*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

EXTENSIONS: LENGHT = 1.08M WIDTH = 0.65M, THICKNESS = 0.14m

INCLUSIONS: - Moderate medium and small pebbles (0.02 → 0.05m SIZE)
- Bone fragments, probably related to inhumation (380005)
- Metal: nail fragments and nails. The presence of nails in the W side, with an oval regular shape ~~probably~~ suggests the presence of a wooden coffin not currently preserved *.

INTERPRETATION: ~~The~~ presence of a big quantity pottery in the ground ~~and fragments~~ and possibly full vases in the burial.

SPECIALLY

* OCCA CHARCOALS IN THE BOTTOM.

*This form is incomplete if fields marked with ◤ are empty. Please turn over for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

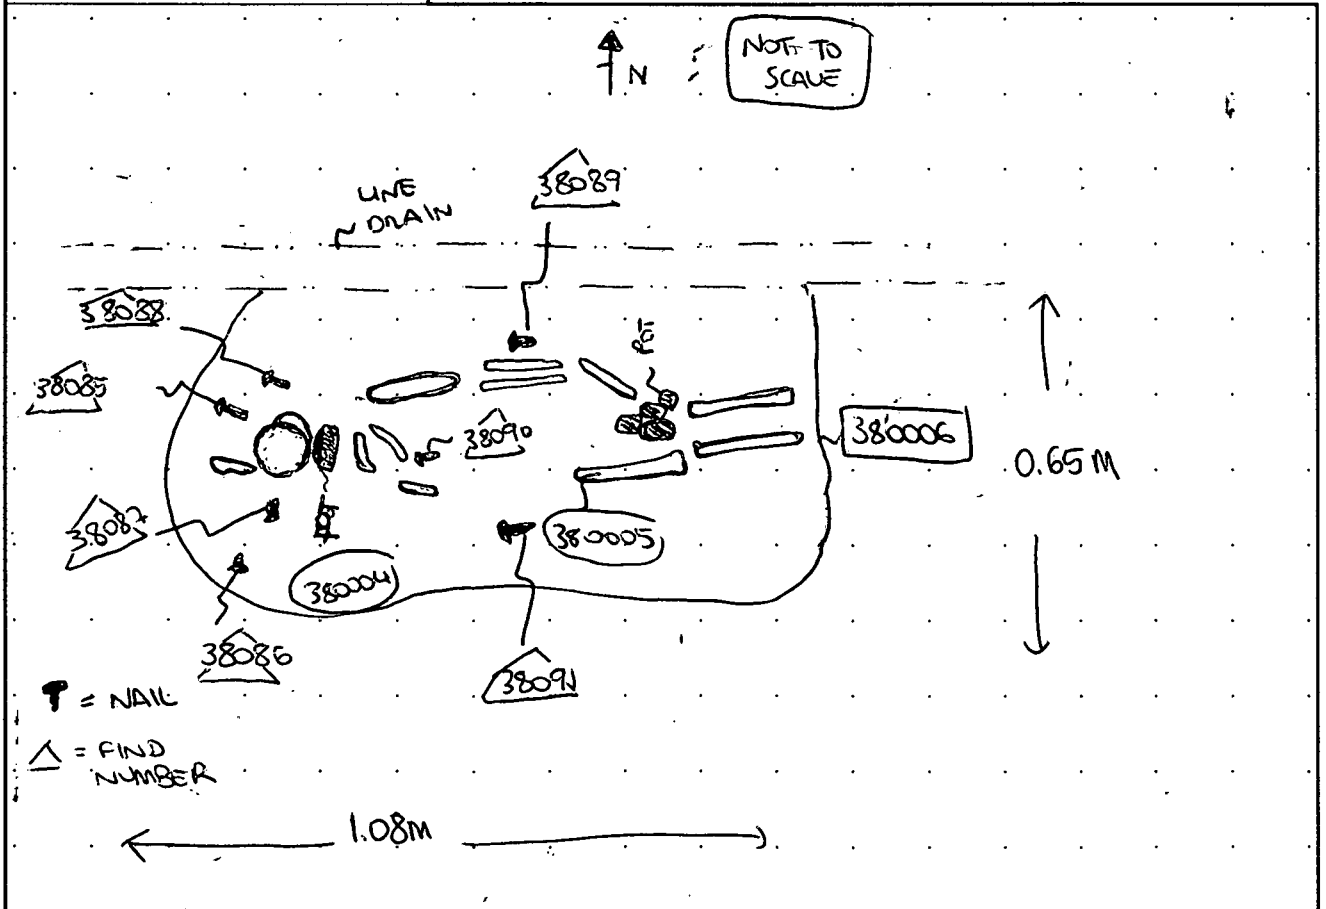

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The skeleton was very damaged probably by the machine excavation. The bones were small so the burial could be an infante or a young person. The skull was fragmented and there were only some teeth in situ but the mandible wasn't there - Only 2 ribs in position, one pubis fragment and part of the left and right legs.
The skeleton was probably truncated in the E side by the machine and in the N side by the modern drain.

Cut for the burial inhumation (380005).
It's truncated by the modern drain on the N side.
It was not possible to determinate the real shape of the feature because on the E side the cut was truncated by the machine.

~~THIS DITCH CUT BY DITCH (380024).~~

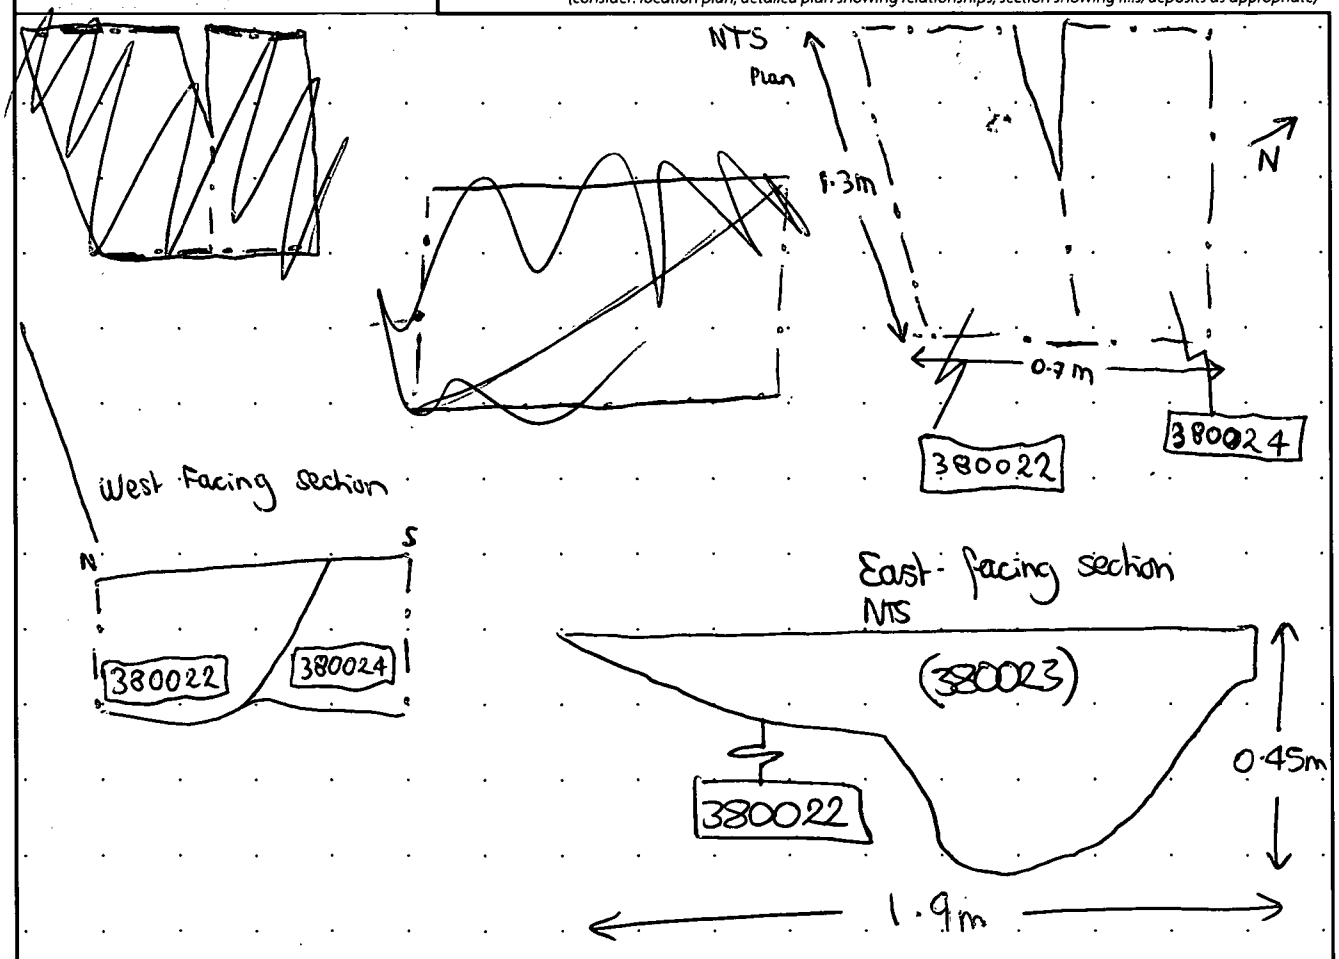

Linear ditch running roughly E-W.

Cuts [380024] & (380025)

The shape of the ditch cut is complex, steep on one side and gentle on the other

Refer to context 380022

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

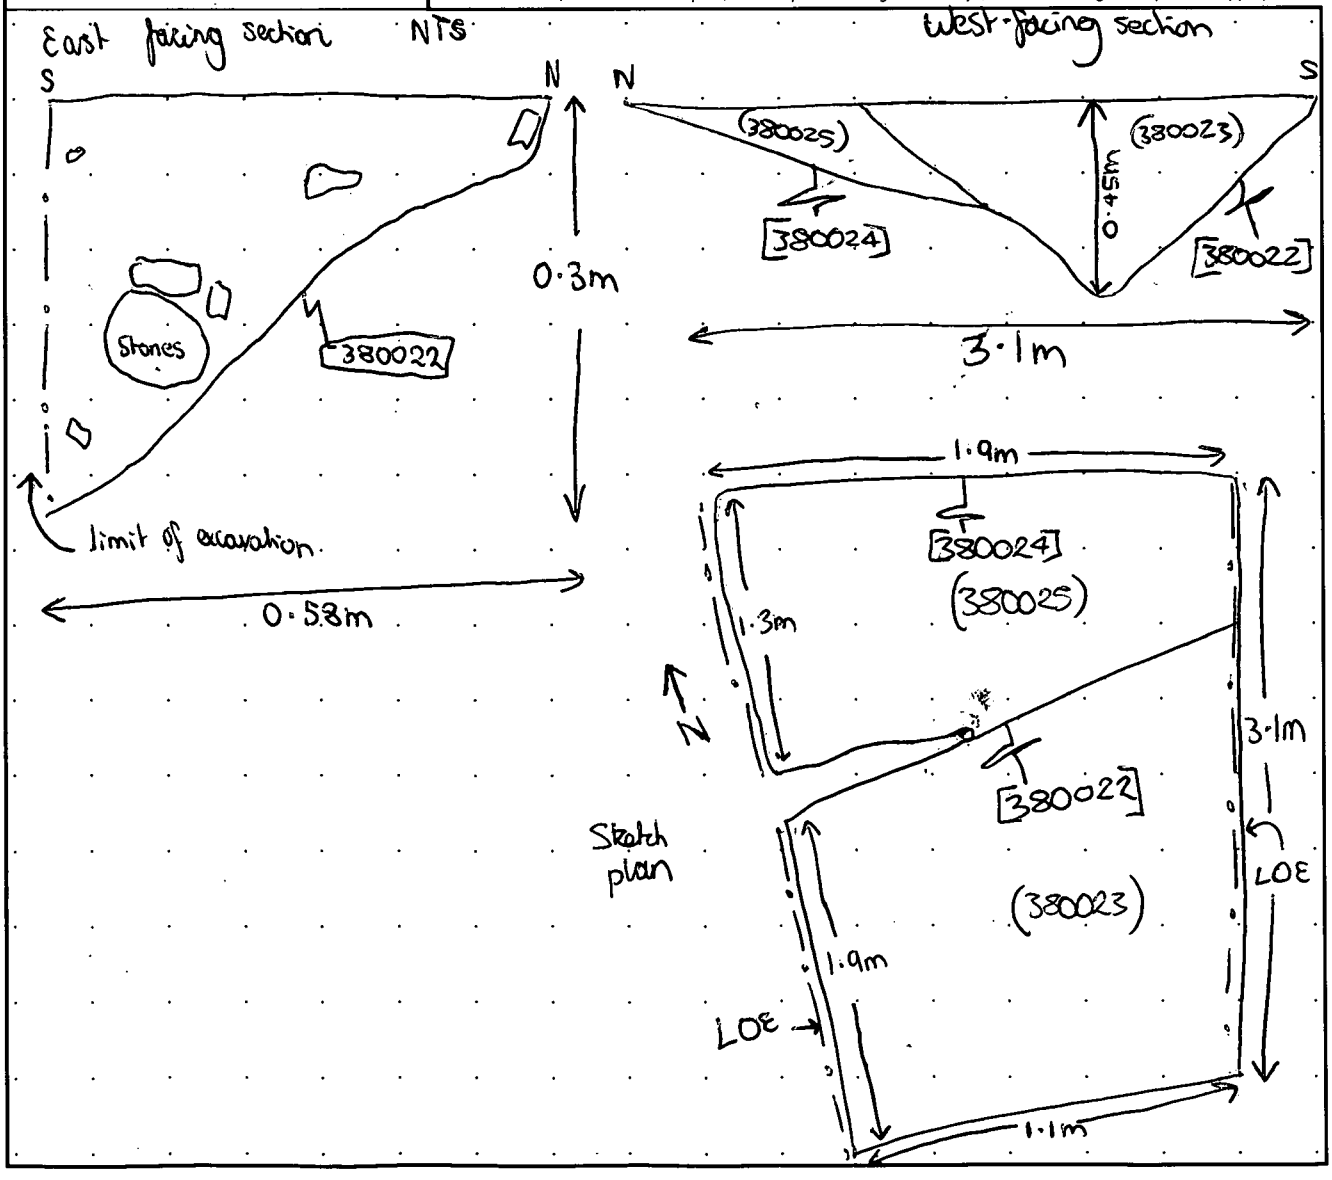

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Sandy gravelly clay fill of ditch [380022].
Large amount of stones of all sizes present - most coarse but some rounded.
No finds suggest possible natural infilling. ← Two pieces of animal bone recovered at southern end of fill

Refer to context 380023

Here we have got a tree pit without any relation with another pit.
We dig 1'14m because we prefer to be sure, but we realised that one half is only the natural filling. It was 30cm deeper with a lot of charcoal inside. that is the due to know it was a tree.

This is the fill of a tree pit. For that reason it was full of charcoal.

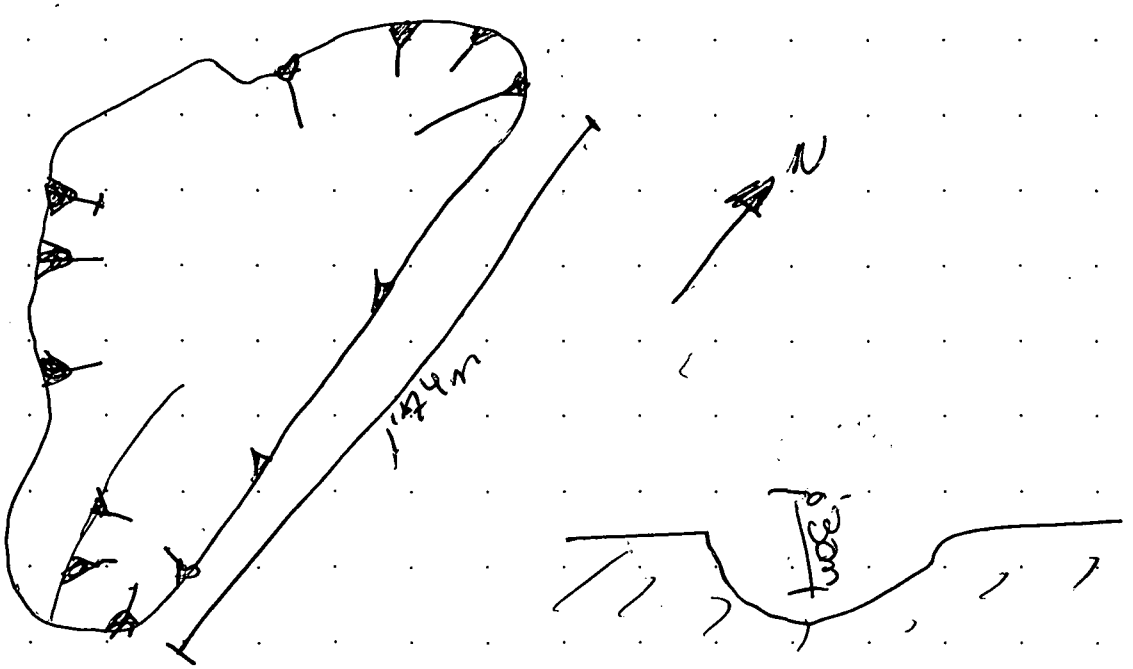

We think it was formed for natural infilling.

We didn't have any found so it is so dificult to say any date.

In this slot we can see two diferents cuts are is this one 380035 with two fills 380036 ~~380038~~ and another cut 380037 with the fill 380038.

we think is is an intersection.

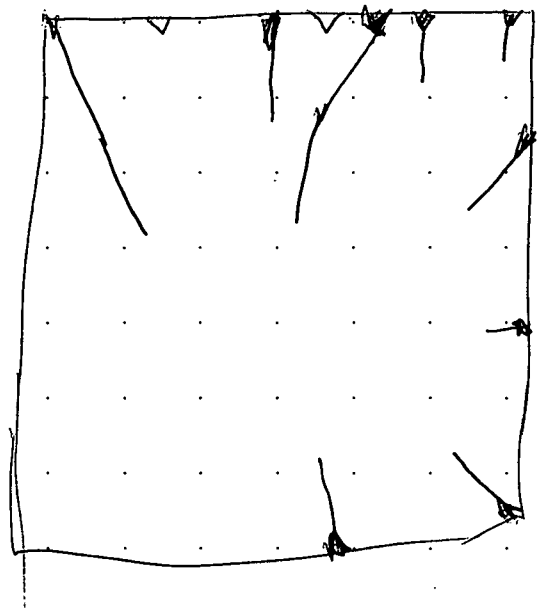

~~was found empty~~

~~3800~~ The cut 380035 is cutting 380037.

It was to deep, almost 1m. with the shape of a square

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

this is the first filling of the 38003[5] cut.

this grey fill had a lot of stones and chalk with a lot of clay on the botton and more gravelly at the NE side. So compact as well.

Also we found some animals bones.

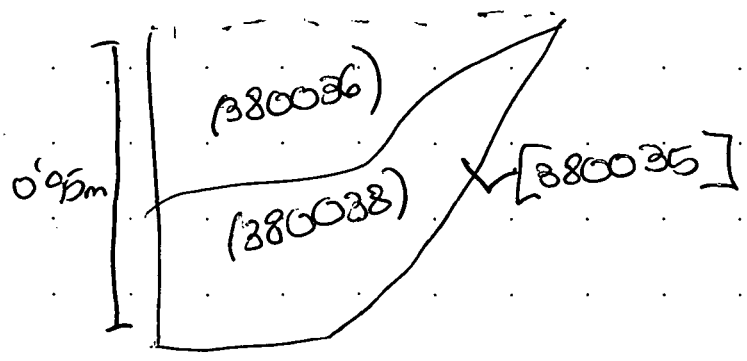

And we think it is a damper layer.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Another dumper layer which fill the cut 380037.

It was less compact than 380036 but with more stones.

The ~~colo~~ color of this one is totaly diferent, it was light brown with ~~sto~~ less stones in it.
And less compact than 380036.

We think it was older than 380036

Refer to context 380037.

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

this is the slot A of a ditch. It was a square cut. The ditch goes along 19m but this slot is 1'80 long.

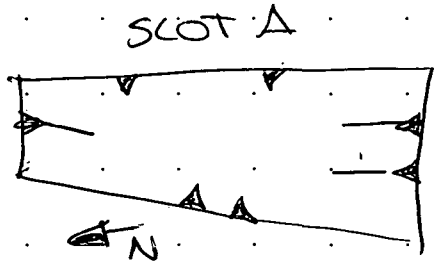

I was not so deep, just 30cm and the natural was so gravely.

It's imposible know or think in a date because I didn't found anything.

Fill of the slot A.

This is the fill of 320076 cut. It was moderately compact and dark brown.

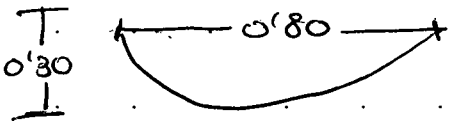

I didn't find anything inside.

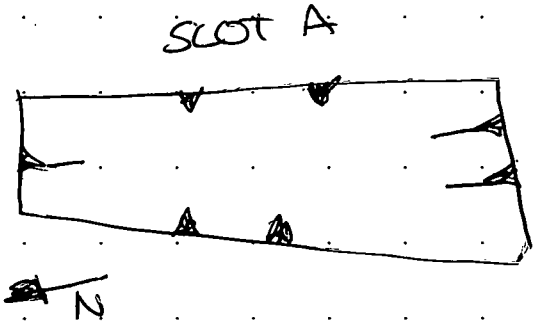

The natural was so gravelly and apair at 30cm.

I think it was fill by natural infilling after disuse.

~~Slot~~ Slot B of a ditch ~~same as 380076~~ and fill 380077

this is the fill of slot B. The cut of this slot is 380071 (other person folder).

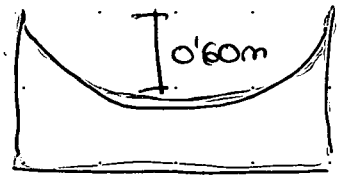

It is the same fill as 380077. Because it is the slot B of the same ditch.

This cut is ~~deeper~~ than 380079 and the natural was at 60cm, but it was gravelly as well.

This is formed by natural ~~after~~ infilling after disuse

Refer to context

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

This is the cut of SLOT C of the same ditch as SLOT A [380076] and SLOT B [380071].

This cut is smaller than the others because the width is smaller in that side, near to the edge.

But is deeper (0'80) and with sloping base.

~~Fill of ditch 380071 Slot C of the same ditch~~

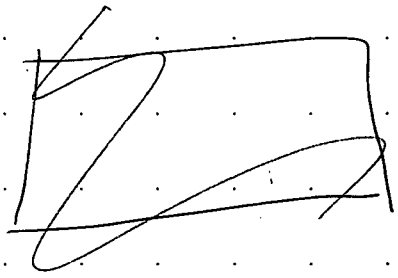

This is the fill of the slot C [380079]. It's the same big ditch as SLOT A [380076] and SLOT B [380071].

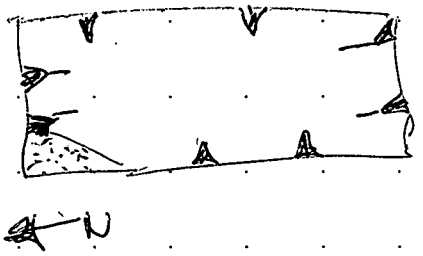

Here the fill is more layey because we are so close to the edge of the big ditch. The color is also different, more brownish than the others

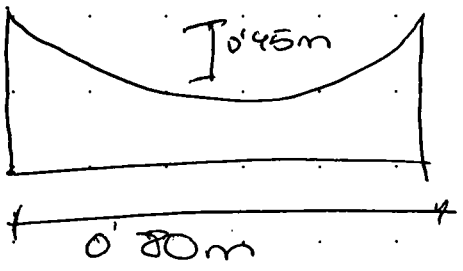

We didn't have any find so we can't say any date. The only relevant thing is, we found natural gravelly on N side which means the edge was close

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of 380082 ditch. Our cut was big because the natural wasn't so clear. But it's not to deep, just 0'29m.

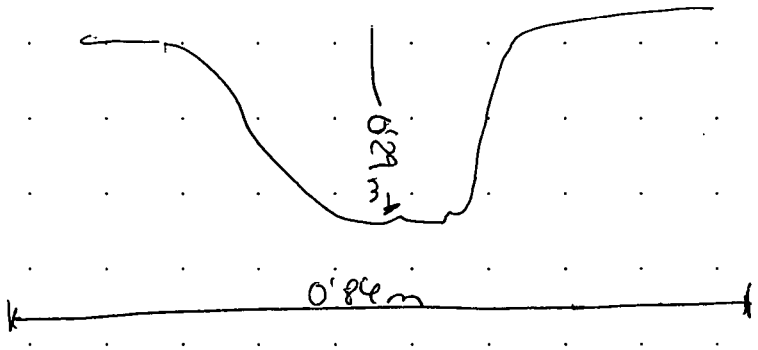

We found lot of stones because we had a mix with the natural wich was so gravelly.

Also it was so loose for the same reason.

We don't find anything relevant so we don't have draws of that.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This is a cut of a ditch.

It was so small and not deeper at all.

The natural was so gravelly so we found lot of stones into it. With a concave base.

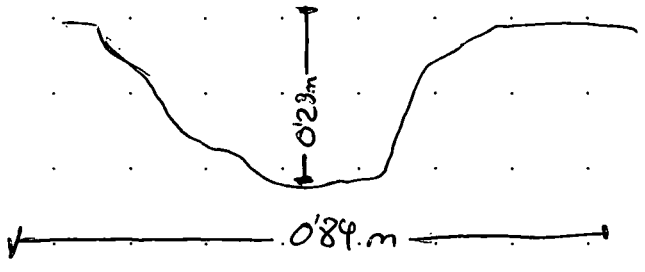

The side is moderated and 23cm deeper.

We didn't do any draw because it was to small and not relevant.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

A stot near to the burial zone.
It wasn't to deep. the west side was close ~~to~~ to the burials.
The ~~we~~ width was 1'20 with 0'60m deep.
It was a ditch wich contiaves as (380771)

We made a draw of the section even it was higher than the ditch we dig.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

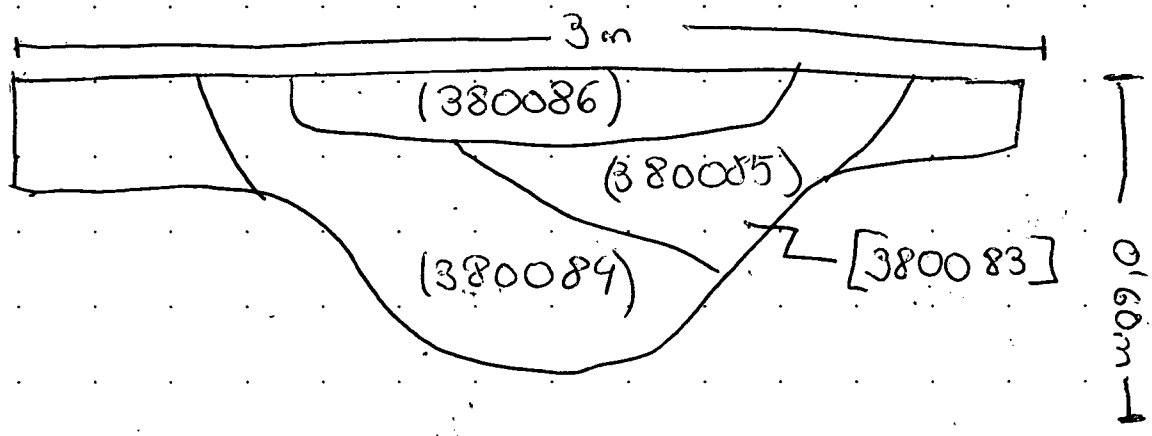

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

We found a first fill (380086) so clayey, probably because it was a path before we started dig it.
The second one (380085) was brown and more soft and we found a piece of bone.
The rest of the fill was brownish and mixed at the end with the gravelly natural.

The rest of the section was natural and it was so close, (2'5 m) far from a burial.

Same description of 380084.

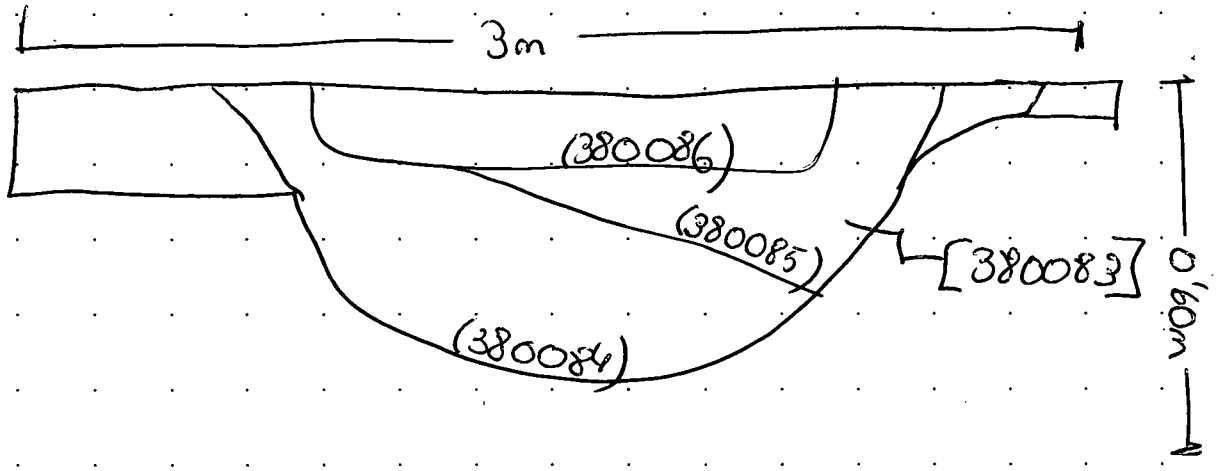

this fill is the top one of the 380083 ditch.

It was clayey probably because it was a path before we started digit.

We didn't find anythin relevant and it ~~was~~ just be 0'08 m deeper.

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This cut was an intersection of two diferents ditches. the one witch is on the south side was witing the othor one.

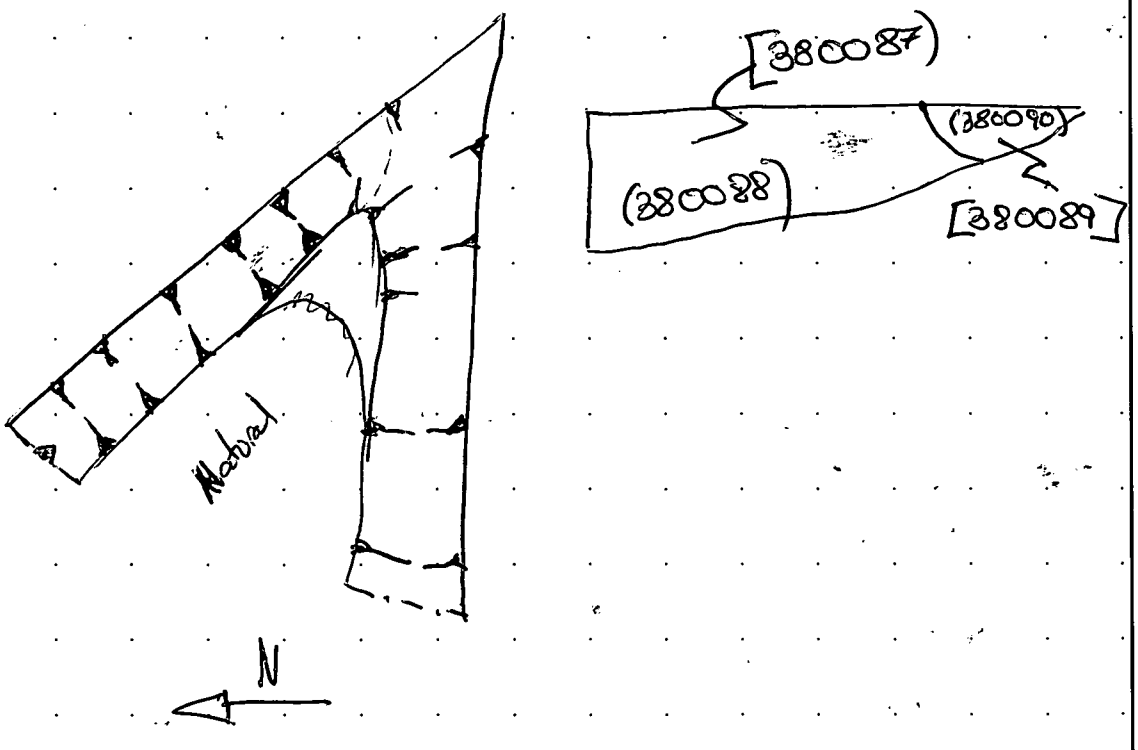

the natural ~~earth~~ was so gravelly so both ditches was soft and gravelly.

We have to extend the cut on the North side to have a good idea of the relationship.

Some description of 380087

this is the fill of 380087 cut, wich is cutting by 380089 cut.

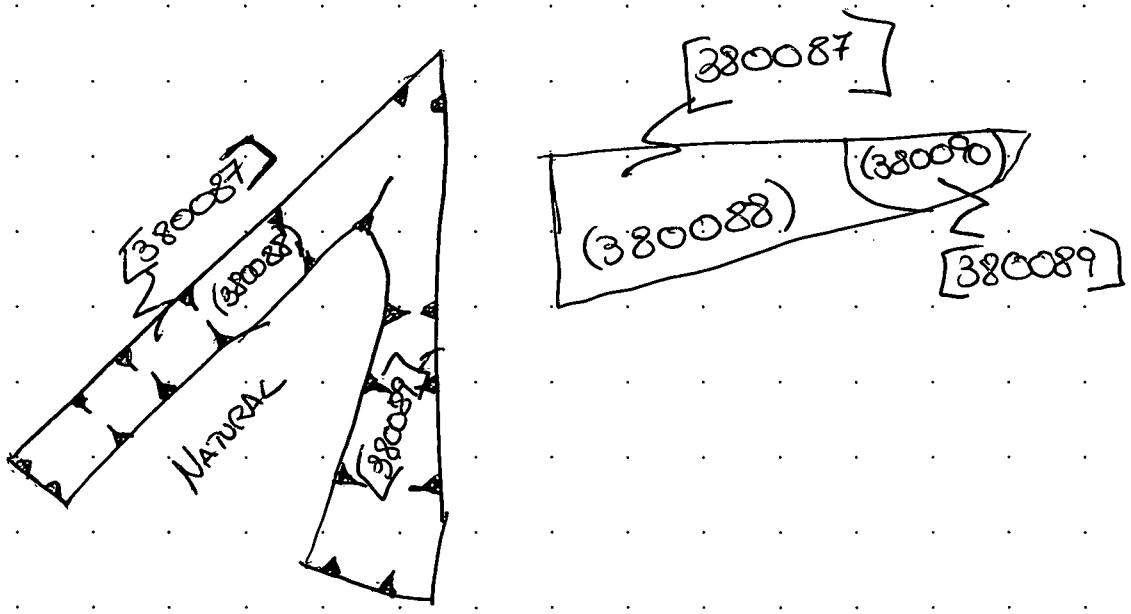

We think that was the same cut for 380088

It was so gravelly ~~this~~ with sand inside. for that reason it was so loose when we digit

Same description as 380089.

this is the fill of 380089 cut. It was sandy and silty. And we found lot of stones into it. For that reason it was so loose when you dig it.

We didn't find anything relevant so it is so dificult to say any date.

