If present, the sternum can be grouped with either rib side and the hyoid bone can be grouped with the mandible.
Use the diagram for further information - shade bones present and mark extent of truncations.

Date	66/09/17
Initials	A.P.
Checked by	

This form is incomplete if fields marked with * are empty. Please turn over for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Skeleton mostly intact. Crouched inhumation. Bones in fragile condition ^{poss. bl.} due to soil acidity or due to overmachining. Whole burial area has been sampled. Skeleton appears to be male judging from gonion angle flaring and ~~sc~~ sciatic notch. Skeleton widely sampled. Arms crossed over body in crouched position. Possible animal bone and pieces of pottery found in grave fill, mixed with skeleton. Age determination was not possible on site due to degradation of pelvis. Cranium facing east. ~~or~~ ^{rest of} skeleton facing North. Grave is not rock lined, appears to be cut into natural, however due to overmachining, only a small portion of grave remains.

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)
