ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410004) is the latest fill of a pit, composed of three different fillings. It is basically a compact brownish grey silty clay natural infilling. The inclusions found in it were occasional, less the charcoal, which was found in a moderate amount. The stones were natural flint with small sizes. The chalk was occasional, above all close to the natural, which is a white-grey natural clay without many inclusions. Regarding archaeological remains, we found some pieces of bones and one fragment of pot, decorated with ~~several~~ lines, common during the late Iron Age. Thanks to this find, we ~~too~~ can know that this context is probably late Iron Age - Early Roman age.

Refer to context (410004)

Context (410005) is a natural infilling, very similar to context (410004) although ~~lighter~~ lighter in colour and less compact.

It is the second fill of the pit. It is compact, brownish grey and silty clay fill. The inclusions were few flint and chalk, with small sizes: 1-6cm, moderate charcoal and moderate pot, within which we could ~~det~~ highlight a fragment of bone, probably Early Roman. Any bone was found in it.

In respect of the age, we ^{have} ~~are~~ probably a late Iron Age, early Roman age filling.

Refer to context (410004)

Context (410006) is a deliberate backfill formed by a compact, greyish brown and clayey silt filling. The inclusions are more frequent than in the other two fills which compose the pit. The stones are still occasional (Natural flint) but the chalk is moderate, specifically close to the natural. In respect of archaeological remains just two pieces of bones were found out. ~~In spite of~~ Despite we didn't find any fragment of pot, this fill is possibly ~~an Early Iron~~ a late Iron Age or Early Roman age.

Refer to context (410004)

Context [410007] is a cut of pit composed of three different fillings. Two of them are natural infilling and the last one is a deliberate backfill. It is really close to another features but it is not cut or cutting something other context. All the fillings inside it have been identified as Ea. Late Iron age or ~~Rom~~ Early Roman, so probably this pit is dated in this transitional period.

Refer to context [410007]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill of ditch

→ Natural Sifting during use

→ Cont a fair amount (30%) very degraded pottery (only a small number of sherds have been retained)

→ Small amount of pockets of orange sand and rare flecks of chalk.

→ One large uncut stone was present at the base of the fill at the eastern end.

Refer to context

...ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410011) is a natural infilling composed of a compact brownish grey and silty clay fill. It is very homogeneous, without many inclusions, just some fragments of natural, medium size, flint, a chalk and charcoal. Regarding archaeological remains, we collected ~~and a moderate~~ ^{and a moderate} amount of pot and just one bone. The pot is in general ~~a~~ a bad quality and black ware, probably from Iron Age or a transitional period between that and the Early Roman occupation. Some pieces of a redish pot were also recorded.

Refer to context (410011)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410012] is a pit cut which is cutting contexts (410013) (410015) and [410014]. It is the latest feature in the slot, but anyway it has been truncated by a modern land drain in its south edge. This pit is ~~the~~ composed of an only fill, which is dated due to the pottery found in it as late Iron age or Early Roman, probably. Thanks to this date, surely the cut of the pit has the same age as the fill.

Refer to context [410012]

Context ~~410011~~ (410013) is a compact, light brownish grey, silty clay natural infill. It is the first fill of a gully. It is cut by context [410012]. It is very similar to (410011) although here we have less inclusions, just a little bit of chalk and charcoal. The archaeological remains were absent in this fill so we could suppose that if context [410012] is Late Iron Age - Early Roman, context (410013) should be the same or earlier.

Refer to context (410011)

Context (410015) is a compact, mid greyish brown, silty clay natural infilling with occasional inclusions, specially flint and chalk, with tiny sizes. In general all the fills in this slot have been so homogeneous and similar. In (410015) we didn't find any archaeological remain but if we consider [410012] as Iron Age - Roman (Transition period), this feature should be the same or earlier.

Refer to context (410011)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410020) is a compact, mid brownish grey, silty clay natural infilling, with occasional inclusion, just some pieces of natural flint, medium and little sizes. Some fragments of bone were collected, within which we can highlight a phalange. This context has been cut by [410025], which makes it impossible to look at the relationship between context [410021] and [410023], the two gully in this slot.

Regarding the age, is very difficult to know exactly the period, but paying attention the chronology of near slots, we can suggest it could be an late Iron Age or Early Roman.

Context (410020) is the same as (410013):

Refer to context (410020)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410022) is a compact, mid brownish grey, silty clay natural infilling of a gully, cut by context (410025), which makes us impossible to know the relationship between context (410021) and (410023). The inclusions found in it were occasional flint, natural, just a couple of pieces, all of them small size. The archaeological remains were absent. Regarding the age, we can't ensure any date, but it might be late iron age or early roman, due to the different slots which surround it.

Refer to context (410020)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410023] is a terminus cut of a gully, whose direction is N-S. It has been cut by context [410025] which makes us impossible to see the relationship between context [410023] and [410021]. We didn't find any archaeological remains inside it, so is quite difficult to know what age ~~cut~~ this context ~~cut~~ could be. Anyway due to the features which surround this feature ~~we can~~ it could be late Iron age or Early Roman age.

Refer to context [410021]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410024) is a moderately compact, dark-black, clayey silt deliberated backfill. It is the unique fill of context [410025] a post hole. This fill is very homogeneous and we couldn't record any inclusion. Unfortunately we didn't find out also any archaeological remain, although, paying attention the chronology of other slots around this post hole, we suggest it as a late Iron age - early roman feature. It was cut by [410027]

Refer to context (410020)

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410027] is the latest feature in the slot. It is a
 post pipe cut due to the loss of the original timber of post.
 As we explained in context [410026], we didn't find any
 archaeological object and possibly, its chronology is around
 early Roman - late Iron age.

Refer to context [410021]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410028) is a compact, brownish grey, silty clay natural infilling, same as (410008), with occasional inclusions of stones, mainly natural flint, small and medium size, and chalk. Regarding archaeological remains we found an occasional amount of pot, black wares above all, and some pieces of animal bones.

This context is the unique fill in the ditch.

In respect of the age, it could be Iron Age due to the pieces of pot found in it.

Refer to context: (410028)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410029] is a ditch cut, which is crossing the site in direction NE-SW. In this slot it is ~~crossing~~ turning to the south, ~~apparently~~ ^{apparently}. It is the same context as [410010].

The only difference between both is that in context [410010] it is composed of two fill while in [410029] is formed by only one [410028]. This feature is cutting a furrow whose number are [410030] and [410031].

Regarding the archaeological remains found in it, we ~~can~~ can suggest it is an Iron Age feature.

Refer to context [410029]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with curvilinear shape, with orientation NE-SW and steep sloping sides. The base is a few concave and it has a depth of 0'48 m. The base is sloping in SW direction. It has a length of and a maximum width of 0'90 m in its part NE.

It cuts to the ditch 410039 in its NE side, and it is sloping to the ditch. It is filled by the fill 410038, where roman materials found.

By its sloping shape, and because of it is cutting the side of the ditch, it could be a little channel for to pour something in this.

Refer to context 410038

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of clay soil, of orangeish grey colour, and moderately compact. It has a thickness of 0.48 m, and a maximum width of 0.90 m. It has some stones, with a maximum size of 6 cm. It has moderate inclusions of chalk and points of charcoal.

It is the natural infilling of the cut 410037 and it has some ~~most~~ animal bones and fragments of roman pottery.

Refer to context 410037

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is a N-S orientation cut with moderated side. We stoped digging when we arrived to 1m deep so we don't know how big is it or if is cutting something else.

At the beginning we thought we found the bottom of the ditch but we found ~~me~~ some pottery pieces into the fill of this cut so we know we need to continue to found the base.

For the material we found here we can speak about early roman period with is the same of the rest levels.

This cut is the ~~start~~ first slot of the big ring ditch or big enclosure of the site.

We extend the cut and it was 1'30m deep

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clayey soil, of mid grey colour, and moderately compact. It has a thickness of 0.44 m, and a maximum width of 3.86 m. It has frequent inclusions of small stones (2-3 cm) and chalk. There are some points of charcoal.

It is the most modern natural infilling of the ditch 410039 and it occupies almost all the area of the ditch. There are some animal bones and fragments of roman pottery.

This fill also cover the fill 410038, the natural infilling of the ditch 410037

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

this is the fill of the rewt. It was so loose and black, so easy to dig of the fill with it was withing. (410047 and 410042).

Furthermore, it was so loose and sandy. We found lot of pottery into it, everything from roman period. Also many animals bones fragments. And even many charcoal and also some chalk and small stones (not more than 0.05m)

We think it was formed for ~~some~~ natural infilling. after they used it.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

this is the oldest fill of the initial cut (410039). It was so compact for that reason we thought it was the bottom of the ditch until we found some pottery pieces and some animal bones fragments. Thanks of the pottery we can say it was early roman.

this mid gray and clayed fill has many little stones into it (small ones, no more than 0.05mm) some chalk and even, a small piece of charcoal.

We thought it was formed for natural infilling after the use of it.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410043) is a compact, mid brownish grey, silty clay natural infilling, with an occasional amount of chalk, charcoal and natural flint as inclusions, all of them with small sizes.

Regarding archaeological remain we found little pieces of pot, black and orangeish, and some pieces of bones. All this material suggest us that this fill could be ~~Iron Age~~ Late Iron Age - Early Roman.

Context (410043) is the same as (410035) which has been dated with the same chronology.

Refer to context (410043)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410044) is a compact, light orangeish grey, silty clay deliberate backfill, whose composition was quite similar to the natural, which made us more difficult the identification between both of them.

The inclusions were formed by chalk, charcoal and natural flint, all of them in small - tiny sizes.

In respect of archaeological remains we only found a fragment of animal mandible.

Regarding the age, we suppose it could be late Iron Age - Early roman due to the context upper context has that chronology.

Refer to context (410043)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Context [410045] is a cut of a terracing ditch which has an orientation N-S. It is the same context as [410036]. It is composed of two fills. The last one really similar to the natural.

Regarding the age it could be late Iron age - early Roman due to the pot found in the first of the fill (410043). Also context [410036] was dated with that chronology.

Refer to context [410045]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of clay soil and moderately compact. It is of black colour and it has a thickness of 0.20 m. It has occasional inclusions of stones and some chalk. There are some points of charcoal. It is one of the natural infillings of the ditch 410039 and it is over the gill 410042. It was cut by the ditch 410048, and there is only a small part of this gill in the E and W of the ditch. After, it was covered by the gill 410040, the most modern of the ~~the~~ slot. No materials found.

Refer to context 410039

4100055

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This cut for us is a recut, because of the shape and even for the material of the fill. It was moderately deep with 0.7m of width, and is cutting two fills of 410039 cut (410042 and 410047)

We found lot of pottery pieces into it, and everything is from roman period.

We can see 410048 on both side of this cut, for that it is another reason to say is a recut.

Refer to context

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of [410055] NIS running gully, natural infilling with a colour orangish, possibly truncated by the ditch. Enclosure [410061], investigated in 3 m slot, this fill is only visible in the south facing side of the jet because of how dry the ground is it's difficult to be sure of the relationship between the gully and the enclosure ditch but the most likely relationship is that the enclosure ditch cuts the gully.

on the fill pottery and animal bones have been appeared with small subangular stones (-0'05 m)

Refer to context 410058
410061

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS FEATURE IS MOST LIKELY A FURROW SINCE IT'S VERY SHALLOW.

AT FIRST IT WAS THOUGHT TO BE CONNECTED WITH A DITCH TO THE EAST OF IT, BUT AFTER EXCAVATING NO RELATIONSHIP WAS FOUND.

THE ONLY ARCHAEOLOGICAL FIND IS ONE METAL NAIL.

THIS IS THE CUT FOR A DITCH RUNNING N-S.
THIS DITCH RELATES (IS EQUAL TO) THE ~~N~~ #
[410036] & [4100245], EXCAVATED IN OTHER SLOTS.

IT'S CUT BY A LATER DITCH [410068].

ONE FILL WAS ASSIGNED TO THIS DITCH (410071).

Refer to context 410068 & 410069 & 410064

THIS IS A FILL OF A DITCH 27 cm deep

THE FILL WAS A BROWNISH GREY CLAY WITH OCCA CHARCOAL & CHALK.

THERE WAS MOD STONES, ~~AND~~ INCLUDED IN THIS FILL SUB-ANGULAR UP TO 5cm, BUT IN THE SOUTH EAST OF THE SLOT THERE WAS A BIG STONE OF 20cm SIZE AT THE BOTTOM OF THIS FILL.

OCCA ANIMAL BONE & OCCA POT WERE FOUND.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Context (410072) is a compact, mid-brownish grey, silty clay natural infilling. It is the unique fill in this shallow ditch. The inclusions were composed of natural flint and chalk, both of them with tiny and small sizes. It is the same context as (410052).

In respect of archaeological remains we found some pieces of bones and some fragments of pot. in general black and bad qualities pieces, probably late Iron Age - early roman.

Refer to context (410072)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410073] is a cut of ditch, which is the same context as [410053]. Both of number consist of a small ditch, which has a curvilinear shape, where one of the terminus is orientated to the ~~NE~~ NW, and the other one to SW.

In respect of ~~archaeological~~ chronology, we can suggest, in order to the archaeological remains found in it, ~~it is~~ that it is late Iron age - early Roman.

Refer to context [410073]

PRIMARY FILL OF DITCH [410075]

THE FILL IS VERY NARROW AND WAS VERY DRY WHEN I DUG IT, SO IT WAS COMPACT. THE COLOUR IS BROWNISH GREY. THE INCLUSIONS ARE OCCA SMALL STONES WITH IRREGULAR SHAPE AND DISTRIBUTION. OCCA CHALK FRAGMENTS AND OCCA CHARCOALS. THE PRESENCE OF POTTERY AND BONES IS MODERATED.

FROM THE MATERIAL IN THE FILL I CAN SAY THAT THE DATE COULD BE ROMAN PERIOD.

Refer to context [410074] [410075]
[410177]

THIS IS A NE-SW RUNNING DITCH CONTAINING ONE
FILL.- (410077)

THERE WAS NO FINDS IN THIS SLOT, ALTHOUGH
I'VE ~~REGISTERED~~ ASSIGNED A FIND TO THE FILL OF
THIS DITCH SINCE IT WAS NEARBY, ON THIS FEATURE.

THIS DITCH IS BELIEVED TO BE MEDIEVAL DUE TO
WOODEN POST STILL PRESENT & SITUATED OUTSIDE
IRON AGE BOUNDARY DITCHES.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS FILL (410078) BELONGS TO THE PARENT CONTEXT [410080]. IS COVERING (410079) THAT IS OLDER THAN (410078). FORMED BY A DISUSE PROCESS. IS COMPACT FOR ITS CONTACT WITH THE SUBSOIL AND ITS COLOURS AND COMPOSITION ARE SO SIMILAR TO (410079). THIS NATURAL INFILLING HAS CONTAINS A MODERATE PRESENCE OF SMALL AND MEDIUM STONES, OCCASSIONAL INCLUSIONS OF ANIMAL BONES AND TOOTH AND A MODERATE PRESENCE OF IRON AGE AND EARLY ROMAN POTTERY IN THE SAME BAG WE HAVE PUT SOME OF THE POTTERY THAT WE FOUND AROUND THE SLOT. BECAUSE OF THAT THIS FILL HAS A EARLY ROMAN - IRON AGE CHRONOLOGY DUE TO ITS CONTACT WITH THE SURFACE AND TO BE THE LATER DISUSE FILL OF THIS IRON AGE DITCH (CUT [410080])

Refer to context [410080]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS NATURAL INFILLING (410079) BELONGS TO THE PARENT CONTEXT [410080]. IS COVERED BY (410078) SO THIS FILL IS THE OLDER ONE OF THIS DITCH. FORMED BY A DISUSE PROCESS ITS FEATURES ARE SO SIMILAR TO (410078), THE BIG DIFFERENCES ARE THE COMPACTION AND THE INCLUSIONS. IS A LITTLE MORE ORANGEISH THAN (410078) THIS FILL CONTAINS OCCASSIONAL PRESENCE OF SMALL STONES, CHALK, MARINE SHELLS AND ANIMAL BONES. ALL THE ^{PIECES OF} POTTERY RECORDED BELONGS TO THE SAME IRON AGE POTTERY BASE THAT WE HAVE RECORDED WITH A WORKING SHOT NUMBERED: 4100056, SO IT IS POSSIBLE TO MAKE THE RECONSTRUCTION OF THIS CRUMBLY BASE. BECAUSE OF THAT WE CAN DATE THIS FILL WITH AN IRON AGE CHRONOLOGY.