*(any further details that may be important for understanding the context, including items marked * overleaf)*

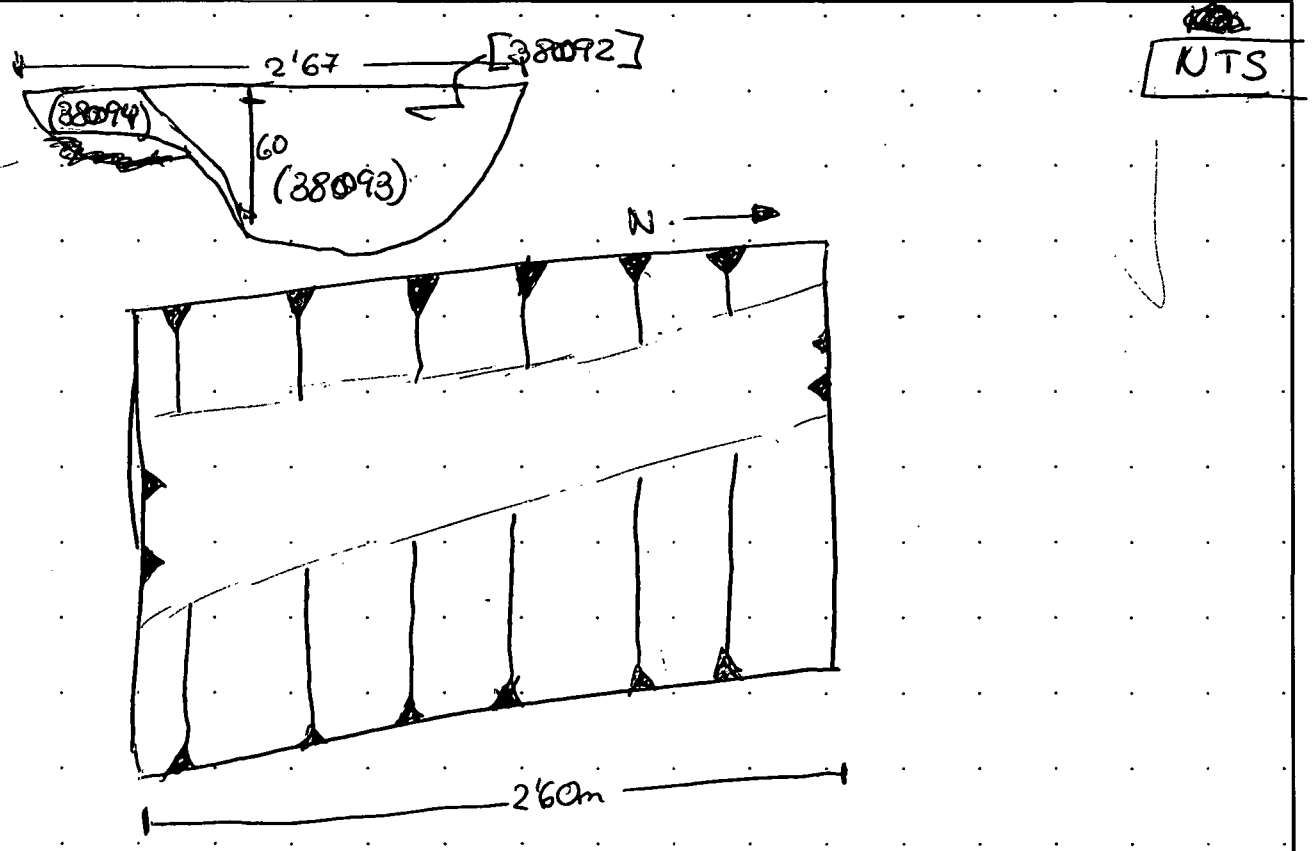

At the first time we take out a top soil so compact and brown, then we found a brownish layer on the south side just on top of the gravelly natural.
We can see perfectly the fill of the ditch because it was so dark and compact.

This slot is one of the 4 that we have of the same ditch, 38/180, 38/178. And even an other one on the east side but it was to cold and full of water so it is impossible know which one is it

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of the cut 380092. It was dark brown and grey at the end because of the clay.

It wasn't to deep, just 0'6 m but the end was under the water table.

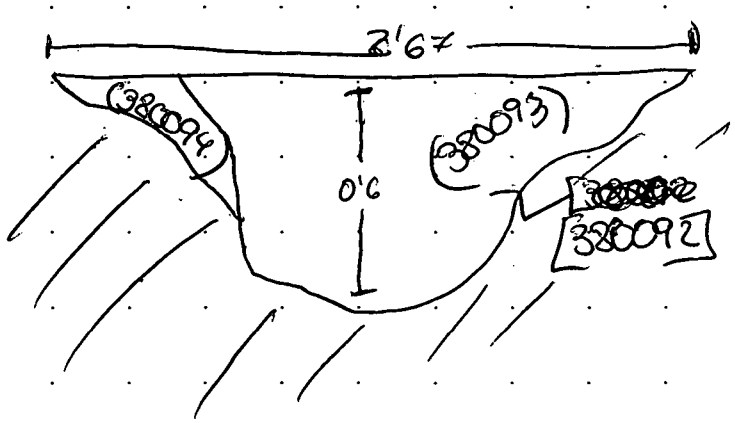

We found lot of pottery, we want to highligh the base of a big piece of comun pottery. We found also lot of big stones bigger than 15-20 cm maybe they have an intencion.

Also we found many fragments of animals bones. At least one almost complete rabbit and a can jaw.

It's quit diffict to say a date because the pottery is just fragments

this is the other fill of the cut 380092. It was more light than 380093 and loose.

We didn't find anything, any pottery or bone.

It was just under the "top soil". We found this small layer more compact than the other one and we decided to use another ~~number~~ context number but probably was formed because it was part of a path before we dug it.

We can see that cut on N facing section but it isn't on East facing section because is cutting by 380096.

The end is under the water table but we know the edge is brownish gravelly.

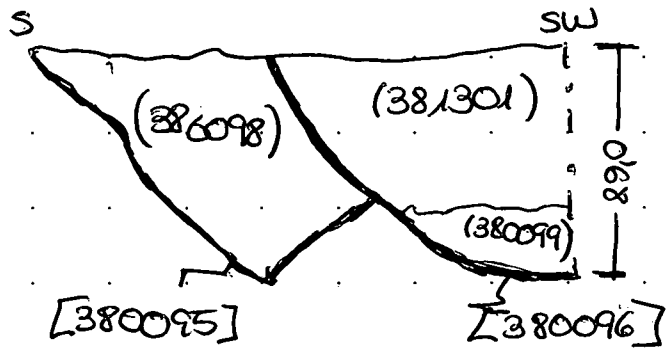

We can see the east edge which is gravelly natural,

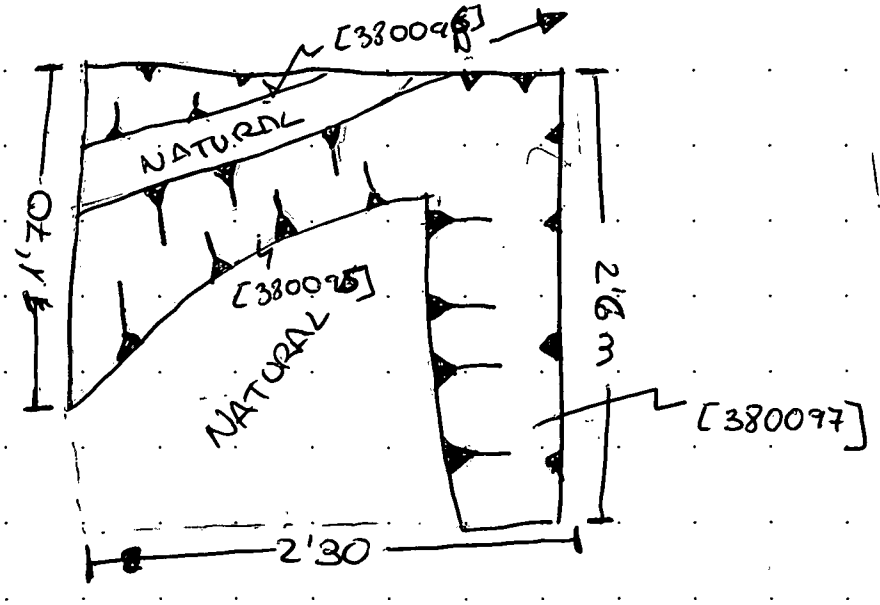

Also we can see this ditch in other slot, so we know it's the same as 38f182.

We just can see it on the South corner of this slot, but we notice that is cutting 380097.

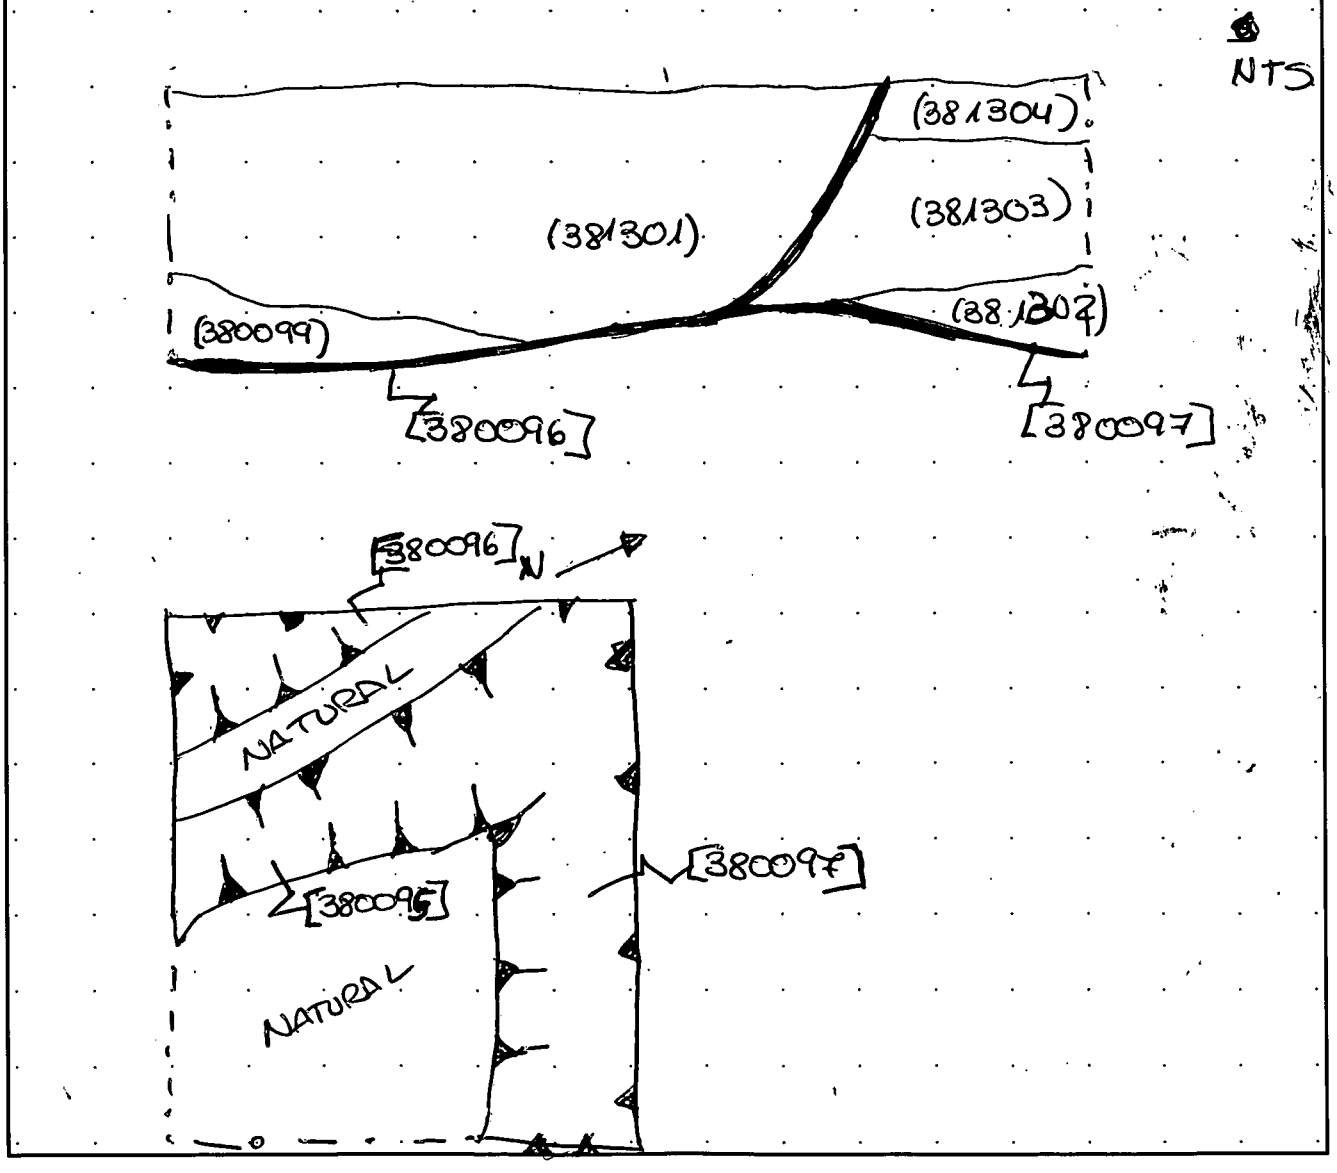

It isn't to deep, jost 0'70m.

~~this section~~ We have to extend this section 0'30 m to be sure if 380096 is cutting 380097 or is cutting by this one. With this extended we see that is cutting 380097.

For us this ~~dit~~ ditch is de latter one of this slot.

This ditch we can see it in other slot, 381352.

It is cutting 380095 and is cutted by 380096.

the edge is under the water table but we know it was cleyed and 0'80m depth.

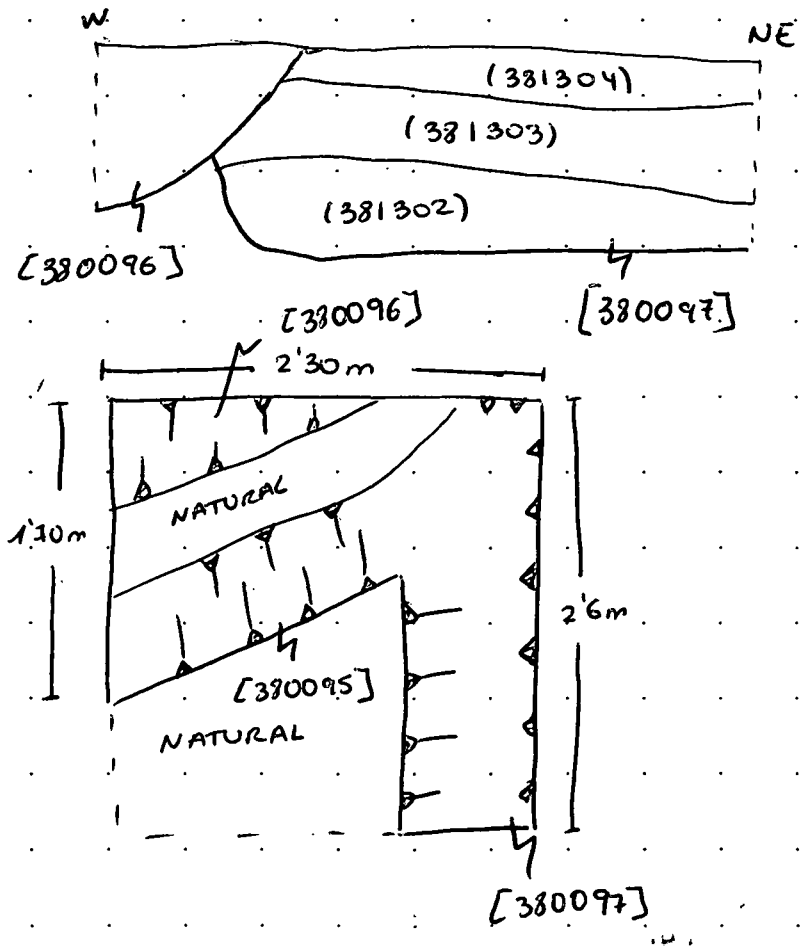

In this ditch we can see three diferents fills

We can't know how width is it because we just dig a half to know how is the conections with 380096.

This gill is moderate compact, dark and very gravelly in all with moderate stones with very differents size also, we thinK that this is the oldest gill, but we don't found any archaeological objects, so we can't say any date for this gill or cut.
also, we found a charcoal but very ocassional in the south.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

It's a small layer (0'30 m deep) with a lot of clay into it. But the natural was so gravelly so it is gravelly on the botton.

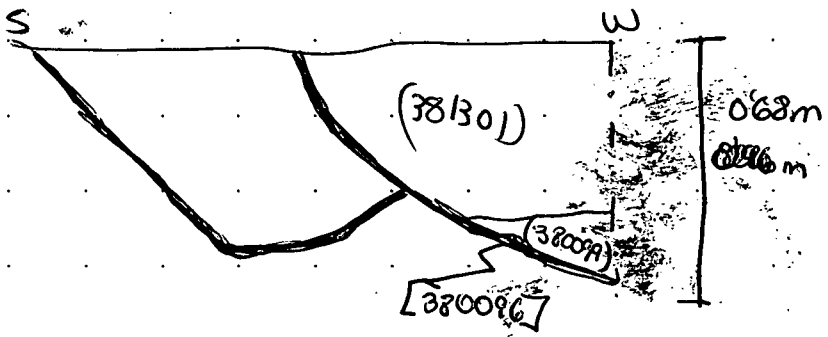

It have ocasional ~~sto~~ litlos stones and ~~many~~ many chalck.

We didn't find anyting important so it is quit difficult to know an age.

(Cut) ~~fill eg: ditch: likely natural~~
Linear feature, likely a ditch. Filled by (380107) Very shallow feature
orientated NE-SW. Sides have a moderate slope down to a concave
base.

Refer to context

ONE OF DIFFERENT FILLS OF A PIT. IT'S COMPOSED BY A BROWNISH-GRAY SAND, QUITE CLEAN FROM STONES (SOME MEDIUM SIZE FLINSTONES (5-10 cm). WHICH HELPS TO DIFFERENCIATE FROM THE PREVIOUS AND POSTERIOR FILLS. POTTERY FOUND IN IT

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

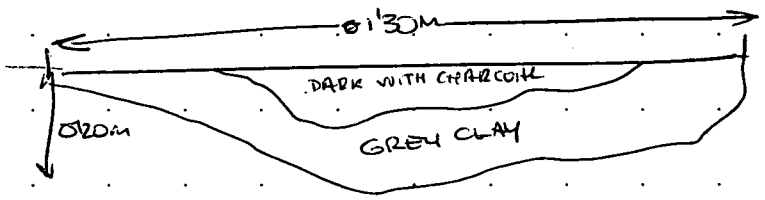

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Natural infilling of [382130] [380158] dark and grey brown material. Stones and chalk throughout. Occasional finds of fragmented animal bone, likely discarded after eating.

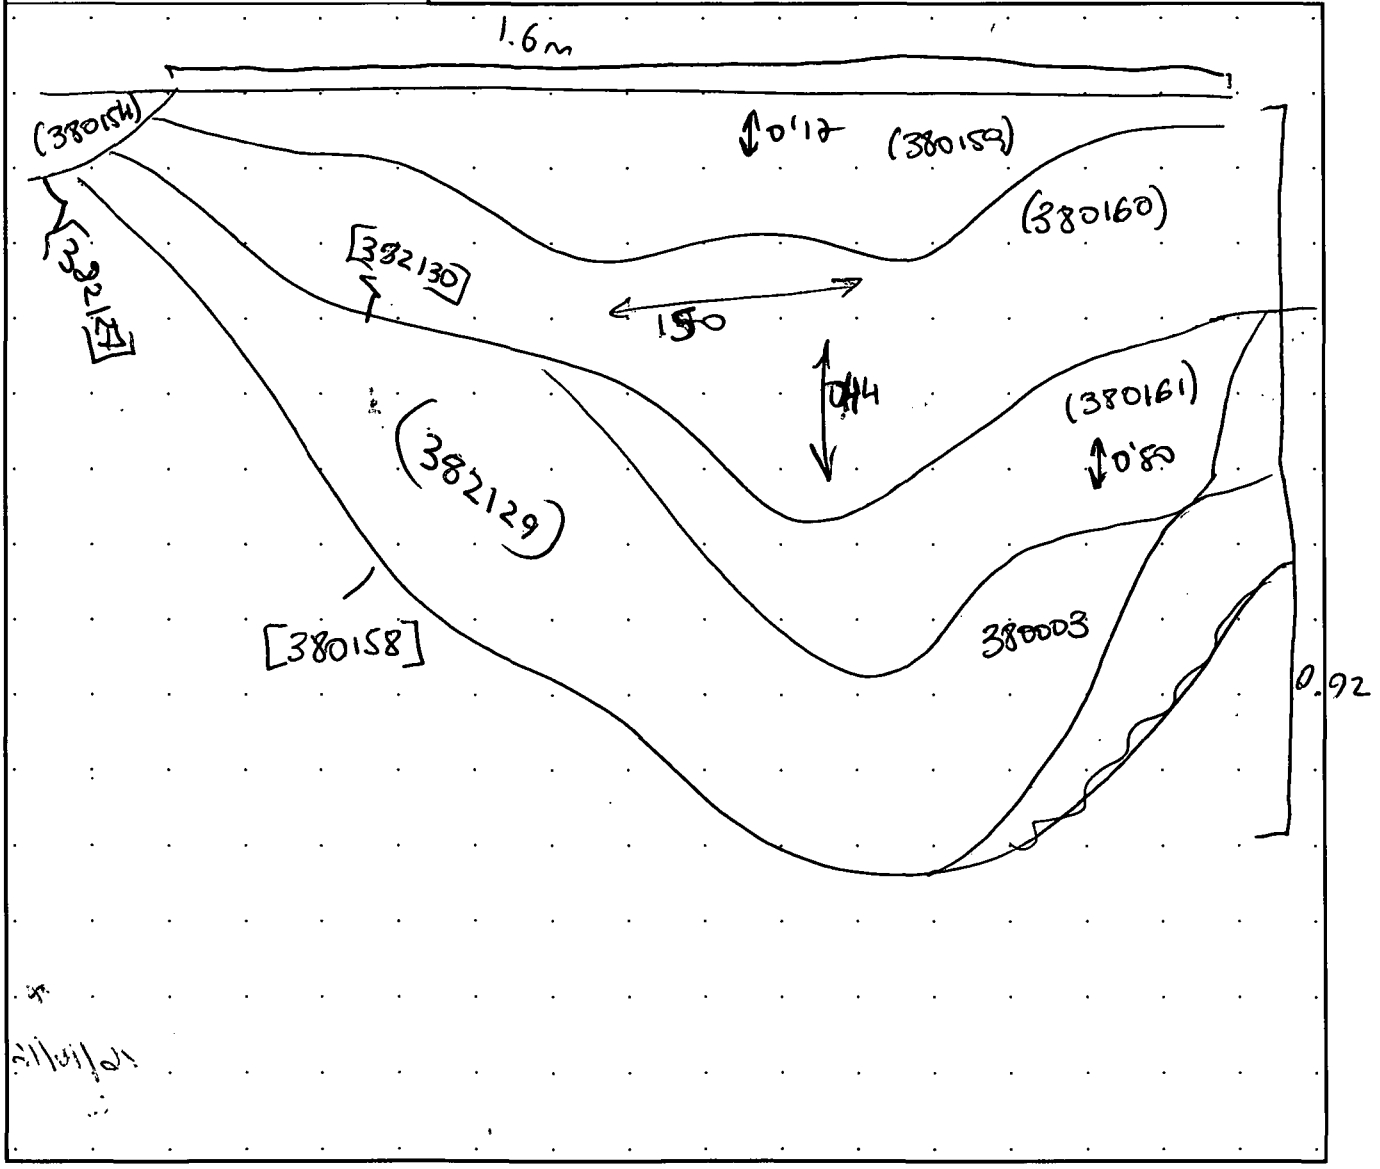

Stones are small and angular.

The presence of the chalks is moderate, more than in (380159) and in (380161).

Refer to context: 380158

ADDITIONAL INFORMATION

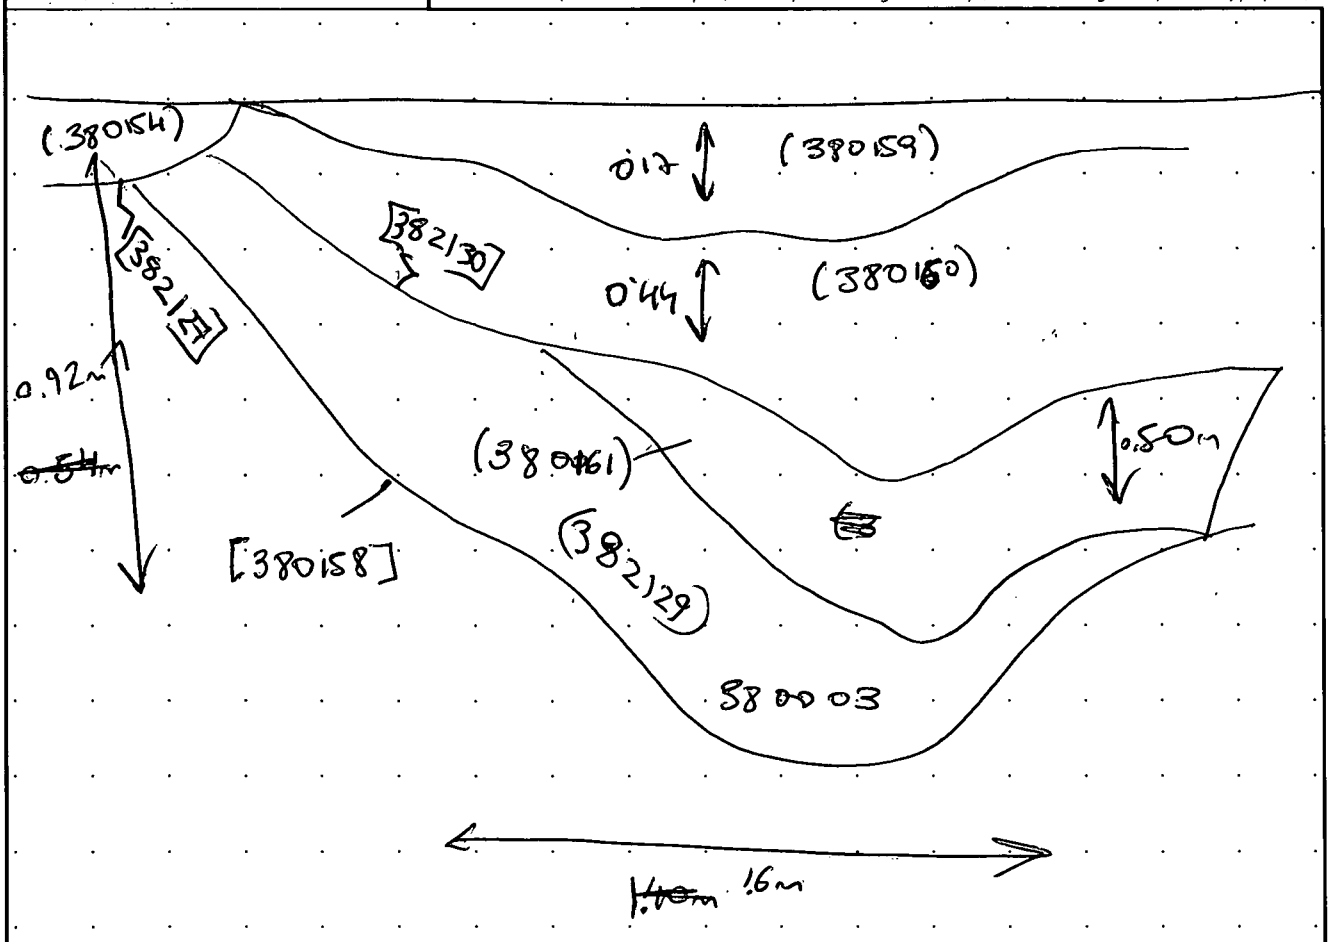

*(any further details that may be important for understanding the context, including items marked * overleaf)*

It is not fully excavated because is belows to water. We found a pipe in the middle of the ditch.

If we speak about the ~~east~~ fill, it was so soft with many stones in it and a little bit clayey on the ~~east~~ south side.

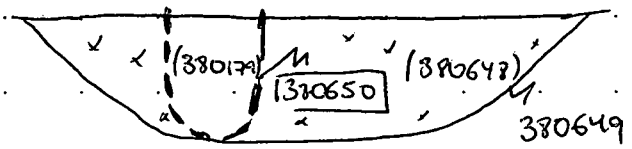

Any small find ~~were~~ or even pottery or bone.

We started digging this slot with a clear idea of how deep it is but as we can't see where was the edge we decided to extend the slot. So at the end, as you can see on the picture and on the photos, we dig some part of the natural. The depth is 0'36m with a lineal form, which edge we can see before dig and ~~saw~~ it was clay. the blue clay in it. It could be an iron age ditch

It was a fill with a lot of clay on the ~~east~~ west side and most gravely on the east side.

We just found some pieces of pottery and a few bones fragments. ~~We also found burnt~~
~~material and some pottery~~
We didn't found some especial, so we couldn't see a cultural ~~phase~~ age, maybe iron age.
also, it had a lot of charcol near to the ~~age~~ edge

DITCH

END OF THE ~~CUT~~ [380180]. We try to found the end of this ditch, and we can see thin end in the superficie. This is a linear ditch width end is very circular how you can see in the plant. Next is the cut [380180]

~~We found pottery and bones and we~~

~~cut through a rectangular~~

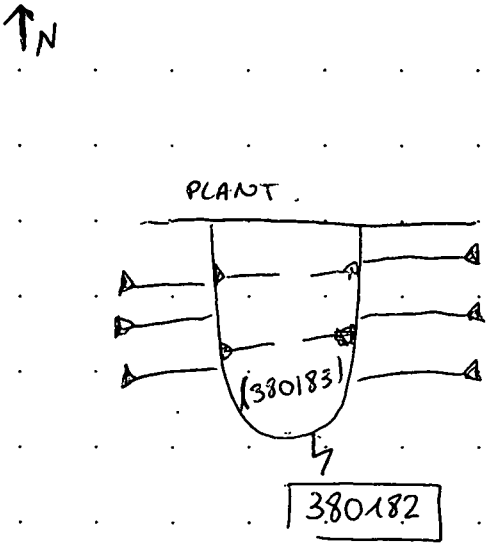

It could be a roman age ditch, but it isn't clear

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a ditch with an unknow use (boundary marker?). Originally only one fill was distinguished for this cut, but the section has been revised and it shows two fills (381459) and (380765).
This slot was separated by a baulk from another slot and the interpretation given at the beginning ~~for the sections between~~ for the sections of both sides of the baulk had no sense, so the baulk has been excavated and the sections cleaned and reinterpretated. Some of the numbers have been maintained, but others have been changed so I'm going to update all the context sheet, maintaining the usfull information and changing the information that needs to be changed.
In this case this ditch was originally considerated Roman because of the pottery they found on (380765) and the roman coin found within another slot of ditch [38077].

Refer to context (381459)(380765)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is a fill of [380186] cut. Originally this cut was named as [380184] but there was a mistake, because this number was given twice, so we maintained one of them and renumbered this.
Is a dark brown and moderate compact fill. A roman coin was found on it. Also a lot of roman pottery, in special many fragments of samian pottery. At least four fragments are from the same piece.
A lot of bone fragments were found and also a little horn of a goat.
This fill is cut by [380192] ~~cut~~.
Originally only a fill was distinguished for this cut a reinterpretation has been made and what originally were 2 cuts with a fill each now seems like are cut with 3 fills (see the sketch)

Refer to context (380187) (380184)

SKETCHES

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of the deeper ditch of this slot. The bottom of the cut hasn't been reached because of the safety rules. It has moderate sloping sides. We see this cut in both sections. Is the primary boundary ditch that heads to south from this points with return re-orientanting cut / ditch to E-W alignment.
This ditch had been considerated iron aged because it has a roman coin two layers above.
The sketch is from the original excavation but during this re-excavation we haven't been able to see it because the slot was full with soil for security.

Refer to context (380175) [380184] (380187)

This is the fill we find in the bottom of the cut [380186]
It's a blueish clay fill with a lot of chalk and little stones
A lot of bones fragments were found. They may be cow or horse beacause of the size
As we have already sayed this fill wasn't fully excavated beaccuse of the depth.
This fill was considerated iron aged, formed with natural infilling. A lot of pottery was also found and most of the pieces seemed to be from the same pot.
was deliberately backfilled after dig it.
We can find this fill in both sections

Refer to context [380184] [380186]

This is the earliest cut of the ~~dit~~ slot. Is a highly truncated "sely" ditch which can be observed accompanying the ~~ditch~~ the [380186] ditch as it returns into E-W alignment approx 30m south of this slot.
Originally was considerated a cut with only one fill but now we can see two fills on it. The revision also shows that is cut by [380190] and [380186]. This cut has been identified as the ankle breaker

Refer to context 380187 380185

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This is the cut of a ditch. We can see it completely beacause it hasn't been cut by any feature. It has steep sloping sides and quite flat base. We can see it in both sections but we can see that return to roughly E-W orientation.

Refer to context (38018) [38088]

SKETCHES

This is the fill of [380190] This fill is loose brownish with ~~the~~ yellow-orange sand and gravel.
A lot of bones were found, but only medium fragments so it was difficult to know wich animal they belong to.

Refer to context (380185) [380188]

This is the cut of a ditch that comes ~~from~~ along a lot of slots. Arrives to this slot with S-N direction but we know that aparently turns 90 to the east somewhere (actually the possible turning zone is being cleaved).
We only see this ditch in this section so we can think there was the terminus in the middle.
It seems the same ditch we can see with [380299] (380300) numbers.
It's a dark fill with a lot of small stones.

Refer to context [380187] (380187)

It was very clear to see beacause it was very darle but without material. It seems a roman ditch beacause is cutting the layer with the roman coin.
There are ~~are~~ some small stones and a lot of chalk.
When was firstly exavated they sayed" just on it we found another layer more compact, we are not sure if it was another layer or the same one but compact beacause before we dig it it was a path"
They also found some bone fragments.

Originally this was considerated as a cut with a fill (N. facing sect) and just as a fill in the S. facing section. But I think that this could be a deposit formed later than the ditches filling (terciary deposit). We can see this cut and it fills in both section.

Refer to context [380187]

This is a moderate compact dark fill. As I have rayed its seems more like a later deposit. Also originally was noticed that "This dark layer was arround the slot so we cant know how big it was!
We can see this fill very clear in both sections because of its dark colour. But during the revision we have seen two fills for the cut [380194] in the south facing section because the difference in the inclusions frequency. In this case the fill (380195) has more chalk and little stones than (380198).

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This ditch ~~with~~ which runs our slot N-S, just takes the N-E corner. We could see it on the N and E section. It is ~~cutes~~ cut by [308184] and cuts 380187. This ditch comes from another slot, close to us. For this reason the interpretation is quite difficult. Regarding to the age we didn't find any object so the it could be from roman or iron age period.

Distinct ankle breaker, truncated of above, also appears in DW# 38143 of [381096].

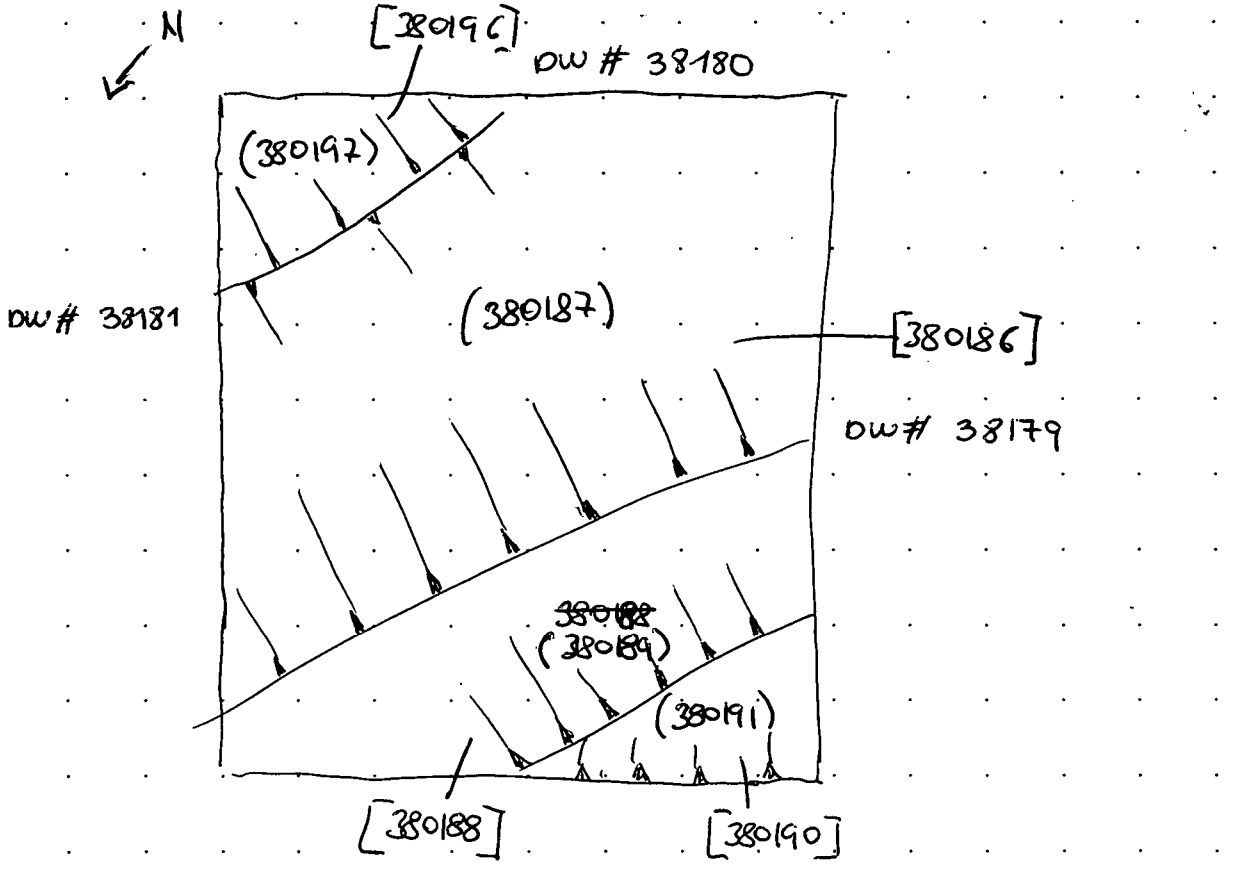

Updated: This cut has been renamed with [38077]

This is the fill of the cut 380196.

This fill was so compact with lot of clay into it. We have to say that at the same time was cutting the natral and in that side it was so gravelly, for that reason it was gray and yellowish.

