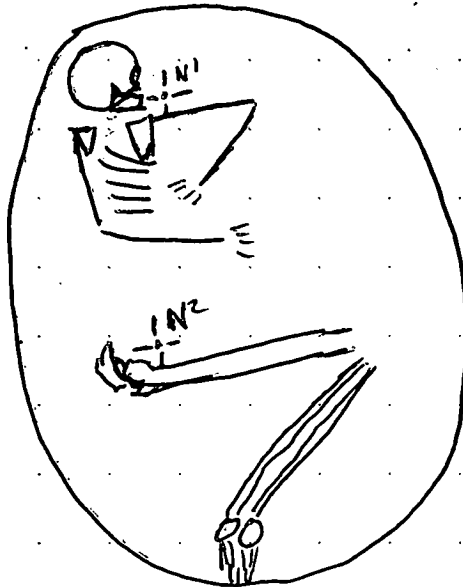

Nails were placed in the grave & surveyed to give the photographs the correct orientation (see below)

Refer to context

Cut of Terminus-Ditch [051042], which basically the last part of a Roman-Ditched-Enclosure has been documented. However, due to the fact that postdepositional processes such as erosion had affected its preservation, we don't have much more archaeological information to add.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

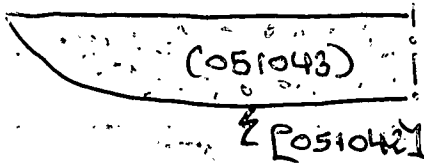

Fill of Ditch-Terminus [051042], where basically we've only been able to document 0.10 m of thickness, as probably some postdepositional processes, such as erosion, erased part of the fill. Regarding the inclusions, any kind of pottery has been found, so we cannot date the abandonment of the ditch in its terminus; however, in some points of such ditch some Roman evidences have been documented, interpreting the construction as a part of a Roman Enclosure.

[051062] IS A CIRCULAR SHAPE PIT WHICH IS RELATIVELY SHALLOW COMPARE TO ITS MORE THAN 2m DIAMETER. IT IS BECOMING APPROXIMATELY HALF AS DEEP AT THE ~~SOUTH~~ NORTH END OF THE SECTION WALL THAN AT

THE SOUTH END. THERE IS NO FIND HAS BEEN RECOVERED FROM HERE. IT HAS ONLY ONE FILL. THE LACK OF MANGANESE IN THE ~~FILL~~ INDICATES THAT IT WAS NOT USED AS A POND OR KEPT WATER IN THERE. NO BURNT CLAY OR OTHER BURNT MATERIAL HAD BEEN PRESENT DURING THE EXCAVATION. IT HAS THE POSSIBILITY OF A TREE BOLE HERE RATHER THAN A PIT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural fill of a treebole. Some pieces of charcoal and patches of soft clayey soil which were the colour of fired clay. This suggests some burning ~~of~~ in situ, maybe for plant removal.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of a pit feature, fill comprises of silt & gravelly combination from surrounding natural. 30% - 70% respectively.

This fill is later cut by what appears to be a stakehole [051093].

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Cut of what appears to be a mid sized pit feature - longest axis of this oval pit is roughly NE-SW. Only one fill visible (051090) which is then truncated by [051093].

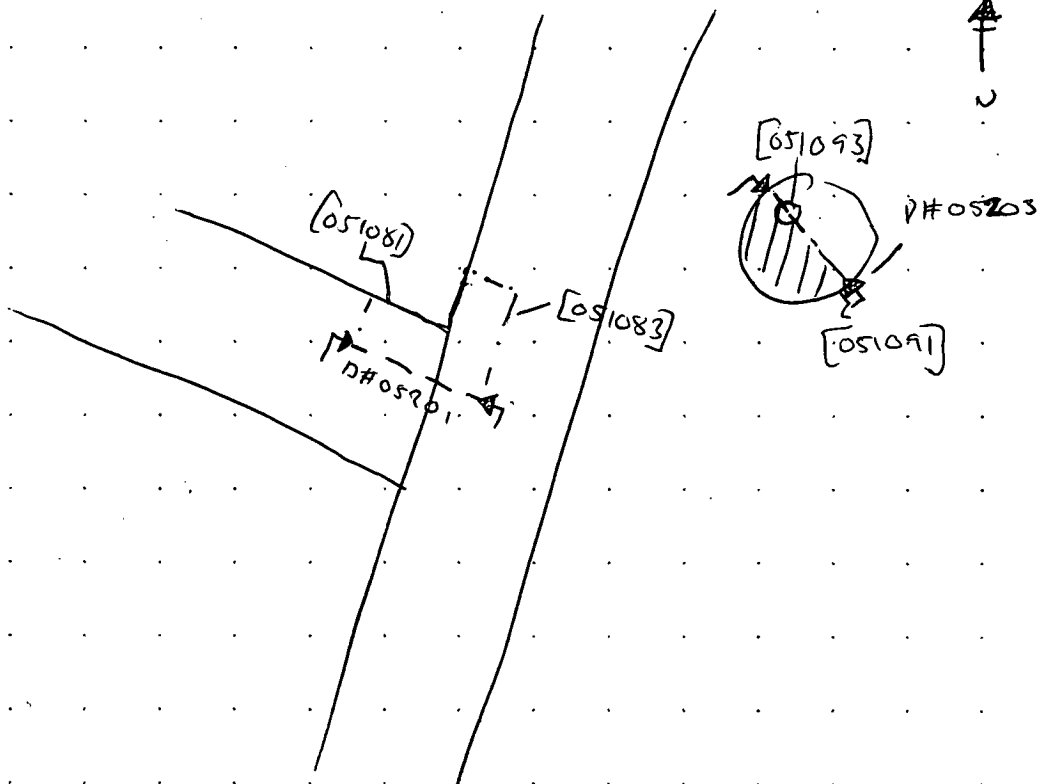

No dating evidence was recovered from this feature.

Refer to context (051090)

This fill appears to be the fill of a stake-hole. Towards the base there were occasional flecks of charcoal present. This may indicate the burning of the stake in situ, however there wasn't much present. It is more likely that this fill accumulated naturally from the surrounding subsoil.

Refer to context (051090)
(051091)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This feature has been interpreted as a stake-hole rather as the shape of the cut suggests a stake was driven in to the fill of an earlier pit [051091].

There doesn't appear to be more of these in the immediate area which suggest this isn't for a structural post. There are however, ditches nearby so this feature could have ^{had} a boundary / marker function within the ladder field enclosure system.

Refer to context: [051090]
[051091]