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF A DITCH [410080] FILLED BY TWO FILLS (410079) AND (410078). LINEAR SHAPE, STEEP SIDES AND A V-SHAPED BASE. WE DON'T KNOW THE LENGTH OF THIS CUT DITCH BUT ARRIVES UNTIL THE CLOSER SLOT ON THE EAST, NOT FINISHED YET. THIS DITCH LOOKS LIKE THAT IS CONNECTING THE ENCLOUSER AND THE BIG RING DITCH OF THIS SITE, IS ^{MADE} ~~MADE~~ BUILT BY DESIGN AND ITS BASIC PROCESS IS CONSTRUCTION. THE FINDS THAT WE HAVE RECORDED SPEAKS ABOUT AN IRON AGE CHRONOLOGY BUT WE FOUND ALSO SOME PIECES OF POTTERY OF A EARLY ROMAN CHRONOLOGY. WE CAN DATE THIS CUT LIKE AS IRON AGE PERIOD. IS CLEARLY A DITCH FOR ALL THE FEATURES THAT IT HAS LIKE THE SHAPE AND THE BASE.

Refer to context (410079)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS A NE-SW RUNNING DITCH CONTAINING TWO FILLS - (410082) & (410083)

IT JOINS WITH ANOTHER DITCH RUNNING NE-SW [410076], AT THE MOMENT I'M UNSURE WHICH ONE IS CUTTING THE OTHER.

THE PROFILE OF DITCH IS QUITE DISTINCTIVE, AS IT BEGINS WITH A GENTLE SLOPE WHICH TURNS INTO A STEEP, ALMOST VERTICAL, SLOPE, MAKING A KIND OF INVERTED HAT SHAPE.

ARCHAEOLOGICAL FINDS INCLUDE A POT FRAGMENT & A GLASS FRAGMENT, BOTH FROM ~~THE~~ TOP FILL (410083).

CUT OF POSTHOLE - THE SIDES ARE VERTICAL AND THE BASE IS FLAT -
 IN THE S-E SIDE THERE IS A BIG SQUARED STONE THAT PROBABLY
 SUPPORTED THE POST INSIDE - IT IS ON THE EDGE OF THE CUT -
 THERE IS ANOTHER POSTHOLE [410089] CLOSE TO THIS ONE, SO
 THERE WAS PROBABLY A RELATIONSHIP BETWEEN THEM -
 THE SHAPE ON PLAN IS OVAL, WITH THE BIG ^{AXIS} ~~BASE~~ RUNNING NE-SW -
 THE DATE COULD BE EARLY ROMAN-IRON AGE PERIOD, BUT IS NOT
 CLEAR BECAUSE OF THE LACK OF REMAINS -

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF PIT [410093] - THE COMPOSITION IS CLAY AND THERE AREN'T MANY INCLUSIONS, ONLY OCCA SMALL AND MEDIUM STONES WITH IRREGULAR SHAPE AND DISTRIBUTION - IT WAS FORMED BY ANATURAL INFILLING. NO FINDS INSIDE BUT THE PIT [410093] IS CUTTING THE DITCH [410091] SO IT COULD BE LATER - PROBABLY ROMAN PERIOD

Refer to context: (410090) [410093]
[410091]

CUT OF A PIT - THE PROFILE IS VISIBLE IN THE N FACING SECTION D# 4042 AND IS CLEAR THAT THE PIT IS CUTTING THE GULLY [410091]. IN THE SOUTH SIDE THE PIT IS NOT VISIBLE SO THE SHAPE IS UNCERTAIN - THE SIDES ARE MOD SLOPING AND THE BASE IS QUITE FLAT - THE DATE OF THIS PIT IS NOT CLEAR AND THE ONLY THING I CAN SAY IS THAT THERE IS A RELATIONSHIP BETWEEN THIS PIT AND THE GULLY, BUT FOR THE OTHER FEATURES I'M NOT SURE -

CUT OF DITCH, NOT FULLY EXCAVATED. CONTAINS TWO FILLS (410094) AND (410095). ONE IS A SALTING FILL AND THE OTHER IS A DUMPING FILL. THE DITCH WAS IN USE FOR A WHILE + THEN BACK FILLED. THIS DITCH CUTS EARLIER DITCH [410092], AT A RIGHT ANGLE. FINDS FROM FILL SAY LATE 1A DATE MAYBE EARLY ROMAN FOR THE DITCH.

UPDATED 10/5/17 NOW A DITCH WITH ONLY ONE FILL (410094). CUTS EARLIER DITCH (410095) / [410346] AND ITS FILL. IT IS A RE-CUT OF THE EARLIER DITCH. NOT FULLY EXCAVATED SO FULL PROFILE NOT SEEN. THIS DITCH STILL CUTS DITCH [410092] BUT ONLY PHYSICALLY NOT STRATIGRAPHICALLY. DITCH IS ONE OF SEVERAL ENCLOSURE DITCHES GOING AROUND THE MAJORITY OF THE ARCHAEOLOGY ON SITE.

Refer to context (410094)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

FILL OF DITCH [410099]. A DELIBERATE BACK FILL, IRON AGE POTTERY AND ANIMAL BONE EVENLY DISTRIBUTED WITHIN THE FILL. INCLUSIONS OF CHALK FLECKS AND MEDIUM SUBROUNDED STONES, SMALL STONES ROUNDED ON BASE OF FILL WASHED IN (KNOCKED) OUT FROM THE SIDE. CUT BY LATER AND BIGGER DITCH [410096]. NOT FULLY EXCAVATED.

* SOME FINDS ATTRIBUTED TO THIS FILL COULD BE FROM (410094) AS WHEN UNDER EXCAVATION THE BORDER BETWEEN THE TWO FILLS WAS NOT CLEAR.

UPDATED 10/5/17 NOW CUT BY DITCHES [410096] AND [410346] ONLY LATER STRATIGRAPHICALLY. COULD HAVE BEEN A SMALL DRAINAGE DITCH WHICH TERMINATED WITHIN THE SLOT BUT TAKEN OUT BY THE LATER DITCHES.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

SECT OF DITCH, CUT BY LATER DITCH [410096], WHICH RUNS AT A RIGHT ANGLE TO THIS ONE. FINDS SUGGEST AN IRON AGE DATE, SIMILAR TO THE FILLS OF [410096]. THIS DITCH HAS A DUMP / BACKFILL LAYER AND A SILTING WEATHERING LAYER. NOT FULLY EXCAVATED SO FULL PROFILE NOT SEEN, WEATHERING DENOTES IT WAS OPEN FOR A WHILE AND IT GOT SILTED UP BEFORE BEING PUT OUT OF USE COMPLETELY. DITCH ONLY RUNS BETWEEN [410096] AND THE OTHER BIG DITCH, BOTH ENCLOSE MOST OF THE ARCHAEOLOGY ON SITE.

UP DATED 10/5/17 NOW CUT BY DITCHES [410096] AND [410346], ONLY LATER STRATIGRAPHICALLY. COULD HAVE BEEN A SMALL DRAINAGE DITCH WHICH TERMINATED WITHIN THE SLOT BUT TAKEN OUT BY THE LATER DITCHES. NO RELATIONSHIP SEEN WITH PIT [410349].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a ~~hole~~ tree bowl. At the beginning we thought this could be a pit or a post-hole, so we excavated the 50% of the feature. Finally we realised that this dark circle was a bioturbation of a tree.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a cut of a medium pit (less than 0.5m of diameter).

It isn't too deep, just 0.57m of depth.

We thought it was a ditch but for the shape of the sides and the concave shape of the bottom, we know it was a pit.

I just found some pieces (1 bone animal bone and one ceramic fragment)

It was the first feature I found in this slot (should be Iron age) and is cutting of one ditch on the top [410105] and another on the east side [410108]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of the pit. We just found an animal bone and a ceramic fragment but ~~the~~ it was the ^{earliest} feature we found, so it could be iron age.

It was grey and ~~medium~~ loose because is so sandy. with a lot of stones into it and even charcoal and chalk occasionally.

this fill was cutting by the two different ditches 410105 and 410107, they were darker and more compact.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is a cut of a ditch which is cutting the pit 410103.

With a NE-SW orientation, this ditch has a moderated sloping with not more of 0.35m deep. And a concave base.

We can see it on both sections S-NW and NW-N. But just on the corner because we ~~can~~ ~~can~~ can see the section of one of the ~~sided~~ sides not the entry ditch.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

this is the fill of the ditch which is cutting the pit.

It was a moderated compact, dark brown and clayed fill with moderated chalk and some little stones into it, no more than 0.5m bigger.

We found some small pottery fragments and animals bones (there are so fragmented because of the clayed fill), they could be roman because of the shape and color of the pottery fragments.

This is the cut of the second ditch I found in this slot. With a NW-SE ~~direction~~ orientation has a moderated sloping and a concave shape.

the or with just 0'35m of depth we didn't find any material to know a chronology, but as is cutting the roman age feature, we think it could be a roman ditch. We are waiting to ~~be~~ confirm this information with futures slots on this area.

We can confirm it is roman feature.

this is the fill of the last ditch but we don't know if it is contemporary or newest of 410106, because it is ~~is~~ both are cutting the Iron age one, 410104.

We didn't find anything into it but into another slot which have the same ditch, they found some pieces of roman pottery, so we can confirm that this level is roman.

It was on the top of the site so we can say that it was formed by natural infilling.

Extra: we know now it was later than 410106

Refer to context 410107.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a fill of a possible modern boundary ditch. The fill includes some speckless of chalk with slightly larger chunks near the top. Only one piece of pot ~~old~~ an iron nail, and a modern iron bar (surface) were found. Stones vary from rounded to subangular, they are smaller than 5cm across and are infrequent within the fill.

Refer to context 410110

This is the fill of a pit. Is a compact mottled fill, also because is a very thick fill. we didn't find any material apart from two teeth near the surface. we have also think that this feature could be a tree bowl, but the colour of the fill make us think that it is a pit.

This is the cut of a pit. It was visible on the surface and we excavated it a half. We saw some charcoal flakes on the surface ~~and~~ and two teeth. Although the charcoal has ~~appeared~~ continue appearing, those two teeth are all the material we have found in this pit.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of the oldest ditch of this slot. We know that because it was cutting by the other one, 410119.

~~With a E-W orientation~~ With a E-W orientation, this ditch has a moderated sloping side and a concave base and clayed base, with only 0.53m of depth.

Our interpretation is: it could be a Iron age feature because of the material we found into it and this interpretation match with the other slot we have in this ditch (410105).

This form is incomplete if fields marked with * are empty. Please turn over for additional information (and describing all items marked with * and sketches).

This is the fill of the oldest feature we have in this slot.

this mid gray ~~and~~ yellowish and clayed fill has just 0'53m of thickness with some chalk and many stones into it (small ones, not more than 0'15 m). Also we found some pieces of pottery and a few of animal bones fragments. Based on the pottery we know this feature is or at least could be Iron age (we have to wait till someone open another slot to confirm this interpretation)

We also took 4 sample buckets because this fill has an organic component and it could be important for analysis.

Refer to context 410117.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of the later ditch we can found in this slot. It is cutting the early one (410118).

With a E-W orientation, we can see gentle sloping side with a clayed and concave base. It is just 0.25m depth.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is the fill of the later ditch we found in this slot.

It was moderately compact, mid brown and clayed, with some stones into it (most $\leq 0.05m$ diameter, occasionally up to $0.10m$). We also found some pottery and animal bones fragments. Thanks of the shape and color we can say this level is roman.

Darkish ~~of the~~ brown color could be interpreted as deliberated backfill.

CLAYEY UPPER FILL OF OUTER ENCLOSURE DITCH. MODERATE FREQUENCY OF FLINT/SANDSTONE
~~PEBBLES~~ PEBBLES & COBBLES (MOST $\leq 0.05\text{m}$ DIAMETER, OCCASIONALLY UP TO ~~0.10~~ 0.10 m.)
 SCATTERED THROUGHOUT FILL, VARYING IN SHAPE BUT GENERALLY SMOOTHED. MODERATE FREQUENCY
 OF FAUNAL REMAINS, ** SOME INTACT BUT BRITTLE BONES, ~~OTHERS~~ OTHERS FRAGMENTED. DARKISH GREY
 COLOUR COULD ALLOW INTERPRETATION OF DELIBERATE BACKFILL, BUT FILL COLOUR COULD ALSO
 BE ATTRIBUTED TO OCCASIONAL CHARCOAL PRESENT - NATURAL INFILLING COULD PROVIDE
 SAFEST INTERPRETATION.

OCCASIONAL POT FRAGMENTS APPEAR DISTINCTLY IRON AGE - ~~MAINTAIN~~ SEVERAL PIECES
 HAVE LINEAR GROOVES ETCHED ON ONE SIDE, MOST PIECES ARE VERY BRITTLE.

* TOTAL DEPTH OF [410123] NOT EXCAVATED FULLY DUE TO TIME CONSTRAINTS AND CONSEQUENT
 DECISION TO FOCUS ON RELATIONSHIP BETWEEN [410123] & [410127] - THUS, FULL THICKNESS
 OF (410121) NOT KNOWN FROM THIS SLOT, BUT IS ~~LIKELY~~ LIKELY TO BE APPROXIMATE TO
 DEPTH OF (410058), THE NORTHERN CONTINUATION OF (410121).

** ALSO SOME ANIMAL TEETH FOUND. SOME OF THE LARGER BONE FRAGMENTS WERE MINERALISED.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

UPPER FILL OF DITCH [410127], MODERATELY COMPACT CLAYEY SILT FILL WITH OCCASIONAL CHALK & CHARCOAL FRAGMENTS, AND OCCASIONAL PEBBLE AND COBBLE-SIZED STONES ($\leq 0.05m$ DIAMETER) VARYING IN SHAPE BUT GENERALLY SMOOTHED. VERY OCCASIONAL RECOVERY OF FAUNAL BONE FRAGMENTS, AND OCCASIONAL POT. MOST POT FRAGMENTS APPEAR IRON AGE - ONE PIECE APPEARS MORE MODERN (PARTLY GLAZED - POSSIBLY MEDIEVAL?) BUT HAS SMOOTHED EDGES AND WAS RECOVERED NEAR THE SURFACE, SO ITS PRESENCE COULD BE EXPLAINED BY PLOUGHING. LOW FREQUENCY OF FINDS ~~AND~~ MIGHT SUPPORT INTERPRETATION OF NATURAL INFILLING.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

CUT OF POSSIBLE ~~OTHER~~ EASTERN TERMINUS OF AN E-W ORIENTED ~~BY~~ LINEAR DITCH, TRUNCATED TO THE EAST BY ENCLOSURE DITCH [410123]. AS THE FOCUS OF THIS SLOT WAS TO DETERMINE THE RELATIONSHIP BETWEEN [410127] & [410123], A ~~BY~~ BETTER DESCRIPTION OF ~~THE~~ THE BASE/SIDES OF [410127] WILL BE FOUND BY REFERRING TO [410080]. HOWEVER, IT CAN BE SAID THAT THIS APPEARS TO BE THE ~~TERMINUS~~ EASTERN TERMINUS OF THIS LINEAR DITCH BECAUSE THE BASE RISES NOTICEABLY FROM WEST TO EAST, AND THE FEATURE DOESN'T APPEAR TO CONTINUE ANY FURTHER TO THE EAST. WHILE THE DRYNESS OF THE CLAY FILLS MAKES IT ~~TO~~ DIFFICULT TO CLEARLY IDENTIFY A CUT IN SECTION, ~~IT~~ ~~APPEARS~~ DIFFERENCES IN THE FILLS ON THE EASTERN HALF OF THE N-FACING SECTION SUGGEST THAT THE TERMINUS ITSELF WAS TRUNCATED BY [410123].

THE LINEAR DITCH WAS PREDOMINANTLY CUT INTO A CLAY NATURAL. THE WESTERN TERMINUS OF THE DITCH APPEARS TO LIE JUST BEYOND THE INNER ENCLOSURE DITCH (SEE [410139]), MAKING THIS A RELATIVELY SHORT DITCH (NO MORE THAN 10-15m).

FINDS FROM THE DITCH'S FILLS PREDOMINANTLY SUGGEST AN IRON AGE DATE - ONE GLAZED MEDIEVAL PIECE (?) FROM THE UPPER FILL SEEMS ANOMALOUS AND ITS PRESENCE MIGHT BE THE RESULT OF PLOUGHING.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

We found this ditch a little bit far from the others & when we continued fixing the section. It was so small but clear enough to add it in this sheet.

It doesn't have the same ^{orientation} direction of the others, it is NW-SE with a gentle sloping side and concave base. It isn't deep, it's just 0.12m of depth.

We didn't find any relevant material to know a chronology, but we think it should be roman because ~~probably~~ ^{probably} is. Is impossible to know until someone open another slot

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is the fill of the "extra" ditch we found when we clean the section.

It was generally smoothed, mid brown and some places clayed fill. This color suggests it was formed by natural infilling.

We just found some small stones (most ≤ 0.05 or 0.10 m diameter) and chalk. But any relevant material to say a date of use.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

~~Tree throw~~ This cut is REFERABLE TO A TREE THROW INVESTIGATED IN A 170X1,20M SLOT NEAR TO A DITCH [410131]. THE SHALLOW DEPTH OF THE FEATURE, TOGETHER WITH THE PRESENCE OF ROOT SPREAD TRACES, CONFIRMED THE INTERPRETATION OF THE FEATURE.