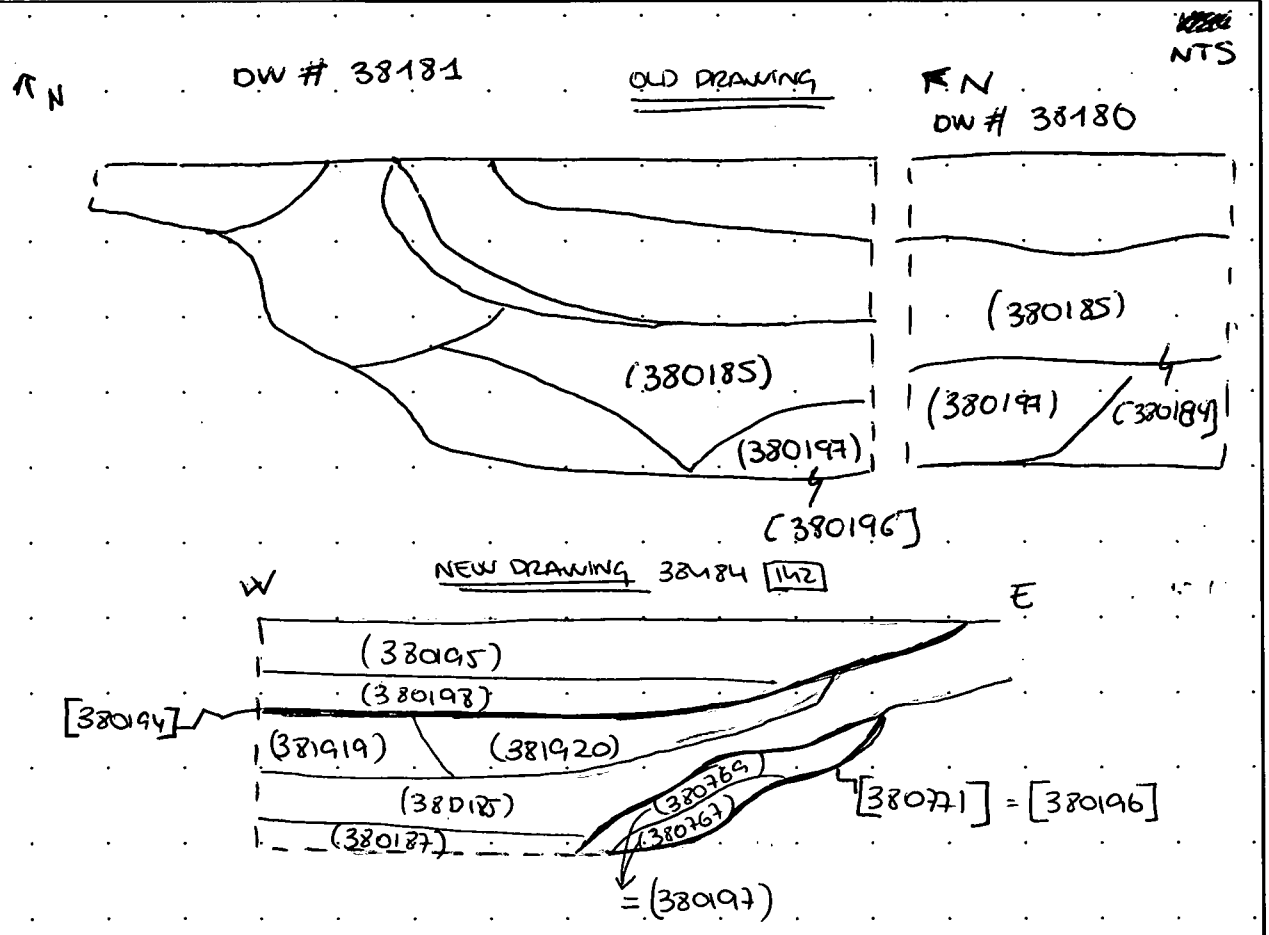

We just find some fragments of bones but littles one. But it had lot of chalk and little stones.

This is a confused ditch which is cuting the big layer 380185. And is coming throw other slot but difficult to ~~interpretate~~ interpolated.

Updated: This fill number has been renamed ~~and~~ in two different fills (380769) (380767).

~~As we have sayed, in the first excavation this dark fill was considered as a ditch with one fill and one cut.~~ But now we think that could be a and also have distinguished two fills for the cut [380194] on the S. facing section. In this case we are speaking about the lower one, wich has les chalk and little stones than the one above. When was excavated, & a lot of "rude" or rusticated pottery wes found, that's why they sayed that could be medieval, also beacause it is later than the roman coin layer. They highlight into this pottery one of the fragments wich is brushed and black.

Refer to context: [380187]

This is a fill formed with a lot of stones, probably it was formed by deliberate backfilling probably, because this stones were the bottom of the ditch for create a floor.

Natural fill of a clay pit [380216]. This deposit is the mostly recent fill of this clay pit. Visible in the northern section (DWG # 38002). It contain few stones and only one animal bone is visible in the section.
In the western limit of the fill, it cut by context cut [380208], a later ditch.
The stones inside the fill are rounded and the size is small and medium.

Refer to context: 380222

3° Natural fill of a clay pit. [380216]. Visible in the northern section (Dwg #38002), it's a characterised by a compact clay, without archaeological remains and without stones or pebbles.
The clay is very similar to the natural clay in the bottom.
It's possible to suppose that this fill is a result of the previously extraction of clay from the pit.

Refer to context 380212

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill was greyish-brown with a silty-clay composition. It contained occasional inclusions of charcoal and bone, with one sample of bone appearing to be burned (although this could have been burned wood instead). Also contained a moderate no. of sub-angular stones throughout the fill. Conclusion = natural infilling. Originally thought this feature was a ditch, but we eventually concluded it was just an ice-crack although there had clearly been some human activity involved (as evidenced by the burned bone/wood).

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Possible pit or tree-bowl located south of the power lines. Originally thought to be a clay-lined spring but the clay did not continue along the base of the feature.

Fill is a greyish-brown - clay/silt composition with frequent inclusions of chalk and sub-angular stones. No other finds were identified. Conclusion is that the fill is natural infilling of a pit or tree-bowl.

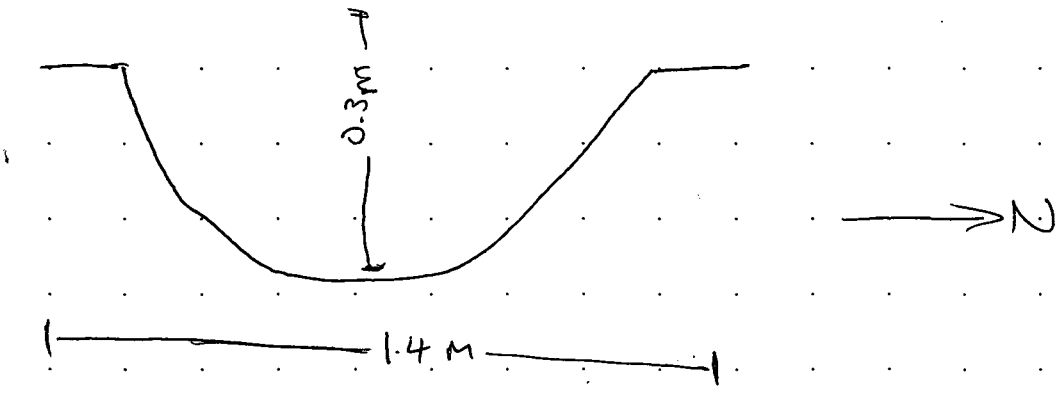

Feature was only half excavated (50% of a circular feature) as we were able to identify the feature as a pit/tree-bowl without needing to excavate further!

Cut of poss gully - highly irregular edges pronounced extinct rooting with the usual sorting of gravels associated with such bioturbation much in evidence - Some might say a classic example of rooting. However I digress. As gullys go this isnt very convincing. I suspect it is a fortuitous migration of biomass from Ditch [380963] linking into Post hole [380260] a terminus of Ditch [380262] giving the illusion of a curvilinear.

Refer to context 380260 for sketch sections

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Ditch cut in approximate N/S orientation. Ditch is a rectangular cut into grey/blue of clay on the lower aspect (approx 30cm) with very steep, almost vertical, sides. Above this is a natural orange gravel with less severe slope. The surface at the top of the edges is rounded on the West aspect & flat on the East. The Ditch has two fills (380299) & (380300), with the lower fill interpreted as natural infilling in the form of a gravelly collapse from the Eastern aspect. At the base of context (380300) a partially articulated cow skeleton (hind legs, pelvic fragments, vertebral fragments) & And a fragment of roman pottery (ear/handle). This cut is interpreted as being a roman ditch which has been re-cut into an infilled iron-age ditch. Our slot cuts the ditch as it separates from the iron-aged ditch as it turns a corner.

ADDITIONAL INFORMATION

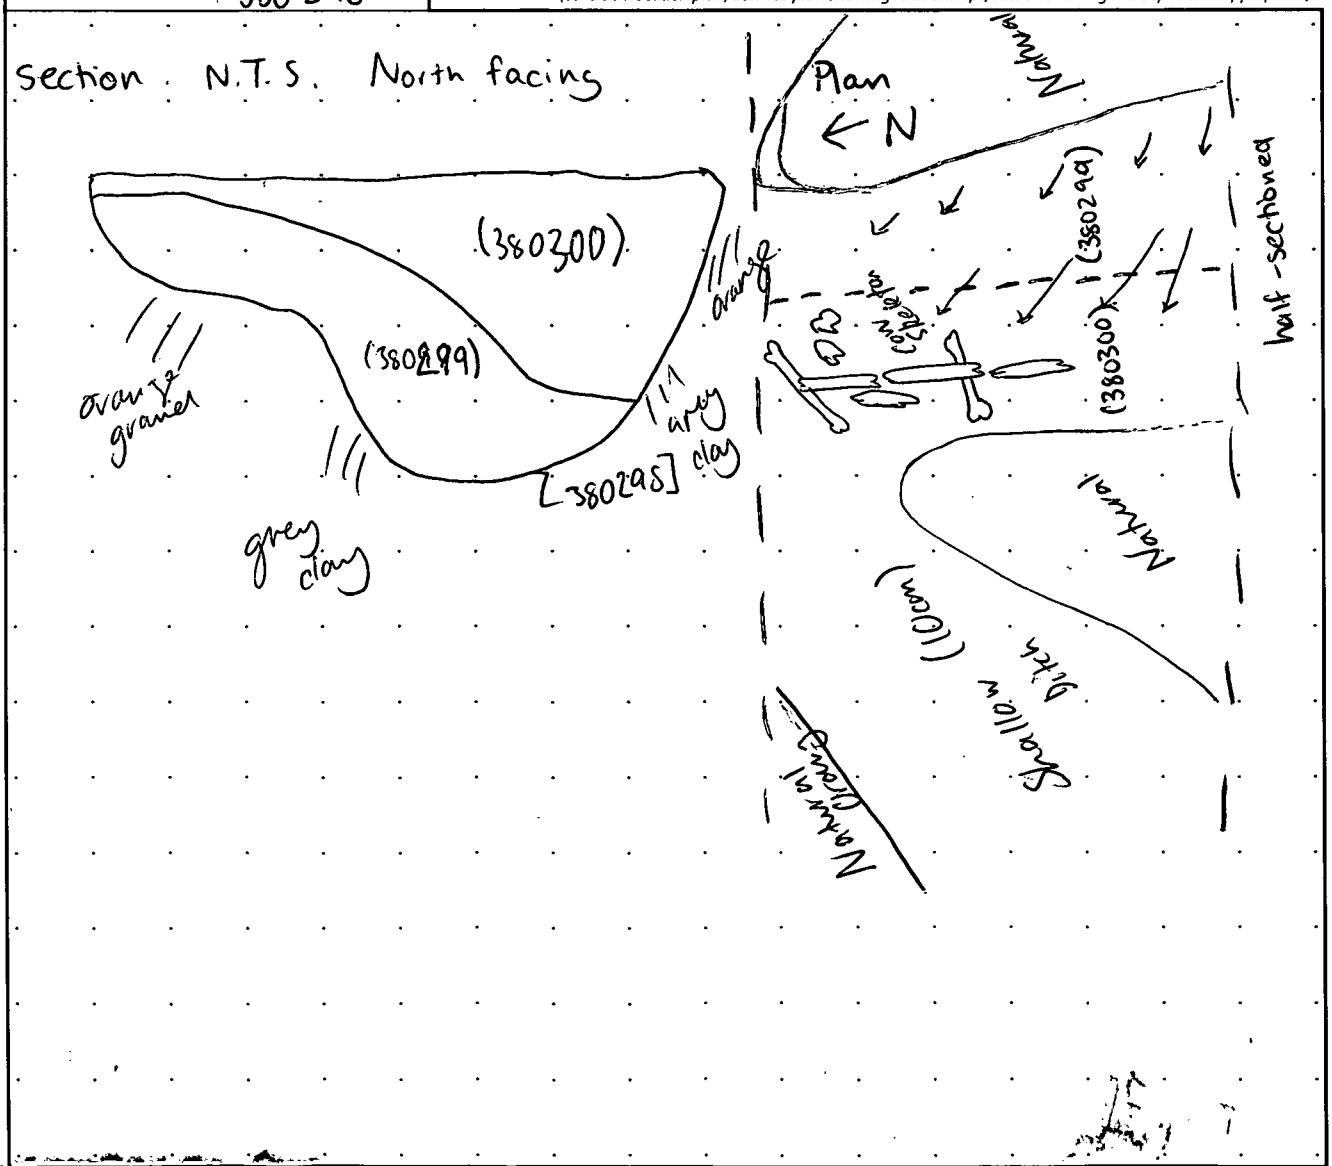

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Natural infilling that has slumped from the East Edge of the ditch. Mix of the 'natural''s chalk-rich orange gravel with the silty grey clay. Stone inclusions are predominantly small angular pebbles associated with the gravel & chalk. No finds.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact brown silty clay fill above (380299) in [380298]. Infrequent chalk inclusions scattered throughout. Stons found throughout the fill are small (< 2cm) but considerably larger stones (> 7cm) also found (including flint). At the base of this layer, above the surface where the two fills meet an incomplete, but partially articulated, cow skeleton was found. The hind legs were the best represented element of the skeleton with the lower portions clearly articulated. Other skeletal elements (cow & bird? & rat) were found in the fill (380300) above the main aspect of the skeleton. There were no obvious butchery marks & it is possible the cow legs were placed in the ditch for a purpose other than disposal of butchery waste. Charcoal (both large >2cm³ & small & <0.5cm³) was present within the fill in a diffuse distribution not representative of a single intact fire event. (no samples taken). A pottery handle found at the same level as the cow legs suggest Roman time period

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The ditch [380306] has a linear shape; the ditch and the gully [380308] are parallel and this combination probably presume a field boundary. The two ditches are not touching, so there is not relationship between them due to the absence of finds we can not date them.

Refer to context: 380306

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

SOUTHWEST END OF SECTION 38252 IS CUT BY A MODERN DRAINPIPE, BUT THE NATURAL EDGE OF CONTEXT (380363) CAN STILL BE SEEN IN SECTION.

FILL CONTAINED ~~8~~ PEBBLES AND ~~SOME~~ MODERATE-SIZED FLINT NODULES (0.05 - 0.1 m DIAMETER)

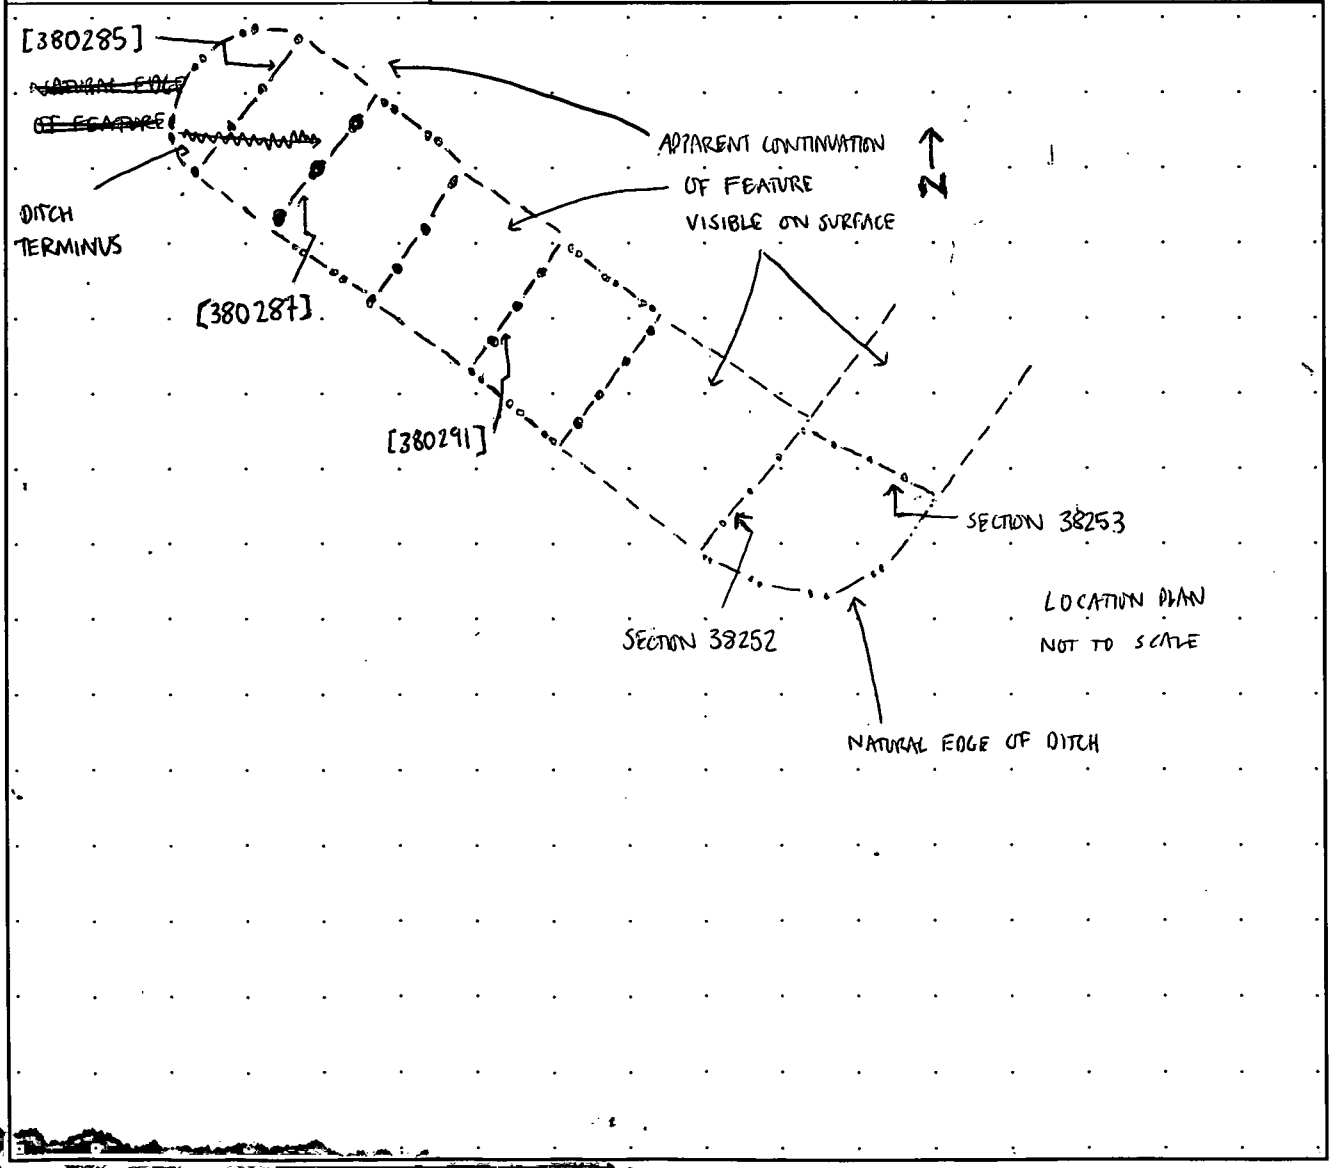

VERY OCCASIONAL RECOVERY OF FAUNAL BONE FRAGMENTS, NO APPARENT SORTING.

ON THE SURFACE, THIS UPPERMOST CONTEXT APPEARS TO EXTEND IN A NORTH-WESTERLY DIRECTION, ~~AND A NORTH-EASTERLY DIRECTION~~ ALONG WHICH 3 ADDITIONAL SLOTS HAVE BEEN EXCAVATED (REFER TO CONTEXTS [380285], [380287], & [380291]). IT WAS INITIALLY THOUGHT THAT WE WERE EXCAVATING THE CORNER OF A DITCH - THIS STILL SEEMS TO BE A GOOD INTERPRETATION DESPITE NOT APPEARING OBVIOUS IN SECTION (SEE D38252 AND D38253)

Refer to context: [380365] [380367] [380370] [380372]

VERY CLAY-RICH DEPOSIT, CONTAINING ~~A~~ A NUMBER OF LARGE BONES AND A MODERATE FREQUENCY OF LARGE SMOOTH PEBBLES (0.1 - 0.2 m DIAMETER). POSSIBLE NATURAL INFILLING, AS SUGGESTED BY THE CLAYEY NATURE OF THE DEPOSIT AND ITS DARK COLOUR (POSSIBLE WATER STAGNATION?)

DEPOSIT IS SIMILAR IN COLOUR, COMPOSITION AND COMPACTION TO CONTEXT (380371).

Refer to context [380365] [380367]

Moderate amount of natural flint within context
large amount of iron slag pottery and some charcoal.
One x limes burnt animal bone
2 x photos of insitu slag and pit base
2 x photos of large jar rim in situ

Large amount of pottery and other finds suggests ditch was deliberately filled with household waste as an rubbish dump.

Clay fill of pit [380381]. Some pieces of pottery recovered. Nature of the cut and the finding of pottery most likely suggests a deliberate backfill.

Ditch cut running E-W.

On the northern side of the ditch, it is cut by a E-W running modern drain. This cuts all fills and into the natural.

The base of the ditch is somewhat complex, the overall depth and size of the ditch is is at least partly affected by modern truncation. In the western part (0.6m) of the slot the cut is deeper and rounder. The ditch cuts through the orange gravel and into the natural light grey clay. On the eastern side the base is much flatter and shallower (0.3m). The different fills and inclusions suggest that the ditch began to naturally silt up (380386) before being backfilled with rubbish (380385) and a final natural layer (380384).

Refer to context: 380383

ADDITIONAL INFORMATION

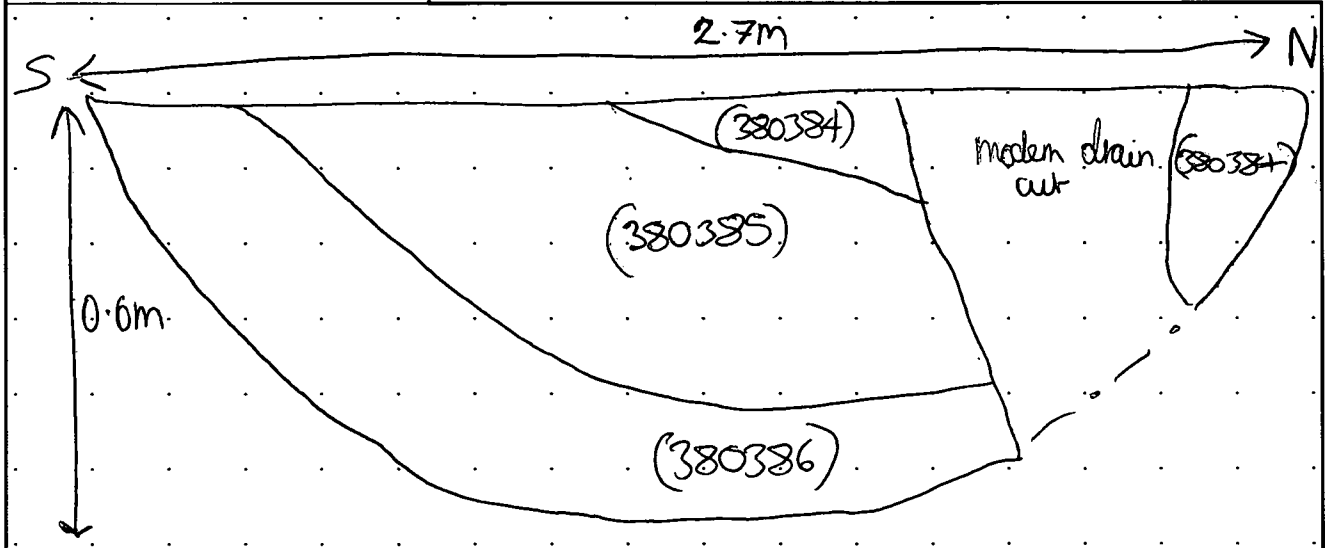

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Dark grey to black fill of ditch [380383]. Rubbish layer with pot, charcoal and animal bone. Small stones included with one large stone in section - 0.25m x 0.25m. The nature of the different fills suggest that once the ditch fell out of use and began to silt up (380386) it was filled in with household waste (380385). Fill is cut at the northern end of the ditch by a modern drain.

Refer to context 380385

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

First and bottom-most fill of ditch [380383]. Mostly silty clayey fill with some small stones and a few pieces of animal bone. (380386) is cut by a modern drain at the northern end of the ditch. The contrasts with (380385) make this (380386) appear as a natural infilling, and that the ditch was later backfilled once it had fallen out of use.

Refer to context 380386

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

3820028 → 3820029

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Sticky, well sorted silt with only few stones and faint iron pan. Bottom of the fill more mixed with only a few pieces of chalk. Likely a deliberate backfill as the largest bones of the ditch section came from this fill. The bones include mainly ribs, vertebrae and pelvic bones, pointing towards refuse dumping. The fill included local* Saxon pottery

Possibly backfill from an evaluation trench but this was not clear even after excavating a part of it.

* fake.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Only a few stones present, all smaller than 2cm. Stones range from rounded to sub-angular in shape. This fill is probably the same as fill 380560, but with less stones. It is cut by ditch/eval. trench 380393 and ditch 380397.

Refer to context 380397.

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

It's a fill of straight ditch [380429]. In this layer we had found especially cooking pottery of roman period and animal bones. IT'S COMPOSED BY A DARK GREYISH-BROWN CLAY, FILLED WITH SMALL (1-2 cm) ANGULAR FLINTSTONES AND CHALK. THIS FILL WAS CUT ON THE NE FAC SECTION BY A POSSIBLE TREE HOLE [380434] ALSO A SMALL PIECE OF BRICK WAS FOUND IN IT → SMALL FINDS # 38058 Photo # 3801520.

L.E. TN 05.01.2017 This fill is truncated by at least to a two ditches parts in section 38023. This was visible in plan 38211, as well as the relationship between this two pits. At the moment of the digging they weren't visible mainly because the plan wasn't clean when the slot was planeered and dug.

~~L.E. TN 12.01.17. This ditch continues terminate has a terminus further north (see plan). South of this slot we couldn't be sure if it continues because of it's truncated by [380434], but this could cut could'n be from south a top disturbance of an iron age ditch.~~

Refer to context [380429]

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

SKETCHES

Please, see context sheet of cut [380429]

L.E. (TN 07.12.07.17). This fill is part of an roman ditch [381212], same as (381760).

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This pit has a very irregular shape and it is apart of context [380834].

L.E. (TN 11.07.17) - This was excavated 100% in 07.07.17, and proved to be an tree bowl, truncating the ring-ditch [384272]

INITIAL FILL OF THE RING DITCH [380429], IN CONTACT WITH NATURAL SOIL. IT FILLS THE LOWER STEP OF THE CUT, AND HAD BIG ANIMAL BONES, AND ALSO LARGE PIECES OF ROMAN POTTERY

~~This~~ L.E TN @ 12.07.17 : This is part of an iron age ditch. In plan ~~was level~~, in north was heavily truncated by roman ditches [381212] and [381214]. ~~On south~~ Same as fills : (381759) on north (384303) on south. Probably late iron-age dating.

Refer to context [380429]

POSSIBLE MEDIEVAL FURROW, FILLED BY (380430)

L.E. TN 12.07.2017.. This was interpreted later as a ditch ~~truncating & same as~~ in the slots further south. It's the latest feature so far. It's truncating ditch [380429]. ~~Although this was it wasn't visible as a clear cut in it~~ Wasn't visible on the south west facing slot, probably having a terminus which wasn't visible at the moment of excavation. ~~Same~~ We interpreted same as ditch [384290] in southern slots due to the position in the matrix although only the fill (384293) of this ditch may be contemporary with this cut. ~~or not~~ The bottom part of the ditch with fills (384291) and (384303) might've been the same as fill (380433) [380429] - the terminus wasn't surveyed on the GPS. No clear dating.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This fill could be the prosecution of fill (380430) of possible furrow [380434] we see on the NE facing section. HAS A HIGH CONCENTRATION OF POINTY FLINTSTONES OF MEDIUM-SMALL SIZE (1-5 cm)

The NE section of this feature has since been re-evaluated (see [381212]), and a ditch identified on the E side of the section.
The uppermost layer of this ditch was a mottled dark brown/black, gravelly clay. There were occasional stone & chalk inclusions along with an area of bright orange/brown ~~sandy~~ clay close to the ~~section~~ original section, situated at the bottom of the fill. - JW 10/1/17.

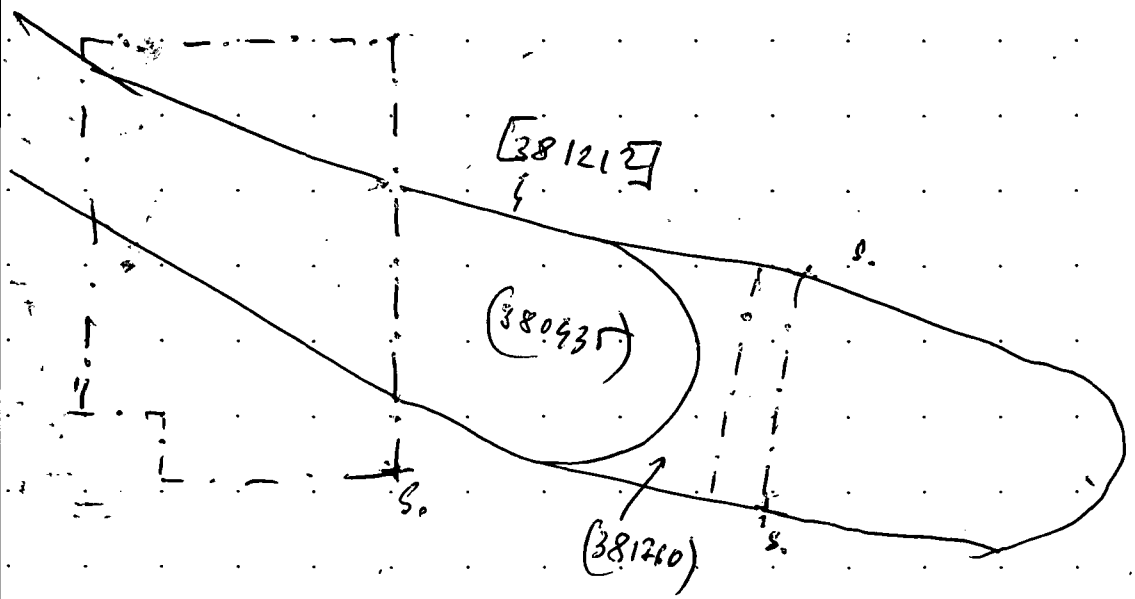

~~Refer to [381212] for sketch plan and (38176) for fill number. We now know this fill (380435) is the same as (38176).~~

Refer to context 380428

PHOTOGRAPHS [illegible] 13/1/17 JW.

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

WE FIND THIS FILL IN THE BOTTOM OF THE PIT. IT IS RICH OF ORGANIC MATERIAL AND BIG FRAGMENTS OF ROMAN POTTERY. THIS LAYER COULD BE PART OF PREVIOUS WELL (???). IT'S ALWAYS BEEN WET BECAUSE OF THE FREATIC LEVEL, BUT ITS COMPOSITION IS CLAYISH, FILLED WITH MEDIUM SIZED STONES, QUITE ROUND, 0'10 M LONG. THE AMOUNT OF WELL PRESERVED, LARGE PIECES OF FINE ROMAN POTTERY FOUND IN IT, ~~HOWEVER~~ GIVEN THE LITTLE SURFACE EXCAVATED, ~~MAKES~~ GIVES THE IDEA OF A CONCENTRED INTENTIONAL DUMP.

Refer to context

4) FILL OF CUT [38115], VERY HOMOGENEUS BLACK SANDY-CLAY, WITH NO STONES OR CHALK IN IT. AT THE BOTTOM OF THIS DITCH [38115] AN IMPORTANT CONCENTRATION OF LARGE ANIMAL BONES WAS FOUND, PLANNED AND PHOTOGRAPHED (PHOTO # 3801928-29), IN FILL (381155)

1) IT'S A RECUT IN A PREVIOUS DITCH [381152], THAT ALSO CUTS THE GEOLOGICAL SOIL.

2) THE DARKNESS OF THIS LAYER IS NOT DUE TO ANY CHARCOL, BUT MIGHT BE DETERMINED BY THE ORGANIC MATERIALS THROWN IN IT

3) FILL OF A DITCH, VERY DIFFERENT IN COLOUR AND IN INCLUSIONS (IT HAS NONE) FROM ALL LAYERS IN CONTACT

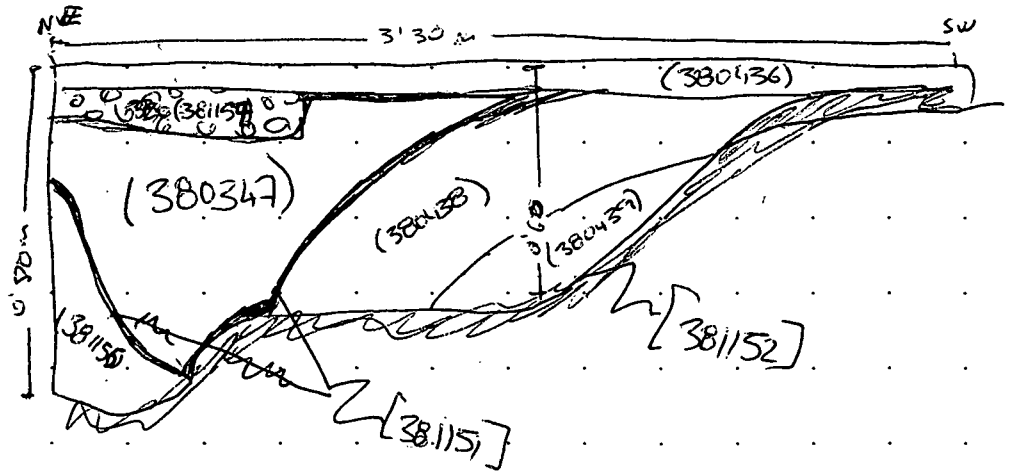

5) IT'S POSSIBLY ROMAN, ACCORDING TO THE BLACK POTTERY (COOKING) FOUND IN IT

Refer to context [38115]

E-W running ditch excavated in 3 slots, which are [380456], [380454] – and this one [380459].
The objetive of this slot was try to see the relationship with NE/SW running ditch, but it was impoible to see, because both ditches were infilled at the same time. Maybe contemporary?

Refer to context [380457]

SKETCHES

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

N/S running re-cut, cutting through earlier ditch [380475] and its fills (380473), (380474).
It has been truncated by later shallow ditch [380465], because of that the west side of the re-cut is not totally visible.
Excavated in 3m slot. No finds.

Refer to context: 380465, 380471

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [380475]. Observable in both sections.
Rich in stones; contained also moderate quantities of animal bones and Roman pot.
The Fill is cutted by two subsequent ditches [380470 & 380472].
The stones have a sub-rounded shape and small size.
~~The~~ Inside the fill there are also a moderate quantity of gravel.

Refer to context: 380465

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Upper fill of pit comprising a silty clay. Dark material suggestive of organic fill laid during a period of aquacious stagnation

two sherds of Hack pottery were recovered in moderate to poor condition and a number of animal bones, unarticulated, likely from different individuals & species

(380498) RR SECONDARY FILL OF [380497]
With stones and chalks, and some pottery and bone. One small find appears of iron metal. Possibly a fill above a pit.
Stones are small and angular.
The soil is silty sand gravelly, very mixed of the natural with chalks and a very little stone.

Refer to context 380497

soft, light brown-orange fill without any finds

similar to natural → seems a bit darker

→ could be a pit, but might as well be just a spread

Refer to context see [380530]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

very mixed fill with inclusions of flint pebbles and cobbles and some clayey natural

might be part of the original fill that (380538) was cut into but could possibly be part of [380539] and resemble some silting into the ditch before it was actually backfilled.

shape of layer suggests first option though

no archaeological finds

Refer to context | see [380543]

Cut of ditch viewed in relationship slot for intersection with ditch [380547].
Ditch is cut into light grey compacted clay natural.
Two fills, the uppermost of which contained some animal bone and pottery fragments. (see (380546))

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Small posthole with a small pit located to the West [380568], a possible ditch gully to the East and another posthole further east [380565]. The posthole is small (0.3m E-W) and contains frequent inclusions of stones (0.02-0.05m diameter) that are subangular, as well as two large stones (0.10-0.20m in diameter) located in the middle. Fill is mottled orange/dark gray. Date of posthole can be presumed as late Roman-British as the posthole clearly cuts a larger ditch (see plan drawing #38211) which contained Roman pottery. No finds were identified in this posthole. Original use of posthole is unknown (apart from being a posthole).
See [380568] and [380565] for adjacent features.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Small pit with a posthole [380566], possible ditch/gully and another posthole* all located along the same line to the East. The pit is 0.7m E-W (diameter) and has a depth of 0.18m. It contains frequent inclusions of subangular stones. Date of pit is unknown although it is presumed to be late Roman-British as it cuts a larger ditch & (see plan drawing #3821) which contained Roman pottery. No finds were identified in this pit. Original use of pit is also unknown.

