this dark brownish, orangeish grey fill (385386) is moderately compact and sandy clay composition. this fill belongs to the ditch [385387] and it's the only one we have recorded in this slot 6'5" x 4'5" as we can see on the recorded section DWN# 88220. We can't see it on the other section because it's ^{a terminus} probably one of the newest features we found which is cutting [385392] and [385390] etc.

Into this fill we found:

- moderated presence of chalk flakes
- occasional presence of roots in the left edge of the recorded section 88220.
- occasional presence of ^{medium sized} animal bones fragments.
- occasional presence of pottery which we identified as possible iron age pottery.