THE TREE THROW WAS FILLED BY ONLY ONE NATURAL INFILLING (410132) THAT CONTAINED FEW ARCHAEOLOGICAL REMAINS (ANIMAL BONES AND ONE POT SHERD). PROBABLY, THIS FILL IS CONNECTED TO THE FILL (410130) OF THE NEAR DITCH, WHICH, DUE TO THE ROOTS ACTION, WAS PARTLY SPREAD OUT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut with linear shape, with moderate sloping sides, and concave base. It has a maximum depth of 0'30 m in the part E, and 0'15 m in the part W. It has a length of 1'69 m and a ~~width~~ width of 1 m, and a N-S orientation.

It is a ditch that is filled by the natural infilling 410141, and it cuts to the ditch 410140 by the part E of this ditch.

This ditch is the same that 410144.

Refer to context 410141

NATURAL INFILLING DEPOSIT (410135) FORMED AFTER THE PIT [410137] WAS FILLED BY (410136) THERE IS NOT ANY CUT ASSOCIATED WITH THIS (410135) BECAUSE OF THAT WE CALLED IT DEPOSIT COVERS ~~CONTEXT~~ THE FILLS (410136) AND (410138). THE DIFFERENT FEATURES OF THIS CONTEXT ARE ASSOCIATED TO ITS CONTACT WITH THE SURFACE, LIKE THE COLOUR AND COMPOSITION. POSSIBLY WE ARE SPEAKING ABOUT THE LAST FILL BEFORE THE SUBSOIL. MODERATE PRESENCE OF SMALL AND MEDIUM STONES, WE CAN'T DATE THIS DEPOSIT BECAUSE OF WE HAVEN'T GOT ANY REMAINS OR FINDS ASSOCIATED TO THIS CONTEXT.

Refer to context (410138)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

TERMINUS OF A DITCH [410139] FILLED BY THE NATURAL INFILLING (410138) AND CUTTING BY THE PIT [410137]. IT HAS A RECTANGULAR SHAPE AND SEMICIRCULAR IN THE TERMINUS PART, GENTLE SLOPE, AND AN UNEVEN BASE. THIS DITCH HAS AN E-W ORIENTATION AND CROSS THROUGH THE RING DITCH BUT WE STILL DON'T KNOW THE RELATIONSHIP BETWEEN THEM UNTIL IT ^{WILL BE} HAS RECORDED. THIS DITCH CUT THE NATURAL IN A CONSTRUCTION BASIC PROCESS AND ITS SHAPE IS RESULT OF A DESIGN. ITS IS DEEPER IN THE FAR AWAY PART OF THE TERMINUS BUT THIS MAY BE IS FOR THE PIT THAT CUT IT. THIS TERMINUS IS HALF EXCAVATED BECAUSE OF THAT WE DON'T KNOW PROPERLY ITS DIMENSIONS BUT THE WIDTH IS 1'6 METERS. WE CAN'T DATE THIS TERMINUS IF WE DON'T RELATE WITH THE OTHER SLOTS THAT RECORD THIS DITCH.

Refer to context (410138)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clay soil, of dark grey colour and moderately compact. It has a maximum ~~depth~~ thickness of 0'30 m, and a length of 1'69 m. It has some small stones, with a maximum size of 4 cm. There are moderate inclusions of chalk and charcoal. It's the natural infilling of the ditch 410134. The most thickness part is in the E, and in the W it has a thickness of 15 cm.

A few fragments of animal bones and roman pottery found. This fill is the same that 410143, that is the natural infilling of the ditch 410144.

Refer to context 410134

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, of orangeish brown ~~and~~ colour and moderately compact. It has a maximum thickness of 0.24 m, and a length of 1.02 m. It has some small stones, with a maximum size of 5-6 cm. There ~~are~~ are moderate inclusions of charcoal and chalk.

It's the natural infilling of the ditch 410140, and it is cut in its part E by the ditch 410134.

No material found, and it is the oldest fill of the slot.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the latest fill of this feature. Is a dark fill and it was very dry because of the its thickness. ~~of the~~ It seems to be the fill of a recut of the gully, because as we can see on plan, they could be to features.

We have sampled this fill because we found a lot of charcoal flakes and small pieces of pottery. Some chalk was also found, and some medium sized rounded stones.

Refer to context 410148

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is the recut of a gully with moderate sloping sides and concave base. It could have been an extension of the original gully. According to the pottery found, it seems a roman gully (a couple of pieces could be middle-late roman).

We can see on plan that this gully continues in south direction, but there is an area where we lose it, maybe because the soil is very dry or because we still have a bit of subsoil. If we assume that the black fill on the top is the fill of a recut, could be happen that this recut terminates in that point.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of the earliest gully that we see in this terminus. Has a clayey composition and it's very similar to the natural we haven't found any remarkable material in this fill, just very small pieces of pottery and charcoal (<1cm). We also found some rounded stones, like the ones we see in section.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a gully with quite steeped sides
 It seems to be the earliest feature in this slot,
 but we only can see a small part of it.
 This terminus is the only slot opened in this feature,
 so I think that we will be able to know more about
 it and its relation with contiguous ditches in the future

Refer to context 410147
 410143

Secondary NATURAL INFILLING OF THE DITCH [410156]. The fill CONTAINED A OCCASIONAL presence OF small or medium (0.5-10 cm) sub rounded AND sub angular STONES. IT CONTAINED ALSO FEW chalk FLAKES, A FEW ANIMAL bones and sporadic presence OF IRON AGE POT SHERDS.

The fill is COVERING A primary fill (410155) THAT, during the EXCAVATION, SEEMS AS A INTERFACE LAYER BETWEEN THE TOP FILL AND THE NATURAL SOIL.

Refer to context 410156

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary NATURAL infilling of the ditch [410156]. The fill contained only few sub angular stones with small/medium size. AND SOME ANIMAL BONES.

Stratigraphically covered by ANOTHER fill (410154), this fill is interpretable as a interface layer between the top fill AND the NATURAL CLAYED SOIL. Only the presence of a big animal bones ~~in this layer~~, in the top of the fill suggests to considerate this layer as a fill.

Refer to context 410156

This is the cut of a pit without any relation with the other ditch we found in this slot.

With a circular shape and no more than 0.30m of depth, it has concave base and moderated sloping sides.

We didn't find any relevant material to say a date of use

This is the fill of the pit.

this mid brown and orangeish fill was moderately compact because of the clayed composition.

It has lot of chalk and manganese into it, and some little stones ($\leq 0.05m$ and occasionally $\leq 0.10m$).

The fill was dark as we can say it was natural infilling formed.

We didn't find any material or relevant pieces to say any date of use.

This is the cut of a ditch. We found this ditch throw all the plant of this slot with a NW-SE orientation.

It has a moderated slopping side with a concave base not more of 0.25m of depth.

We found here a ring or earring when we are cleaning so it was almost on the ~~sp~~ ~~separate~~ top of the ditch. Our interpretation is, it is a late Iron age or early roman object. That is the date we say as date of use.

NOTE: When we open [41061] we discover that this ditch ~~was~~ ~~is~~ a pit the same as this pit [41057]

This is the fill of a ^{huge pit} ~~excavation~~

It was moderately compact, brown and yellowish and cloyed fill.

We found small stones into it (most not ^{more} ≤ 0.05 m). It has chalk and some small pieces of charcoal. Even we found some fragment of pottery and animals bones, the most important find was a ^{bronze} ring or a earring. Thanks of that object we say a date of use between: Late Iron Age and early Roman.

NOTE: parent context of [41016] it is the same huge pit.

Refer to context 410159

This is a cut of a pit. We thought at the beginning it was a ditch but the shape of the base and ~~sides~~ sides told us, it was a pit. For that we have to change the interpretation of [].

It has a circular shape with concave base and moderated sloping sides. Also has just a ≤ 0.25 m of depth.

We just found some animal bones fragments and ~~some~~ a piece of pottery $\rightarrow$ thanks of that we know Iron age is the date of use of this pit (probably, cutting by a roman ditch but we can't confirm that until someone make another slot in this area.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of a pit (probably a huge pit).

this compact, brown and greyish and clayed fill, was quite difficult to dig not just for the clayed composition but for ~~the~~ it was so dry and it broken. ~~rest~~

We found lot of stones (small ones most of them not more as $\leq 0.10\text{cm}$), chalk, manganese moderately and some pieces of ~~to~~ animal bones fragment and a piece of pottery classified as Iron age, because of the decoration. So our conclusion is ~~that~~ ^{this} pit was Iron age feature probably cutting by a roman ditch. But we can't confirm that until someone open another slot in this area.

A CUT OF A POSSIBLE POSTHOLE. DUG AS A HALF SECTION DURING INVESTIGATION FOUND THAT THE HALF PART OF THE CUT STOPS JUST BENEATH THE TOPSOIL. THE OTHER HALF PART OF THE CUT GOES A LITTLE DEEPER. IT'S AN OVERALL SHALLOW CUT/POSTHOLE. THE SHAPE OF THE CUT/POSTHOLE IS ^{PROBABLY} DUE TO LEVERING THE STAKE OF IT. JUST ONE FILL OF THE CUT, BASICALLY THE TOP SOIL MIXED WITH DARK FILL. FOR THAT REASON IT HASN'T BEEN SAMPLED. NO FINDS OR POT IN IT.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of silty clay soil, of light grey colour and moderately compact. It has a maximum thickness of 0.28 m in its part W. It has occasional inclusions of chalk and small stones.

There are some charcoal.

It is the natural infilling of the ditch. ⁴¹⁰¹⁷⁰ Its part SE has very little thickness, only 9 cm. Animal bones found, but not pottery.

Refer to context 410170

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with linear shape, with orientation E-W, and steep sloping sides. The base is a little concave. It has a maximum depth of 0'28 m in its part W. The part excavated in the slot has a length of 1'45 m and a width of 0'44 m.

It is a ditch that is filled by the natural infilling 410169. It's not sure if it has some relationship with the ditch 410172 so the little thickness of the fill doesn't let see that relationship, or if they don't cut them.

Refer to context 410169

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, of mid grey colour and moderately compact. It has a maximum thickness of 0.23 m. There are some small stones. It has occasional inclusions of chalk and charcoal.

It is the natural infilling of the ditch 410172
No material found.

Refer to context 410170

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

PRIMARY FILL OF PIT [410181] - THE COMPACTION IS MODERATELY COMPACT AND THE COMPOSITION SANDY CLAY. THE COLOUR IS LIGHT ORANGISH BROWN MOTLED WITH LIGHT GREY.

THE INCLUSIONS ARE: OCCA SMALL AND MEDIUM STONES SPECIALLY ON THE EDGES, OCCA CHARCOALS AND ONLY ONE FRAGMENT OF POTTERY, PROBABLY IRON AGE PERIOD. THE FRAGMENT IS BLACK AND ORANGE WITH A LOT OF WHITE INCLUSIONS. IS NOT POSSIBLE TO BE CERTAIN ABOUT THE DATE BUT IT WAS PROBABLY IRON AGE - EARLY ROMAN.

THE FILL IS OVER EXCAVATED ON THE TOP, SO THE CUT IS DEEPER.

Refer to context [410180] [410177]

SECONDARY NATURAL INFILLING OF RING DITCH [410186]

INVESTIGATED IN A SLOT (0'45x1'35x0'90m) MADE FOR SEE THE RELATION BETWEEN THE DITCH [410186] AND THE RING DITCH [410188].

THE FILL CONTAINS OCCASIONAL SMALL CRACK AND ~~AND~~ SMALL (-3cm) AND BIG (8cm) STONES WITH SOB-ROUNDED SHAPE.

BECAUSE THE SHAPE, COMPOSITION AND DIRECTION, THIS FILL IS SAME AS (410154) WHICH WE CAN SEE IN A CLOSER SLOT AND ARTIFACTS WERE RECOVERED BUT PROBABLY WE'RE IN A ROMAN RING DITCH BECAUSE THE POTTERY FOUNDERS IN OTHER SLOTS AND THE FILL COMPOSITION (DARK)

PRIMARY NATURAL INFILLING OF ~~DEEP~~ RING-DITCH [410186] INVESTIGATED
 IN A SLOT (0'45x1'35x0'90m) MADE FOR SEE THE RELATION BETWEEN
 THE DITCH [410186] AND THE RING DITCH [410188]
 THE FILL CONTAINS OCCASIONAL SMALL STONES (-3cm) WITH
 SUB-ROUNDED SHAPE AND OCCASIONAL SMALL CHALK
 BECAUSE OF THE SHAPE, ORIENTATION AND COMPOSITION THE FILL
 IS SAME AS THE NATURAL INFILLING (410155).
 THIS FILL COULD BE A MIX BETWEEN THE FILL OF THE DITCH
 AND THE NATURAL CLAY BECAUSE OF THE COMPOSITION
 NO ARTIFACTS WERE RECOVERED IN THIS FEATURE BUT PROBABLY
 IT'S ROMAN BECAUSE THE FIND REGISTER IN NEAR SLOTS WHERE
 WE CAN SEE THIS RING-DITCH.

Natural infilling of ring-ditch [410192], investigated in a slot (1x0.70m) made for see the relationship between the two ring-ditch [410192] and [410190] this last interpreted like roots interferences.

The fill contains occasional small stones (1-3cm) with sub-rounded shape and moderate chalk with different sizes (3-7cm).

also, the fill contains some pieces of animal bone and pottery.

~~Because the fact, the ring-ditch~~

Because of the shape, composition and closer, the fill is same as (410169) and could be iron age with hand made pottery

THIS IS THE ONLY FILL OF A DITCH. IT APPEARS TO BE NE-SW DIRECTION.

IT'S BROWNISH GREY IN APPEARANCE AND CONSISTS OF MAINLY CLAY

IN THE TOP OF THIS FILL WE FOUND APPROX.

10 STONES OF 10-20 CM *

THIS FILL IS 20CM DEEP

This is the fill of a gully that terminates in this slot.
 It's a clayey fill with a greenish-grey colour.
 We have found some small pieces of pottery and also small bones.
 Is the same fill that we found as a primary fill in the terminus of this gully.

Refer to context 410197

This form is incomplete if fields marked with * are empty. Please turn over for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a post-hole. The edges are formed by a ~~ch~~ chalky-gravel natural. We can also see this gravel continuing a bit along the western section, what tells us that it's a circular feature, more than a terminus. This post-hole is cutting the terminus of the gully that runs from NE to SW.

NOTE: 30/06/2017 - we open ~~at~~ the entry gully 410458 and we discover that this "post hole" was a real terminus of this gully.

This is the fill of the post-hole that we have in one of the corners of this slot.

It wasn't visible on the surface and we recognised it by the gravelly edges. On the section we can see that is a bit darker than the fill of the gully.

We just found an animal vertebra on it.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of the third feature that we can see in this slot. As we have said we aren't able to say a lot about this feature.

We found some small pieces of pottery and bones as well. It seems roman pottery but the pieces are very small.

This is a cut of a ditch. With a linear shape and moderated sloping side. Has a N-S orientation.

This ditch present ~~1.5~~ 1.1m of width and less than 0.30m of depth.

We decided to open ~~a~~ this slot to ~~see~~ confirmed that this ditch is cutting the early Iron age pit we found in 410159 and 410161, ~~3~~ And our conclusion is definitely a ditch.

But is complicated to say a date of use because we just found a small piece of ~~pot~~

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of a ditch. It is so compact, mid brown and orange. Into this layer fill, we found lot of stones (small ones $\leq 0.05m$) and chalk and occasionally manganese.

We just found 1 piece of a ~~pot~~ fragmented pottery and our interpretation is it could be early roman or late Iron age because is hand made and is difficult to say a date of use.

Also we found a fragment of a ~~animal~~ animal bone but too fragmented to know anymore information.

SOFTER, LIGHTER-COLOURED FILL BENEATH (410215), WHICH GAVE OFF DISTINCT ORGANIC SMELL WHEN EXPOSED. ~~POSSIBLE SEWAGE DUMP?~~ OCCASIONAL STONE INCLUSIONS ARE SMALL ANGULAR PEBBLES (<0.05m DIAMETER), SCATTERED RANDOMLY THROUGH FILL. AS WITH OVERLYING FILL, FAUNAL BONE IS GENERALLY FRAGMENTED, ALTHOUGH IS RECOVERED LESS FREQUENTLY. MINERATE POT FRAGMENTS ARE BRITTLE AND APPEAR IRON AGE IN DATE. FILL COULD BE EXPLAINED AS ORGANIC WASTE DUMP? BUT UNCERTAIN, SINCE ABANDONMENT OF THIS RELATIONSHIP SLOT MEANS ONLY THE TOP OF THIS FILL WAS EXCAVATED.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF LARGE CURVILINEAR ENCLOSURE DITCH, WHICH IS ORIENTED SW-NE WHERE THE SLOT WAS OPENED. THIS CUT HAS NOT ACTUALLY BEEN EXPOSED, SINCE THIS RELATIONSHIP SLOT WAS ABANDONED OWING TO A PREVIOUSLY UNIDENTIFIED LAND DRAIN COMING THROUGH THE SW-FACING SECTION WHERE THE RELATIONSHIP WOULD HAVE BEEN SEEN. HOWEVER, TWO SLOTS WITHIN 5m EITHER SIDE OF THE ABANDONED SLOT SHOULD EXPOSE THE PROFILE OF CUT [410217].