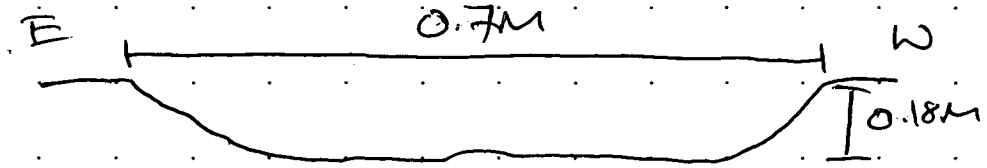

See [380566] and [380565] for adjacent features.

When this posthole was excavated it probably was overcut excavating remains of the beam slot [381397] as well (NV: 03.02.17)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The deposit contains rounded to sub-angular stones and few pieces of chalk. A Roman pottery fragment lies in situ at the top of the deposit. The posthole is only slightly different in texture from the surrounding fill, but they can be differentiated based on the disruption in the line of chalk in the surrounding fill by the posthole. There are also more stones in the posthole. Stones vary in size up to 5cm across.

The cut goes through the surrounding fill that may belong to a ditch. The posthole reaches the natural sand and penetrates a line of chalk in the ditch fill (see sheet 380570).

This ~~pit~~ posthole was overcut ~~at the moment of digg~~ when was excavated. Part of a romano-british structure (hut or shed). It's truncating a ~~gully~~ fill of [381213] of a gully [381214] -TN. 03.0217

FILL OF UNEXCAVATED DITCH

The fill included some Roman, possibly Iron Age pottery and faunal remains, including a juvenile ruminant mandible. A fine line of chalk runs across the middle of the fill and it is cut by the posthole 380571. The stones in this fill are smaller than 5cm in length and vary from rounded to angular. One potential heated flint was also present.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

A small ditch cut across the top of pit [380575]. The ditch cuts through five of the ditch fills ;(381225), (381776),(381777),(381778) & (381780) & ~~&~~ truncates the southern aspect of the ~~d~~ pit [380575]. The ditch has a maximum depth of 0.25m, although this is probably not the true depth of the ditch given the level of machining in the area. The finds from within the fill of the ditch suggest it was deliberately backfilled with rubbish. Pottery within the pit suggests an interpretation of late iron age → Romano britain.

Probably same as [381629], ~~to~~.

ADDITIONAL INFORMATION

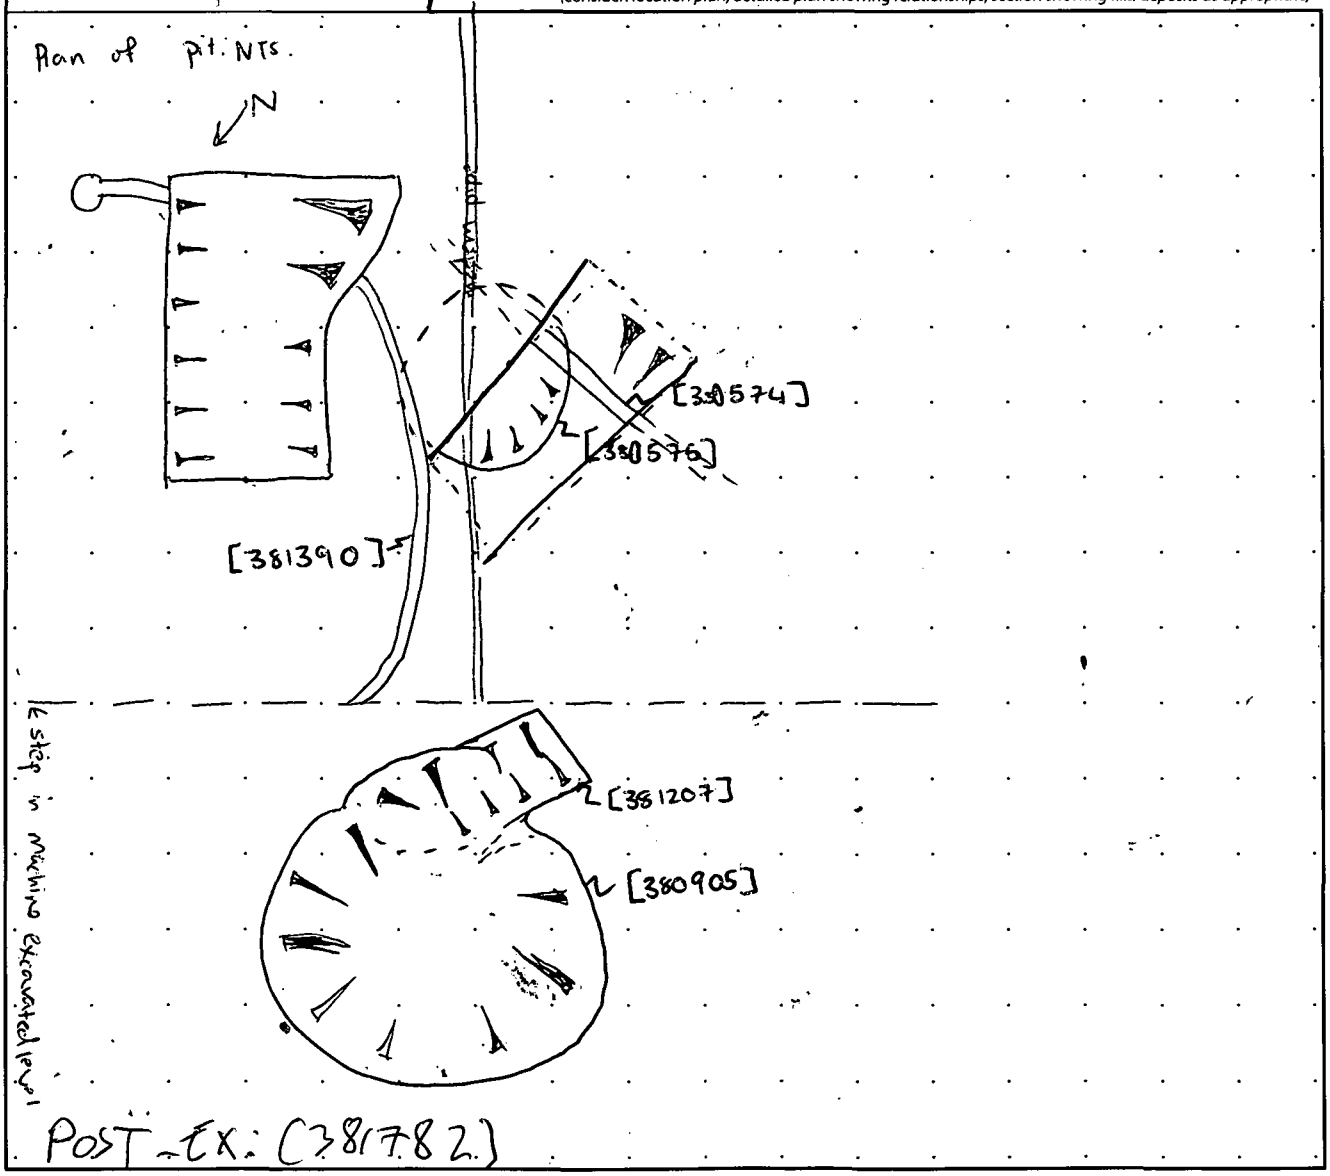

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Base of pit below water table, too deep to excavate safely. Maximum depth excavated 1m. Pit is cut by round house gully [381390] and a shallow ditch [380574]. Pit contains a total of 8 fills, including those naturally deposited (381781), (381779), (381783) (381778), (381776) & deliberately dumped (381782), (381777), [redacted], (381225), suggesting the pit was open for a considerable period of time. pottery finds indicate Iron-age or later, possibly Roman. Modern drainage pipe cuts Northern aspect of the pit. Pits cuts into natural grey blue clay, with orange gravel present for the top 50cm of the northern aspect.

The cut may be the same as 380580, which may be a ditch. ~~[illegible]~~ However, the darker layer 380591 suggests that it was not cut into, and therefore possibly deposited there over time, naturally or otherwise

3801363

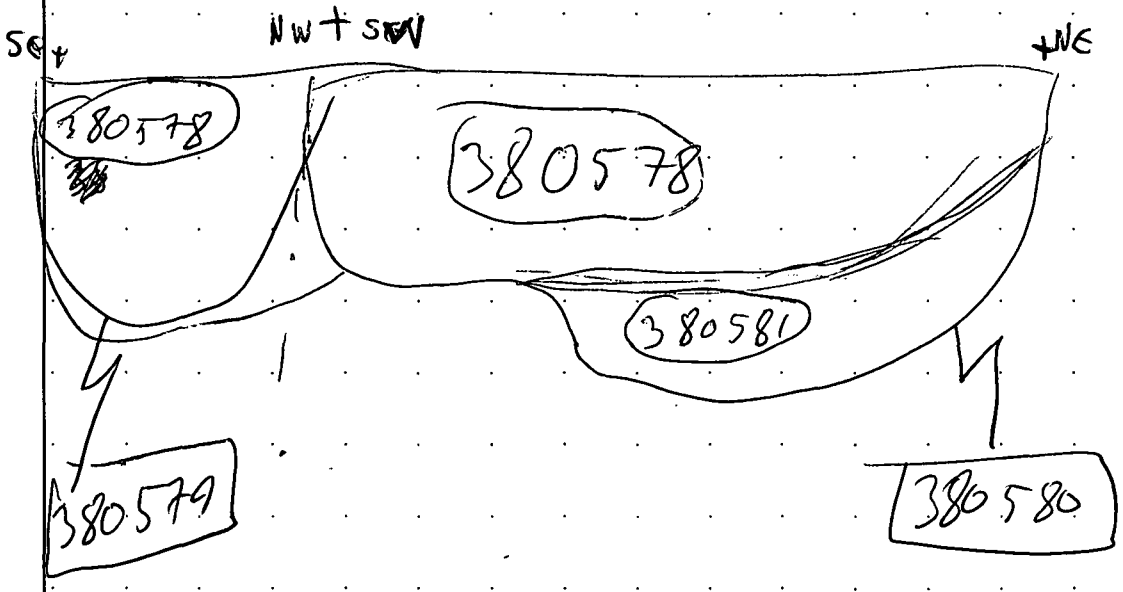

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This layer is contained within cut 380580. As it is topographically lower than cut 380579, this layer may either be the original deposit/fill of 380580, or, if the cuts 380580 & 380579 are the same, it may be deposited by waterflow.

The included stones were smaller than 2cm and relatively rounded in comparison to natural.

Refer to context

ADDITIONAL INFORMATION

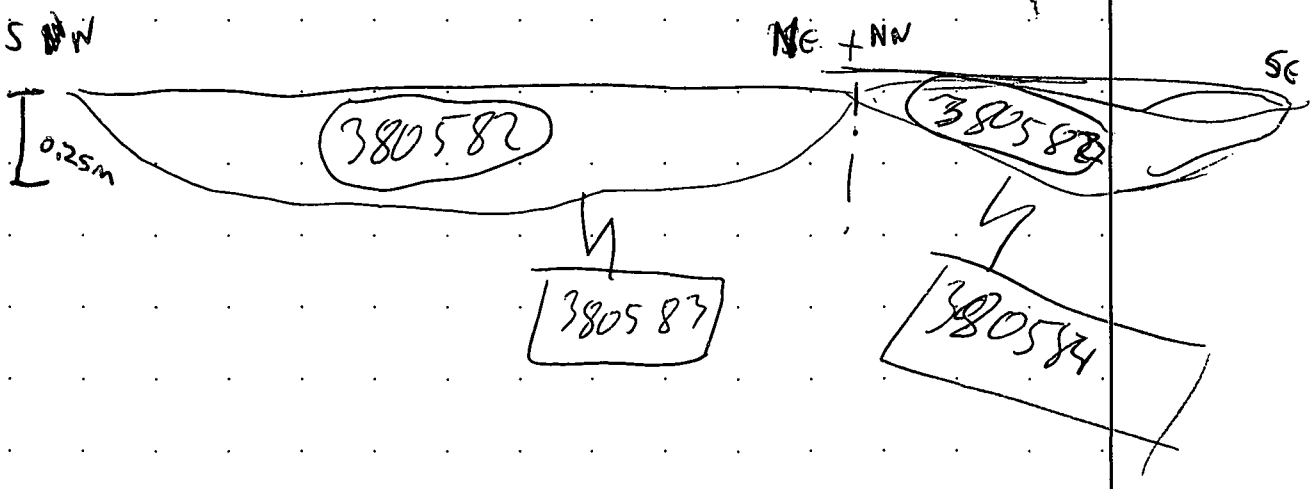

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Connected

This gully may have ~~[illegible]~~ cut [380584] to cut [380579] but this relationship is now lost due to pits [380587] AND [382126]. AREA NOT REALLY UNDERSTOOD. NOT MUCH AROUND. GULLYS/DITCHES [380564], [380579] AND [380583] DEFINE A VERY SMALL AREA WITH NOTHING IN SO USE UNCLEAR.

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
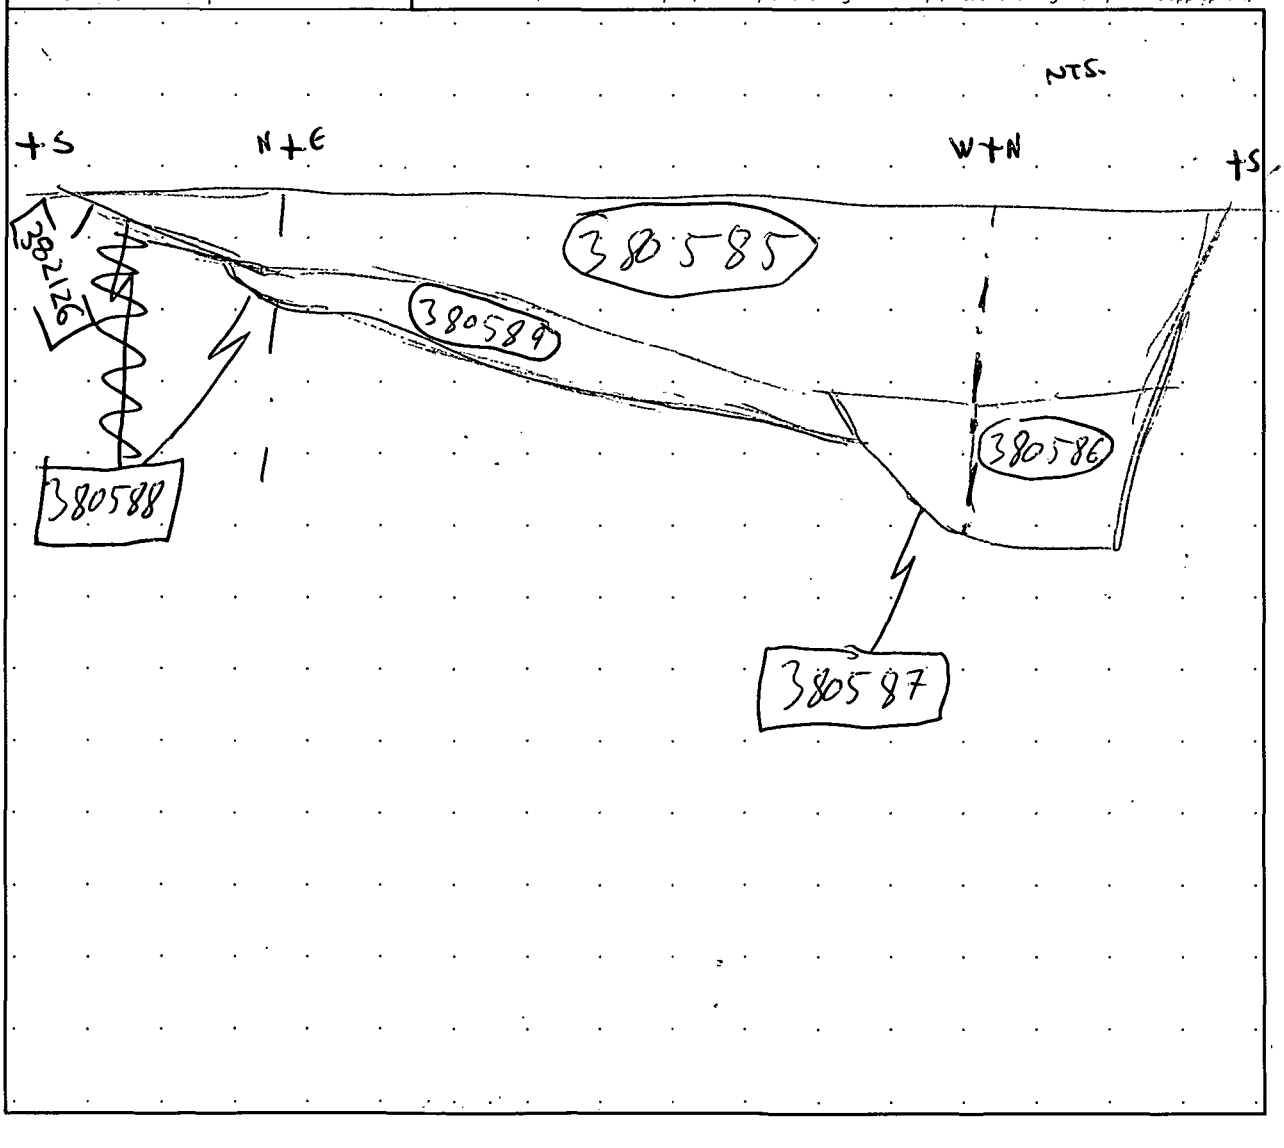

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut dimensions not recorded as much of the original deposit has been lost due to bad machine matching, resulting in poor visibility of the cut.

UPDATED 25/07/17: DIMENTIONS ON GPS AS NOT RECORDED AT TIME, PLUS NOT REALLY EASY TO DEFINE THE CUT.

Refer to context 380592

ADDITIONAL INFORMATION

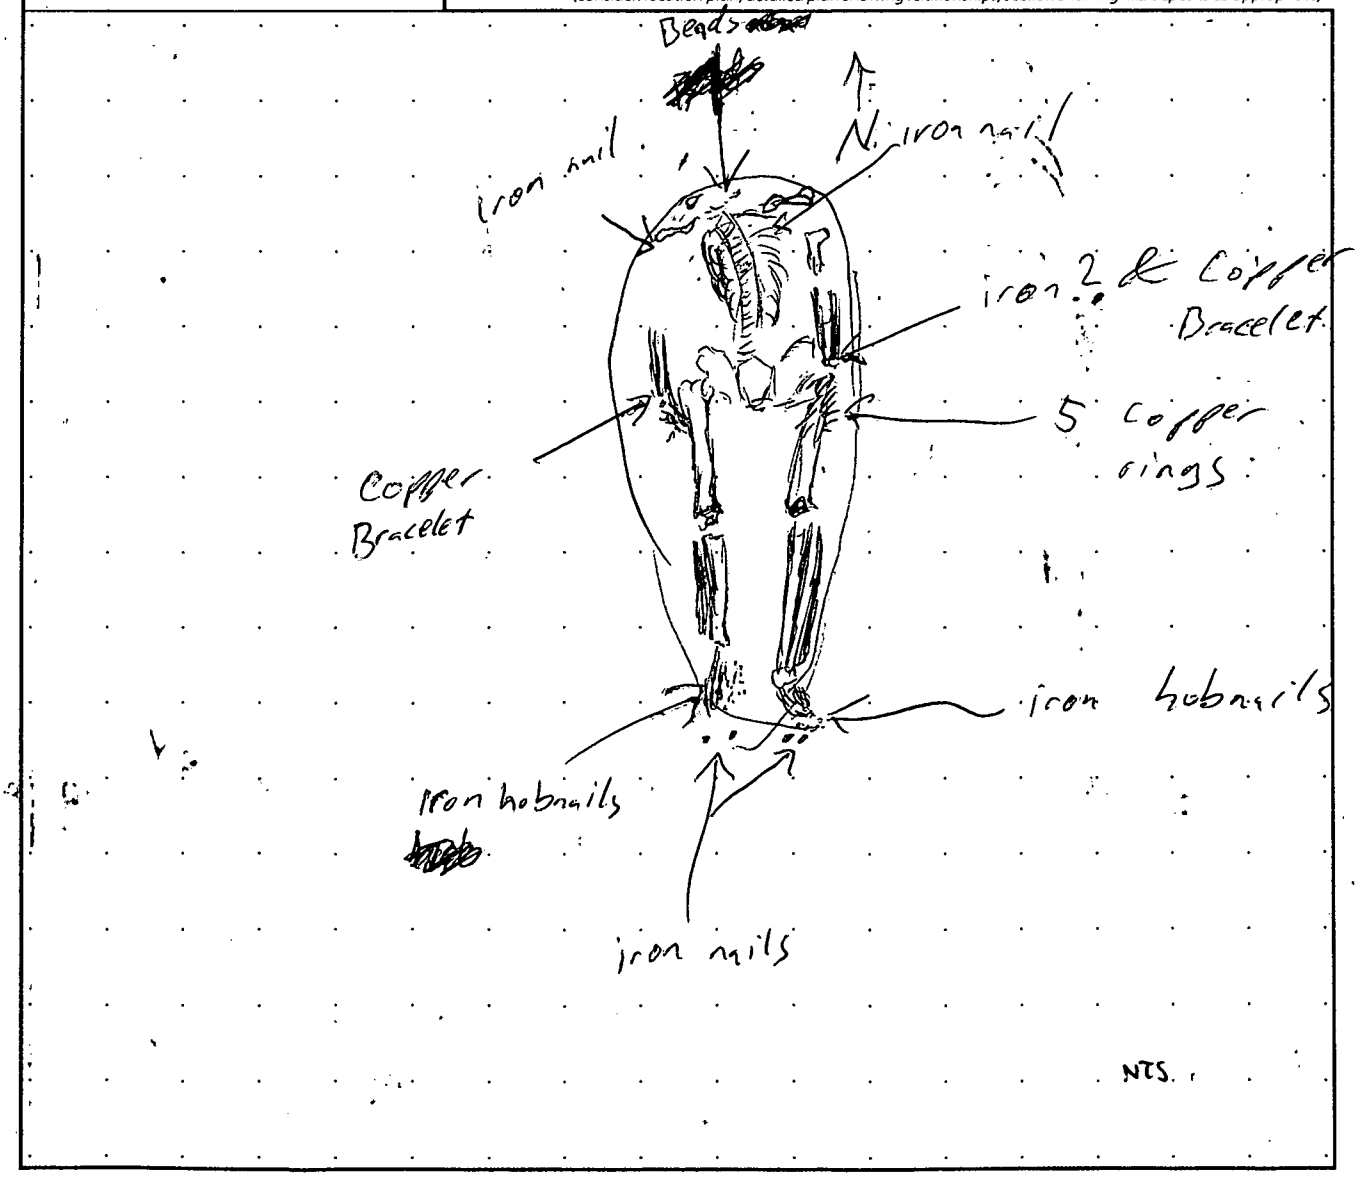

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Beads & small bones likely to be found in the soil sample tubs. 2mm mesh recommended as the beads are very small. Some fairly large stones right on top of the bones. Head lost due to poor machine matching, upper thoracic and lower cervical bones broken too. In addition, left humerus put back wrong way up, and left ribs (first three) and scapula not in articulation.

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

This ditch is visible only in the section 38155, and not in the S# 38156, so we can not assess the relationship between [38060] and [38060]. The rounded ditch [380323] is ~~cutting~~ disturbing ~~the~~ this relationship, TRUNCATING ~~cutting~~ both the ditches

THE BASE OF [380 604] APPEARS TO BE SLOPING SW → NE: THE SW PART THUS ~~SUGGESTS~~ CAN BE POSSIBLY CONSIDERED AS TERMINUS OF THIS DITCH, EVEN IF THERE IS NO MATERIAL EVIDENCE OF A ROUND TERMINATION

Refer to context [380323]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

The skeleton was in good conditions except for the cranium and the right leg; it was disturbed by the machine excavation. The left leg (tibia, fibula) and the left foot are truncated by the modern drain.
The superior part of the cranium is dislocated towards his left. Also The mandible is dislocated. The lumbar vertebrae are in not natural position, shaping a curve, so the ribs are pressed and overlain. The right hand is lain over the pubis and part of the right femur. The left hand is parallel to the left side of the left femur, but a bit twist toward the left. This position is probably caused by the collapse of the coffin and the heavy of the soil that push the skeleton. Part of the skull, ribs, right hand and pubis and right femur are dislocated by the machine excavation and they are labelled as: "unstrat" probably referred to inumation (380615)".

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

EXTENSIONS: LENGHT = 2.10m, WIDTH = 0.65m, THICKNESS = 0.15m

INCLUSIONS:- Frequent medium and small pebbles (SIZE 0.02 - 0.10m)
- Bone fragments, probably related to inhumation (380617).
- Metal: nail fragments and 4 nails, one clothing item (F38096) located on the right shoulder - One nail was very close to the feet.
- Pottery: some fragments all over the burial and one small vase (F38100) located on the ~~NE~~ NW side of the skeleton, close to the head - it Probably was not broken before the machine excavation (*)

INTERPRETATION: Grave soil - The presence of the nail and the possibly metal clothing item together with the lain position of the skeleton (380617), might suggest that the body was wrapped in a shroud.

(*) The fine type of this vase together with geometrical stamp decorations suggest it's use as perfume or ointment vessel.

Refer to context 380618

ADDITIONAL INFORMATION

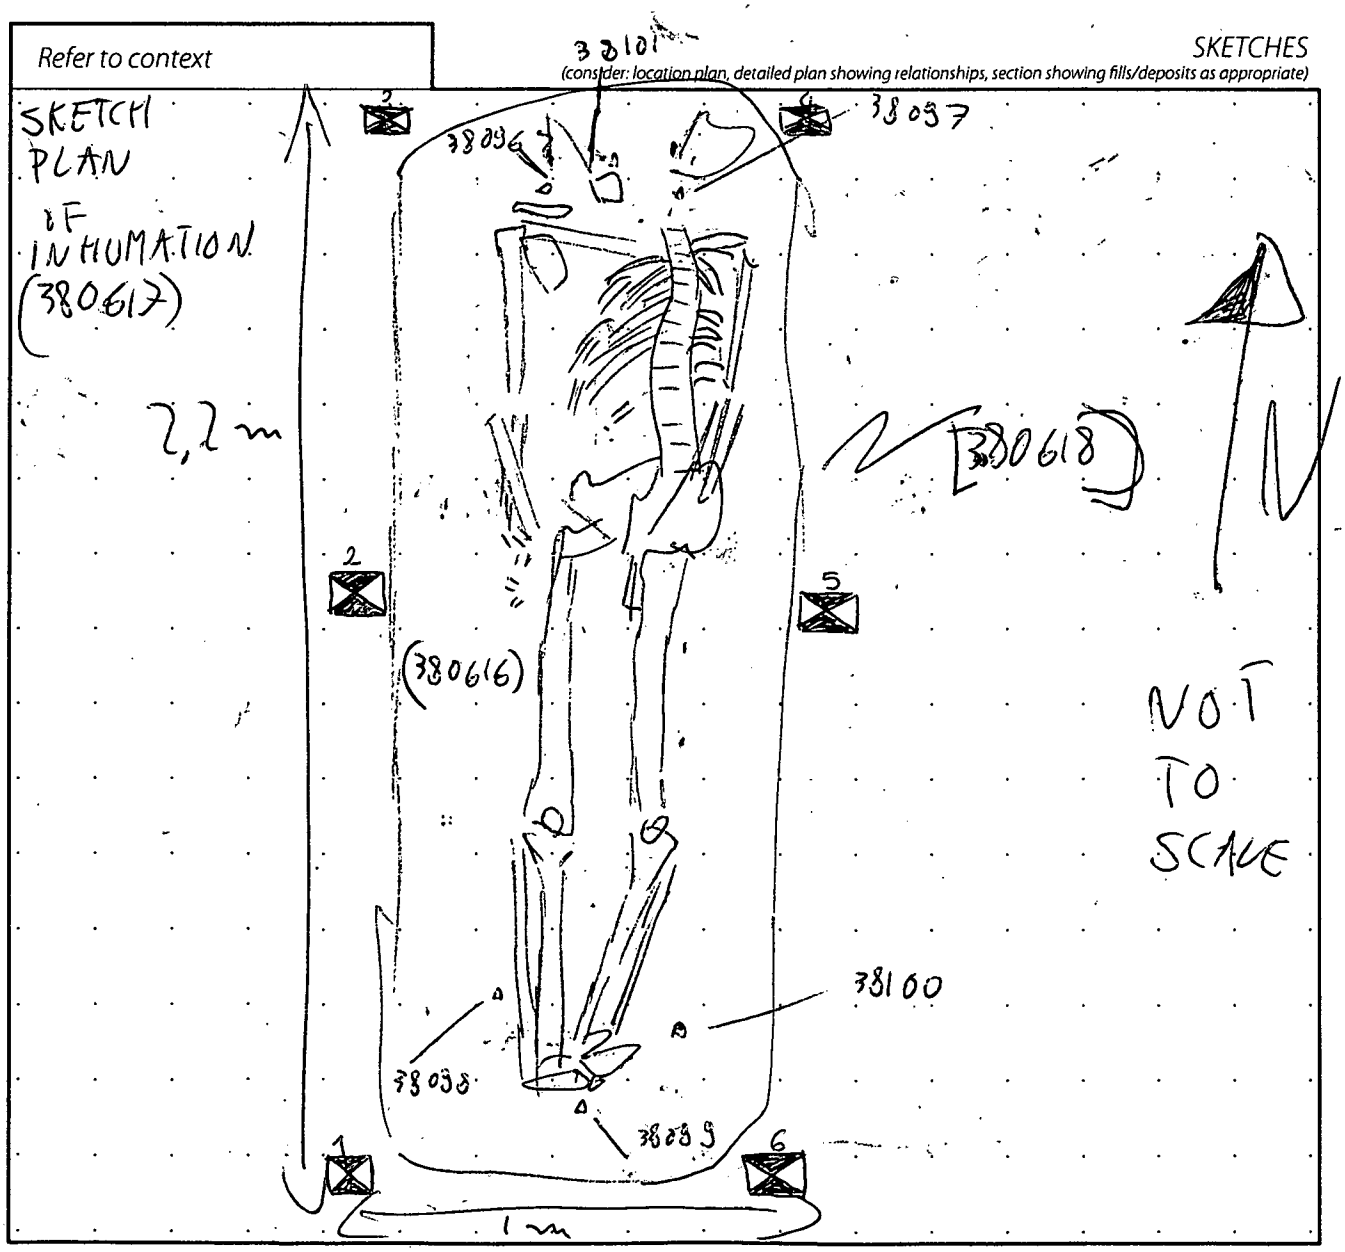

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The position of the skeleton is supine, a bit sloping E-W. The body was leaning on his right side with the right hand under the right leg and the left hand probably was placed between legs according to the lack of the second and third rows of phalanges and the left corpus and metacorpus.
The position of the feet was with the right foot (missing) probably overlaing the left one (still preserved).
The upper halves of the ribs on both sides are missing.
The skull is missing, only few fragments are present.

ADDITIONAL INFORMATION
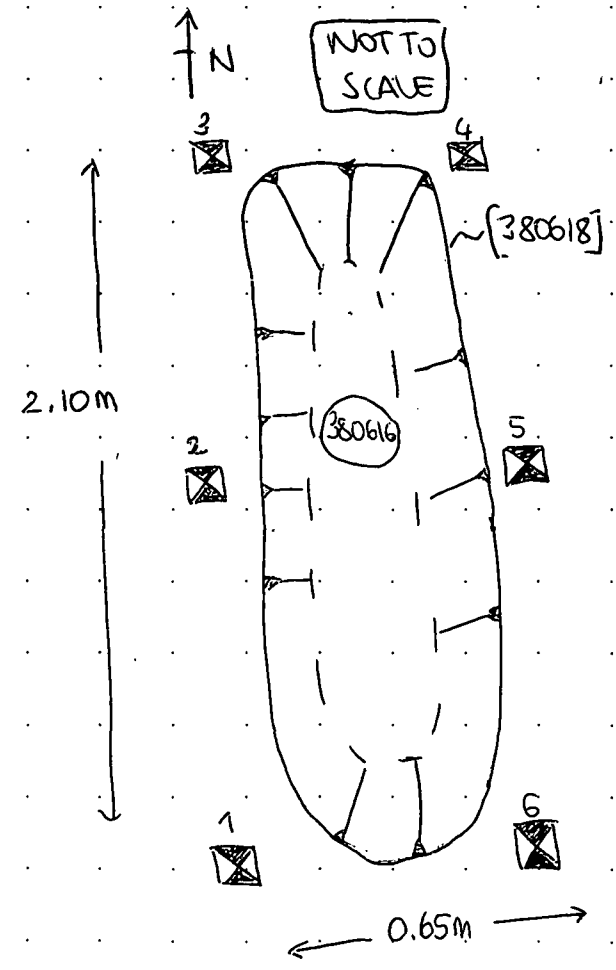

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of grave.
Inclusions :- small and medium pebbles (0.02 - 0.10 m)
- charcoals flecks
- dislocated human and animal bones.
- pottery fragments.
- metal : nails and iron fragments, probably related with the nails. These fragments could be related to a shoud - because they were not allineated so a coffin is probably not contemplated.
- The fill is very similar to the fill of the ditch so the edges of the burial were not clear.

*PHOTOS (SMALL FINDS) : • 38113 - 38123 = 3801869 TO 3801879
• PRE-EX = 3801831 TO 3801833 (WITH PHOTOGRAMMETRY)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

The skeleton was in good conditions, unaffect by machine digging - its left side appears to maintain the original burial position, while on the right leg is a bit slipt towards the cut, probably as a result of degradation of the possible shroud - The right forearm is placed across the chest forming ar 90° angle with the upper part of the arm - The left hand is underneath the left leg so this explains the slide of the radius - The mandible was located on the right side of the cranium, and all the theeth were missed - The upper part of the theeth was dislocated close to the right side of pubis - The right foot is disappeared - The split between the vertebrae doesn't appear regular: this may suggest hard working life - This together with the lack of the lower teeth may suggest a late age of the person -

cut of burial. The grave cuts ~~the~~ a ditch ~~not~~ yet investigated and it is situated on the South side of another burial [380616] and very close to it. The shape is squared on the W side and more curvilinear on the E side.

* THE EXCAVATION REVEALED ~~THAT~~ THAT THE CUT WAS ACTUALLY MORE EXTENDED TOWARDS E THAN PREVIOUSLY ASSESSED. IT WAS THEREFORE NECESSARY TO ADD AN SUPPLEMENTARY GROUND CONTROL POINT

*

- FOUND BRONZE BROOCH (F38053)
- GRAVELLY AND CLAYEY FILL. DURING THE DIGGING WE FOUND MANY STONES IN ALL THE FILL, AND OCASSIONALY POTTERY AND BONES. ALSO, WE FOUND A BRONZE BROOCH WHICH NUMBER IS (F38053).
THIS DITCH IS IN ALL THE SLOT, SO WE CAN SEE IT IN TWO SECTION.
IT IS NATURAL INFILLING.
THE COLOUR IS VERY DARK WITH GRAVELLY IN ALL THE FILL ~~AND~~ WITH SMALL SIZE.
- THE BRONZE WAS FOUND IN THE DEPTHEST OF THE DITCH, THE METAL DETECTOR WASN'T FOUND ANYTHING MORE.
- THE DITCH WAS DIGGING AGAIN WITH N° SECTION 38033

CLAY AND SILTY FILL, VERY SIMILAR TO (380631).
DURING THE DIGGING WE FOUND ~~[illegible]~~ FREQUENT STONES AND ANY BONE OR POTTERY.
THE DITCH WAS EXTENDED WITH A NEW SECTION DRAWING (38033), IN THIS DRAW WE CAN SEE THE RELATION BETWEEN ALL THE DITCHES NEAR.

Refer to context

DARK FILL, [illegible]
THE TOP SOIL OF THIS DITCH WAS COMPACT, PROBABLY BECAUSE OF IT WAS AN PATH BEFORE WE STARTED DIGGING.
THE WAS A LOT OF STONES OF GRAVEL AND OCASSIONAL BONES AND POT, BUT WE DIDN'T DIG THIS DITCH, SO WE DON'T REALLY KNOW FROM WHAT LEVEL ARE.
IT SEEMS LIKE NATURAL INFILLING

Refer to context (380 635)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

WE MADE FOUR DIFFERENTS SLOTS.

