ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

5m of ditch [381771], the terminus. It is a occupation layer, compact, ~~loose~~ grey silty, ~~and~~ sand, ~~with a frequent presence~~ ~~of small and irregular stones~~ dark, ~~greenish~~ grey and silty silt soil. It has a moderate presence of small and angular stones, and a very few pieces of bone and pottery. Small thickness. the dark color indicates an organic contamination. At the bottom we have the natural, and it is all grey clay.

-We have extended the slot. the fill is the same. We have more bone and pottery, but continues being occasional. We haven't realise nothing different.