FINDS FROM THE TWO EXPOSED FILLS IN THIS DITCH SUGGEST ^{A POSSIBLE} ~~AN~~ IRON AGE DATE FOR CONSTRUCTION / USE.

IDEA OF RELATIONSHIP SLOT WAS TO SEE RELATIONSHIP BETWEEN ENCLOSURE DITCH [410217] AND A SMALLER CURVILINEAR FEATURE INTERACTING WITH THE ENCLOSURE DITCH ON ITS EASTERN EDGE AND TERMINATING WITHIN 3m OF THIS INTERFACE

Refer to context

A CUT OF A PIT WITH ONE FILL FULL OF STONES AND
PEBBLES. STONES ^{OF} MEDIUM AND LARGE SIZE ^{AND IRREGULAR SHAPE}, BURNED
AND IN RED COLOUR MOST OF THEM. PEBBLES OF SUBREGULAR
SHAPE, ~~MOST~~ ^{MANY} OF SAME COLOUR AND CONSISTENCY AS WELL.
* THREE LARGE STONES SHOW THE LINE OF THE CUT, TO THE
EAST, CUT BY ANOTHER FEATURE, WHICH IS CUT BY A MODERN
PIPELINE

MUST NOTE THAT THE BASE OF THE CUT IS VERY UNEVEN,
~~STEPS~~ STEPPED AND FILLED WITH ^{SOME} STONES OF MEDIUM SIZE
AND IRREGULAR SHAPE.

* ON THE NORTH FACING SECTION OF THE SLOT.

* CUT of small pit - uneven base, d. stone as
eaten side by land drain.

SHEET FOR THE DESCRIPTION OF SEMI-CIRCULAR STRUCTURE
 WE CAN SEE IT ON THE PRE-EX AND ALSO IN PLAN.
 IT HAS TWO RING DITCH AND ~~WAS~~ ~~WAS~~ ONE OF THEM WITH
 TWO SLOTS IN THE TERMINUS [410210] + [410235] AND THE
 OTHER WITH THREE SLOTS, TWO OF THEM IN THE TERMINUS
 [410212] + [410214] AND OTHER IN THE MIDDLE [410223]
 CUTTED BY A POST HOLE [410221]

A GREY IRREGULAR PATCH IN THE WEST WAS INTERPRETATED
 LIKE ROOTS AFTER ONE SLOT.

WE ONLY CAN CONFIRMATE TWO POST-HOLE [410221] AND
 [410260] BUT IN THE MIDDLE OF THE STRUCTURE WITH
 E-W ~~OR~~ ORIENTATION, WE COULD SEE A LITTLE BIT OF BLACK
 FILL BUT IT ~~WAS~~ COULDN'T BE DIG BECAUSE THE DEPTH.

THE STRUCTURE COULD BE CIRCULAR AND CUTTED BY A
~~BY~~ BY N-S RUNNING DITCH ABOUT THE CHRONOLOGY COULD BE
 EARLIER ROMAN BECAUSE THE DARK FILL IN THE RDP, BUT NO
 ARTEFACTS WERE FOUND IN THE SLOTS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the latest fill of this pit. It's a very compact fill because it's very dry. This pit was very altered by the machine action so we found a lot of burned sandstones in the fill.

As we are speaking about a combustion feature, there were a lot of charcoal flakes in this fill, but we didn't find any material apart from that.

Refer to context 410227
410226

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the primary fill of the pit. Has a clayey composition and we distinguish it from the secondary fill because it's more brighter.

As we have sayed when we have described the secondary fill, we found a lot of burned sandstones, but no so frequently. This fill contained some charcoal flakes as well.

The composition of this fill was very similar to the natural, but was less compact, what let us to define the edges of the pit clearly.

Refer to context 410224
410225

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a pit. Some broken and burned stones were visible on plan but it was very altered by the machine action, so the original shape was difficult to distinguish.

At the beginning we excavated just the half of the pit and we saw that the pit was delimited by stones, so we maintained them and we made the proper recording. To finish, we dug the other half.

The edges of the pit are very clear, and we found a lot of burned sandstones and charcoal flakes but no material.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the only fill that we see in this feature. We saw part of this fill in the contiguous shot, but we weren't able to say much about this feature. At the beginning we said it was a pit, but now that we have excavated it "knivus" it seems more like a post hole. We found some rawen black pottery on it.

Refer to context 410233

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is the cut of a post-hole. At the beginning we saw this feature in the contiguous slot (D# 41050) but its edges were very disturbed by rooting action.

Now we have excavated it in half section and we have realised that it seems a post-hole without relation with any other feature.

THIS FILL CONSISTS OF MODERATELY COMPACT
CLAYEY SILT OF BLUISH BROWN COLOUR, BELIEVED
TO BE FORMED VIA NATURAL INFILLING.

THIS FILL CONTAINS OCCASIONAL STONE INCLUSIONS
NO LARGER THAN 10cm IN DIAMETER - SUB-ANGULAR.
THERE WERE OCCASIONAL CHALK & CHARCOAL PIECES.

MODERATE AMOUNTS OF BONE & POT WERE FOUND AS
WELL AS TWO PIECES OF WORKED BONE.

(410239) IS BELIEVED TO BE THE SAME AS (410238)
DUE TO IT'S SIMILAR COLOUR, TEXTURE &
CONTENT.

FILL OF DITCH [41024], PRIMARY FILL OF DITCH, FORMED BY A SLUMPING OF MATERIAL INTO THE DITCH FROM A POSSIBLE BANK AND/OR WEATHING OF NATURAL. STONES ARE MOSTLY AT THE TOP OF THE FILL, SMALL TO MEDIUM SUB-ROUNDED AND SUB-ANGULAR STONES, A THIN LAYER OF GRAVEL FROM THE FORMATION OF THE FILL. NO FINDS AND ONLY OCCASIONAL PIECES OF CHARCOAL. DITCH ONE OF TWO WHICH ENCLOSE SITE AND IS PROBABLY IRON AGE.

CUT OF A CURVILINEAR DITCH RUNNING WITH A SOUTH - WEST DIRECTION -
 IT IS TURNING IN THE SLOT TOWARDS WEST - IT IS TERMINATING
 MORE IN THE SOUTH ^{EAST} WITH THE TERMINUS [410277] ^{OVER}
 THE SHAPE IS CURVILINEAR AND THE PROFILE IS VISIBLE IN THE
 D# 41053 BUT FOR HALF OF ITS WIDTH -
 IT IS VERY CLOSE TO THE OTHER 2 DITCHES [410245] AND [410247]
 THAT ~~ARE~~ ~~ARE~~ HAVE A E-W DIRECTION BUT THEY DON'T HAVE
 ANY RELATIONSHIP IN THIS SLOT -
 THIS DITCH COULD BE IRON AGE PERIOD BUT IS NOT CLEAR BECAUSE
 OF THE FEW AMOUNT OF MATERIAL -

Refer to context

CUT OF A CURVILINEAR? DITCH - THE SHAPE ON PLAN IS NOT VERY CLEAR BECAUSE IT IS CUT BY THE DITCH [410247] SO IN THE W SIDE WE LOSE IT, IN THE E SIDE PROBABLY ITS TERMINUS IS CLOSE TO THE SLOT, BUT THERE IS ALSO THE LAND DRAIN SO IT IS DISTURBED - THE PROFILE IS VISIBLE IN THE ^{W FAC} SECTION D# 41053 AND IN THE W FAC SEG D# 41059. IN THE E FAC SECT D# 41058 THE DITCH IS CUT BY THE DITCH [410247].

~~THE DITCH~~ THE RELATIONSHIP WITH THE OTHER DITCH [410243] THAT IS CURVING IN THE SLOT AND IS LOCATED IN THE W SIDE OF THIS DITCH IS CLEAR IN THE SLOT: HERE THEY DON'T HAVE ANY RELATIONSHIP - BUT IS POSSIBLE THAT MORE IN THE W SIDE ONE IS CUTTING THE OTHER ONE -

THE DATE FOR THIS DITCH COULD BE IRON AGE - EARLY ROMAN PERIOD -

Refer to context: (410242)(410244)
[410243][410245]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of clay soil, of light brown colour and moderately compact. It has a maximum thickness of 0'38m in its part W. In this slope, the ~~fill~~ gill has a length of 1'34m and a width of 0'38m. It has occasional inclusions of small stones and charcoal. There are some chalk.

It is the natural infilling of the ditch ~~area~~ 410249. The most thickness is 0'38m in its part W, while in the part E it has only 0'11m.

Very few animal bones and pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with linear shape, with a little concave base and moderate sloping sides. It has a length of 0'50m, and a width of 0'52m. The maximum depth is 0'28m.

It is a ditch that is filled by the natural infilling 410250. It would be the terminus of the ditch, that would continue to the W, but it can't see because there is a gully that cuts it.

It is very near to the cuts 410249 and 410253, but there aren't relationship between them.

Also, it may be a small pit. Although it hasn't relationship with 410253, they are very similar, so they could be the same.

Cut with linear shape, with moderate sloping sides and concave base. It has a width of 0'70m and a length of 0'44m in this slot. The maximum depth is 0'28m.

This cut is filled by the natural infilling 410252, on the surface we can't see the shape because there is a furrow that cuts it, but it could be a terminus of a ditch. Also, it may be a small pit. It is next to the cut 410251, and, although they aren't relationship, they are very similar, so they could be the same.

Also it is very near to the ditch 410255, but they don't look like to have relationship.

Refer to context

cut with curvilinear shape, with moderate sloping sides and concave base. It has NE-SW orientation. It has a maximum depth of 0'15 m, and a length of 0'74 m and a width of 0'32 m.

It is a ditch that is filled by the natural infilling 410254. It is part of a ~~ring~~ ring ditch, of which also are 410172 and 410192, although between this slot and 410172 there are a gully that I can't see that union.

Also, it could be the terminus of that ring ditch, so it looks finish in the W part of this slot, and, immediately, there is the possible pit 410253, with which doesn't look have any relationship.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

VERY DARK (ALMOST BLACK) UPPER FILL OF DITCH TERMINUS - FREQUENT CHARCOAL INCLUSIONS
SO APPROX. 50% OF CONTEXT WAS SAMPLED, MOSTLY FROM LOWER (& LESS DRY) PART OF
FILL. REASONABLY HIGH FREQUENCY OF STONE INCLUSIONS, VARYING IN SIZE ($< 0.05m - 0.15m$
DIAMETER), GENERALLY ANGULAR AND SCATTERED THROUGH FILL.

FAIRLY FREQUENT RECOVERY OF FAUNAL REMAINS, PARTICULARLY NEAR THE SURFACE, IN
~~VARYING CONDITIONS~~ VARIOUS STATES OF PRESERVATION (SOME RELATIVELY INTACT BUT BRITTLE,
~~SOME SEVERELY FRAGMENTED~~ OTHERS MORE FRAGMENTARY AND OCCASIONALLY SHOWING SIGNS OF
BURNING). OCCASIONAL TEETH RECOVERED SUGGEST THESE REMAINS COULD BELONG TO PIG/BOAR.
MODERATE POT RECOVERED, SEEMINGLY IRON AGE IN APPEARANCE, QUITE BRITTLE AND SOME
PIECES FAIRLY DEGRADED.

FREQUENCY OF FINDS, ~~AND~~ CHARCOAL, AND LARGER STONES MIGHT SUGGEST THAT (410256)
IS DELIBERATE BACKFILL

Refer to context [410258]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

POSSIBLE PRIMARY INFILLING OF DITCH TERMINUS, LIGHTER GREY (MOTTLE ORANGE) ~~PM~~ CLAYEY
FILL RESEMBLING THE NATURAL BUT WITH MODERATE CHARCOAL INCLUSIONS. PROBABLY NATURAL
INFILLING. OCCASIONAL STONE INCLUSIONS ARE ANGULAR PEBBLES ($\leq 0.05m$ DIAMETER), SCATTERED
RANDOMLY THROUGH FILL. OCCASIONAL FAUNAL REMAINS ARE FAIRLY INTACT, BETTER PRESERVED THAN
THOSE IN (40256). VERY OCCASIONAL POT FRAGMENTS ~~ARE HEARD TO ASSESS~~ APPEAR IRON AGE.

FILL WASN'T FULLY EXCAVATED ON EASTERN EDGE OF TERMINUS DUE TO THE PRESENCE OF
A LAND DRAIN

Refer to context (40256)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF SOUTHERN TERMINUS OF A CURVILINEAR DITCH (POSSIBLE RING-DITCH?), WHICH ~~CONTRASTS~~ ~~EXTENDS~~ EXTENDS NORTHWARDS, TURNING TO THE WEST BEFORE ~~BEING~~ PROBABLY BEING TRUNCATED BY LARGE ENCLOSURE DITCH [410217] (THIS RELATIONSHIP IS OBSCURED BY A LAND ~~LAND~~ DRAIN), AND NOT VISIBLE BEYOND THIS ENCLOSURE DITCH, POSSIBLY HAVING BEEN EXCAVATED BEFORE (SUGGESTED BY TRACES OF A TRIAL TRENCH IN LINE WITH THE LIKELY TRAJECTORY OF [410258]).

THE SIDES APPEAR MODERATELY-SLOPING (ALTHOUGH THE EASTERN EDGE WASN'T FULLY EXPOSED ~~AND~~ DUE TO THE PRESENCE OF A LAND DRAIN ~~AND~~ ~~THE~~ ~~BASE~~ TRUNCATING THE TERMINUS SLIGHTLY). THE BASE IS RELATIVELY FLAT. THE CUT WAS MADE INTO A CLAY NATURAL.

THE DARK CHARCOAL-RICH FILL (410256) DOESN'T EXTEND ALONG THE ENTIRE LENGTH OF THE DITCH, CONCENTRATED WITHIN ~1.5m OF THE SOUTHERN TERMINUS - POSSIBLY A FINAL BACKFILLING EVENT? POTTERY FROM THE FILLS OF THIS FEATURE APPEAR IRON AGE.

Refer to context (410256)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch composed of brown Silty Clay with a variety of inclusions. Included was charcoal, natural stone very small (0.001m), Spang (0.001-0.02m) and medium (0.03m-0.08m) in size and chalk, all spread thinly evenly (though charcoal in much smaller amount) throughout the fill.

Excavated in dry sunny conditions.

Infilled naturally, possibly with a hedge growing within it.

Refer to context [41.262]

A large sub-circular ditch^{cut} that encloses an area of numerous man-made, earth-cut features. Also see sheets for cuts [410282] [410300] [410240] [410039]. The ditch contained 3 fills, all of which were similar, comprising compact silty clay. All 3 fills contained animal bone, and the upper 2 fills included pottery sherds - hand-made, crude + probably Iron Age. This cut was through a section of the ditch ~~for~~ aligned approx. N/S. The ditch was cut, roughly through the middle, by a smaller, shallower ditch/feature [410273], and at the W end by a furrow [410274].

Top fill of ditch [410265]. Very difficult to mattock through due to the fact that it was sun-baked for an extended period of time. ~~the~~ Moderate medium and small angular stone inclusions, with occasional chalk, pot and animal bone. This F.II was cut by a smaller ditch [410273] and a furrow [410274].

Refer to context [410265]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Black fill of ditch. Found just below top hardened layer. Most likely to be the fill of a ditch that cuts our main ditch. Approx 50cm deep, and cuts (410266) and (410268). Much easier to mattock than the rest of the fills in the ditch, as it was a more friable clay. Occasional large rock inclusions. Also some pottery and animal bone present. Charcoal also found occasionally throughout.

Middle + main

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

~~Lower~~ fill of ditch. Very compact soil, quite difficult to attack. Greyish/orangeish in colour. Looks quite like the natural in this area, however it contained pot and bone inclusions. This fill makes up the largest portion of the ditch. This fill was cut by a smaller ditch [410273] that ran through the middle of the large, parent ditch; and by a small, presumably modern furrow [410274].

This is the cut of a pit. As a circular structure, we ^{dig} ~~made~~ it a half and we just know it was 0'25m depth and 0'55 of diameter.

It had a moderated sloping sides with a concave base; clayed on the base but so gravelly on the sides.

We didn't find any relevant material so we can't make a conclusion about the date of use. Or even for what was using.

this is the fill of a pit. It hasn't any relationship with the ditch we have in the same slot.

*It was so clayed, grey and brownish and moderated compact composition.