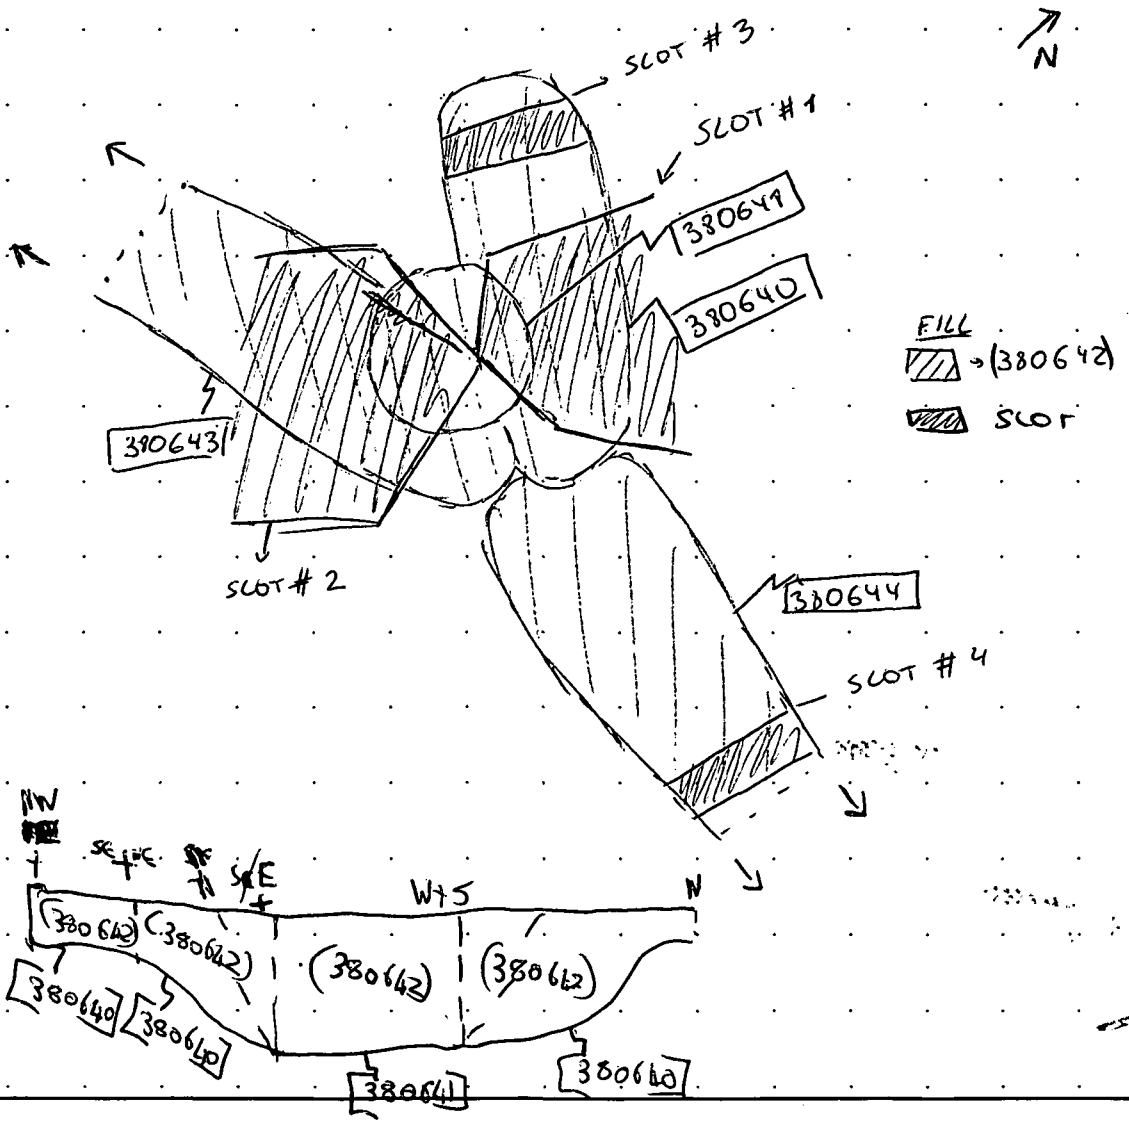

- SLOT #1: WE COULD SEE IN THE SECTIONS TWO DIFFERETS CUTS → 380640 AS A RESULT OF DITCH WHICH IS CUT BY A POST HOLE [380641]
- SLOT #2: WE COULD SEE ANOTHER DITCH, WITHCH CONTINIUS TO THE WEST WHICH IS CUT BY THE SAME POST HOLE [380641]
- SLOT #3: WE COULD ONLY SEE THE FILL (380642) IN THE DITCH [380640]
- SLOT #4: WE COULD ONLY SEE THE FILL (380642) IN THE DITCH [380644] WHICH CONTINIUS TO THE EAST.

MAYBE THE THREE SLOTS COULD END IN THE SAME POINT, BUT WE DIDN'T DIG IN.
ALL THE CUTS HAS THE SAME FILL (380642)

THERE ARE TWO ^ APES IN THE FILL
NOT COMPLETE EXCAVATED. BECAUSE THE WATER TABLE.
CLAY AND GRAVELLY FILL, WE FOUD MODERATE STONES AND CHALK IN ALL. ALSO, THERE WAS BONE AND POTTERY MODERATE
Stones were a mix of small rounded pebbles (typical & the orangey-gravel natural) & large irregular pieces of flint.
Natural reached on both excavated sides of ditch was orangey gravel.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

CUT OF DITCH [380663] FILLED BY (380662) & TRUNCATED ~~WEST~~ EASTERN EDGE BY [380660]. DUG INTO ~~NATURAL~~ GRAVELLY-SAND. VERY SHALLOW Compared to other features nearby & also had quite defuse edges in the WEST. THE FILL it contained (380662) had quite a few natural sand inclusions in it & SUGGESTS that this ditch was purposefully filled in prior to being cut by [380660]. SEE DRAWING Number 38022 FOR further

Refer to context [380660].

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This context (380666) - covered by [redacted] (380671), and covers (380669) and (380667) - has a yellow/orangeish color, is compact and has a sandy silt composition, is a natural infilling, spread out in an oval shape. It lies on top of the (380669) and partially on top of the (380667).

The [redacted] present/ context/ had It was identified an occasional amount of pottery sherds within this context, being from an anthropogenic origin although there's not enough evidence/information that would allow us to claim it to be a deliberate backfill.

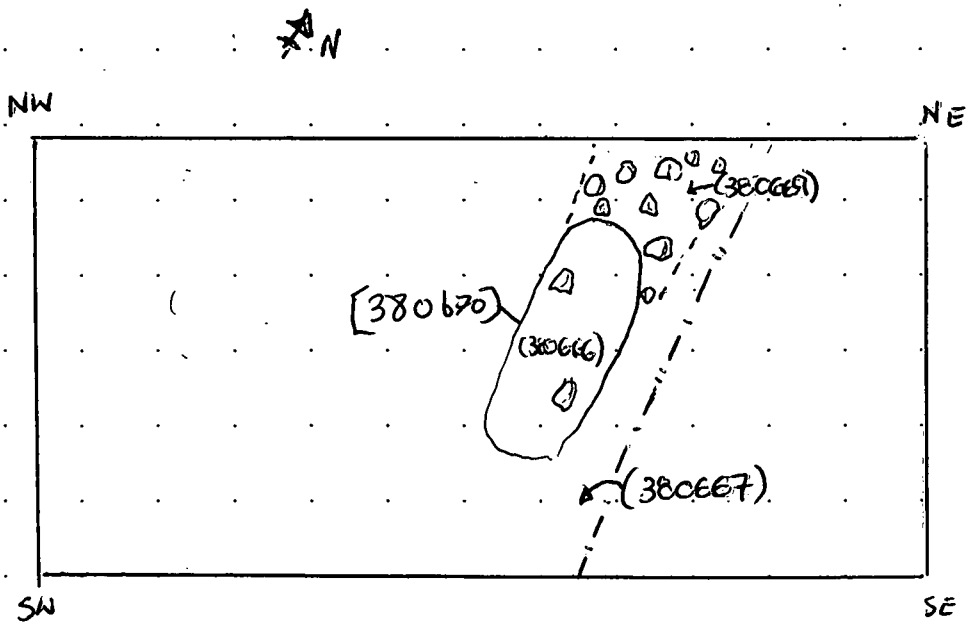

It is a filling of the ditch [380670] and it is not reflected in any of the sections of this slot. However, for precaution matters, the section of this context was recorded on drawing (# 38269) and on work sheets (# 3802202, 3802203).

Refer to context [380670]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

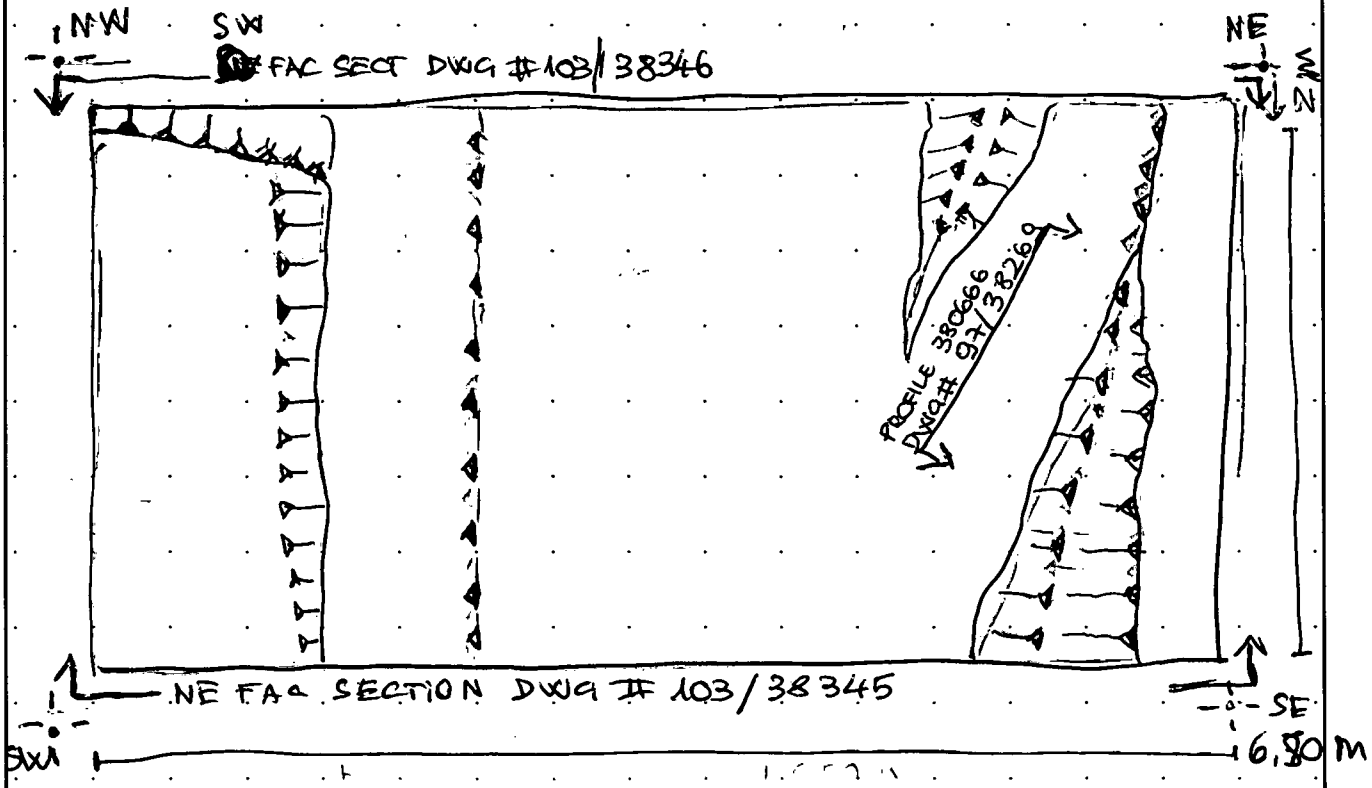

Natural deposit investigated in a 2m slot. Primary fill of the shallow ditch [380670]. Covered by 380671, 380666 and 380669. The deposit contained a conspicuous quantity of archaeological remains: many animal bones, in particular 3 cow skulls and a dog (see CONTEXT SHEET 380668).
Numerous pottery's sherds, mainly roman age; it's reported, in particular, the presence of samian pottery.
In the deposit, generally rich in chalk flakes, gravelly stones and pebbles, there were also two worked stones (F38169) and three metal's object (F38167, F38168 and F38171).

Inside the deposit was also present a relative quantity of charcoal and 2 lens of burned clay; it's, therefore, decided to take a sample of the context.

Refer to context 380670

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

DOG'S SKELETON IN ANATOMICAL CONNECTION. IT WAS FOUND INSIDE THE CONTEXT 380667, DURING THE EXCAVATION WAS NOT POSSIBLE TO RECOGNIZE A CUT INTERPRETABLE AS A INTENTIONAL DEPOSITION OR "BURIAL".
IT'S THEREFORE POSSIBLE TO SUPPOSE THAT THE DOG WAS PART OF THE FILLING AS SAME AS THE REST OF CONTEXT 380667, ALL INSIDE THE DITCH [380670].

IT'S ALSO NOTED THE EXCELLENT STATE OF PRESERVATION OF THE SKULL.

DURING THE EXCAVATION IT WAS NOT POSSIBLE TO TAKE PICTURE OR DRAW, BUT THE POSITION OF THE DOG WAS TAKEN WITH TOTAL STATION AND SURVEYED.

Refer to context (380669)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

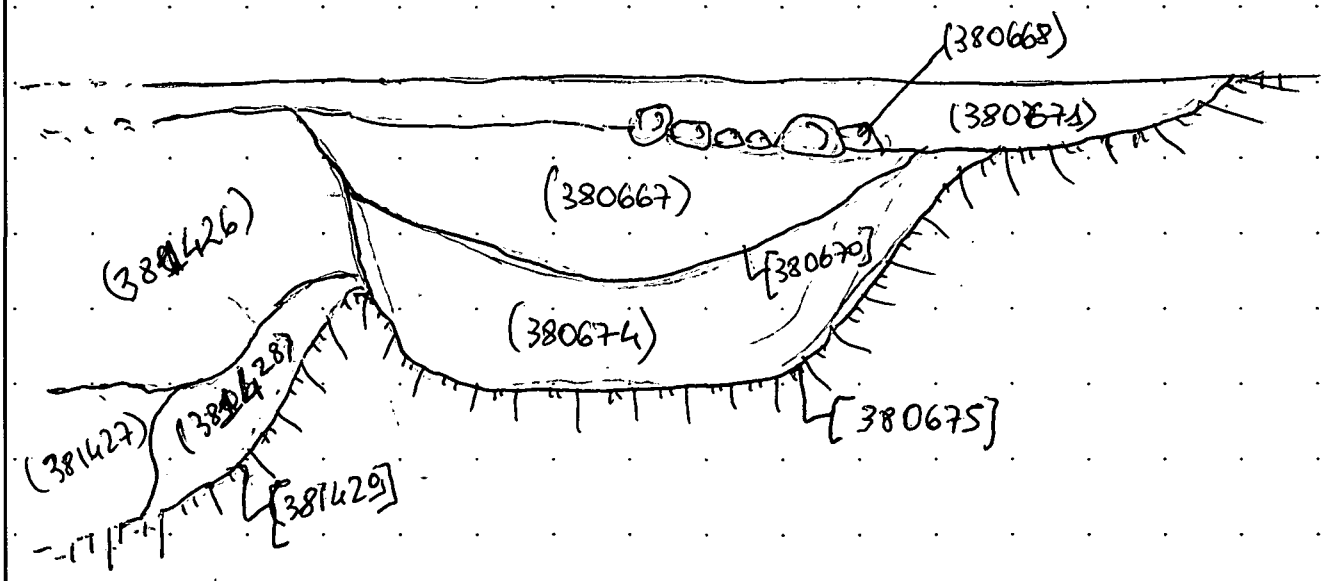

THIS CONTEXT HAS GREY COLOUR, MID COMPACT, WITH CLAY COMPOSITION. IT HAS CONSIDERABLE AMOUNT OF STONES OF LARGE SIZE ASSOCIATED WITH IT (AVERAGE SIZE - 0.8m x 0.1m x 0.03m — 0.18m x 0.2m x 0.9m) WITHIN CUT OF DITCH [380670], ABOVE MAIN FILL BACKFILL OF DITCH (380667), AND COVERED BY NATURAL INFILLING (380666). IT LOOKS TO BE THE RESULT OF A NATURAL CAUSE AS THERE IS NO EVIDENCE OF BEING AN ANTHROPOGENIC ACTION, THERE WERE NO FINDS PRESENT.

Refer to context [380670]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

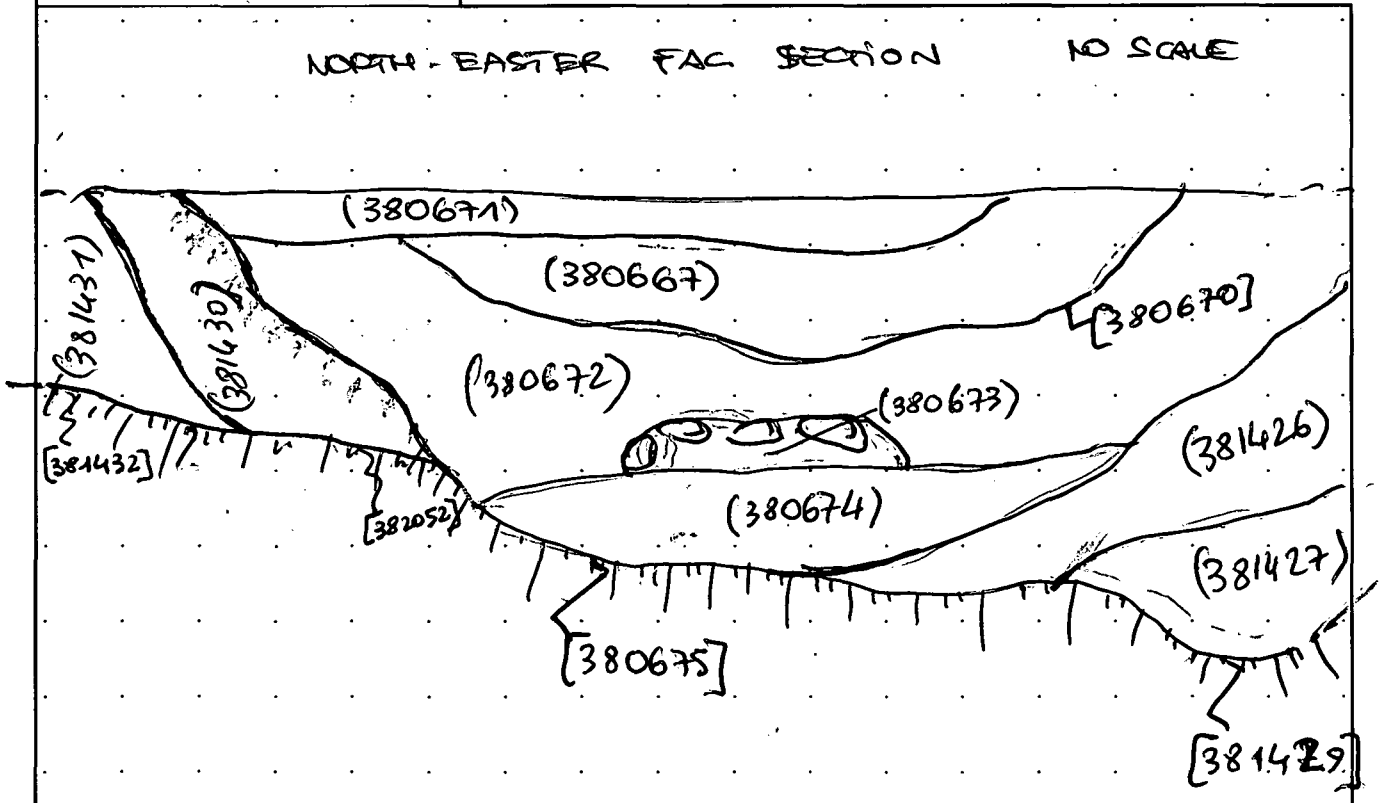

Intentional recut into a previously ditch [380674]. Visible in both the sections. Investigated in a 2 m slot.
Filled by three different deposits, in particulary by a black deposit (380667) rich in archaelogical remains (pot and bones).

The cut, interpretable as a shallow ditch, is oriented NE/SW.

Due to the presence in the area of a higher deposit (380671), it's not possible to observe in plant the development of the ditch and the relation with the others ditches investigated in the surrounding slots.

Refer to context 380669

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

APPEARS TO BE A SECONDAY ~~STUB~~ SOIL WHICH OVERLAYS THE UPPER FILLS OF DITCHES [381429] + [380670]. THE FORMATION PROCESS IS NOT COMPLETELY CLEAR, BUT IT IS APPARENT THAT THE LEVEL OF THE BACKFILLED DITCHES WAS BELOW THE NATURAL GROUNDLEVEL, LEAVING AN AREA WHICH SLOWLY BECAME FILLED WITH NATURAL MATERIAL, INCORPORATING POT + BONE FROM THE SURROUNDING AREA OF USE. THE PRESENCE OF THIS DEPOSIT MADE IT IMPOSSIBLE TO SEE DITCHES [380670], [380675] + [381429] + THEIR ASSOCIATED FILLINGS IN PLAN. IT HAS BEEN OBSERVED THAT THE WIDER AREA IS OBSCURED BY THIS DEPOSIT.

Refer to context [380669]

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This context (380672) is a second and main filling of the ditch [380675]. Appears to be a natural infilling of the ditch, ~~and~~ it is a bit heterogeneous context, with moderately low-porosity, ~~light~~ mid brown color and mainly silty and gravelly composition. There wasn't found any artifact associated with this filling and it has a maximum thickness of 0,70 cm.

It covers directly the contexts (380673) and (380674) and it was truncated by the cut [380670] of a possible shallow ditch.

~~We~~ we believe it to be a natural infilling as besides there weren't identified any associated artifact, there isn't either any further evidence of being a deliberate backfilling.

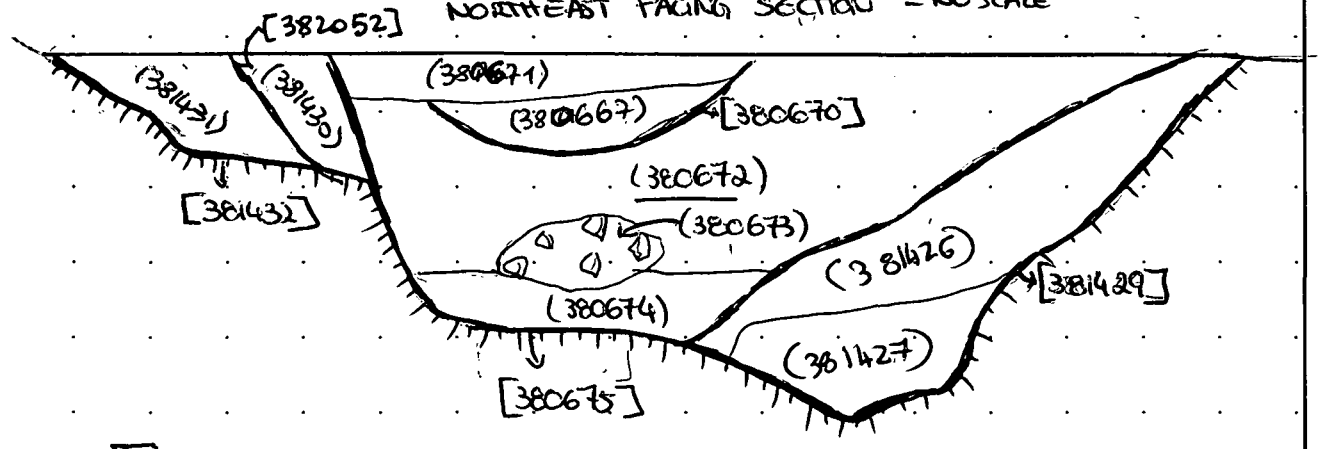

Although this context is not reflected on the ~~3~~ Southwest facing section as the depth of this ditch [380675] gets less and less abrupt as we move towards NE; it is important to include above both sketchs to understand clearly the stratigraphic relationship within the ditch. The ditch ~~cut~~ that this context fills runs in a SW-NE direction and looks to ~~have~~ ~~its~~ have its terminus within the slot.

Refer to context [380675]

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This context (380674) is the primary / first filling of the ditch [380675] being a natural infilling. It's strongly clayey in its composition and presented with some chalk flakes, some few rocks of about 0,20m (average) and had a blueish grey colour. It had a considerable amount of pottery sherds together with some occasional faung bones and it is really compact

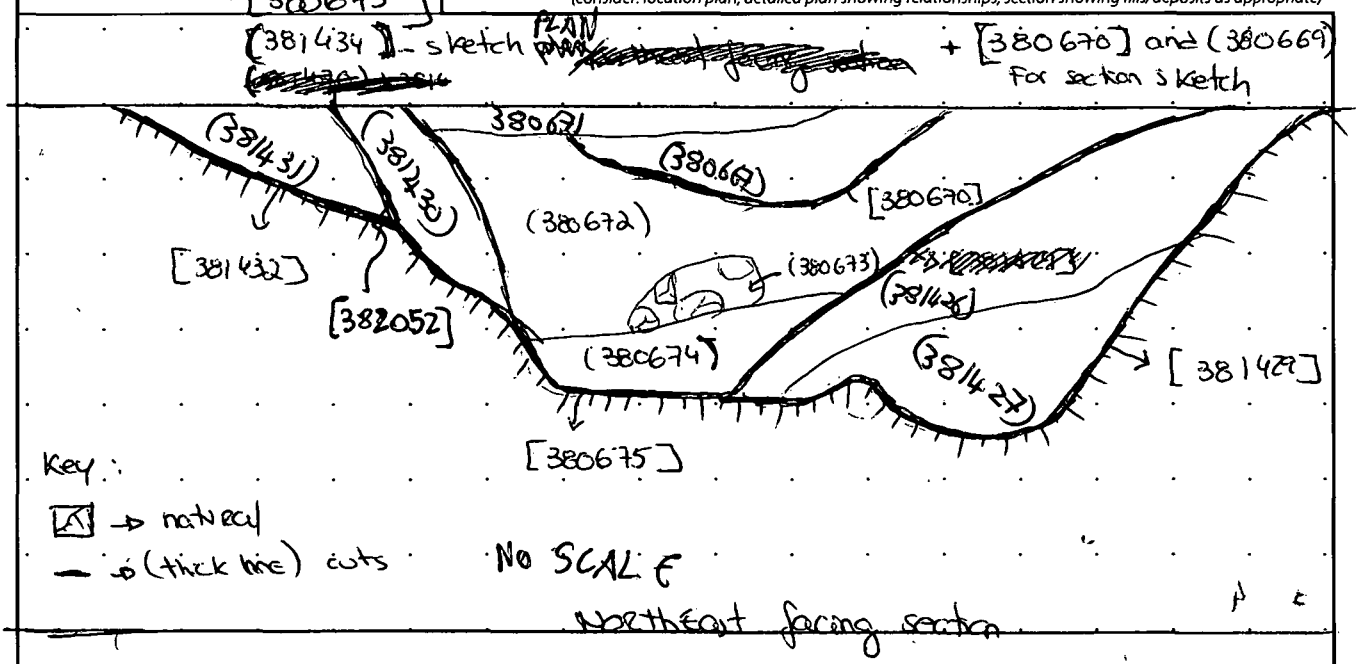

This context appears to respond to the common features identified on this site, as the first/primary filling of ditchs. It appears to be a mixture of remining spoil with the natural clay, lying on a water table level.

It had, on average, about 0,30/0,40 cm thick and it was on the very bottom of the ditch [380675]. This ditch has W-E orientation and appears to have its termians within the limits of this slot as on the Northeast section, it slopes up abruptly. On another hand, it should be consider that in the same section we only have reflected this contexts on a higher depth as the (380672) does probably fully cut in here by the [380670] - being only reflected on the SW facing section - SEE context sheet (380672)

Refer to context [380675]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

DITCH ON E-W ALLIGNMENT WHICH TRUNCATES ~~EARLIER~~ EARLIER DITCHES [381429] + [382052]. ON THE NORTH-EAST SIDE OF THE SLOT THE BASE OF THE DITCH IS RISING AND APPEARS TO BE COMING TO A TERMINUS. CONTAINS PRIMARY FILL (380674) AND TWO ~~PRIMARY~~ SECONDARY FILLS (380672)+(380673). APPEARS TO BELONG TO A ~~LARGE~~ BOUNDARY DITCH OBSERVED IN OTHER SLOTS. THE CHARACTER OF THE INFILLING SUGGESTS THAT IT WENT OUT OF USE AFTER THE PRIMARY FILL AND WAS LEFT OPEN. AT A LATER DATE* A MORE SHALLOW DITCH WAS RECUT ON THE SAME ALLIGNMENT [380670]. THE S/E EDGE OF THE DITCH TRUNCATES EARLIER CUT [382052], BUT THE NATURE OF THIS FEATURE IS NOT CLEAR

* FOLLOWING NATURAL INFILLING (SECONDARY FILLS)

POTTERY FROM THE PRIMARY FILL APPEARED TO BE OF A ROMAN DATE, AND WAS RECOVERED ALONGSIDE ANIMAL BONE

Refer to context 380670

ADDITIONAL INFORMATION

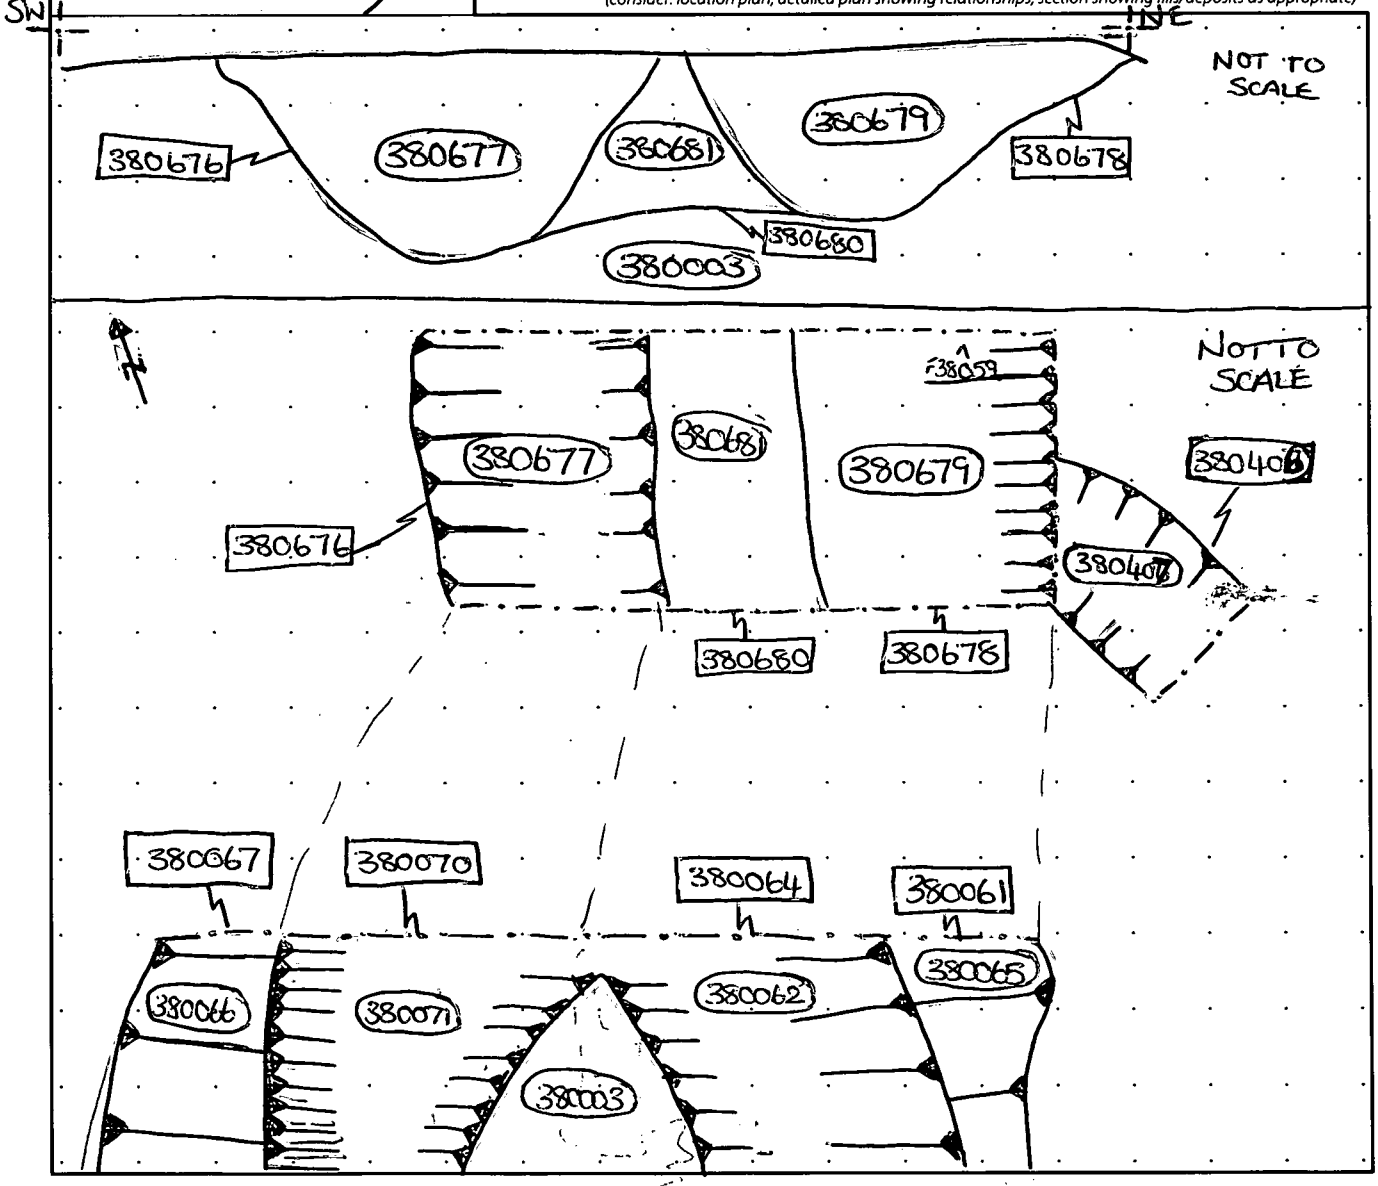

*(any further details that may be important for understanding the context, including items marked * overleaf)*

We found a bone, possibly from a cow or another big animal. It was at the bottom of the context with measures are 9,14 m. length, 9,04 m. width and 0,04 depth. Its direction was N-S.

The stones are ~~frequent~~ occasional, round but above all angular, sizes between 1 cm and 10 cm, some one bigger. Most of them are natural flint and a little bit of sand stones. The chalk is also occasional, more frequent near the subsoil.

Refer to context 380703

There was a base at the bottom of the context, close to the pipe line. Its measures are 0,25 length, 0,08 m. width and 0,04 m. depth. The orientation was N-S.
The stones, mainly natural flint, were very frequent

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

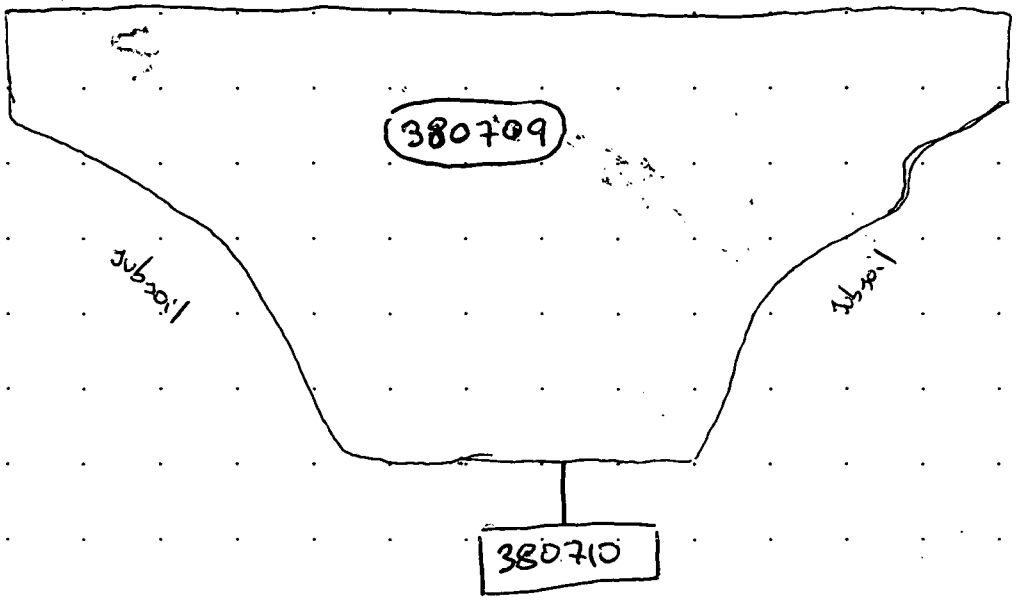

We found up out four bones, probably from a big animal such as cow or horse. They appeared at the bottom of the filling. Also we recuperated seven flagment of pottery, red and black, two of them are lips.

The stones, composed mainly by natural flint, are between 2 cm and 10cm ~~above~~ especially, although there are exceptions. Pebbles are also presente. They appear together little pieces of chalk at the bottom and sides of the ditch.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

About the sides, the steep slopping is in the right side while the stepped is in the left. The feature is a classical ditch, wider at the top than at the bottom where is more narrow.
This ditch is quite similar to another one in its right, whom probably join later.
Regarding the age, is ~~poor~~ surely an iron age - roman ditch, due to the pottery ~~founded~~ found in it.