We found many small stones into it (not more than 0.05m, occasionally some are bigger than 0.10m) also has chalk and manganese.

we didn't find any relevant material to say a date of use ~~or use~~ ~~can~~ and it hasn't any relation with the other ditch so we can't say if ~~they~~ ~~them~~ are contemporary or not.

this cut is a ditch. the with a N-S orientation, continues to the north (until the ultimated limit of the excavation) and to the south (until cut the big or huge pit we found with number [410157], [410161].

It has moderated ~~comp~~ sloping sides and concave base with just 0'30m of depth.

we just can see the ditch in a half part of the slot.

this is the fill of a ditch which didn't have any relation with the pit we found in this slot.

This is moderated compact, brown and orangeish and clayed fill. with lot of chalk and stones into it ($\leq 0.05m$).

We found many small fragments of animal bones and pottery. Because of this fragments of pottery, we can say we are in a early roman ditch (because it isn't handmade). This interpretation is the same we say with 4150157 because it was a pit (with a early iron age piece ~~inside~~ inside it) cutting by this ~~late~~ roman ditch.

This feature appears to have been a relatively shallow ditch or possible drain that cuts an earlier, and much larger ditch [410265]. It was not, however, apparent in plan - so it is unclear what shape it is or where it goes. In contrast to the fills of the larger ditch that it cut, the fill of this smaller ditch was charcoal-rich and not as compact. It contained occasional animal bones and pottery sherds that were hand-made + quite crude - probably Iron Age.

Probable furrow that partially truncated the Western edge of a large ditch [410265]. There are several of these linear furrows crossing the site. No artefacts were recovered from within this cut-fill, but it is presumably of post-medieval — modern date.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the only fill of this gully. It's a dark and quite uniform fill, and it was very visible on plan.

There were some rounded stones in this fill and occasional small charcoal flakes.

We have found small pieces of pottery on it (one piece with iron age ~~looking~~ appearance) and some animal bones (pig mandible ~~piece~~ fragments and an incisor).

Refer to context | 410277

This is the cut of a gully that is terminating in this slot. The material on its western part is gravelly and on its eastern part is clayey. It runs N-S and then turns to the west. The 41053D# slot was made to see the relation between this gully and other features, but in that draw we see the material separating this feature from the others, so for the moment we aren't able to know if this gully cuts other features.

Refer to context 410276

NATURAL INFILLING OF A DITCH FURROW [910279] DIGGED IN A COMPLEX SLOT (5x4x3 m). THIS FILL WAS FORMED AFTER THE DISUSE OF THE CUT [410279]. ITS COMPACTION IS DUE TO ITS CONTACT WITH THE SURFACE AND ITS DARK BROWN COLOUR FOR THE ORGANIC REMAINS THAT CONTAINS THIS FILL (410278) IT HAS SENSE BECAUSE THE CONSTRUCTION OF A FURROW IS A PROCESS THAT INVOLVES THE MOVEMENT OF ORGANIC MATERIALS IN THE SURFACE SOIL LIKE CHARCOAL OR ROOTS RECORDED IN THIS FILL. THIS ^{FILL} ALSO CONTAINS INCLUSIONS OF MODERATE SMALL AND MEDIUM STONES OF DIFFERENT SHAPES, FRAGMENTS OF ANIMAL BONES AND POTTERY DATED IN AN EARLY ROMAN PERIOD. BECAUSE OF DATA THAT WE THINK THAT THIS IS THE CHRONOLOGY OF THIS FURROW THAT WE HAVE RECORDED.

Refer to context [410282]

(any further details that may be important for understanding the context, including items marked * overleaf)

N-S running furrow investigated in a complex slot (5x4x3m). The length and width of the furrow is unknown for us because was impossible find the edges. The furrow is cutting two previously features: an ~~earthen ditch~~ [410282] running NE-SW direction and a ditch [410284] running NE-SW direction. The furrow is filled just by one natural infilling (410278) that contained early Roman pot and occasional animal bones. We don't know the features of the sides because was impossible find the edges (more than 5 metres). The shape of the furrow is flat as usual in this kind of features.

NATURAL INFILLING OF A ~~ENCLOSURE~~ ^{RING DITCH} [410282]. THIS FILL WAS FORMED AFTER THE DISUSE OF THE ~~ENCLOSURE~~ ^{RING DITCH} BUT IN A ^{PREVIOUS} LATER PROCESS OF THE ~~EARLY~~ ^{POSTERIOR} FILL (410280), BECAUSE OF THAT THIS IS THE OLDER FILL THAT WE HAVE RECORDED UNTIL 1 METRE DEEP. ITS COLOURS ^{AND COMPOSITION} ARE IN THIS WAY LIKE HAPPEN IN THE OTHER SLOT OF THIS ~~ENCLOSURE~~ ^{RING DITCH} DUE TO ITS CONTACT WITH THE NATURAL AND THE POSTERIOR FILL. ITS THICKNESS IS 0'30M BUT IS NOT FULL EXCAVATED BECAUSE WE ARRIVED UNTIL 1 METRE DEEP. WE ARE GOING TO DIG MORE TO ARRIVE TO THE BOTTOM. THE WATER TABLE APPEARS IN 0'95 M. APPROX. THIS NATURAL INFILLING HAS WITH THESE INCLUSIONS: MODERATE PRESENCE OF MEDIUM AND BIG STONES WITH DIFFERENT KIND OF SHAPES, FRAGMENT OF BIG ANIMALS BONES (LIKE COWS OR HORSES) AND A MODERATE PRESENCE OF IRON AGE POTTERY. THE ~~POTTERY PRESENCE~~ ^{FOR} THE BAG THAT CONTAINS MORE PIECES OF POTTERY ARE IS ^{THE SAME} A CONCENTRATION OF A FRAGMENTED POTTERY. WE HAVE TAKEN A PICTURE OF THIS CONCENTRATION (WORKING SHOT) WITH THE PHOTO NUMBER (410054). THIS FILL DATE PERFECTLY THE PERIOD OF THIS RING DITCH, IRON AGE CHRONOLOGY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NE-SW RING DITCH WITH A CURVILINEAR SHAPE THAT IS NOT SO EASY TO SEE IN A SLOT OF THESE DIMENSIONS WITH A MODERATE SLOPE AND A CONCAVE BASE (LOOKS LIKE IT BUT WE HAVE TO CONFIRM IT DIGGING DEEPER IN A LITTLE SLOT INSIDE THIS ONE). WE DON'T KNOW THE DIMENSIONS OF THIS RING DITCH IN THIS SLOT DUE TO THE EDGE OF THE LEFT SIDE OF THE SECTION RECORDED ~~WAS NOT~~ ^{IS UNDER THE TOP SOIL} OUT OF THE SITE LIMITS, ~~AND~~ THE LENGTH OF THE DITCH ARE KNOWN IN PLAN AND THE DEPTH WE NEED TO RECORD LIKE WE HAVE MENTIONED IN PREVIOUS CONTEXT SHEETS OF THIS PARENT CONTEXT. AS OTHER SLOTS OF THE SAME RING DITCH ([410265], [410240], [410039]) THIS SLOT HAS A CONCAVE BASE, AND IS DEEPER THAN 1 METER. THE FILLS RECORDED IN OTHER SLOTS ([410240] AND [410039]) ARE DARKER THAN THE FILLS OF THIS PARENT CONTEXT OR THE ^{CUT OF THE} CLOSER SLOT [410265]. THE FEATURES OF THIS CUT TELL US THAT WE ARE IN A CLEARLY RING DITCH OF THE IRON AGE PERIOD. THE IRON AGE POTTERY FINDS IN THE LAST FILL OF THIS CUT (410281) HELP US TO WRITE THIS CONCLUSION.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NATURAL INFILLING OF A DITCH [410284]. THIS FILL WAS FORMED AFTER THE DISUSE OF THIS DITCH SO IS FILLING THE CUT [410284] BUT IS CUT BY [410282] THE RING DITCH. THE COLOUR OF THIS FILL IS DUE TO THE CONTACT OF THIS FILL WITH THE NATURAL IN THE RIGHT EDGE OF THE RECORDED SECTION. THIS IS THE OLDER FILL RECORDED IN THIS SLOT. OCCASIONAL INCLUSIONS OF SMALL AND MEDIUM STONES, CHALK, ^{BIG} ANIMAL BONES AND POTTERY DATED WITH AN IRON AGE CHRONOLOGY. ~~BE~~ DUE TO THE MATERIALS RECORDED AND THE STRATIGRAPHY OF THIS FILL AND ^{RELATIONSHIP} ITS PARENT CONTEXT TELL US THAT WE ARE IN THE OLDER ~~SET~~ ONE WITH AN IRON AGE PERIOD

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of sandy soil, of dark black colour and loose compaction. It has a maximum thickness of 0.62m and a maximum width of 1.58m. It has occasional inclusions of chalk and frequent charcoal. There are some stones with a maximum size of 6-7 cm.

It is the natural infilling of the ditch 410402. Some animal bones and iron age pottery found. A small half ring of bronze and a small fragment of loom weight (probably roman) found. Roman pottery found.

This is the cut of a 'pit. We found several pits in this area. Many ~~time~~ of them are cutting by roman ditch so we can say that they are early Iron age. This is not the case, but probably is the same chronology although we didn't find any relevant object.

With a circular shape, it ~~has~~ has moderated sloping side and a concave base

Refer to context

This is the fill of a pit.

It was so compact, difficult to dig because of the clayed composition. This grey and brownish fill, has lot of stones into it (small ones, most of them $\leq 0.10m$), also has chalk and manganese.

As I said on the cut sheet, is difficult to say a date of use, but we thought it could be Iron age.

NATURAL INFILLING OF GULLY [410290] INVESTIGATED IN A SLOT
(0.86 x 1.70 m) MADE FOR SEE THE TERMINUS OF THE GULLY.
AFTER THE SLOT, IT'S POSSIBLE CONFIRMATE THE TERMINUS.
THE FILL CONTAINS FREQUENT STONES WITH DIFFERENT SIZE
(2 ÷ 12 cm) WITH SUB-ROUNDED AND SUB-ANGULAR SHAPE.
ALSO IT HAS OCCASIONAL ANIMAL BONES AND FREQUENT POTTERY,
WHERE WE CAN IDENTIFICATE AT LEAST TWO PIECES. ~~THEY~~ THEY
WERE IN THE TOP OF THE FILL AND BROKEN ~~BECAUSE OF THE POTTERY~~
~~WITH~~ BECAUSE OF THE POTTERY. THE CHRONOLOGY OF THE
FILL AND THE GULLY COULD BE EARLY ROMAN.
ALSO THE FILL HAS ROOTS INTERFERENCES IN THE SW CORNER

Basal fill of ditch [410265], consisting of blue/grey clay tinted with streaks of orange sandy silt. — essentially a mixture of the fill directly above it (410268) and the natural clay beneath it. There was a single piece of animal bone within this fill, almost at the very base of the ditch. At the time of excavation, this fill (and the base of the ditch) were below the water-table.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Dark grey fill of modern (18th-19th) ditch, with a small ~~very~~ range of inclusions.

Included was charcoal, chalk and natural stones of small (c.0.01m or less) size spread thinly evenly throughout the fill.

Excavated from the ditch c.0.50m from the edge, were two large quartzite fragments, most likely having been removed from this ditch by modern ploughing, but likely deposited in the ditch when an older one was disturbed.

possibly had a hedge growing within it once it fell into ditch, or was very far abandoned hedge.

Excavated in dry conditions.

Refer to context: [410296]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

CUT OF SMALL SHALLOW PIT AT EDGE OF RING DITCH [410300] - 1 FILL - (410301). RELATIONSHIP ~~DO~~ TO RING DITCH UNCLEAR DUE TO CRACKING + BREAKING OF CLAY AT SURFACE (V. DRY CONDITIONS) FILL QUITE DIFFERENT IN COLOUR FROM FILL OF DITCH SUGGESTING [410302] IS DISTINCT FEATURE ~~RATHER THAN~~ ^{POSSIBLY} ASSOCIATED WITH RING DITCH RATHER THAN DRAG OF DITCH MATERIAL DUE TO ROOTING, MACHINING ETC. SHAPE OF CUT ALSO SUGGESTS DISTINCT FEATURE BASE SLOPING SLIGHTLY DOWNWARD TO W.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

UPPERMOST FILL OF DITCH, CONTAINING OCCASIONAL CHALK AND CHARCOAL INCLUSIONS. AND MODERATE FREQUENCY OF SMOOTHED PEBBLE-SIZED STONES ($\leq 0.05m$ DIAMETER) SCATTERED THROUGHOUT). OCCASIONAL FAUNAL BONE IS MOSTLY FRAGMENTED. OCCASIONAL POTSHARDS APPEAR IRON AGE IN DATE. GREYISH COLOUR OF FILL COULD BE ATTRIBUTED TO CHARCOAL INCLUSIONS, SO NATURAL INFILLING IS POSSIBLY MOST PARSIMONIOUS INTERPRETATION.

INITIALLY, IT WAS THOUGHT THAT THE NORTHERN END-POINT OF THIS FILL ON THE SURFACE DEMARCATED THE NORTHERN TERMINUS OF DITCH [410305], SO THE SLOT WAS OPENED TO SHOW THIS TERMINUS. HOWEVER, IT TURNS OUT THAT THE TERMINUS IS PROBABLY A LITTLE FURTHER TO THE NORTH (SINCE THE UNDERLYING FILL (410304) CONTINUES ~~BE~~ TO THE NORTH, AS VISIBLE IN SOUTH-FACING SECTION - PHOTO NUMBER 4100264). THE SHALLOWER REMNANTS OF (410303) ~~ARE~~ IN THIS NORTHERN ~~PART OF THE DITCH~~ ^{PART} OF THE DITCH COULD HAVE BEEN DRAGGED AWAY BY SUBSEQUENT PLOUGHING & MACHINING, OR PERHAPS (410303) NEVER EXTENDED ALL THE WAY TO THE TERMINUS.

Refer to context [410305]

DRABBEY - BROWN CLAYEY FILL RESEMBLING THE NATURAL, ALBEIT WITH OCCASIONAL CHARCOAL - POSSIBLY NATURAL PRIMARY INFILLING OF DITCH. OCCASIONAL ~~SMALL~~ FLINT PEBBLES (≤ 0.05 m DIAMETER) SCATTERED THROUGHOUT. NO FIBRES RECOVERED FROM (410304). FILL OBSERVED IN BOTH NORTH AND SOUTH-FACING SECTION (OVERLYING FILL (410303) OBSERVED ONLY IN N-FACING SECTION) - SHALLOW PRESENCE ~~IN~~ AT NORTHERN END OF SLOT SUGGESTS ~~THAT~~ THAT NORTHERN TERMINUS OF DITCH [410305] IS A LITTLE FURTHER NORTH THAN EVIDENT ^{ON} ~~THE~~ THE SURFACE, BUT DIFFICULT TO TRACE.

CUT OF SHALLOW DITCH ORIENTED N-S, ~~WHICH~~ SIDES APPEAR SHALLOW, ALTHOUGH THE ~~SHALLOW~~ DRYING UP OF THE TOP ~~AND~~ ~0.10m OF THE GROUND MAKES IT DIFFICULT TO REFINES THE EXACT PROFILE. THE BASE IS GENTLY CONCAVE. SLOT WAS OPENED IN PRESUMED LOCATION OF THE DITCH'S NORTHERN TERMINUS, HOWEVER WAS ULTIMATELY BOXED OFF BECAUSE LOWER FILL (410304) APPEAR TO CONTINUE A LITTLE FURTHER NORTH - GIVEN HOW SHALLOW THE FEATURE IS, IT IS POSSIBLE THAT ~~THE~~ SUBSEQUENT PLOUGHING HAS OBLISCED THE EXACT POSITION OF THE TERMINUS (IN SOUTH-FACING SECTION THERE IS ^{LESS THAN} ~~PERHAPS~~ ~0.10m OF FILL ~~IS~~, VERY ~~SHALLOW~~ EPHEMERAL). CUT MADE INTO A LIGHT BLUE-GREY ~~OR~~ CLAY NATURAL. POTTERY FROM UNDERMOST FILL (410303) MIGHT SUGGEST IRON AGE DATE.

WORTH NOTING THAT ~2m SOUTH OF THE SLOT, ~~OR~~ THE DITCH APPEARS ~~TO~~ TO BE TRUNCATED BY A NW-SE ORIENTED BAND OF WHITE CHALKEY CLAY - THIS HASN'T BEEN INVESTIGATED YET, MAYBE A LAND DRAIN CUT?

INFILLING OF POSSIBLE TREE ROOTING, INITIALLY THOUGHT TO BE DISTURBED TRACE OF (410303),
 THE UPPERMOST FILL OF A SHALLOW N-S ORIENTED DITCH LOCATED ~1m ~~to~~ TO THE SOUTH,
 BASED ON SIMILAR COLOUR / COMPOSITION OF FILL. FILL DID CONTAIN VERY SMALL NUMBER OF
 POSSIBLY IRON AGE POT SHARDS - SO IS CONCEIVABLY A TRACE OF NORTHERN TERMINUS OF [410305],
 DISTURBED / TRUNCATED BY SUBSEQUENT PLOUGHING. HOWEVER, IT COULD ALSO BE EXPLAINED AS
 ROOTING, BASED ON IRREGULAR PROFILE, SIMILAR PATCHES OF FILL IN THE NEAR VICINITY, AND ON THE
 FACT IT DOESN'T ~~quite~~ QUITE LINE UP WITH N-S TRAJECTORY OF DITCH [410305].

VERY SHALLOW FILL WITH OCCASIONAL CHARCOAL AND SMALL PEBBLES ~~scattered~~ (<0.05 m DIAMETER)
 SCATTERED THROUGHOUT.

Refer to context [410307]

CUT OF POSSIBLE TREE BOWL/ROOTING, SUGGESTED BY IRREGULAR PROFILE IN PLAN AND UNEVEN SIDES AND BASE. GIVEN SIMILARITY OF ITS FILL TO UPPERMOST FILL OF DITCH [410305] LOCATED WITHIN 1m * TO THE SOUTH, IT WAS CONSIDERED THAT THIS MIGHT BE TRUNCATED/DISTURBED NORTHERN TERMINUS OF THIS DITCH - HOWEVER, IRREGULAR PROFILE AND SLIGHTLY SKEWED ALIGNMENT WITH [410305] MIGHT * BETTER SUGGEST IT IS A ROOT THAT HAS DISTURBED THE UPPER FILL OF THIS DITCH.

SKETCHES

Refer to context

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

SKETCH LOCATION PLAN OF POSSIBLE TREE ROOT/BOWL?

[410307], POSSIBLE TRACE OF ROOTING, PARTLY SUGGESTED BY THE FACT IT DOESN'T QUITE LINE UP WITH TRAJECTORY OF DITCH [410305] AND HAS AN IRREGULAR PROFILE - I.E. NOT NECESSARILY BEING A DISTURBED/TRUNCATED TRACE OF [410305].

NORTHERN TERMINUS OF [410305] VERY EPHEMERAL AND DIFFICULT TO CHASE DUE TO HARDENING OF TOP ~ 0.10m OF THE GROUND

[410305], LINEAR SHALLOW DITCH

Natural infilling of a ditch [410309] investigated in a 0,70 x 1,20m slot in correspondance of the terminus.

The fill contained some chalk flakes and numerous stones with subrounded or irregular shape and ~~the~~ small/medium size (5-15cm Ø). The fill contained also some IRON AGE pot sherds, ~~and~~ numerous animal bones and some CBM, interpreted as burned clay with negative prints of branches.

The fill is same as (410333) formerly identified in a near slot in the eastern side.

The biggest stones found in the fill was mostly in the bottom of the feature, in contact with the NATURAL SOIL.

Refer to context 410309

This is the dark fill of of the recut of a ditch.
As we have seen in all the site, the top of this fill was very dry.
At the beginning we weren't able to see it, but once we have excavated it, we can see also on plan that the central part of this ditch is darker than the edges.
It's a fill where we have found a moderate frequency of small charcoal flakes. There also were some small angular stones.
We have found some small pieces of pottery and they seem iron age but is not easy to say.

Refer to context 410811
410312

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is the recut of a ditch as a result of its conditioning or reuse. If we see the ditch on plan, we can notice that the centre is darker, which is the fill of this recut, anyway, the surface is very dry and we aren't able to see clearly if this recut affects to all the ditch.

Refer to context: 410310
410312

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of the primary ditch. We can distinguish it from the other one because it's more brighter and mottled, and its composition is more clayey. we have found occasional ~~occasional~~ inclusion of small flakes of charcoal but we didn't find any material on it.

Refer to context 410310
410311

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the primary cut of this ditch. As we can see in the section, this ditch has a step on its NE edge for the moment, we cannot relate this ditch with the surrounding features, but my next two slots are gonna be relationship slots between this ditch and its contiguous features.

* Updated 15/5/17: we have seen that this ditch is cut by a gully (it seems roman because of the pottery) the gully cut u² is [410413]. It's also cut by a ditch that comes with E-W direction. We can see this relation in DVG # 41083 and 4100345/6 photos.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410314) is a compact, greyish dark, silty clay natural infilling with ^a high amount of inclusions, most of them chalk, gravel and stones, natural flint, all of them with small sizes less some big stones, probably natural flint and sandstone. We identified also some pieces of fired clay / CBM.

Regarding archaeological remains we found a moderate amount of pot, ~~there~~ in general black and ~~that~~ redish and black pieces. The fragments of bone were numerous. Specially the pottery suggest us ~~that~~ this slot could be Early roman or Roman.

This context together with [410137] and [410326] are the latest of this slot.

It is the same context as (410287).

Refer to context (410316)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410315] is a cut of ditch which runs in a N-W - SE direction. It is the same context as [410273] and it is cutting contexts [410318] and [410319]. It is one of the latest feature in the slot. That information together with the archaeological remains found in it could suggest us that the chronology of the context is Early Roman - Roman.

Refer to context [410324]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410317] is a ~~furrow~~ cut out of a furrow which is running N-S direction. It has been cut by a hard drain which broke the context in two: [410317] and [410326], so both are the same. This context [410317] is cutting also context (410322) (410323) [410324].

Regarding the age it might be a roman feature, due to two nails found in it with a roman typology. ^{together with [410314]} It is also one of the newest feature in the slot, probably the

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410318) is a compact, grey and silty clay natural infilling with a high range of inclusions. The stones, ^{were frequent} mainly natural flint although some sandstones were also recorded. In general the sizes were small; however there were some big sizes too. In respect of charcoal and fired clay/CBM were occasional. The chalk is frequent too.

Regarding archaeological remains, this context has yielded a good amount of pottery and animal bones. Within the pot we can remark a bit of fragments from the same vessel which have been separated in a different bag. The pot is in general a bad quality black and redish and black pieces. That can suggest that the chronology of the context is Early Roman-Roman. The absent of coinage frequent might show us that the roman occupation is still light.

It is important to know that the context has not dug completely due to it exceeds one meter depth.

Refer to context (410316)

4100328
4100331

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Context [410319] is a cut of a ring-ditch, one of the main feature of TE441. Through our slot the ring ditch runs in a NW-SE direction. It is the main context in the slot slot. It is the same context as [410265], it is cut by [410315] and it is cutting contexts (410320) and (410321).^[410324] It is probably a Early Roman - Roman construction. It has not been dug completely due to its depth is over 1 meter.

Refer to context [410324]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please have a look context [410324].

Thank you.

4108331

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS FILL CONTAINED MANY INCLUSIONS, FREQUENT CHARCOAL SPECKS, SMALL ~~PI~~ PIECES OF ~~PI~~ ORANGE FIRED CLAY, OCCASIONAL CHALK & OCCA STONES (UP TO 3 CM, SUB-ANGULAR). IT WAS A DISTINCTIVE FILL FROM THE OTHERS AS IT WAS LESS CLAY & WITH MORE INCLUSIONS. FOR THIS REASON IT SUGGESTS IT MAY BE A DUMPED LAYER? AFTER REACHING THE BOTTOM, DUE TO ~~THE~~ THE FILL'S SIZE, IT'S MORE LIKELY TO BE NATURAL INFILLING. MANY FRAGMENTS OF FIRED CLAY WERE FOUND IN THIS FILL ~~ONCE~~ IT, IT APPEARS THEY COULD BE WASTE FROM POT MANUFACTURING. POSSIBLY ~~LATE~~ LATE IRON AGE EARLY ROMAN. ALSO A FEW BIG CHUNKS OF ANIMAL BONE WERE FOUND.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS THE CUT FOR THE EARLIER FEATURE IN THIS SLOT. THIS CUT IS THOUGHT TO BE FOR A BOUNDARY DITCH. THIS SLOT HASN'T BEEN EXCAVATED TO THE BOTTOM FOR H&S/R SINCE 1M WA DEPTH WAS REACHED. I AM THEREFORE UNSURE IF THIS CUT CORRESPONDS, OR IS EQUAL TO THE CUT ON THE EAST SIDE OF THE SECTION DRAWING. [410319] * ^{EXCAVATED} ~~TO~~ ^{THE} BOTTOM * ^{UPDATE} ~~TO~~ A POSSIBLY E SIDE OF THE CUT WAS CUT BY LATER DITCH [410319].

THE SHAPE OF THE CUT IS STEPPED AND 4 FILLS CORRESPONDING DIRECTLY ~~TO~~ ^{TO} IT WERE IDENTIFIED - (410320), (410321), (410322) & (410323).

SEVERAL SLOTS HAVE BEEN EXCATED IN THIS BOUNDARY DITCH AND IT APPEAR THAT THE EAST SIDE OF THE SITE HAS EVIDENCE OF MORE ACTIVITY OPPOSED TO WHERE OUR SLOT IS LOCATED.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410325) is a compact, light orangeish brown and silty clay natural infilling. It is the same context as (410316), only separated by a land drain which cut the furrow in two. The inclusions are the same, an occasional amount of chalk and stones, natural flint and gravel, both with small sizes. In this context we we ~~didn't~~ didn't find any archaeological remain but we can say it has a roman chronology due to two roman nails found out in context (410316).

Refer to context (410316)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410326] is a cut of a plow, same as [410317]. This context has been cut by a land drain on its ~~west~~ ^{east} side, which avoids us to see the relationship between [410326] and [410317] and it has been also cut by another land drain on its ~~west~~ ^{east} side. That is the main reason why the sides of this cut are complex, they were destroyed by both land drains and we only have the base.

~~Its~~ Its chronology is roman period due to two roman nails found in context [410316].

SKETCHES

Refer to context [410317]

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF PROBABLE CREMATION BURIAL - MOSTLY BLACK IN COLOUR WITH HIGH FREQUENCY OF CHARCOAL, WITH SMALL FRAGMENTS OF WHITE/ORANGE BURNT BONE THROUGHOUT. TOWARDS BASE, FILL BECOMES LESS CONSISTENTLY BLACK, ~~RESEMBLING~~ RESEMBLING MORE THE UNDERLYING FILL (MID YELLOWISH BROWN SILTY CLAY) BUT SAMPLED WITH THE REST OF THE CREMATION DUE TO CONTINUED OCCASIONAL PRESENCE OF BURNT BONE AND NOTICEABLE FREQUENCY OF CHARCOAL. ALL BONE WAS COLLECTED IN SAMPLE. CREMATION WAS FULLY EXCAVATED AND 100% WAS SAMPLED. OCCASIONAL STONE INCLUSIONS WERE MOSTLY SMALL ROUND PEBBLES (<0.05m DIAMETER), ^{WHICH} ~~THE~~ OCCASIONALLY SHOWED TRACES OF EXPOSURE TO BURNING (ALTHOUGH MOST DID NOT). VERY OCCASIONAL POT FRAGMENTS WERE RECOVERED - POSSIBLY IRON AGE IN DATE?

Refer to context [410330]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

PROBABLE CUT FOR CREMATION BURIAL, APPROXIMATELY EGG-SHAPED AND ORIENTED NE-SW. THE SIDES ARE NEAR-VERTICAL IN SOME PLACES, MORE MODERATELY-SLOPING IN OTHERS, AND THE BASE DIPS AT BOTH THE NE AND SW ENDS OF THE CUT, RISING TOWARDS THE CENTRE.

THE CUT HAS BEEN MADE INTO THE TOP OF A NE-SW ORIENTED LINEAR DITCH, SO ISN'T CUTTING INTO THE NATURAL. ADDITIONALLY, THE TOP $\sim 0.10m$ OF THE GROUND HAS HARDENED, MAKING IT DIFFICULT TO DETERMINE THE EXACT PROFILE OF THIS RELATIVELY SHALLOW CUT. THE PROFILE WAS ESTABLISHED PRINCIPALLY BY REMOVING ALL TRACES OF THE CREMATION. THIS MIGHT ACCOUNT FOR THE IRREGULAR SHAPE/PROFILE OF [410330]

SOME POT SHARDS FOUND WITHIN THE FILL ([410329]) MIGHT SUGGEST AN IRON AGE DATE, ALTHOUGH DIFFICULT TO BE CONCLUSIVE ON THIS POINT

Refer to context ([410329])

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a ditch. Is the first one we made at the ^{south} ~~east~~ of the excavation area. Probably is part of the external ditch we can see out of the ~~partial~~ ^{ring} ~~enclosure~~ area.

the orientation is NW-SE with moderated sloping sides and concave base.

It wasn't too deep it just 0.75m of depth

And our interpretation is could be another enclosure but on the point we can't see it properly so we just say it was a ditch.

This is the at least fill of the first set we found into this slot.

It was to compact because it decayed composition. It's also grey with lot of stones into it (most of them are $\leq 8'10m$)

Darkish grey color could allow interpretation of ~~being~~ deliberated backfill

We found here some fragments of animal bones and pottery (but too destroy to say a date of use)

This is the second fill of the oldest cut of this slot.

It is so similar to 410339 compact and ~~grey~~ clayed grey clay but with less stones and less chalk in it. It was cut by the recut (410342) ~~as~~ like 410341. We can see the difference with 410339 in the color as well because it was grey but brownish.

This fill was the only one we found pottery ~~to~~, but it is a small fragment too degraded to say a date of use.

We also found some chalk and manganese. But not in relevant quantity.

This form is incomplete if fields marked with * are empty. Please turn over for additional information (and describing all items marked with * and sketches).

This feature was apparent as a small, black, sub-circular feature in plan and was ~~there~~ initially thought to be a cremation pit. The surface, however, was very dry + sun-baked, and on excavation the cut was much larger than first appeared. It was filled with a charcoal-rich fill but no burnt bone was identified. Consequently, it is probable that the feature is a large post-hole. There is a ^{curvilinear} ~~sub-circular~~ earth-cut ditch/gully that appears to partially surround the post-hole that may be associated (ring-ditch. or round-house?). A large sherd of crude pottery was found in the base of the post-hole - probably Iron Age.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

A charcoal-rich fill that probably represents the deliberate back-filling of a post-hole. There was a large, crude, hand-made shard of pottery within the fill at the very base of the post-hole that may have been deliberately placed there. The feature was initially thought to be a cremation-pit due to its form and the ~~presence~~ presence of charcoal, however, no burnt human bone was identified during excavation (there were numerous small white flecks in the fill but this appears to be chalk). There was also a moderate amount of small-medium-sized stones.

Refer to context 410345

CUT OF DITCH, ~~AND~~ ^{TWO} FILLS SEEN IN SLOT WHICH DOES NOT SHOW THE FULL PROFILE. DITCH CUT BY LATER DITCH [410096], THIS DITCH ~~TURN~~ ^{TURN} CUTS EARLIER DITCH [410099] AND PIT [410349] AND ITS FILL (410348). DITCH IS ~~BOUNDARY~~ ^{BOUNDARY} FOR AN IRON AGE ENCLOSURE/ SETTLEMENT. ONE OF TWO SURROUNDING THE SAME AREA. [410098] IS A RE CUT OF THIS DITCH AND IS THE SAME AS [410244]. FINDS SUGGEST AN IRON AGE DATE. PROFILE HAS A MODERATE SLOPING SIDE AND SLIGHT STEP DUE TO THE PIT BENEATH, REST OF PROFILE NOT SEEN.

CUT OF PIT, STEEP SIDED WITH A FLAT & SH. BASE, NOT MUCH WITHIN THE SLOT SO DIAMETER IS NOT CLEAR, THE DEPTH IS ALSO UN CLEAR, AS TRUNCATED BY DITCH [410346] SO FULL DEPTH LOST. COULD HAVE BEEN CUT BY DITCH [410099] ~~FOR~~ IT COULD HAVE CUT [410099] BUT BOTH ARE CUT BY [410346] SO THE RELATIONSHIP IS LOST. USE OF PIT UN CLEAR BUT COULD BE A RUBBISH PIT AS FILL (410348) IS FAIRLY DARK IN COLOUR REALLY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Slightly Silty Clay fill of ditch terminus, excavated in very hot and dry conditions.

Inclusions include small (> 0.01m - 0.01m) - medium (0.01 - 0.05m) Stones spread thinly throughout the fill. Two very large (0.0 - 30m) Stones were found.

Iron age pot was found, variety of types and sizes but all fragmentary undecorated sherds no greater than 0.05m in size.

Grey on surface from long exposure to sun and drying out, water spray used to clarify edge location due to dried out nature.

Fragmentary animal bone was found of a variety of species and conditions and species, including a pig mandible. A fully intact Metacarpal/Metatarsal was found of a medium medium, possibly pig or goat/Sheep. Animal bone was scattered randomly evenly throughout the fill with no discernible pattern.

Occasional - moderate amount of charcoal spread throughout the fill with no visible patterns.