* [380712]

ADDITIONAL INFORMATION

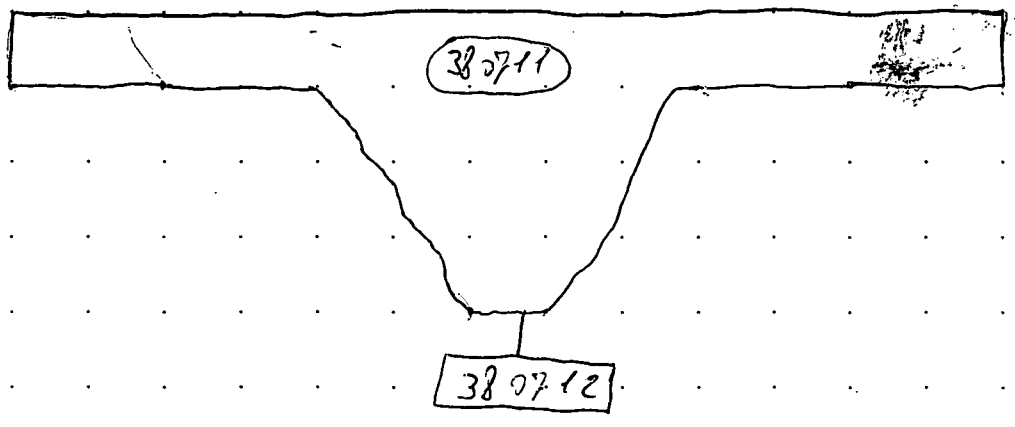

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The filling is very rich in pottery, mostly common pottery. Some of the fragments are ~~sinia~~ Terra Sigillata, one of this fragment is decorated with circles. Also appeared an animal bone.

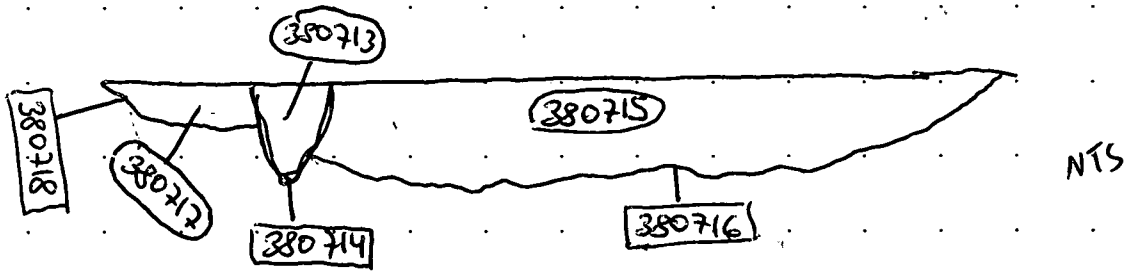

The stones were natural flint and some sandstone, round and angular, between 2cm and 10 cm, with some exceptions. The chalk appeared with more strength on the sides and at the bottom.

Age: possibly roman age due to a fragment of terra sigillata decorated.

Refer to context 380716

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

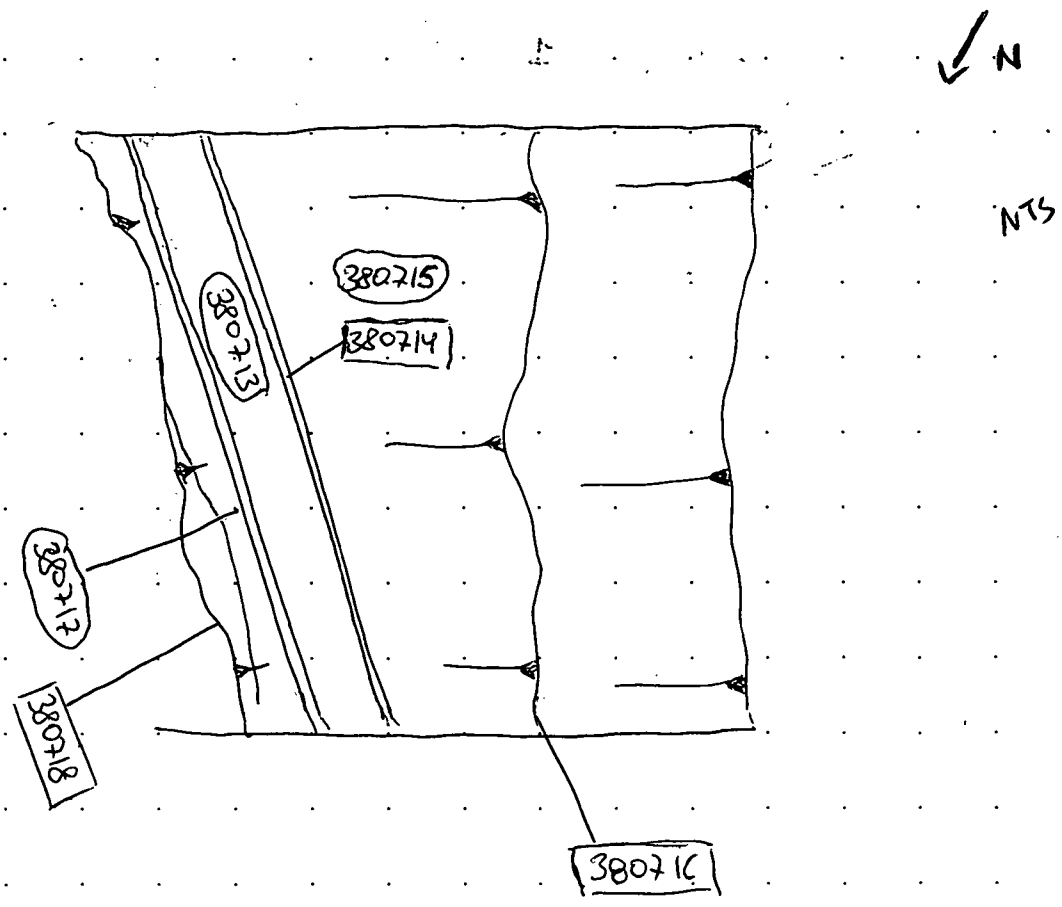

This cut is probably a ditch, close to the ending of it. The depth is shallow, very different from the other ditches around. Is cut by [380714] and related to [380718]. Indeed, both were the same until the cut of the pipeline.

Age: Roman period.

Refer to context: 380716

*(any further details that may be important for understanding the context, including items marked * overleaf)*

We found just one animal bone.
Stones: They were primarily natural flint, round and angular, some rounded pebbles and few sandstones. The flint was spread along the filling together with the ~~pe~~ sandstone, while the pebbles were basically on the sides and at the bottom of the ~~feature~~ ditch. Regarding the age, is very difficult to know exactly which period belongs, probably Iron age - Roman.

UPDATE 18/01/07 SC : THE SECOND FILL OF THE ~~DITCH~~ CUT [380721] COMPACT COMPOSITION, ~~MOTTLED~~ DARK GREY COLOUR, SILTY CLAY COMPOSITION, OCCASIONAL ROUNDED AND ANGULAR STONES AND JUST ONE PIECE OF BONE INSIDE. THE SHAPE OF THIS FILL WAS REINTERPRETED, ~~NOT~~ AS RESOLVING THE THICKNESS TO 0,56 m.

Refer to context 391~~6~~77 ~~380720~~

~~This sh~~ We excavated the ending of the ditch, which runs E-W. The sides and the ending were very clear, formed basically by gravel and clay.

Age: Iron age - Roman.

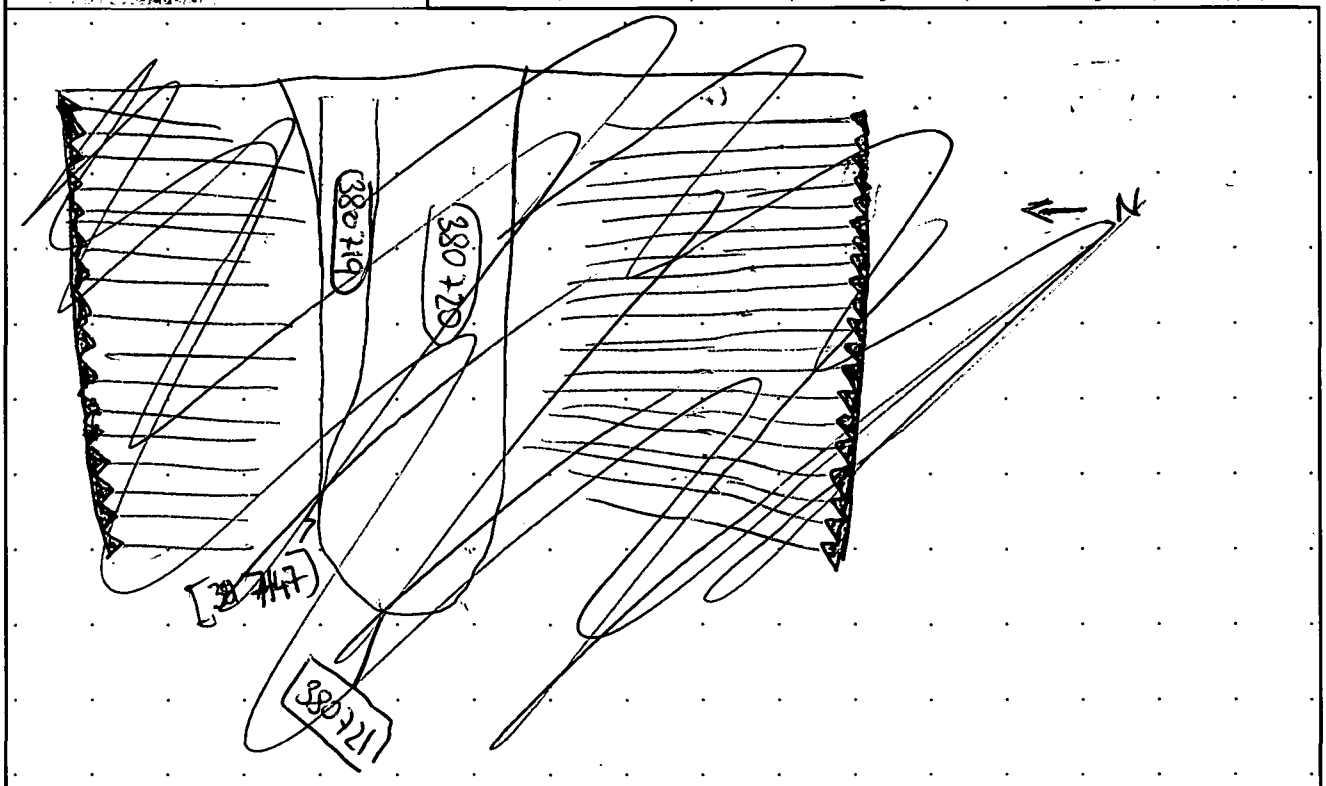

UPDATE 18/01/17 SE: DITCH RE-CUT ~~[illegible]~~ WITH 2 FILLS INSIDE (381678) E (380720). IT CUTS [381743] AND CUT BY [381672]. IT HAS IRREGULAR SHAPE, STEEP SLOPING SIDE, CONCAVE BASE.
THE SHAPE OF THIS DITCH CUT IS CHANGED IN THE SECOND INTERPRETATION, REDUCED IN THE SW SIDE WITH ADD OF THE PITCH CUT ON THE NE SIDE.
SEE THE NEW ~~[illegible]~~ 58158.
THE AREA WAS SURVEYED.

381677

AREA SHOTS - 380235-18

PLAN # 38361 (P. 112)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Pit of medium size, on a ditch [380748].
This pit cuts to the ditch and cuts a linear feature [381752]. Possibly a rabbit pit?
This pit cuts another pit [381754]

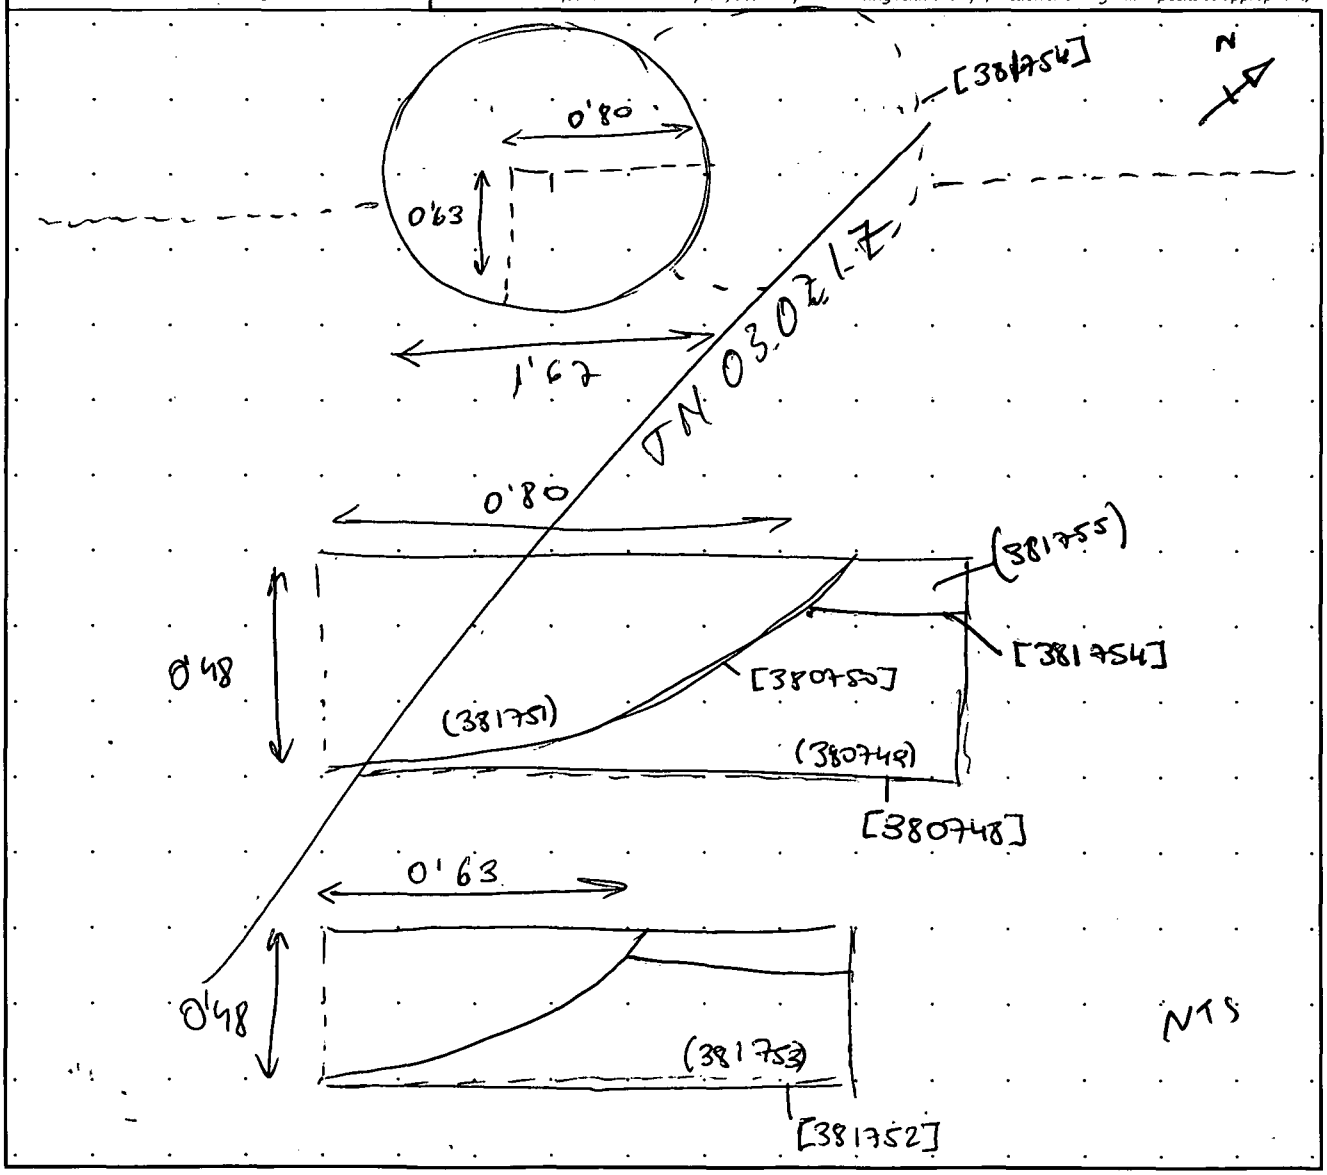

- Firstly we characterise this pit. Looks like that in the plan, and after dig dug a part of it, but when we dug all the place we realised that it is not a pit. Only a fill.

- maybe human burial.

This is the terminus of [381212], misinterpred at a pit. The fill is same as (381361)

Refer to context 380750

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Ditch fill (380755) of ditch cut [380758]. Finds inc. A. Bone and pottery. Animal bones were all small in size and only a small ammount were found. Pottery is brown in colour and is poorly made, also has stone inclusions - probably Iron Age. ∴ date of ditch is linley to be late Iron Age. Of the moderate ammount of stones found the majority were flint, the minority pebbles, both were medium - small in size. Although moderate amounts of chalk were found within this fill they only took the form of chalk flecks, with no sizeable pieces of chalk found. Stones were mostly sub Angular in shape, with a small ammount being sub Rounded.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [380758]. Ditch has three fills (380755), (380756), and (380757). Date of ditch - Late Iron Age due to Iron Age pottery found within fill (380755). Original use - Unknown. Possibly a flood defence. Ditch [380758] cuts ditch [380762] which is located SW of feature. Both ditches run in similar directions, because of this it is possible that their original purposes were linked.

Refer to context: 380755

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Ditch fill (380760) of ditch cut [380762]. No finds. The occasional stones found were mostly flint with some pebbles, both were all small in size. The occasional ammount of chalk found took the form of chalk flecks. (380760) is cut by ditch [380758]. Date - Late Iron Age or earlier, this is due to Iron Age pottery being found within fill (380755) of ditch cut [380758]. Stones were Sub Angular in shape and small in size.

(8/12/16) Redrawn section sheet #67 38146/38147 shows that fill was quite extensive. Date is not precise as finds unverified. Fill is cut by [381087]. [380758] has been voided/superceded.

Refer to context 380755

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Ditch fill (380761) of ditch cut [380762]. No finds. The frequent stones were small and gravelly in nature. Fill is likely to have been formed by the sides of the ditch slumping in on themselves. Date - Later Iron Age or ~~later~~ earlier V. This is due to Iron Age pottery being found within fill (380755) of ditch cut [380758], which cuts ditch [380762]. Stones are sub rounded in shape and very small in size.

(8/12/16) Redrawn section 38146/38147 Sheet #67. No real change apparent. Date not known. Basically it is the interface layer/deposit below the cut [380762] and secondary fill (380760).

Refer to context 380755

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [380762]. Ditch has three fills (380759), (380760), and (380761). Ditch is cut by ditch [380758]. Date - Late Iron Age or earlier. This is due to ~~the~~ Iron Age pottery being found within fill (380755) of ditch cut [380758]. Original use - Unknown. Possibly used as a flood defence. Both ditches [380762] and [380758] run in similar directions, because of this it is possible that their original purposes were linked.
(8/12/16) Slot was extended to record that [381087] cuts this context and related fills. Redrawing took place Sheet ~~#67~~ Dwg 38146/38147. No change to fills. Context remains largely as originally surveyed and no further investigation needed.

Refer to context 380755

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (380765) of ditch cut [380766]. Finds inc. A. Bone. Most were small in quantity and small in size, and both Roman and Iron Age pottery. Stones found inc mostly flint but some pebbles. Stones ranged from small - medium in size and were sub rounded in shape. Date - Roman. Probably Early Roman due to a Roman coin being found within another slot of ditch [380771] and the Roman pottery found within (380765). In addition to the finds already mentioned a dog or fox skull and body was found within (380765), with the head being preserved quite well with the body being rather fragmented. There is no evidence to show that the dog or fox was buried, however it is far more likely that it unceremoniously crawled into the ditch to die. Date - Roman, due to Roman and Iron Age Style pottery being found within fill (380765) and Roman coin being found within another slot of ditch [380771].

Refer to context 380763 (380764) (381459)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (380767) of ditch cut [380771]. Finds - None. Moderate Stones were majority pebbles with some flint, all Stones were small - medium in size and Sub Angular in Shape. Mottled nature of fill is suspicious, potentially the result of organic root disturbance disturbing (380768), (380769) which could have continued further. Edge of fill is uncertain. Date - Early Roman due to Roman coin being found in another slot of ditch [380771].

Refer to context: 380768 (380764)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

IT IS A PART OF STRAIGHT DITCH CUTTED IN BOTH SIDES BY TWO POST HOLES [380789] - [380791]. THE ALTERNANCE OF POST HOLES IN THE DITCH COULD BE REFERS AT THE FOUNDATION TRENCH OF A CONSTRUCTION.

* Update: 6/2/17 (by M.E). I excavated the northern post-hole and I gave my own numbers [381905] (381904). The southern post-hole seems clear in the section but is inside a ~~strong~~ zone with strong roofing where we have said it could be possible to have more post-holes but its difficult to identificate them. We gave a number to this roofing zone [381698].

This is the cut of a post-hole. Is the northern one of two post-holes that cut a ditch. It's a very clear hole that we can see both in section and on plan. We can see a little working action on the edge of the post-hole

Refer to context [80791] [380787]

This is the fill of a post-hole. It's a dark brown fill with moderate presence of stones and chalk. We've got two numbers for this fill because other person excavated the contact area of this hole and a ditch and gave this number ~~tha~~ to this post-hole and later I excavated and gave another number so: (381904) = (387790)
[381905] = [38789]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

GREYISH BLUE FILL, CLAY, ON THE WESTERN SIDE OF THE DITCH [380795] AS (380785), DIDN'T CONTAIN MUCH ANIMAL BONE OR POTTERY. BOTH FILLS OVER THE POTENTIAL BOTTOM FILL OF THE DITCH (380798), THAT IS FULL WITH ANIMAL BONE AND POTTERY. THEREFORE THIS FILL MAY RESPOND TO AN ABANDON PHASE AND A NATURAL INFILLING PROCESS (INCLUDING A LARGE STONE, AS DRAWN IN D# 38454)

GIVEN THE ROMAN POTTERY FOUND IN (380798), AND THE PRESENCE OF THE BIG DARK EVENT ON TOP, THIS FILL, AS 380785, CAN BE RELATED TO A GAP BETWEEN ROMAN PHASES IN THIS PART OF THE SITE

DARK FILL, ONE OF THE THREE - (381175) (380796) < THAT COMPOSE THE BIG FEATURE THAT CUTS & COVERS THE REST OF EVENTS IN THIS AREA (WITH THE EXCEPTION OF THE LINE OF POST HOLES), IN A NORTH–SOUTH DIRECTION

THOUGH THE EXPLANATION BEHIND THIS BIG FEATURE REMAINS UNCERTAIN, THERE IS A NOTICEABLE LOW AMOUNT OF POT OR ANIMAL BONES IN IT, SUGGESTING A FAST FORMATION.

THIS FILL INCLUDES A FREQUENT PRESENCE OF MID-SIZE STONES, ROUND AND POINTY, THAT TEND TO ACCUMULATE AT ITS BOTTOM.

FOR ITS RELATION WITH THE REST OF EVENTS IT SHOULD BE INTERPRETATED AS ONE OF THE LATTEST ROMAN PHASES, CLOSE POSSIBLY TO A SAXON MOMENT

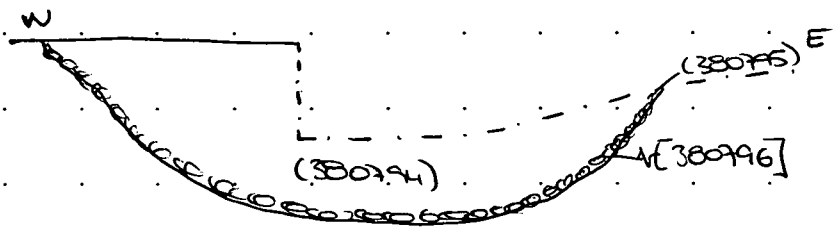

Refer to context

SKETCHES

FIRST OF THE 3 FILLS (38175) (38794) THAT FORM THE BIG FEATURE RUNNING NORTH-SOUTH IN THIS AREA.

ITS COMPOSITION IS BASICALLY PEBBLE, COVERING THE BASE OF THE FEATURE FROM SIDE TO SIDE. ITS HOMOGENEOUSY CAN BE INTERPRETED AS INTENTIONAL. ITS INTERESTING, NORTH TO THIS SLOT, WHERE THE BIG FEATURE NARROWS UNTIL DISSAPPEARING, HOW A LINE OF PEBBLES JOINS THE LIMITS BETWEEN IT AND THE BLACK FILLED DITCH THAT TURNS INTO THIS AREA; MAYBE IMPLYING THAT BOTH FEATURES ANSWER TO THE SAME MOVENT OR ONE IS A LATTER CONTINUATION OF THE OTHER

CUT OF THE BIG DARK EVENT, FILLED BY (380175) (380794) (380795), RUNNING NORTH - SIDE IN THIS AREA, CUTTING ALL EVENTS BUT THE LINE OF POST-HOLES. ITS UBICATION, TRUNCATING THE INNER AND THE OUTTER RING DITCH, MAY IMPLY A STRONG CHANGE IN THE USE OF THE SPACE ON THE SITE, ATTACHED TO A LATE ROMAN MOMENT, MAYBE TO THE BIG ENCLOSURES RUNNING E-W THROUGHOUT THE SITE.

IT NARROWS AND RUNS HIGHER WHEN REACHING THE NORTH AND SOUTH EXTREMES, WITH A CONCAVE SHAPE IN ITS MIDDLE. RUNS ON TOP OF A PREVIOUS DITCH - POSSIBLY THE ~~EAST~~ ELBOW ONE, THAT ALSO GOES NORTH—SOUTH IN THIS AREA

ROMAN DITCH, RUNNING NORTH - SOUTH IN THIS AREA BUT PROBABLY TURNING TOWARDS THE EAST FURTHER ON IN SOUTH DIRECTION AND TERMINATING IN ITS NORTH END SOMEWHERE IN THE AREA.

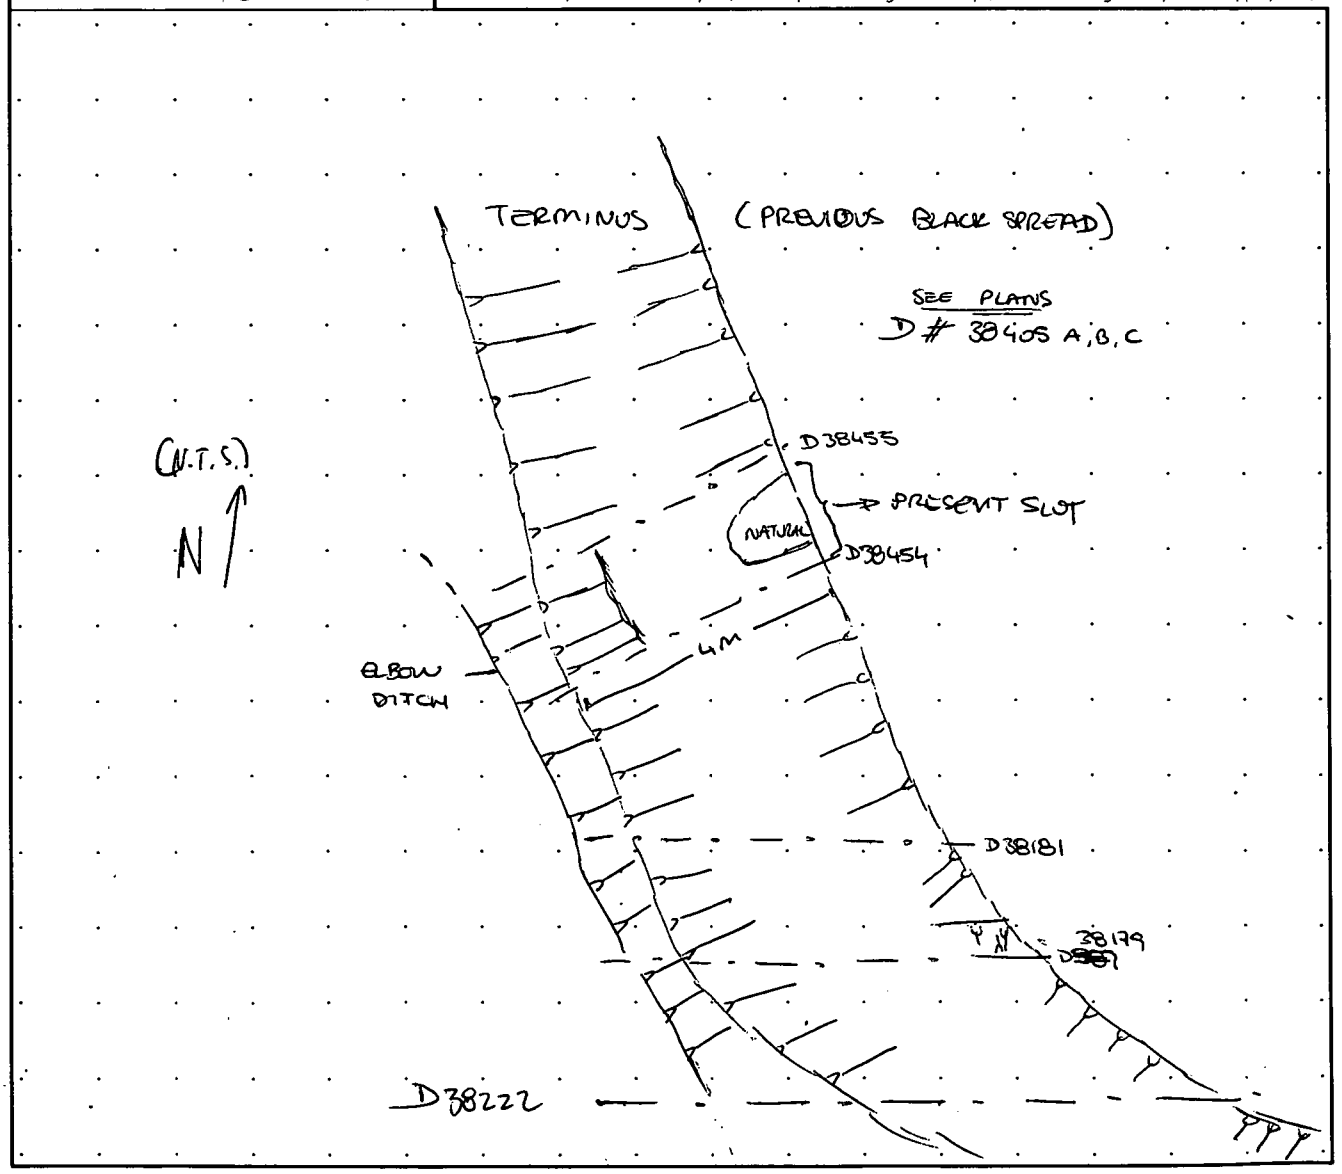

PROBABLY CONCAVE IN ITS BASE, (ITS DEPTH, BEYOND 1'10, HASN'T ALLOWED SO FAR TO DETERMINE IT) FOLLOWS A PROCESS OF CUT, ANIMAL AND POT DUMPSTER IN ITS BASE (380798), AND A NATURAL COLMATATION LATER ON (380785) (380793) (381617).

ITS ORIGINAL FUNCTION REMAINS UNCLEAR, BUT IT CUTS THE ELBOW DITCH [381615] AND POSSIBLY THE OUTTER AND INNER RING DITCHES, BELONGING TO A ROMAN MONUMENT. ON TOP OF IT, THE BIG DARK SPREAD SEEMS TO FOLLOW ITS DIRECTION IN ITS WHOLE EXTENT, AS CAN BE SEEN IN SECTIONS 38181 & 38179 (74 & 74A)

Refer to context (380793)

NATURAL INFILLING OF DITCH [380802] SAME AS (380805), WITH A HIGH CONCENTRATION OF BONES AND POTTERY IN THE SLOT INVESTIGATED. IN THIS FILL THERE WAS A SPECIAL FIND #38093. CATALOGED AS "FE OBJECT".
All the bones are animal.
The fill contained also some white gravel flakes and a relative quantity of sub-rounded small and medium size stones.

Refer to context 380802

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

fill of ditch [380804]. Cutted by a successive ditch [380802]. This Fill CONTAINED FEW ANIMAL BONES AND A FREQUENT presence OF STONES AND pebbles ~~with~~ with ROUNDED SHAPE AND MEDIUM SIZE. INside the fill was also a piece OF grinder stove [F38095]. ALSO, during the escavation, it's observed the presence OF CHARCOAL AND fired clay; It's therefore took a sample of the fill. SAME AS [380811) observable IN the SOUTH FACING section.

Refer to context ~~380804~~

SKETCHES

Curvilinear ditch observable in the South facing section of the slot. Same as context cut [380802], observable in the NW facing section.
The ditch is truncated by a modern pipeline and is relative cut. Therefore is possible to dyarle the original shape of the ditch but is not possible to have a fisic relation between the two cuts. The ditch cut a previus ditch [380814], partially visible in the western side of the section.

Refer to context 380801

Fill of ditch [380816]. Investigated in a 2 m Slot.
CONTAINED MODERATE QUANTITIES OF ANIMAL BONES AND FEW FRAGMENTS OF ROMAN POT.
ALSO CONTAINED A WORKED STONE OF CIRCULAR FORM AND WITH DRILLING TRACES NOT FINISHED ON BOTH FACES. [F38133]
THE FILL CONTAINED ALSO, OCCASIONAL irregular shape STONES OF SMALL AND MEDIUM SIZE AND SMALL white chalk FLAKES.

Refer to context: 380816

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary natural infilling of the small clay pit [380823].
Contained few animal bones and two fragments of ERODED pottery.
The deposit contained also a MODERATE QUANTITY OF STONES. The STONES have medium size (5 cm Ø) and a sub rounded or sub-angular shape.
In the western side of the fill it's possible to observe a concentration OF STONES; HOWEVER IS NOT possible TO INTERPRETATE AS A DELIBERATE BACKFILL.

Excavation Reveiwed by TJB, AP e VP
re-evaluated as Post hole - high frequency of Stones interpreted as collapsed packing Stones from pulled / rotted post upright.

Refer to context 380823

Primary natural fill of a small clay pit [380823].
The deposit contained few animal bones and few fragments of pottery.
It's contained also a moderate quantity of subrounded stones with small size (2 cm Ø)

Excavation reviewed by DB, AP, VP
re-evaluation on Sheet (380821)

Refer to context 380823

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

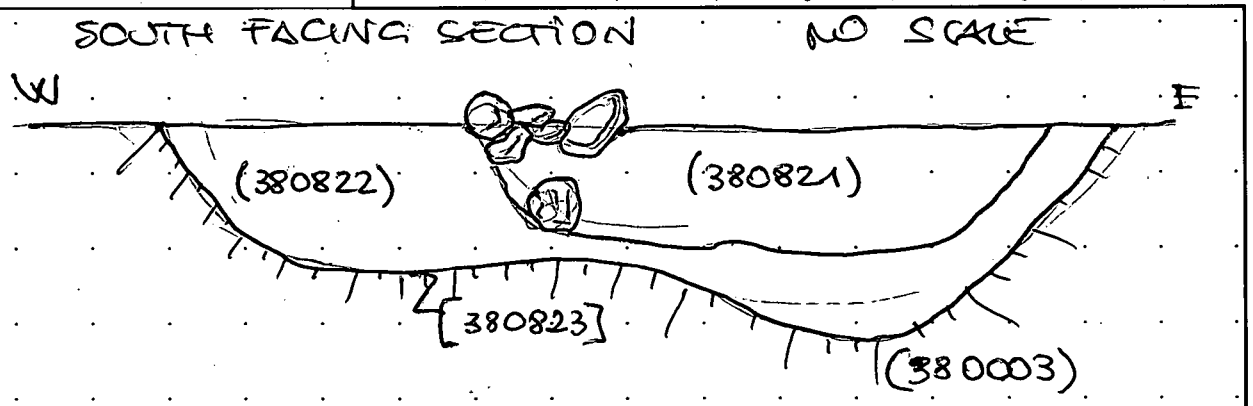

Sub-circular small pit with natural clay in the bottom (380003). probably a small clay pit.

The original shape of the pit is observable in plant; however, in the southern side the cut is truncated by a subsequent ditch [380820 = 380544] investigated in two different slots near the pit. [See location sketches in context sheet 380821 and 380822].

Excavation Re-evaluated by DB, AP, VP re-evaluation on sheet (380821)

Cut of linear. Wasn't very visible in plan, and
Is Is truncating a round curve-linear ditch, possible
remains of a round house.

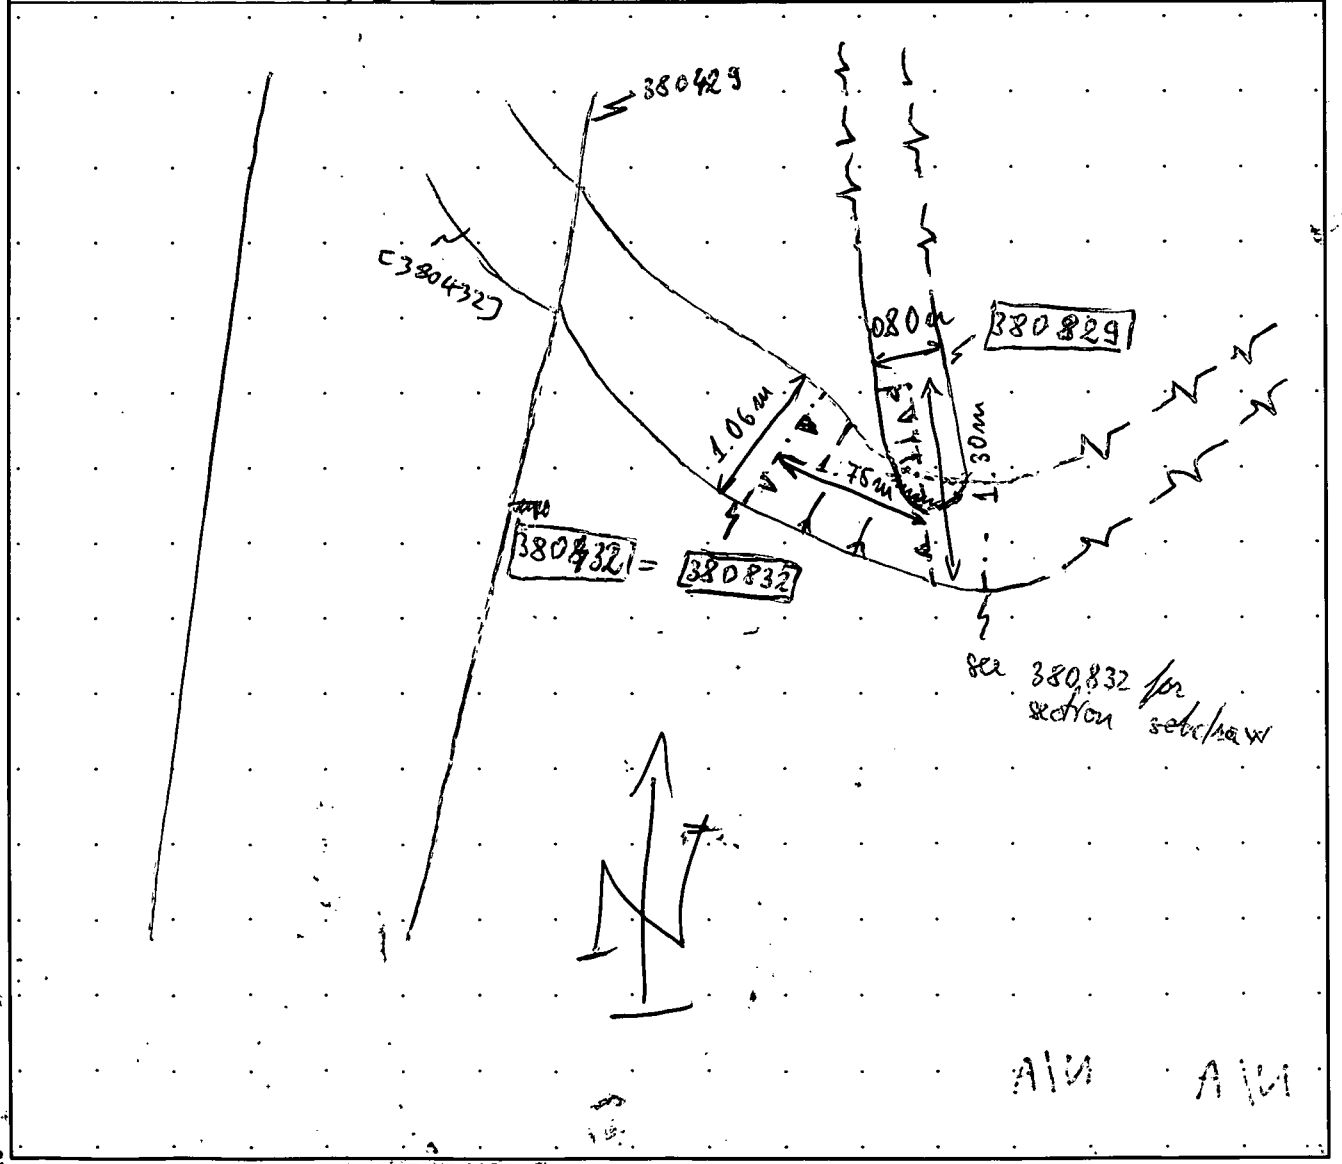

This feature is truncated by curvilinear ditch [380832]
possible roundhouse? see [380432]

L.E. Further investigation of the area concluded that this is rooting from a tree bowl [384289]. Initial stratigraphical relation was false.

Refer to context: [380832] [380432]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of curvilinear ditch. ~~which cuts~~ linear [380830]. ~~same fabric, appears to be in character with another~~ slot ~~was dug to the east~~ [380832]

~~L. This area~~ L.E. ~~this~~ (TM 11.07.17) This area had further investigation, confirming that this ~~..~~ ~~of~~ was part of an round house. ~~The one dug~~ North of this slot the ditch wasn't visible any more due to weathering and because this ~~the~~ was ~~shalle~~ shallower. A Chiquer board slots were excavated further east ~~slot~~. The section was also redrawn about 0.50m east, ~~away from modern~~ and ~~#~~ (S.# 38970), away from natural disturbances.

Refer to context [380831] [380832] [380830]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of Organic Root disturbance. No datable finds.
Finds include - Burnt Bone. (Poorly preserved).
Occasional Stones inc - flint and pebbles. In surrounding areas close to feature there are scatters of charcoal and burnt-bone - possibly related to feature. Date unknown. Shape of Stones - Sub Angular, ~~Sp~~ Size of Stones - Small to medium.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of Organic Root disturbance. Date Unknown. Although in Section, cut [380852] does not cut or intersects with feature [380856], it looks like the mottling from the organic root disturbance does contaminate ditch [380856] although there seems to be no definite cut. ~~Because of this~~ The Strat matrix is reflective of this.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Tertiary fill of enclosure ditch [380863].
The fill appears to be ~~a~~ dumps of material including animal bones and pottery. It has lots of charcoal present in the fill which we think is from near by settlement activity. I wonder if they were filling up hollows along this section of ditch to get rid of their rubbish. including stones, sub angular, to bolster this attempt.

Refer to context: 380863.

[redacted] secondary fill of ditch which has occ' bone and pot in the fill. It is greyish silty clay which makes me think it was from during the use of the ditch which might have been filled over a short period of time as the fill has some depth to it and it is homogenous. contains small sub Rounded gravel Naturally eroded & incorporated into silting.

Refer to context 380863.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary fill of ditch [380863]. This fill is identical in compaction & texture to [380860] but it is mottled red in colour with no finds. There is quite a lot of iron panning and manganese present around site and also evidence for metal working and I wonder if this red mottling is a result of near by metal working. ~~Naturally occurring through erosion of sides of ditch and near by~~

5/12/16 cap Ditch Fill represents a phase of water logged silting which has stood for a period of time before DRAINING. Stones in Fill represent naturaly eroded gravel/natural material, this is evidenced By a high Quantity of IRON PANNING & manganese.

Refer to context 380863.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Longitudal slot of enclosure ditch [380863] SAME AS [380536] & [380350]. The slot was excavated to determine if there was an opposing entrance to what is believed to be an entrance to a curvilinear FEATURE. ditch just to the east [380863] ~~this was~~ also because there was a rise in the base of the ditch [redacted] IN an adjacent slot to the south [380536]. There isn't any suggestion of an entrance present but it does appear to be that there has been a change in the construction of the ditch where more came has been taken, where previously it was (not the case, possibly because the ditch is running closer to the main settlement area it is possible there is an entrance further north. ⊕

I want to make a suggestion that the possible entrance in the curvilinear to [380539] is actually a grave cut put in after what I believe to be a ~~barrow~~ ditch to a barrow. There was a nice decorative piece of metal work pulled from the fill of the ditch. [380539]

cut of linear ditch. relatively small ditch uncertain of function, but judging by finds of animal bones and lumps of pot it was used as some sort of enclosure ditch to nearby settlement.

Refer to context | 380868.

cut of possible drip gully - discovered when cleaning back an area after a slot had been put through a larger enclosure ditch [380802].

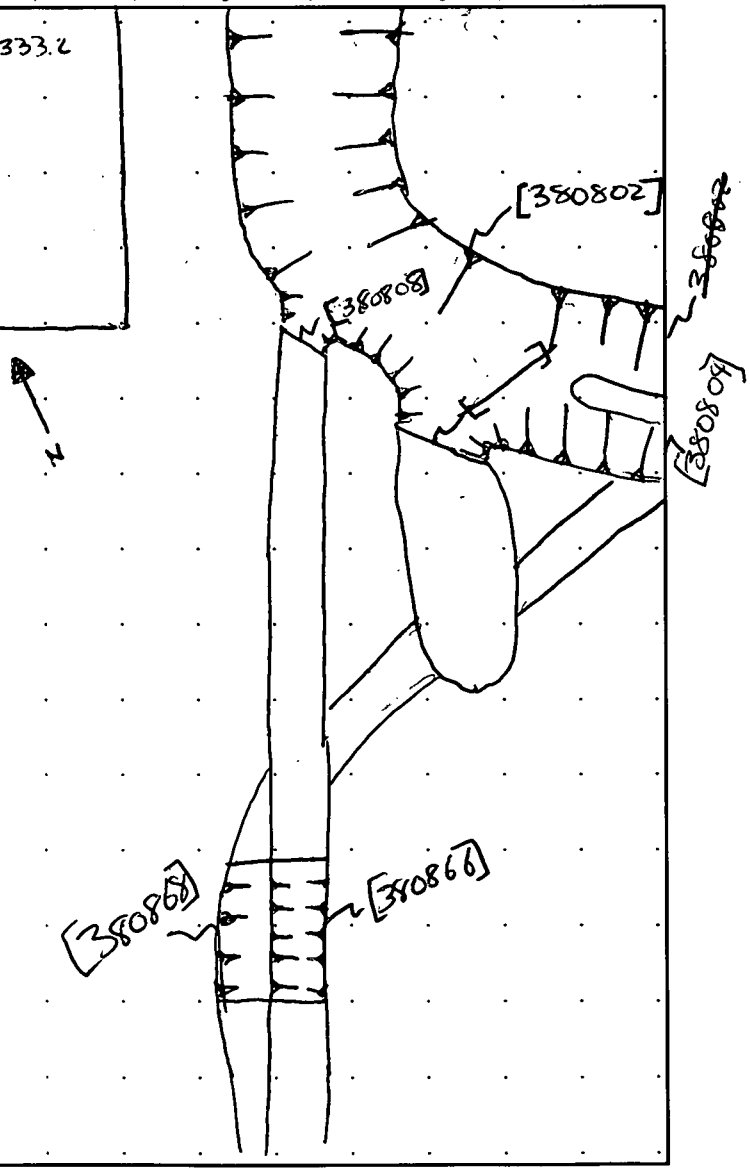

The drip gully is relatively hard to see on the ground but it is possible to track it in other slots and on the ground. NO FINDS present, but possibly from Early Iron age settlement. There is a suggestion of another drip gully just to the EAST. [380660] [380493] cut Numbers of slots put throughs drip gully before it had been identified.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of pit truncating ditch [80549] almost entirely removing the fill at the NW end of the slot (see plan). Single fill with finds of pottery fragments, marine shell and animal bone. Extent of pit continues beyond excavation area, truncating the western side of the ditch.

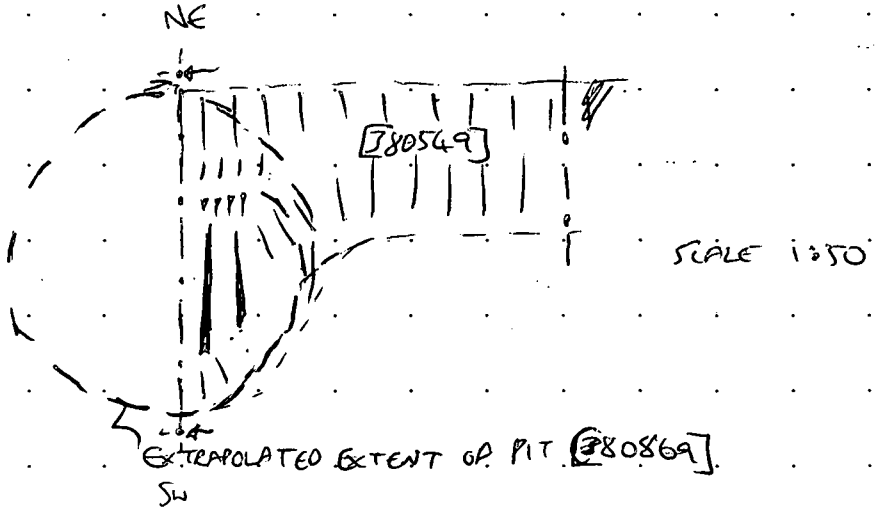

The pit cuts down the natural beyond and within the bounds of the ditch — complete removal of ditch fill at later stage.

Refer to context [80549]

DUE TO EXTREME WATERLOGGING, ONE CONTEXT SHEET HAS BEEN USED FOR ALL FILLS.

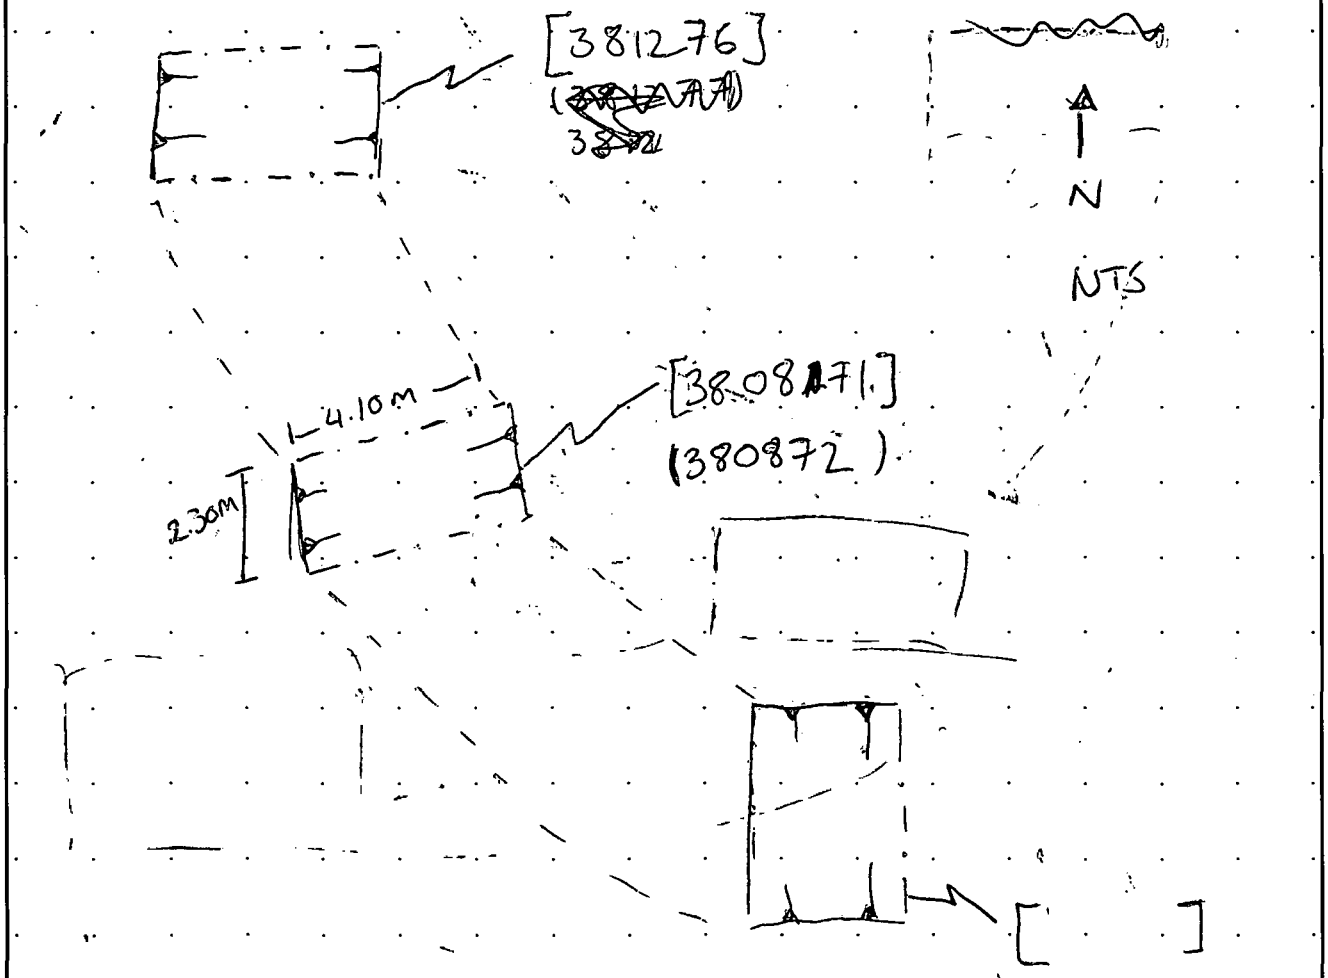

THERE WERE APPROXIMATELY 4 FILLS AS SEEN ON CUT 380871. THE FIRST WAS A DARK BROWN COLOUR WITH MEAN AMOUNTS OF SUB-ANGULAR FLINT & STONE NO BIGGER THAN 10cm IN DIAMETER.
THE NEXT 3 FILLS WERE MOTTLED DUE TO WATER LOGGING BUT VARIED FROM LIGHT/DARK BROWN SOIL WITH BLUEISH & RED TINTS. THESE LAYERS ALSO HAD FREQUENT STONES & FLINT NO BIGGER THAN 10 cm DIAMETER

THE FINDS CONSISTED OF SMALL FRAGMENTS OF BONE & POT PRIMARILY FOUND IN THE TOP LAYER

Refer to context

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

FILLS & CUTS VERY SIMILAR TO 381276-82.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

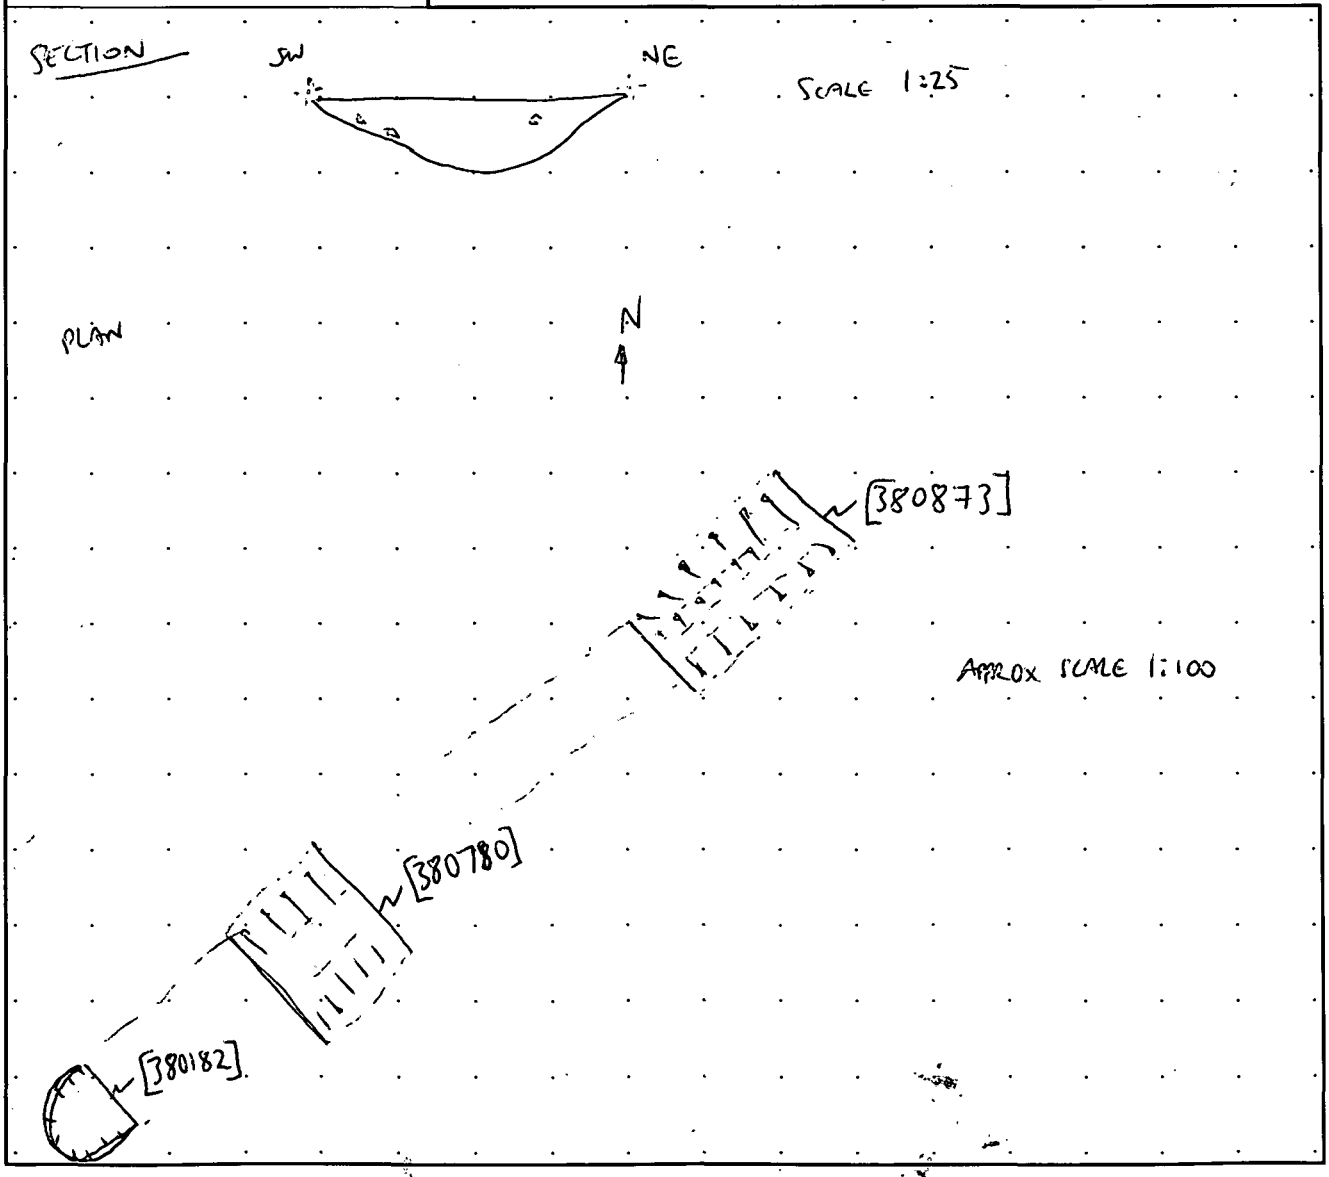

Shallow ditch cut into natural chalky gravel. Single fill with scattered finds of animal bone and pottery. Sides are fairly distinct although presence of clay on SE edge confuses this. Strong linear plan, no truncation or disturbance

Nearby ditch features lie along the linear path extrapolated from [380873]. While it is likely that the ditch extends to the terminus [380182], the lining of slot [380780] of grey clay is significantly different, as is the corresponding section profile. This may be due to truncation and/or geology.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of Kiln/ OVEN, closely ASSOCIATED with [381358]. Clay lined. No DISTINCT Colouration due to High intensity heat Suggests low temprature OVEN.

Fills Suggest use as a Refuse pit Simular to disuse of [381358]

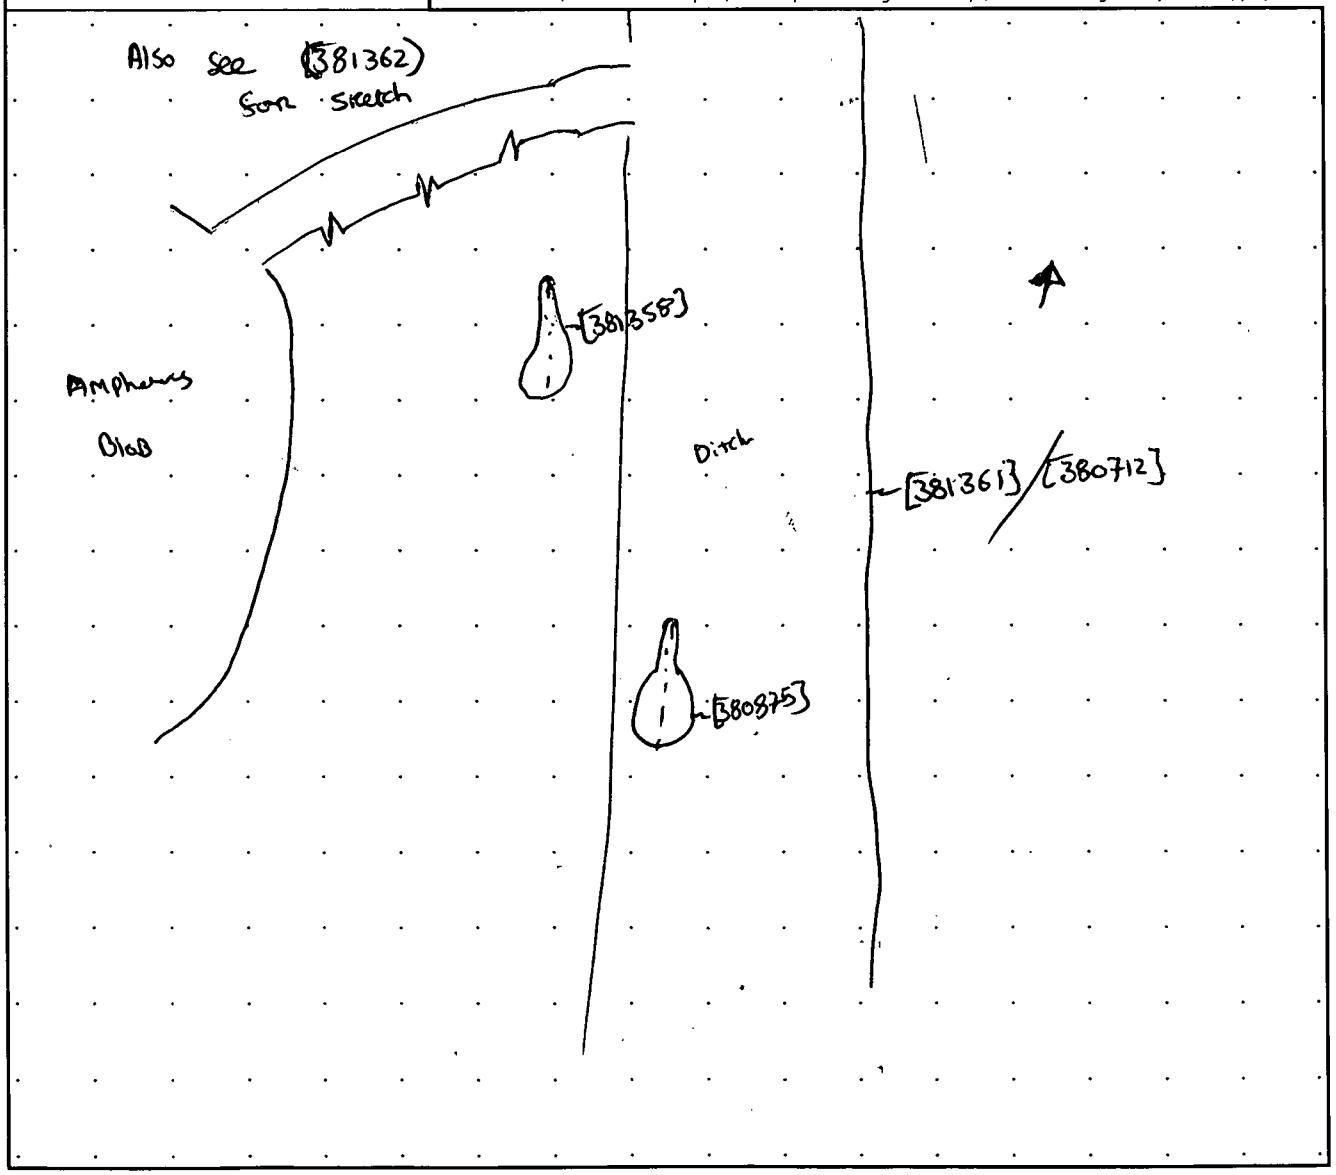

OVEN'S [381358] & [380875] are associated with Potential Ring Gully, unEXCAVATED at time of writing, Seen in plan, Not GPS.

Cut Shows distinct RAKE out to the NORTHWEST.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of waste pit filled with interchanging layers of dark organic soil and light grey heavy clay. Finds of pottery and animal bone consistent with refuse deposited and covered.

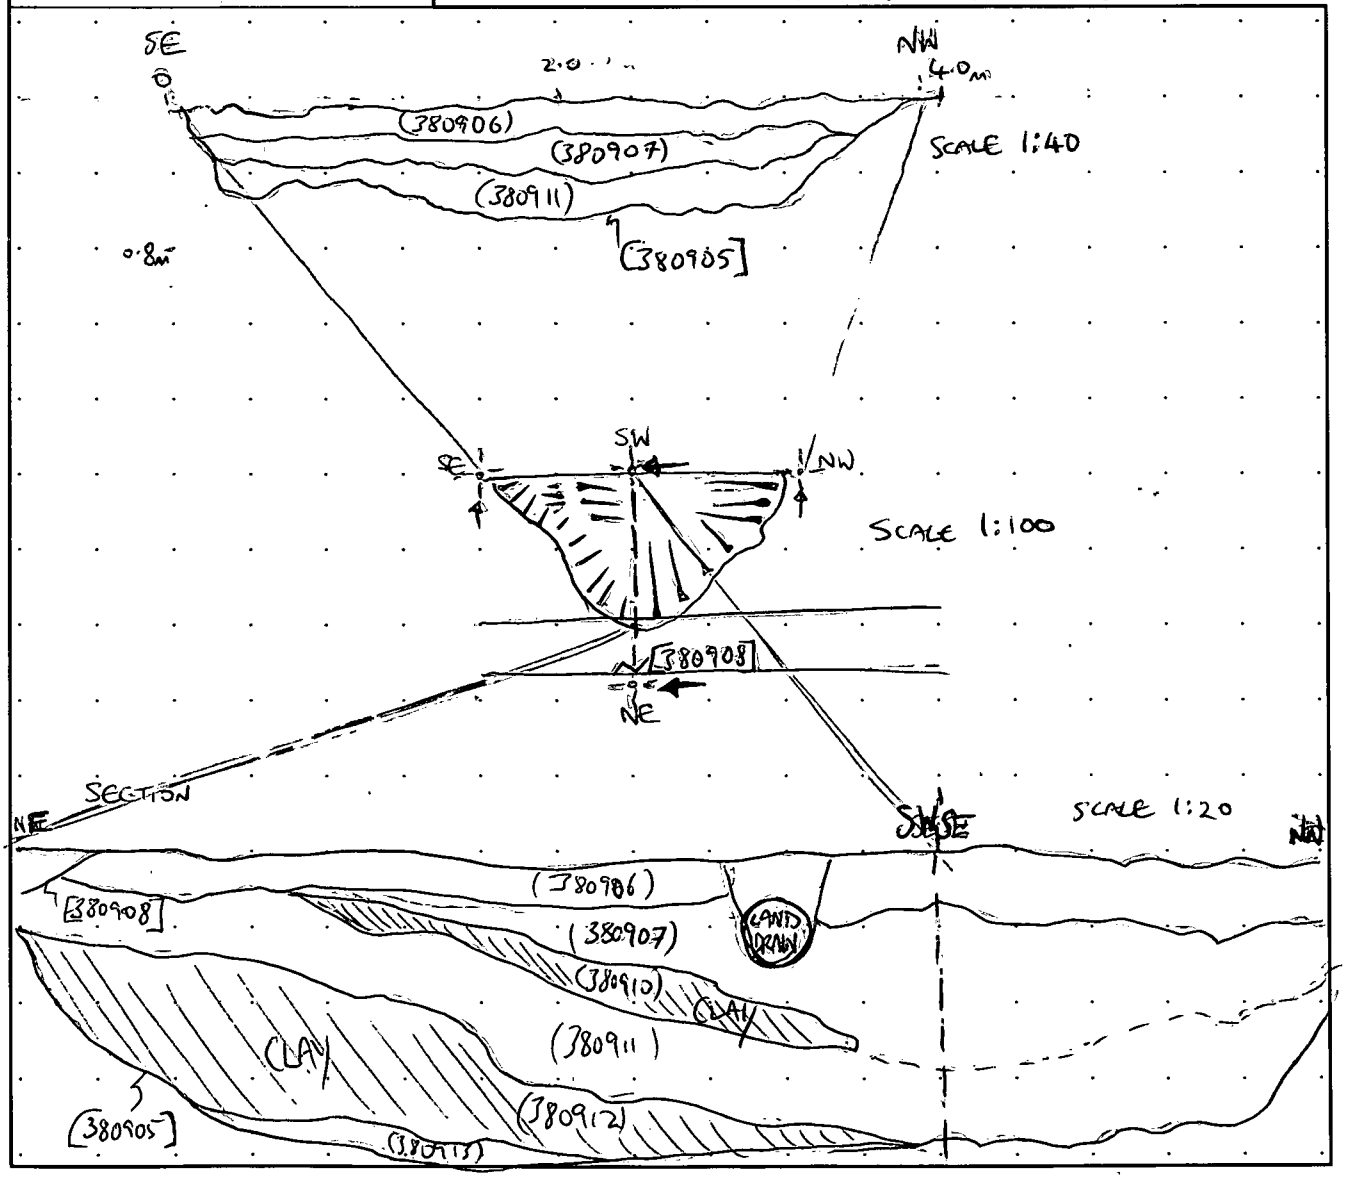

When extended back southeastward, the NW facing section (D# 38073) was removed along with contexts (380910)+(380912) to leave a full NE-facing section of the cut and 3 fills – see sketch.

16-12-16 Further excavation to remove the rest of the pit [380905] has resulted in the following contexts; [381205]+[381206]+[381207]+(381208)+(381209)+(381210). Refer to those Context sheets.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Top fill of pit [380905] characterised by lighter brown disturbed soil with minimal finds of pottery fragments. Cut by land drain and, at NE ~~end~~ extent, by ditch [380908].

Scattered rough stones and flint <5cm, sub angular + rounded.

16-12-16 Further excavation has resulted in new contexts. See [381205] → (381211) inclusive.

Refer to context [380905]

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Very dark organic layer of soil within a section of interchanging dark soil and light clay layers. Occasional inclusion of angular flint.

Pottery finds were very fragment within this context and the underlying clay fill (380910).

- Animal bone infregment (bagged). Overall indicative of pit for dumping of waste, covered periodically with heavy clay, including pottery fragments and little animal bone.

DIFFUSE BOUNDARY ONTO (380911) IS DIFFICULT TO IDENTIFY DUE TO SIMILARLY DARK SOIL. (See below)

16-12-16 Further excavation has resulted in new Contexts. Please refer to [381205] → (381211) inclusive.

Refer to context: [380905]

Brown/grey mottled fill of ditch Context # 380908. Gravelly w chalk & flints. Base of fill had significantly larger stones. possibly the Continuation of context # 380685.

Only a couple of pieces of pottery were found. No animal bone. The consistency of the fill suggests natural infilling

Refer to context

3801716
3801718

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This clay fill ~~was~~ separated two layers of dark soil above and below → (380907) + (380911) at the NE end of the pit/ditch. The context did not extend to the NW edge, reaching approx 0.5m out from the NE-SW section wall.

Pottery packing was dense in this dumped layer, with several large fragments of a substantial vessel. (Orange fabric with grey core, flared rim). This packing was photographed during excavation.

Photo #'s 3801716 + 3801718

Occasional sub rounded stone inclusions ~5-10cm scattered along base and throughout layer.

Date - Roman in keeping with use of pit for dumping refuse, wheeled pot etc.

Refer to context [380905]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Second dark layer of soil bordered above (partly) and below by light grey clay. Some pottery finds, possibly drawn from clay dump above (380910).

Compact deposit of animal bone recovered from deepest part of context close to SW section wall. At this point the upper boundary with slightly lighter (380907) is difficult to determine.

Some shell recovered – oyster + snail

Rare occasional sub-rounded rough stones and flint, distributed throughout and close to natural and feature cuts. <5cm

Approx date ⇒ Roman based upon overall wheeled pottery finds, marine diet signs? + lasting use of ditch ~~dump~~/pit for dumping refuse.

16-12-16 Further excavation has resulted in updated contents. Please refer to [381205] → (381211) inclusive.

Refer to context [380905]

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

A dark brown clayey silt fill in ditch cut feature [380915]. Occasional chalk inclusions and several small pieces of animal bone. The fill is thought to be natural infilling due to the lack of finds. Ditch is also quite shallow (~ 30cm) depth & suggests that ~~machining~~ machine stripping had drastically reduced the depth of the ditch.

Stones are large, irregularly shaped flint pieces, & small rounded pebbles

Refer to context 380915

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Terminus of ditch cut. Slot was opened to find the relationship between ditch [380923]/[380087] & a dark linear feature that appeared to cut across [380923]. Excavation revealed the terminus and other feature did not interact. The level of machining had also resulted in the 'linear feature' being largely indistinguishable, & no clear cut lines for a ditch/similar feature could be identified.