Refer to context [410355]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

End of Terminus of Han era ditch. Cut into natural brownish gray clay.
N-S aligned, with steep sides on the E and W sides but a moderate slope on
the northern side as it terminates.

Slightly overcast due to dry clayey nature of fill and natural material,
water spray used to define the edges.

Excavated in very hot, dry sunny conditions.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Yellowy brown fill of heavily truncated iron age ditch. ~~was~~
 Charcoal is spread thinly evenly throughout the fill.
 Fragmentary animal bone is evenly spread throughout the fill, from a variety of
 species and sizes.
 Pot Sherd are spread evenly throughout the fill, assortment of fabrics,
 shapes and thickness, no pattern, no decorations.
 Excavated in very hot sunny conditions.
 Probably formed by a mixture of natural infilling and dumping.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Bottom fill of late Iron age ditch cut, excavated in very wet and dry conditions.

Natural Stoned Small-medium Thinly Scattered Throughout the Silt, no pattern discernable

Charcoal present in greater amount than upper layers

Naturally in filled

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Cut of late N-S aligned iron age ditch truncating the earlier ditch
Side are gentle-moderate for the top half, then steep for the
bottom one.

Excavated in dry, hot sunny conditions.

Contains two fills.

Continues Northwards beyond Loc E, continues Southwards curving slightly
for 10 m.

Excavated in Relationship Slot.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Neonate remains deposited within ring ditch [410367], articulated in a flexed position, with the posterior resting against the Eastern edge of the ditch slope. No evidence of a grave cut; remains were simply deposited.

- Ring ditch forms part of an Iron age enclosure.

- Cranium (crushed) and the humerus, radius + ulna were discovered during excavation (side trench). Remains were then touch typed: SH1020 and the pit of the ditch around the burial area sampled: SH10119.

Refer to context [410367]

Fill of ring ditch that contained some medium
 mammal bone bones, Iron age pot + a chunk
 of slag. ALSO contained burnt stone.
 Stratified above the remains of
 a neonate (410365), ~~pot~~ this fill was sampled
 around the remains.

stones: Flint gravel 0-5mm sub rounded.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of small ring ditch that forms part of an exposure. Iron pipe in ditch, finds also hint at metalworking in this space as slag was found.

Also contained the remains of a neonate: C3410365 that had been dumped down the southern edge of this slot (no evidence of a separate burial cut).

SECONDARY NATURAL INFILLING OF A DITCH, INVESTIGATED IN
4.00m x 2.00m SLOT.

THIS FILL BELONGS TO A DITCH [410370] OBSERVED IN
HARDLY 0.80m IN HIS SIDE, THIS IS WHY IT WAS
DIFFICULT TO IDENTIFY THE FILL.

IN THIS LIMITED SPACE THERE WERE NO ARCHAEOLOGICAL
REMAINS

IT'S TRUNCATED BY LATER DITCH [410374] IN WHICH
TILLS APPEAR IRON AGE MATERIAL

Refer to context | 410370

PRIMARY NATURAL INFILLING OF A NE-SW RUNNING DITCH
[410370] INVESTIGATED IN 4'00 x 2'00 UNIT SLOT
THIS FILL BELONGS TO A DITCH RESEARCHED IN HARDLY 0.80 m
JUST WHEN THE EDGE STARTS COMING DOWN
IN THIS LIMITED SPACE THERE WERE NO ARCHAEOLOGICAL
REMAINS

THIS FILL IS COVERED BY (410368) AND LATELY TRUNCATED
THIS ONE TRUNCATED LATELY BY [410374]

Refer to context 410370
410374

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a NE-SW running ditch found in 4'00x2'60 cut slot, investigated in only 0'80m x 0'60m.

~~The ditch comes from NE possibly the same that has been researched 2m~~

The ditch is possibly the same as another ditch [] researched 2m NE from the location.

The ditch's base has been investigated only at the beginning of the side so it was impossible describe it.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

GREY UPPER FILL OF GULLY-LIKE FEATURE, FROM WHICH PART OF A HUMAN SKULL WAS RECOVERED NEAR THE SURFACE. INITIALLY THOUGHT TO BE POSSIBLE BURIAL, SO MUCH OF THE SURROUNDING FILL (INCLUDING SOME NATURAL* SINCE THE SKULL WAS POSITIONED ON THE EASTERN EDGE OF THE GULLY, LODGED BETWEEN FILL AND NATURAL) WAS SAMPLED. ULTIMATELY, ONLY THIS SKULL FRAGMENT WAS RECOVERED (POSSIBLY DRAGGED FROM A BURIAL BY PLOUGHING/MACHINING, ALTHOUGH POSSIBLY INTENTIONALLY DEPOSITED GIVEN THAT IT IS BROKEN ~~AND~~ ONLY ALONG THE SUTURE LINES, ~~APPROXIMATELY~~ AND THAT A BROOCH WAS RECOVERED WITHIN ~~2~~ 0.20 M.) NO OBVIOUS BURIAL CUT, HOWEVER. (410375) CONTAINED OCCASIONAL SMALL ROUNDED/SMOOTH PEBBLES (≤ 0.05 m DIAMETER), A MODERATE FREQUENCY OF SMALL CBM FRAGMENTS AND OCCASIONAL SMALL BONE FRAGMENTS WHICH SEEMED DIFFERENTLY PRESERVED TO THE SKULL (E.G. SOME BURNED) AND THUS WEREN'T CONSIDERED PART OF A BURIAL. THE SKULL/BROOCH NEAR THE SURFACE MAY HAVE BEEN DELIBERATELY DEPOSITED, HOWEVER OTHERWISE THIS UPPER FILL WOULD APPEAR LIKE NATURAL SILTING UP OF GULLY. SOME POTTERY FRAGMENTS FROM LOWER IN THE FILL (I.E. NOT RECOVERED ON/NEAR SURFACE) LOOK DISTINCTLY IRON AGE (NOTICEABLE TEMPER INCLUSIONS, VERY BRITTLE), ALTHOUGH POT FRAGMENTS NEAR/ON THE SURFACE ARE BETTER PRESERVED WITH NO INCLUSIONS.

* AND SOME OF FILL (410376) IN ALL LIKELIHOOD

Refer to context [410377]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

SKETCH OF N-FACING SECTION THROUGH GULLY [410377] - DWG# 41072

OVEREXCAVATED NATURAL, WHICH WAS OVEREXCAVATED BECAUSE THE HUMAN SKULL FRAGMENT WAS POSITIONED ON THE EASTERN EDGE OF GULLY [410377] AT THE SURFACE, PARTIALLY SITTING ON THE NATURAL.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

POSSIBLE PRIMARY INFILLING OF GULLY-LIKE FEATURE, WITH A MORE YELLOWISH CLAYEY FILL
RESEMBLING THE UNDERLYING NATURAL SAVE FOR OCCASIONAL PRESENCE OF CHARCOAL, POT
FRAGMENTS AND ~~CBM~~ CBM. OCCASIONAL STONE INCLUSIONS ARE VARIED IN SHAPE/SIZE
($\leq 0.05m$ DIAMETER, SOME FLINT, SOME SANDSTONE, SOME ROUNDED, OTHERS MORE ANGULAR).
POT FRAGMENTS APPEAR DISTINCTLY IRON AGE (NOTICEABLE TEMPER INCLUSIONS, VERY BRITTLE).
MOST LIKELY PRIMARY NATURAL INFILLING.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

SHALLOW CUT OF A POSSIBLE GULLY, BROADLY ORIENTED N-S. ONLY ~~4~~ ~ 2m OF THIS FEATURE ARE VISIBLE ON THE SURFACE, INTERACTING WITH POSSIBLY SEVERAL E-W ORIENTED DITCHES AT ITS NORTHERN END (ITS TRAJECTORY BEYOND THESE DITCHES CAN'T CLEARLY BE SEEN) AND PETERING OUT AT ITS SOUTHERN END (POSSIBLE TERMINUS? OR CUT BY A MORE EPHEMERAL FURROW-LIKE FEATURE?). SMALL SLOT WAS OPENED TO DETERMINE IF IT WAS A POSSIBLE BURIAL BASED ON THE RECOVERY OF A HUMAN SKULL FRAGMENT ALONG ITS EAST EDGE - ULTIMATELY, THIS DOESN'T SEEM TO BE THE CASE (THE SKULL FRAGMENT IS ISOLATED). THE SIDES ARE MODERATELY SLOPING AND THE BASE MODERATELY CONCAVE, CUT INTO A SANDY / CLAYEY NATURAL. ~~POT~~ PUT FROM BOTH ITS FILLS SEEMS IRON AGE IN CHARACTER, ^{MAYBE} SUGGESTING IRON AGE DATE OF CONSTRUCTION.

THE SLOT WILL PROBABLY BE EXTENDED NORTHWARDS TO FIND RELATIONSHIP WITH E-W ORIENTED DITCHES. PRIORITY AT THIS STAGE WAS TO REMOVE THE HUMAN SKULL FRAGMENT.

POSSIBLE CONNECTION OF HUMAN SKULL FRAGMENT ^{TO} AN INCOMPLETE / DAMAGED HUMAN BURIAL APPROX. 20-30m SE, WHICH IS MISSING ITS SKULL?

Refer to context ~~[410377]~~
(410375)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the secondary fill of a ditch with two fills. It's the earliest ditch of this slot and it seems to be a ditch coming from NE to SW, crosses the evaluation trench and appears in this slot. It's visible in both S-facing section and east facing section.

Although this black fill and the black fill of the ditch which is cut by this one ([410395]) are very similar, this one is a bit darker and less compact.

We found some animal bones in this fill and also two teeth (2nd molar of a small herbivorous (sheep?) and an incisor of a cow or a horse).

We also found a moderate amount of charcoal flakes, some of them about two cm long, but they weren't concentrated in an specific area.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the primary fill of a ditch. As we see in many in many medium sized ditches of this site, we have one mid greyish-brown fill with a clayey composition as a primary fill and a darker secondary fill above it.

In this case we are speaking about that clayey one. We found some occasional charcoal flakes and some animal bones.

We also have found ~~some~~ pottery and it looks iron age pottery because it's black with brown areas as a result of the cooking process.

* updated 3/6/17: As we have seen in a slot opened in the north-west the gully of this slot [410398] cuts this ditch [410395]. We can see it in 41151 DWG#

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the primary fill of a ditch. It's very similar to 3(41391). Indeed is not easy to see the cut between this two fills, but we see it between (410390) and (410393). This could be because this first infilling moment was the same for both features.

We found some small angular and rounded stones and also chalk nodules in this fill.

The most representative material found in ~~at~~ this fill are to iron age pieces of pottery. They seem like they have been decorated with the fingers and nails.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a ditch that comes from east to west and that it turns to the south in this slot.

This ~~cut~~^{ditch} was excavated by me and I saw a recut containing the secondary black fill, however I'm not able to see the recut in this slot. Maybe because the recut doesn't run all along the ditch or because of the orientation of the slot in relation to the ditch direction

This is the secondary fill of a gully that is terminating in this slot. It comes from the south-east and it has two fills.

In this case we are speaking about the dark and dry one on the top. It has small chalk nodules ~~and~~ and also small angular stone, but just occasionally.

We have also found some small pieces of animal bones and pottery (Roman pottery tip)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a gully that comes from the southeast and terminates in this slot. It has two fills and it seems roman if we look at the pottery.

We don't see the relation between this gully and [410395] gully in the section, but we know that the gully cuts the ditch and also the big ring ditch because we see it in the plan.

* updated 13/6/17: We have check in a section that the gully cuts [410313] [410395] ditch DWG # 41151

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut with curvilinear shape, with moderate sloping sides and a few concave base. It has a maximum depth of 0.76 m, a length of 2.88 m and a width of 2 m in this slot. It has orientation NW-SE.

It is a ditch that is filled by the natural infilling 410403. Later, this ditch was cut, in the middle, by the ditch 410402, with the same orientation, and in its part SW, by the ditch 410406, with orientation NE-SW. Also, this ditch cut is the fill 410404, that the natural infilling of the ditches 410446 and 410447.

It is the same ditch that 410513.

THIS FILL OF DITCH [410400] CONSISTS OF
COMPACT BROWNISH/BLUISH GREY CLAY.

BEHEIVED TO BE FORMED VIA NATURAL
INFILLING.

OCCASSIONAL SUB-ANGULAR STONES WERE
* FOUND (L25cm DIAMETER).

OCCASSIONAL FRAGMENTS OF BONE & POT
WERE FOUND.

cul with curvilinear shape, with steep sloping sides and concave base. It has a maximum depth of 0.62 m, a width of 1.58 m and a length of 2 m. Its orientation is NW-SE. It is a ditch whose natural infilling is 410285. This ditch is a recut that was made inside the ditch 410399, cutting the natural infilling 410403. There are iron age and roman materials in its natural infilling.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clayey silt soil, of mid brownish grey colour, and moderately compact. It has a maximum thickness of 0.76 m and a maximum width of 1.76 m. It has moderate inclusions of chalk and stones, whose maximum size is 12 cm. There are a few charcoal.

It is ~~the most modern~~ natural infilling of the ditch 410399, and, later, it was cut ~~in~~ in the middle, by the ditch 410402, with the same orientation, and in its part SW, by the ditch 410406, with orientation NE-SW. Animal bones and iron age and roman pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of silty clay soil, of mid greenish grey colour and moderately compact, with a maximum thickness of 0.32m. It has occasional inclusions of chalk and charcoal. There are a few small stones.

It is the natural infilling of the ditch 410446 ~~and 410447~~, and later, it was cut by the ditch 410399. Some fragments of animal bones, iron age pottery, and a cow skull found.

This fill is very similar to 410766, the natural infilling of 410447, but, although there would have to have some cut that divides it, in the digging and in the section hasn't been seen. Other possibility would be that 410447 isn't a ditch, so it has very few depth, and maybe it is the soil erosion mixed with the fill.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

curvilinear gully, possibly forming the foundation of a round-house — it is ~~para~~ roughly parallel + external to another curvilinear cut of similar proportions [410433] and may represent a re-cut of the original foundation cut? * The gully contained 2 fills, the upper of which (410409) included a few shreds of pottery and some animal bone — a piece of horn/antler was recovered from the terminus of the gully.

* Both this cut [410407] and the parallel cut [410433] are truncated by a larger ring-ditch [410425].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Top fill of poss. round-house foundation gully [410407]. This fill was probably formed through natural in-filling but contained charcoal flecks, a few pottery sherds and occasional animal bone - including a piece of horn/antler at the terminus of the gully. The pottery sherds are typical of the material being recovered from across the site and probably date to the Iron Age.

Refer to context 410407

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf).

This is the fill of a gully. We found this gully terminating in a slot and we opened this slot to see if the gully was all one feature. This fill is very visible on the surface, and it's very dry because it's very thick. We haven't found many material on it, but we have added some pottery we have found over the surface of this gully. In the slot where this gully terminates, we found a roman pot. lip.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a gully. This gully is cutting [410313] ditch and also the big ring ditch of the site.

Updated 13/6/17: As we have seen on a slot opened in its south east, this gully ~~has~~ cuts [410313] ditch but it doesn't cut the big ring ditch, they just don't have relation.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch. Slot approx 1m in length. Quite a narrow ditch which seems to turn westwards towards the northern end of the ditch. Natural soil was quite easy to see as it was a greyish-white with orange and brown flecks. Cut ~~the~~ bottom slopes upwards from the southern end to the northern end. Ditch quite shallow. I possible reason for this is there was a furrow going through it I cut, I fill

Fill of ditch. Fill soil was quite dark, compact, sun baked. Quite difficult to mattock through in the beginning as it was hard baked. Cut of ditch quite easy to distinguish due to the fact that the natural soil was a greyish colour while the fill was a dark brown, almost black. Very few finds from the fill, with a few fragments of animal bone and pottery.

1 cut, 1 fill

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Dark black brown fill of iron age ditch with animal bone, natural
 Stone and charcoal inclusions.
 Natural stones present throughout the fill with no discernable pattern.
 Fragmentary animal bone present in very small amounts, no decoration
 or pattern in placement, species or part discernable.
 Most likely a combined reservoir of natural infilling or small scale
 dumping.
 Excavated in slightly rainy conditions following a long very dry period.

[410419]

Natural infilling of ditch [410419] investigated in a slot (1'20 x 1'30 x 1'50m) made for see the relationship between three features (ditch + pit + gully) and the chronology.

The gill contains occasional small and medium stones (-3 → 7cm) with subangular shape and occasional big stones (20cm) with rounded shape.

No artefacts were recovered but because of the colour and shape and be inside the enclosure, probably it's early roman.

also, the gill has frequent charcoal with different size (1 → 4cm)

E-W running ditch with one natural infilling (410418)
investigated in a slot (1'20 x 1'30 x 1'50 m) made for
see the relation and chronology of three features (ditch
+ pit [410422] + gully [410424])

This ditch is the latest feature in this slot, cutting
the pit ~~but~~ but without ~~any~~ physic relation
with the gully ~~but~~.