An animal jaw (large), one pieces of black pottery & one stone implement with grooved lines were excavated from within the terminus.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Ditch cut, possible termination. The shape of the ditch may have been partially dictated by the presence of the thick, natural blue-grey clay as at the Northern-most point there is a sharp rise in the base of the ditch. This is also being interpreted as an indicator of a terminus. The base & lower 30cm (approx) of the ditch are blue-grey clay, w natural orange/chalk gravel above. The primary fill was initially interpreted as natural, and may be the result of natural silt-deposition (it was mottled orange/brown silt). The ditch curves slightly to the west in the SW corner of the slot. Few artefacts were found (pottery only in the uppermost fill (381204), & less than 10 elements of animal bone) Charcoal sampled from fill (381202).

OF NOTE: The N-facing section cuts the ditch at an oblique angle & ditch is not present in S-facing section.

Refer to context 381202

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Shallow clayey deposit, spotted as running above the three features, being [380946] ditch, the one it cuts [380938] and [380944]
It is believed that it may be a levelling deposit, sealing the two ditches, it is also seen in a slot to the West [380758]
Bones and pottery found, though only the bones have been bagged as this context it is very likely the pottery ended up in the bag for (380932) and can not be distinguished.
There is also a possibility that this is slumped subsoil, though the nature of the finds was very similar to the fill of the ditch which suggests a levelling deposit is more likely.
The stone inclusions were small subangular mostly around 5cm, some up to 10cm length.

Refer to context [380935] [380933]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

DARK GREENISH-GREY CLAYEY-SLT. FILL OF DITCH [380935] CONTAINED frequent SUB-ANGULAR ROCKS OF varying SIZES & SMALL chalk pebbles. ALSO contained animal bone and pieces of pottery. Likely as result of natural infilling.

CUT BY [380933] which represents a recutting of the ditch following formation of this context.

STRATIFIED above [380935] & below [380955]

The full extent of this context was not ascertained as a depth of 1.2m was reached prior to full excavation being complete.

Stone inclusions included a small number of large rounded cobbles (~0.2m in diameter). The small amount of bone/pottery recovered from this fill were collected in bulk with finds from (380932) because the change in context was difficult to detect during excavation.

Refer to context: [380935] [380933]

DITCH CUT WHICH APPEARS TO CUT INTO (380936), (380937), (380938), [380939], (380940), [380941], AS WELL AS CUTTING INTO THE NATURAL.

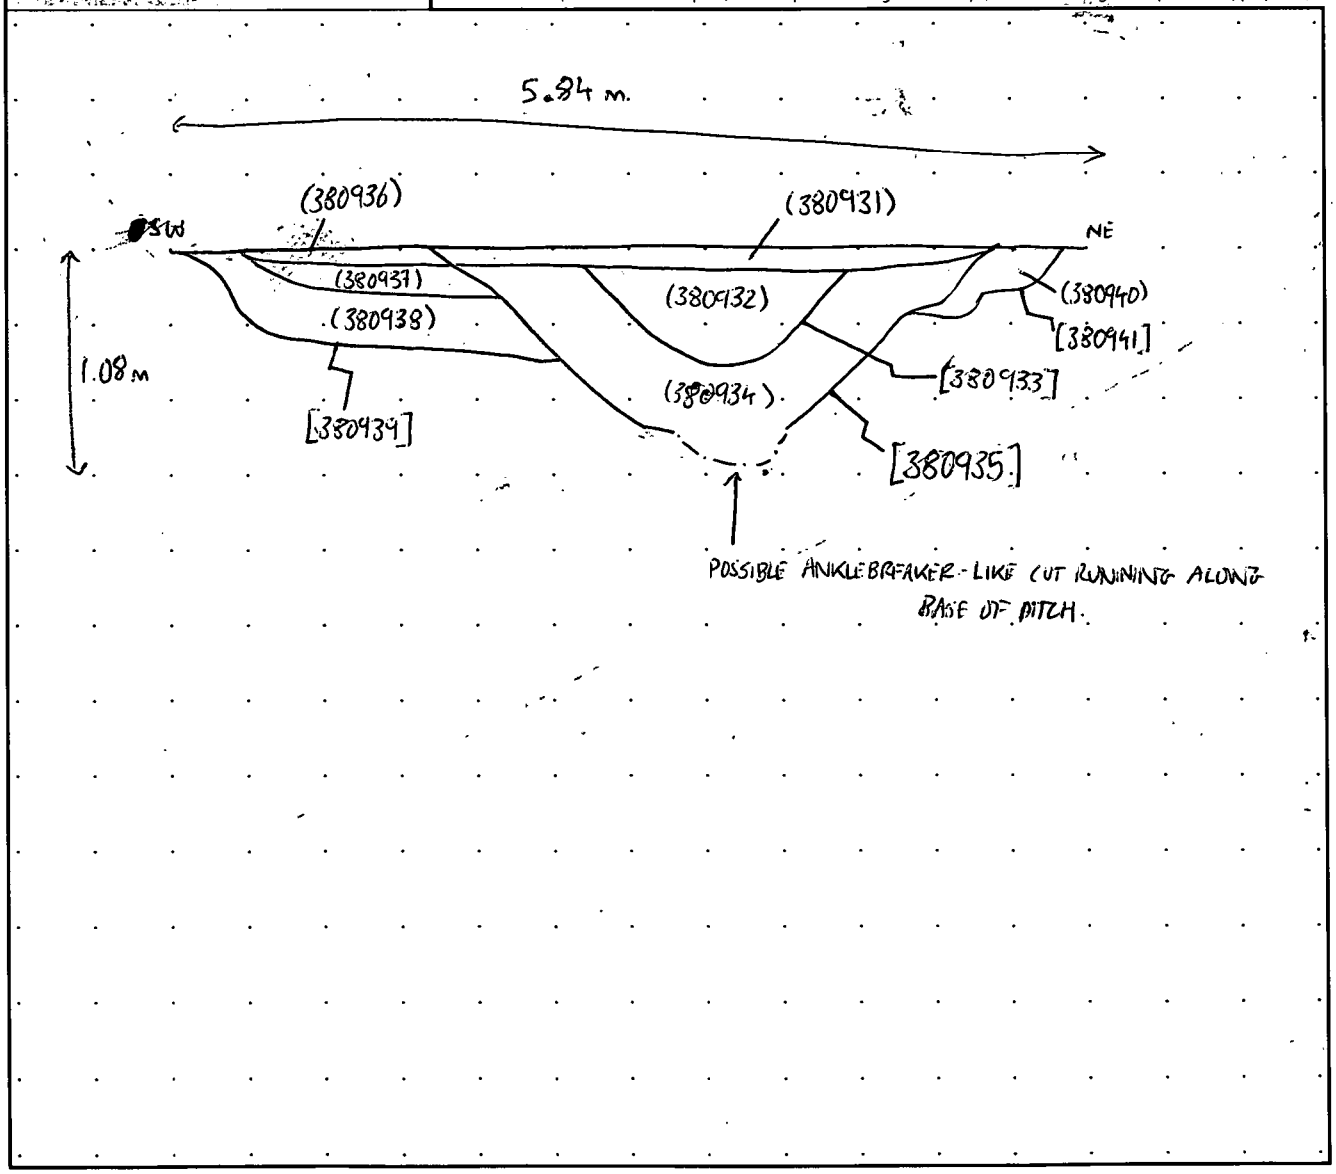

THIS DITCH EXTENDS BOTH EASTWARDS (REFER TO [380425]) AND WESTWARDS (REFER TO [381032]).

IT APPEARS THAT THERE IS POSSIBLY AN ANKLEBREAKER-LIKE CUT RUNNING EAST-WEST ALONG THE BASE OF THE DITCH, HOWEVER THIS WAS DIFFICULT TO ASCERTAIN BECAUSE THE BASE OF THE DITCH LIES BELOW THE WATERTABLE AND WAS DIFFICULT TO EXCAVATE FULLY.

Refer to context [380933]

~~Fill of~~ LEVELLING deposit in [380939], CUT BY [380935]. Contained SMALL chalky pebbles & NUMEROUS STONES of various dimensions. ALSO contained occassional charcoal, POT & ANIMAL bone, very fragmented. Probably formed in order to level off the area for later activities on site or to re-dig the ditch from ground level.

Refer to context: [380935] [380939]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Redeposited natural fill of ditch [380939], using above fill (380938), though not all the way across the feature. quite mottled with patches of light blue grey clay concentrated evenly throughout. Appears to be cut by ditch [380935] and therefore older than it's earlier than being a result of it's construction as originally suspected.

Frequent small subangular stone up to c. 5cm length, white and whitish grey in colour, and very small gravel stone.

Refer to context [380935] [380939]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

THICK FIRST INFILLING OF DITCH [380939], CONTAINING A HIGH FREQUENCY OF ANGULAR STONES RANGING IN SIZE (0.05M – 0.1M IN DIAMETER) WITH NO CLEAR EVIDENCE OF SORTING. THIS FILL WAS SAMPLED OWING TO THE HIGH FREQUENCY OF CHARCOAL PRESENT THROUGHOUT, BUT THE LACK OF ARTEFACTUAL MATERIAL RECOVERED SUGGESTS THAT THIS INFILLING WAS POSSIBLY A RESULT OF THE DITCH BEING LEFT OPEN AND SILTING UP NATURALLY, RATHER THAN BEING DELIBERATE BACKFILL.

ONE SMALL FIND (F38102, A FLINT SCRAPER) WAS RECOVERED NEAR THE SURFACE OF THE FILL, BUT THIS WAS AN ISOLATED FIND. VERY SMALL NUMBER OF BONE FRAGMENTS COLLECTED AS BULK FINDS.

Refer to context [380935] [380939]

CUT OF A DITCH WHICH WAS SUBSEQUENTLY TRUNCATED BY A LATER DITCH CUT [380935], MAKING IT DIFFICULT TO DETERMINE THE ORIGINAL WIDTH OF THE FEATURE.

IN TERMS OF THE SHAPE IN PLAN, THE CUT APPEARS LINEAR WITHIN OUR SLOT, BUT AS ILLUSTRATED IN THE SKETCH BELOW, THIS DITCH APPEARS TO CURVE TOWARDS THE NORTH AS IT CONTINUES WESTWARDS. THE DITCH ALSO APPEARS TO CONTINUE EASTWARDS, BUT THIS EXTENSION OF THE FEATURE IS STILL BEING EXCAVATED

Refer to context [380935]

Fill of E-W ish running gully cut by large ditch [380735]
This fill is quite similar in nature to (380738) the fill of ditch [380737] which could suggest they are close in age, and both are truncated by the larger ditch.
The chalky deposit* (levelling) was above this so the gully was not visible in plan.

Cut of linear E-W gully, truncated by ditch [380935] which runs parallel. In section it is overcut. Not visible in any of the slots to the East or West. Earlier than [380935] but no way of saying if it is newer or older than [380937], could be contemporaneous. Fills are slightly similar, wasn't visible in plan due to [380931] Running above the fill of this gully.

NO FINDS IN THESE SLOTS

Refer to context [380935] [380937]

upper fill of ditch [3809444], natural infilling. The bones were disarticulated fragments of animal bone, a mandible of a small mammal and a complete limb bones of a large animal (cow?) majority of bones from same area of the fill, about halfway down. (c. 5-10cm length)

The stones are small to medium subangular and subrounded, as well as very small gravel. One stone in section stands out as being very red.

The pottery gives this fill a probable Roman date due to the nature, sherd of black burnished ware, a sherd of darker orange pot with grooves, and a bright orange sherd

Refer to context [3809444]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

FILL (380943) INCORPORATES SOME NATURAL (E.G. GRAVEL) ON THE SLOPES, MORE CLAY ALONG THE BASE, AND ADDITIONALLY CONTAINS LITTLE ARTEFACTUAL MATERIAL, LEADING US TO INTERPRET IT AS PRIMARY EROSION OF DITCH CUT [380944].

STONE INCLUSIONS WERE MODERATELY FREQUENT, WITH LARGER ROUNDED STONES (0.1 - 0.15m DIAMETER) BEING RECOVERED PARTICULARLY ALONG THE BASE OF THE DITCH. OTHER STONE INCLUSIONS WERE MORE VARIABLE IN SIZE (0.05 - 0.15 m DIAMETER), BUT WERE TYPICALLY SMOOTH AND SUBANGULAR IN SHAPE.

The finds were similar to those from (380942) but much smaller fragments i.e animal bone fragments, potsherds, but not as distinguishable as those from the above layer

Refer to context (380942) [380944]

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

DITCH CUT PROFILE IS QUITE VARIABLE, STEPPED IN SOME PLACES BUT MORE SLOPED IN OTHERS (SEE SKETCH PLAN BELOW). THIS MIGHT SIMPLY RELATE TO THE SUBSTRATE, WHICH WAS OFTEN SOFTER MATERIAL WHERE THE EDGES WERE SLOPING, BUT WAS TOUGHER CLAY WHERE THE EDGES WERE MORE STEPPED. THE BASE OF THE CUT WAS UNIFORMLY CONCAVE.

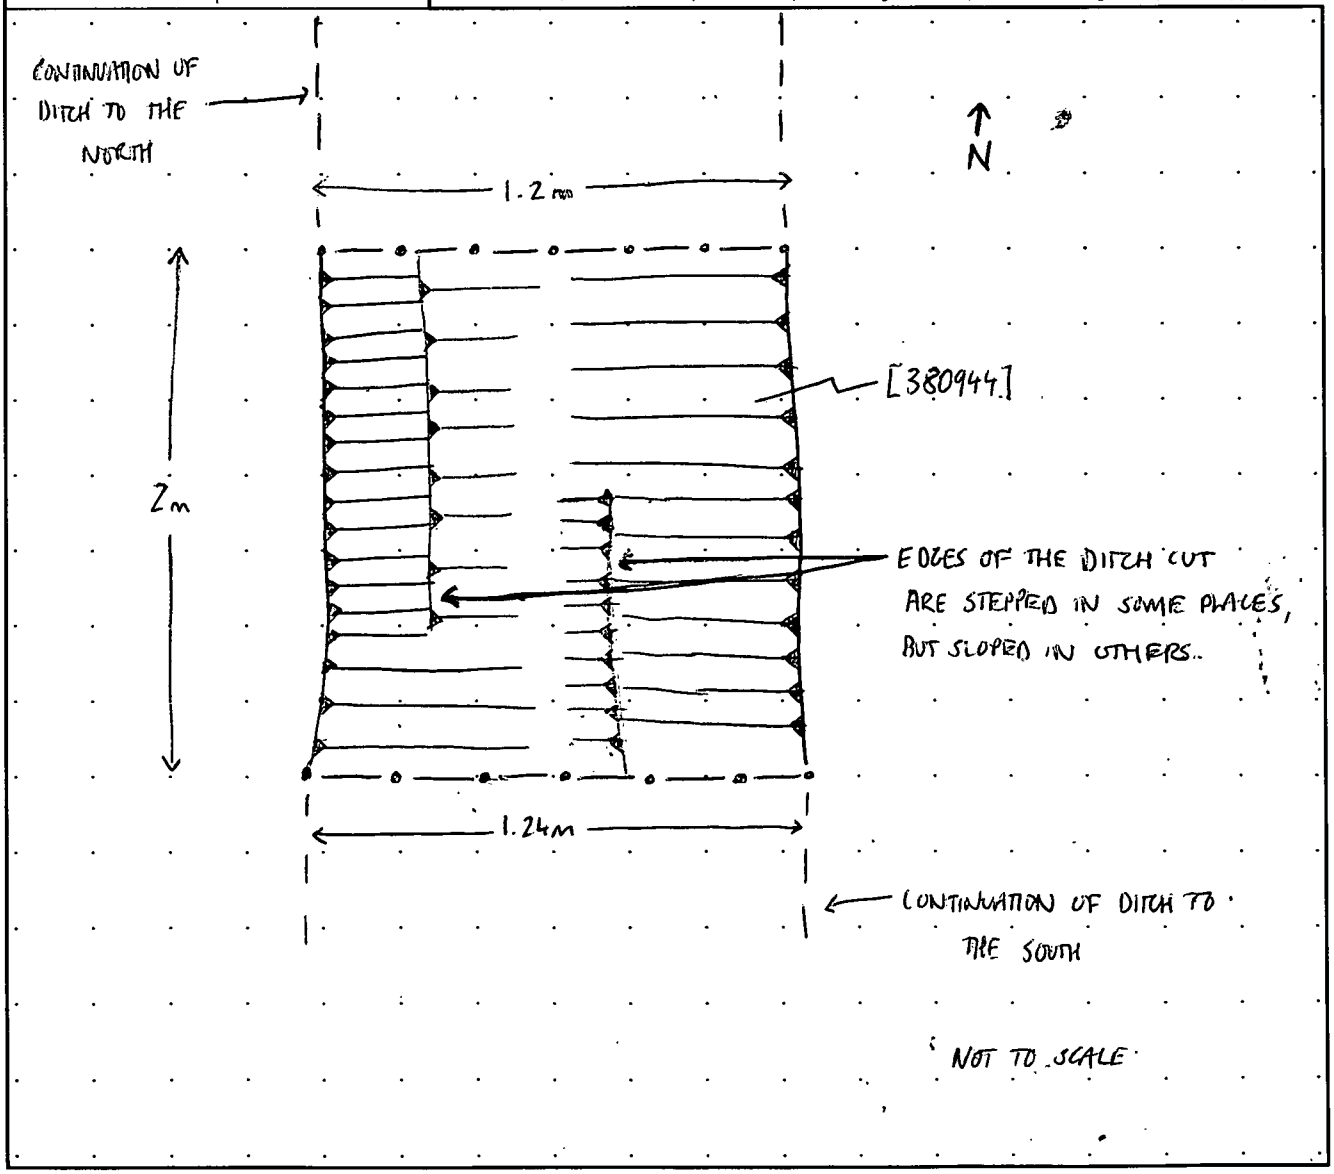

IT IS POSSIBLE THAT THIS DITCH CUT COULD BE ATTRIBUTED TO ROMAN TIMES, GIVEN THAT SOME OF THE POTTERY IN (380942) APPEARS BROADLY TO COME FROM THAT PERIOD, HOWEVER IT IS DIFFICULT TO BE CONCLUSIVE SINCE (380942) IS THE TOP FILL OF THE DITCH, SO ITS CONSTRUCTION MIGHT DATE EARLIER.

AT THE TIME OF WRITING, IT IS DIFFICULT TO SAY HOW THIS DITCH RELATES TO OTHER FEATURES, RELATIONSHIP SLOTS HAVE YET TO BE OPENED ALONG THE DITCH'S NORTHWARD AND SOUTHWARD TRAJECTORY

Refer to context (380943)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of linear feature, probably gully due to it being quite gradually, positively towards the base.* Most of the stones are small chunks Rounded and subrounded stones, 3 larger rocks, largest is 25cm length.

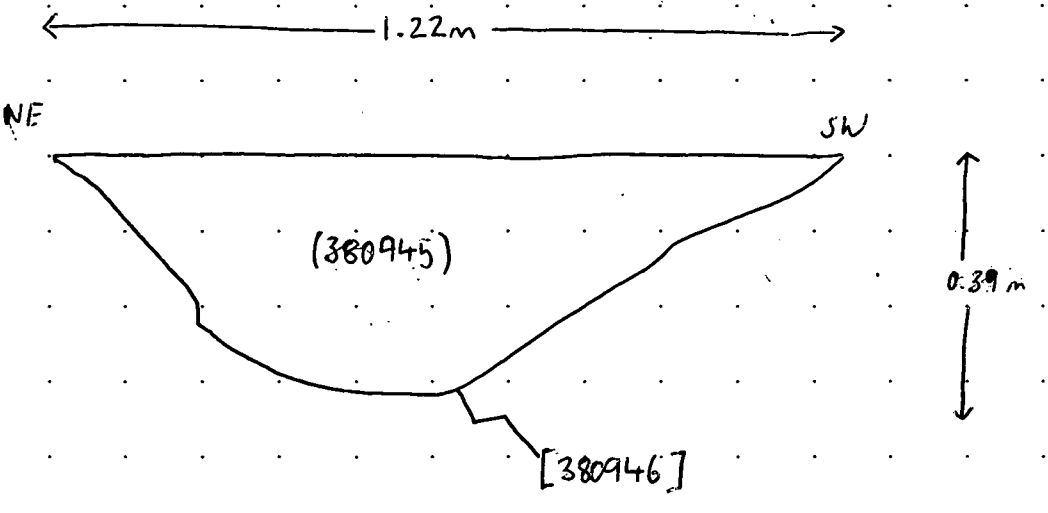

Finds quite minimal, suggesting it is natural infilling. Two broken pieces of animal bone, two pieces of pottery, black/dark orange in colour, one has patterning.

*suggestive of water having run through it for extended periods

Refer to context [380946]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

NORTH EAST EDGE OF [380946] HAS STEEP SIDES, WHEREAS SOUTHWEST EDGE HAS MORE MODERATELY SLOPING SIDES. THE BASE OF THE CUT IS VERY SLIGHTLY CONCAVE IN SHAPE, ALMOST FLAT.

CUT OF POSSIBLE LINEAR GULLEY, BASE IS QUITE FLAT AND GRAVELLY. THIS FEATURE WAS ONLY VISIBLE AFTER CLEANING THE AREA, REMOVING ALL MAN MADE (SUBSOIL REMOVAL, EPHEMERAL SPREAD?)

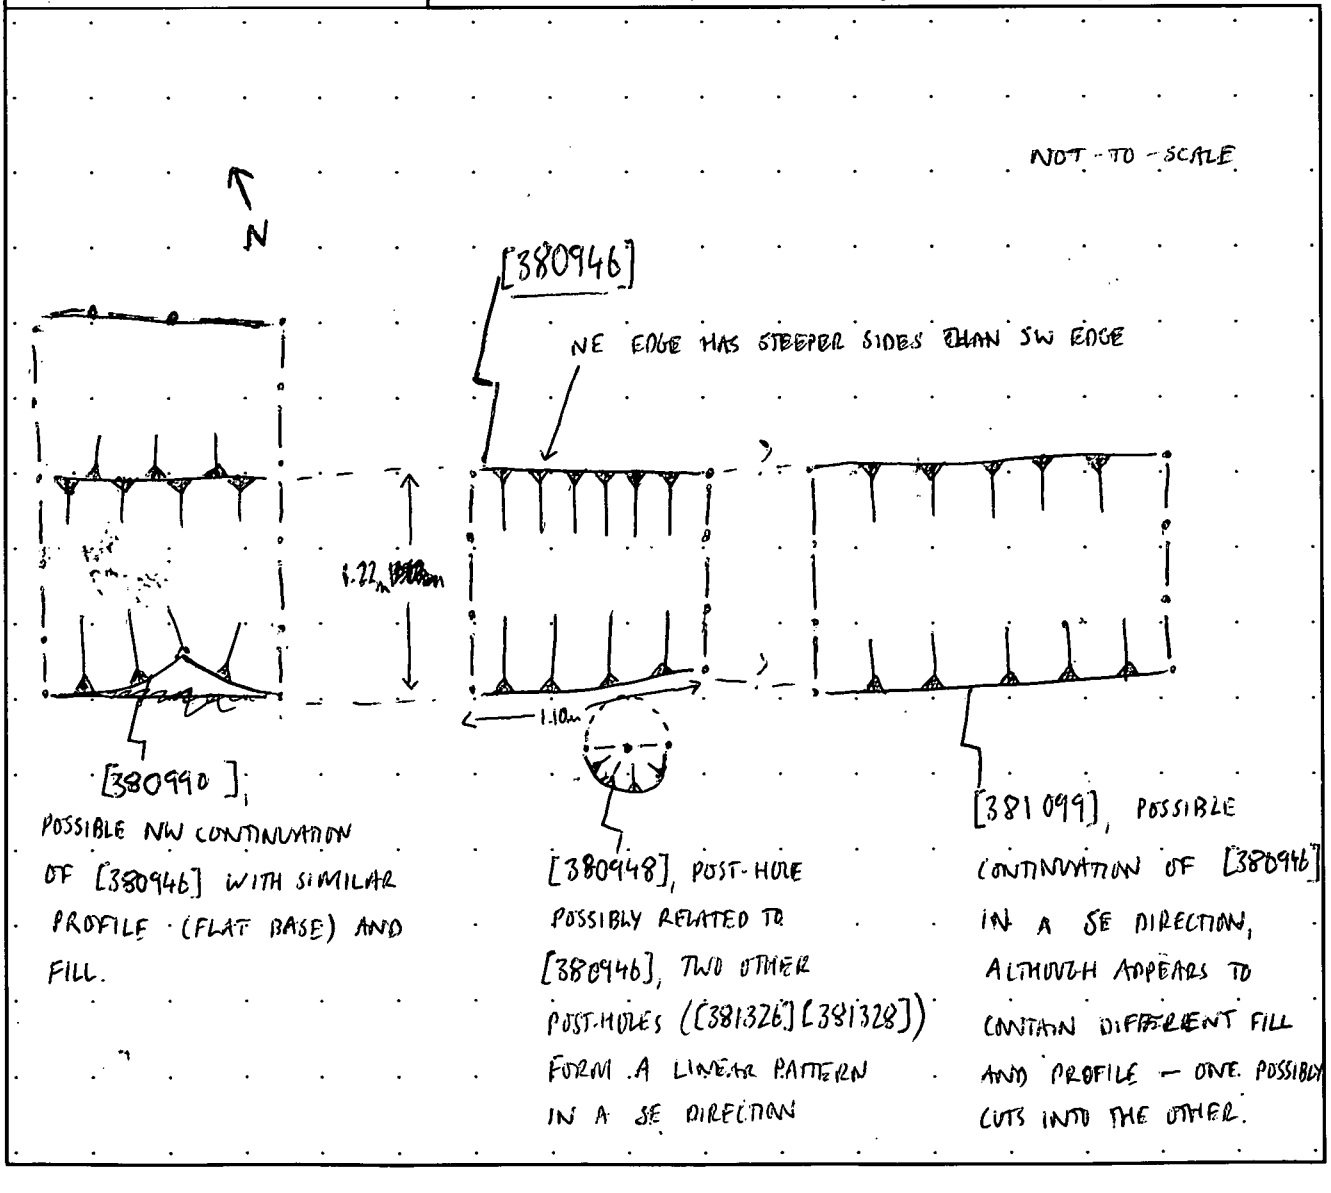

IT APPEARED ON THE SURFACE TO BE AN EARLIER FEATURE RUNNING BETWEEN AND BELOW - LESS DISTINCT REMAINS (REFER TO [381099] TO THE SOUTHEAST AND [380990] TO THE NORTHWEST, THE LATTER OF WHICH MAY IN FACT BE A CONTINUATION OF [380946], THE FORMER OF WHICH HAS A DIFFERENT PROFILE E.G. A V-SHAPED BASE BUT COULD POTENTIALLY ALSO BE RELATED).

IT IS ALSO POSSIBLE THAT THERE IS A RELATIONSHIP BETWEEN [380946] AND AN AN APPARENT LINE OF POST-HOLES RUNNING PARALLEL TO THE GULLEY IN A NW-SE DIRECTION (REFER TO [380948], [381326], [381328])

Refer to context (380945)

ADDITIONAL INFORMATION

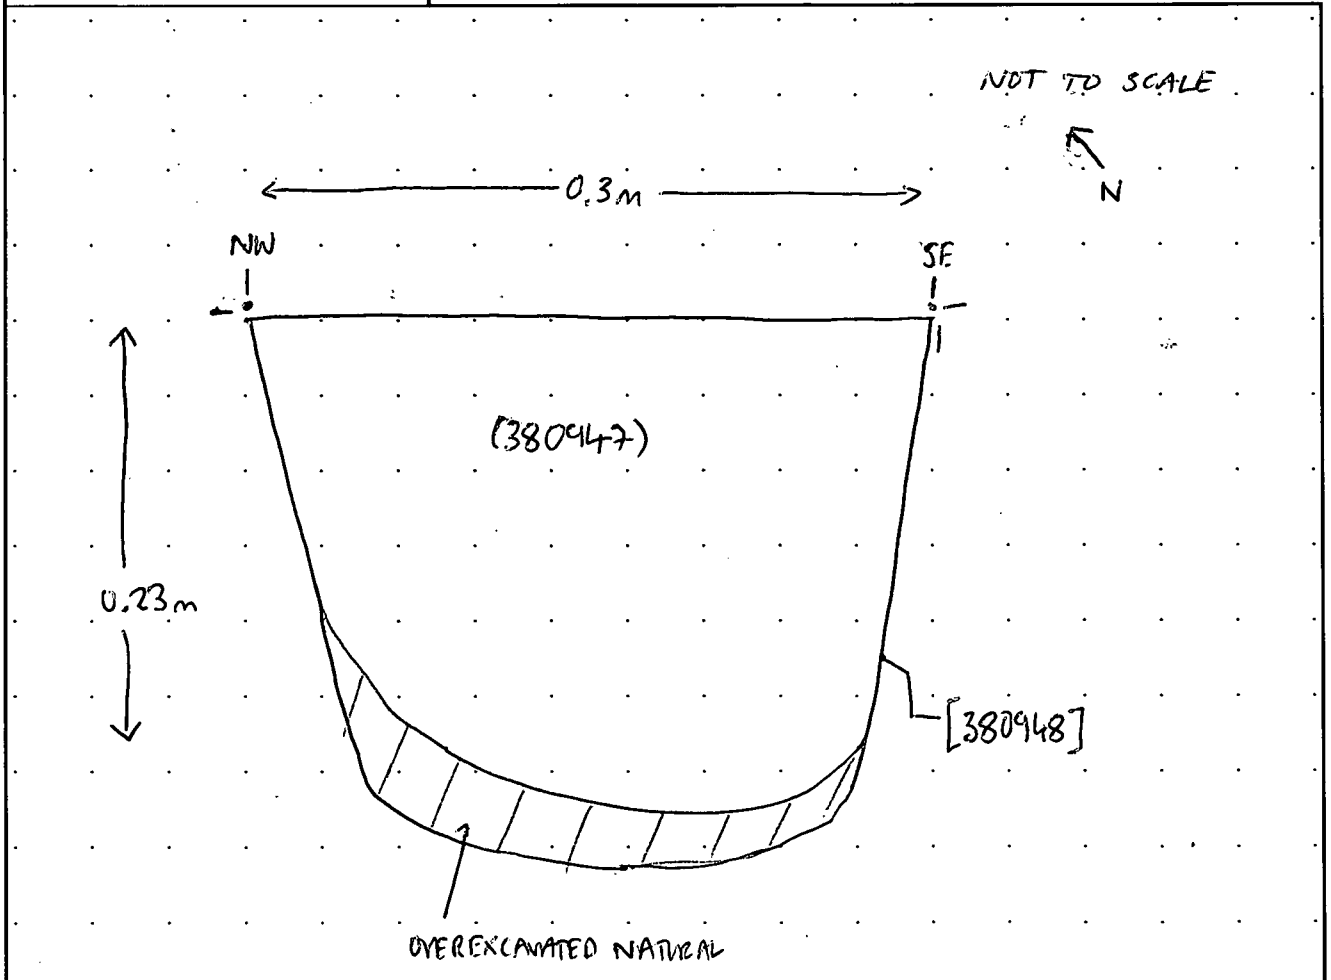

*(any further details that may be important for understanding the context, including items marked * overleaf)*

(380947) IS A SILTY FILL WITH SOME GRAVELLY INCLUSIONS (~ 0.02m DIAMETER) AND OCCASIONAL PRESENCE OF LARGER PEBBLES (~ 0.05 - 0.1m DIAMETER) ASSORTED RANDOMLY THROUGH THE FILL. TOTAL ABSENCE OF ARTEFACTUAL MATERIAL / CHARCOAL SUGGESTS THAT THE FILL IS POSSIBLE RESULT OF NATURAL INFILLING.

CUT OF POSSIBLE POST-HOLE, ELLIPTICAL IN PLAN WITH NEAR-VERTICAL SIDES AND GENTLY-CONCAVE BASE.

IT ~~IS~~ IS POSSIBLE THAT THIS POST-HOLE IS RELATED TO 2 OTHER POST-HOLES (REFER TO [381326] AND [381328]) WHICH FORM A LINEAR PATTERN TO THE SOUTH EAST (SEE SKETCH BELOW). THIS POSSIBLE LINE OF POST-HOLES RUNS PARALLEL TO A GULLEY/DITCH RUNNING NW-SE (SEE [380946] AND [381099]), POSSIBLY CONSTITUTING AN ENCLOSURE-LIKE FEATURE, ALTHOUGH IT IS DIFFICULT TO ASCERTAIN IF THESE FEATURES ARE RELATED.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

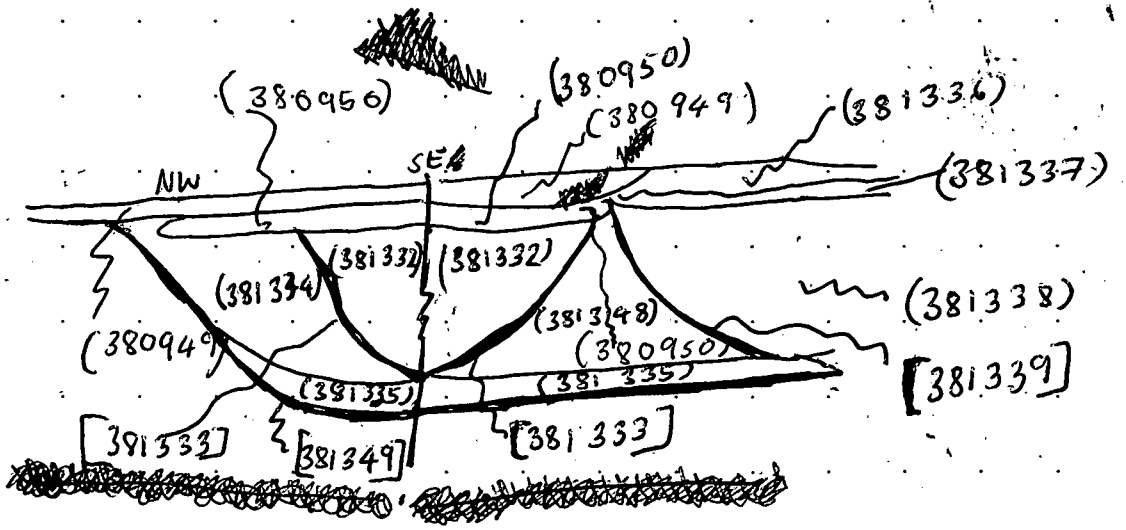

This fill is a mid orangeish brown sandy clay. It is believed to be a sub-soil type layer / spread extending over a ditch feature. This type of layer / spread extends over many areas of the site. This fill contained no finds and occasional angular + sub-angular rocks (< 20%) (0.5 - 3 cm).

Refer to context See [381349]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This fill is a light greyish brown silty clay with patches of orange sand + grey clay mottled clay. It contained v. occasional angular + rounded stones (0-5 - 7cm) ~~and had no finds~~. It is believed to be a ~~remnant~~ remnant sub-soil layer/spread such other spreads are found across most of the site. The finds contained within the fill consisted of pot + bone.

Refer to context See [381349]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Cut of . Curvilinear. (presumed)

The highly irregular nature of this cut when seen in plan combined with heavy ~~exotic~~ extinct Rooting Systems cast doubt on this features anthropogenic Nature.

This combined with the terminal Nature of ADJoing Ditch e The very different nature in both [380965] e [ ] Profile makes ~~the~~ anthropogenic intent less likely.

Refer to context 380 896 + 380963

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Remanent layer, overlaying all the ditches in the slot. Was cutted by a cremation F 380473
Occ & Freq. charcoal small (~~0.0~~ 0.5 - 1 cm) bits.
Occ. roman, an poss. later pot. Near the cremation part of a roman pot. was found in orizontal position, possible part of the cremation funeral goods, and disturbed (by ploughing?)

See S. 38120 ; 38179 ; 38181 ; 38142 ; 38146 ; 38147 for same as layer (posible interpretation as top fill in some of them).

Truncated and disturbed heavely by ploughing

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Single fill of pit. No dating material. Cut by ditch 380977, the upper fill of which 380249 contained pottery (possibly Roman) which gives a terminus ante quem. The fill contained occassional gravel + small sub-angular flints.

Refer to context 380977

SKETCHES

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Made up entirely of weathered down, clean gravel. Filling the bottom of the cut [380994]. Absolutely sterile and one would be forgiven to think that this feature [380994] was a pit but a natural depression as a result of the fill/deposit. However, because it was so, linear and shapes/slumps on the cut edges as evident in Section # 38193 IE particular it has been interpreted as a fill that has washed down at some point before pit was sealed by fills.

Gravel is minute ranging 5-10mm in diameter and smaller.

Refer to context: 380996.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Remnants of the primary fill(?) of oval pit [380996]. Nothing to note about it other than a large sub-rounded rock protrudes from the southern edge of the cleaning trench. Was suggested it was post-packing or a post-hole but it is too ephemeral to be sure. So not recorded as such.

Refer to context 380996

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Truncated remains of a pit. Quite shallow. Function not possible to ascertain but most probably gravel/sand extraction. No base human cuts very close to an alluvial layer. It is possible it is contemporaneous with the linear gully [380990] and acted as a ponding area for water. There is a hint of burnt stone inclusions along the line of this feature, possibly mesolithic.

Refer to context 380996.