No artefacts were recovered but probably it's a early
roman ditch because the colour, ~~shape~~ shape and
the situation inside the enclosure

Refer to context 410498

~~primary~~ secondary

~~the~~ natural infilling of a pit [410482] investigated in a slot (1.20 x 1.30 x 1.50 m) made for see the chronology and relationship between three features (ditch [410449] + pit [410482] + gully [410484])

The fill contains occasional small stones (1-3cm) with sub rounded shape and moderate small chalk.

The fill is cutted by the early roman ditch [410449]. ~~Noted~~ It's possible to see the fill in west and east ~~for~~ facing section and in plan, without a regular circular shape. No artefacts were recovered but the irregular shape could be because we're in a iron age pit.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Basal fill of ring-ditch [410425] comprising ~~light~~ compact, light-grey silty clay with flecks of orange running through it. This fill marks the interface of natural infilling and the natural clay that the ditch was dug into - the base of the cut is formed by orange sandy gravel.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This fill appears to have formed against the northern ~~edge~~ side of a ring-ditch [410425]. It is very similar in composition to the adjacent fill (410428) but is slightly lighter in colour and has more orange — this may be the result of slippage from the orangey clay that forms the natural sub-soil here. It is also similar to the main fill of a pit [410432] that the ditch-cut truncated (see sketch on Sheet 410426).

This fill contained occasional charcoal flecks and some small gravelly stones, but no finds or animal bone (although it should be stated that there was little to distinguish this fill from adjacent fills during excavation so it is possible that finds/bone were mis-appropriated).

This fill was similar in composition to the adjacent fill (410427) but was slightly darker and contained more charcoal. It consisted of naturally formed silty clay and contained occasional animal bone and a small number of pottery sherds - mainly crude, hand-built sherds (Iron-Age?) but also two pieces of orange fabric, one of which a rim-sherd that is possibly wheel-thrown?

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill forms the upper layer of a ring-ditch [410425] and consists of a dark brown fill with a considerable amount of charcoal. It included c. 3% small-medium-sized stones, in addition to occasional animal bones and several sherds of pottery - some incised and finer than those from the preceding fill (410428).

This fill was very dry + sunbaked during excavation making it difficult to dig. Due to its compaction it typically fractured into large clumps when struck with the mattock. It was almost impossible to trowel.

Refer to context | 410426

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This cut appears to be that of a pit or possibly a very large post-hole. It was truncated on the south side by a ring-ditch (410425) but, because it is deeper than the ditch, the lower extremities of the pit survive intact revealing it to be sub-circular in plan. The western extremity of the pit ~~was~~ was not excavated but enough was visible to project its probable dimensions. The pit contained two fills - the ~~lower~~ basal fill was a combination of natural infilling and the natural sub-soil and contained no finds (410431) - the upper, most predominant, fill contained a few pieces of animal bone and occasional pottery sherds. The pit cut through a natural layer of small gravel + chalk on its NE + E side.

Refer to context 410425 + 410426

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This constituted the main and upper fill of a large pit [410430]. It was similar in composition to an adjacent layer (410427) from a ring-ditch [410425] that truncated the pit on the south side.

The fill contained occasional pieces of animal bone and pottery sherds - these all appear to be crude, hand-made and well-fired - probably Iron Age.

There was also occasional orange clay + small gravelly stones with chalk that had presumably washed in from the sides of the pit.

Refer to context | 410426

Curvilinear gully that may represent the foundation cut of a round-house (the cut is truncated by other earth-cut features so does not describe a complete circle, however enough of it survives to suggest that this was originally the case). ~~Another~~ Another gully of similar form lies almost parallel to the north [410407] and this may represent a re-cut of or moving of the roundhouse. Another gully ~~from~~ (south of the larger ditch [410425]) could be the southern ~~terminus~~ terminus of the round-house, either a continuation of [410433] or [410407].

Adjoint (south) of the gully [410433] is a large pit [410430]. No relationship was established between the two features but they were both truncated by the large ditch [410425]. It is, however, possible that the pit is contemporary with the gully/gullies +

Refer to context

is contemporary with the gully/gullies + (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

associated with the poss. round-house

Blackish brown Dark clay filled ditch, excavated in dry conditions.

Natural Stone inclusions spread thinly throughout the fill with no pattern

Visible in a range of sizes $>0.01m - 0.05m$ with a couple of fair large ones.

Small animal bone fragments spread very thinly throughout the fill with no pattern in size, shape, element or species.

Truncated by later plough furrows.

Refer to context [410439].

NATURAL PROCESS

THIS CUT OF A ~~DITCH~~ CONSISTS OF MODERATELY SLOPING SIDES AND A FLAT BASE.

A RELATIONSHIP SLOT WAS INITIALLY DUG TO INVESTIGATE A POTENTIAL DITCH TERMINUS CUTTING [410442]. ~~THIS WAS~~ THROUGH INVESTIGATION IT WAS FOUND THAT THIS POTENTIAL TERMINUS WAS ACTUALLY ROOTING, WATER EROSION OR ANOTHER ~~DIFFERENCE~~ NATURAL DISTURBANCE INTO [410003].

[410442] CUTS INTO CLAY NATURAL.

Deliberate Backfill of ditch terminus [410445], Context is quite DARK with charcoal & Degraded fired clay, Suggesting domestic usage. No Dating Assumed Iron Age in date. The stones in the fill are naturally sourced rounded pebbles with irregular setting. Slightly more clayey interface at BASE But probably related to the Disuse phase of Feature.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cul with curvilinear shape, with moderate sloping sides and concave base. It has orientation NE-SW and a maximum depth of 0'32 m. It has a width of 0'80 m, and a length of 2 m in this slot. It is a ditch, that is filled by the natural infilling 410404. This ditch and the ditch 410447 are the oldest of the slot, and they are parallel, although 410446 is a little bit deeper than 410447. The fill of them are very similar, and we can't see if there was some relationship between them during the digging or if they are contemporary. Other possibility would be that 410447 isn't a ditch, and maybe it is the soil erosion mixed with the fill.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with curvilinear shape, with moderate sloping sides and concave base. It has orientation NE-SW. It has a maximum depth of 0.16 m, a width of 0.70 m, and a length of 2 m in this slot.

It is a ditch, that is filled by the natural infilling 410766. This ditch and the ditch 410446 are the oldest of the slot, and they are parallel, although 410446 is a little bit deeper than 410447. The fill of them are very similar, and we can't see if there was some relationship between them during the digging or if they are contemporary. Other possibility would be that 410447 isn't a ditch, and maybe it is the soil erosion mixed with the fill.

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

GENERAL DESCRIPTION OF THE SLOT

In this slot we have 5 ditch with 5 fills. The two oldest ditches are 410446 and 410447, with a maximum width of 0.80 m and 0.70 m respectively. They are parallel, although 410446 is a little bit deeper than 410447. The natural infilling of 410446 is 410404, and the fill of 410447 is 410766. These fills are very similar, and we could not see if there was some relationship between them, or they are the same. Maybe, 410447 isn't a ditch and it is the soil erosion mixed with the fill. After, 410404 and 410766 were cutted by the ditch 410399, that occupies all the width of the slot. It is filled by the natural infilling 410403, that after was cutted by two ditches, in the middle by 410402, and in the SW by 410406. All the ditches, less 410406, have the same orientation NW-SE, and 410406 has orientation NE-SW.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Curvilinear gully that possibly represents the truncated remains of a round-house foundation. Most of the northern side of this feature survives as a semi-circular cut (another section was dug through it [410433]), but it is heavily truncated to the East, West & South, predominantly by a large sub-circular ditch [410425]*. The poss. SE terminus of the gully survives [410350]. The gully is partially mirrored to the North by another gully which is similar in form [410407] and may represent an earlier, or later, phase of the 'round-house'. Both of the gullies, and a large pit [410430], were truncated by the large ditch [410425] [410399].

* [410399]

JUST A SHALLOW CUT OF A TREE THROW WITH
A DARK FILL LAYER OF 10cm^{DEPTH} DUG AS A HALF
SECTION. INITIALLY IT IS THOUGHT TO BE A SMALL
DITCH BECAUSE OF THE CURVILINEAR SHAPE. ITS
DARK FILL IS MIXED WITH NATURAL, ESPECIALLY
AT THE EDGES. AS FEW HAVE BEEN

MUST NOTE THAT POTTERIES COLLECTED FROM THE
SURFACE (3, two small fragments and a decorated
- incised - larger one)
FEW SMALL ANIMAL BONES AS WELL.

not sampled
only record due
to find

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of a gully [410458] E-W direction, investigated in a 1'2 x 0'8 m slot. The fill had moderately presence of charcoal and occasionally presence of big stones (rolling stones). Without presence of any archaeological materials.

NOTE: 30/6/17 (VA-SR) The gill was completely excavated. Because of the pottery, could be iron age.

Refer to context

[410458]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

E-W running gully investigated in a 1.2 x 0.8 m slot. The gully is the same feature that we can find in a near slot [410199] cutting another gully in the west side of the slot. The gully is filled for two natural infillings (410456) and (410457) that contained animal bones and just one piece of pot (possibly from age).

NOTE: 30/6/17 → Gully full excavated probably from age.

THIS FILL OF DITCH [410474] CONSISTS OF MODERATELY
COMPACT MID-GREYISH BROWN CLAYEY SILT.

BEHEVED TO BE FORMED VIA NATURAL INFILLING.

THIS FILL CONTAINED OCCASSIONAL SUB-ANGULAR STONES
(< 5 cm DIAMETER).

OCCASSIONAL FLOCKS OF CHARCOAL & CHALK WERE FOUND.

MODERATE NUMBERS OF POT & BONE FRAGMENTS
WERE FOUND.

A SQUARE HEADED NAIL WAS FOUND.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of a gully. It was moderately compact and deged. This dark color maybe could be allow interpretation of deliberated backfill. It was var.

We found lot of chalk and stones into it (most $\leq 0.05m$ diameter)

We didn't find any relevant material to say a date of use.

And it was so thick ($\leq 0.19m$) so we decided to call it gully instead of ditch.

E-W RUNNING DITCH WITH ONE NATURAL INFILLING (410483)
INVESTIGATED IN A SLOT (3'10 x 3'50 m) MADE FOR SEE THE
RELATIONSHIP BETWEEN ALL THE THE FEATURES.

THE DITCH IS CUTTING THE GULLY (410480) + (410481) and
cutted by the ditch (recut) (410484).

It's possible to see this ditch in a closer slot
with the cut number ⁽⁴¹⁰⁴²²⁾ ~~(410482)~~, previously interpreted
before as a pit because the irregular shape. After
this slot we can see how this is a ditch with
a irregular edge.

The ditch could be early roman because of the
pottery found on it.

4100482

this is the fill of a ditch. It was 0'42m deep and grey brownish. It was also so layered and compact because of that.

We found stones into it (small ones & most of them $\leq 0'05m$ occasionally 0'10m of diameter). Also it has chalk and ~~other~~ relevant materials. We found animal bones and small fragment of pottery we think is early roman. So it is the information we have to say a date of use.

Refer to context

INVESTIGATED IN A SCOT (3'10" x 3'50" m)

Because of the shape, orientation and composition of the gill is same as [410149], investigated in a closer slot.

Because of the pottery from this fill, the ditch could be early roman.

Refer to context

this is the fill of a recut. ~~It is~~ very

Darkish gray ^{and black} color could allow interpretation of ~~deliberate~~ deliberate backfill. It has some stones (small ones) and lot of chalk. But it was so loose and easy to dig.

We also found some animal bones and some pottery fragments. We can say ^{early Roman} AD date of use.

This is the fill of a gully, we found perpendicular of the main ditch we have in this slot. (N-S orientation).

It was moderately compact, ~~grey~~ brown orangeish and clayed fill. We found stones and some chalk into it. And also manganese.

But we didn't find any material to say a date of use. The only thing we know is: this ditch is cutting by a furnace and probably ~~cut~~ cutting by the big ditch as well.

This is the fill of a furrow 410488. It was so compact and brown yellowish with a lot of little stones into it (most ≤ 0.05 m). Also it has chalk.

Into it, it has 2 pipes for that we can say that ~~it~~ this furrow were done probably, for those two modern pipes. We decided to ~~to~~ leave them on site to show where is the place of this perturbation and the reason why.

THIS FILL OF DITCH [410472] IS BELIEVED TO BE THE SAME AS FILL (410473).

THIS FILL CONSISTS OF MODERATELY COMPACT MID-BROWNISH BLACK CLAYEY SILT.

THIS FILL CONTAINED OCCASIONAL SUB-ANGULAR STONES (<10cm DIAMETER).

OCCASIONAL FRICKS OF CHARCOAL AND CHALK WERE FOUND

THERE WAS A MODERN LAND DRAIN RUNNING THROUGH THIS FILL.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Mid greyish brown Silty clay fill of Tree ball, half sectioned in very hot/dry very dry conditions
 Small amount of charcoal spread evenly throughout the fill.
 Natural stones of small-medium size spread evenly throughout the fill.
 Small amount of fragmentary animal bone, about half of which appear to have been burnt prior to or during deposition.
 Small amount of fragmentary pot, this and the bone has no relation to its placement.
 Appears to have been dumped in a tree ball.

Not Summary of
 Footing.

Refer to context [410492]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Small
 Gaming piece
 Was recovered
 from sample.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of a furrow [410508] N direction, investigated in a 11'5 x 3'5 m slot. The fill had occasional presence of stones (small rollings stones). We found a roman pot, ~~some~~ occasional animal bones and 3 interesting finds: a piece of decorated glass (golden), a iron roman nail and a smoke pipe made in ~~stone~~ ^{ceramic}. Any way the fill is a ~~stratified~~ later scrambled made for put 2nd pipe lines.

N-S running furrow investigated in a 11'5x3'5m slot. The furrow is cutting two previously ditches in the eastern side and another one in the western side [410513]. The furrow is filled just by a one natural infilling (410507) that contained roman pot, animal bones, an iron roman nail, a decorated piece of glass and a smoke pipe made in ~~stone~~ ceramic. The furrow is a latter feature made for put two pipe lines. [410506] [410518]

Refer to context [410510] (410511)

Natural infilling of a ditch [410513] NE ~~NE~~ direction, investigated in a 11'5 x 3'5 m slot. The fill had frequent presence of stones (medium and big rolling stones), moderate presence of charcoal and moderate presence of chalk. We found frequent moderate roman pot and moderate presence of animal bones (big animal; cow or horse). The fill is the same as (410512) investigated in a near slot. The fill is very gravelly, easy to difference with the earlier one.

Refer to context [410508] [410510]

NE-SW running ditch investigated in a 11'5" x 3'5" m. slot. The ditch is cut into in the southern corner for one pit [410520], in the northern corner for another pit [410510] and is cut into for a N-S running furrow [410508]. The ditch was investigated in two different mear slots and is the same as [410399] and [410374]. The ditch is filled for two natural infillings (410511) and (410512) that contained roman and iron age pot and moderate presence of animal bones (cow, horse, pig and lamb).

Natural infilling of a ditch [410516] SE direction, investigated in a 11'5 x 3'5 m slot. The fill had occasional presence of stones (big polygonal stones) and occasional presence of charcoal.
We found frequent presence of roman pot and frequent presence of animal bones (big size, probably cow or horse).
The fill was very organic (dark colour) for the frequent presence of bones.
The fill is the same as (410368) investigated in a near slot.

Refer to context [410503] [410510] [410513]

Natural infilling of a ditch [410516] SE direction, investigated in a 11'5 x 3'5 slot. The fill had occasional presence of stones (small and medium rolling stones) and occasional presence of charcoal in the bottom.

We found moderate presence of roman pottery and moderate presence of animal bones (big and small size, cow, lamb and pig).

The fill was very compact, a reddish inclusions of clay in the bottom.

The fill is the same as (410369) investigated in a near slot.

Refer to context [410508][410510][410513]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NW-SE running ditch investigated in a 11'5 x 3'5 m slot. The ditch is cutted for a later/ furrow. The ditch is the same as [410370] investigated in a near slot. The ditch is filled by two natural infillings. The early one (410515) is a compact fill with reddish clay inclusions, that contained roman pot and animal bones (cow, lamb and pig). The later one (410514) is a organic fill, that contained roman pot and frequent big size animal bones (cow or horse).

Refer to context [410508] [410510] [410310]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, moderately compact and of dark brownish grey colour. It has a diameter of 1'36 m and a maximum thickness of 0'46 m. There are frequent inclusions of stones, with a maximum size of 9 cm, and occasional chalk and charcoal.

It is the natural infilling of the pit 410704. This pit cuts to the fill 410705 and the ditch 410706. There was frequent bones, and some iron age and roman pottery in this fill. A bones deposit of pig found, all the bones of the same part of animal, but from different animals. Under them, a small pig skull found.

NATURAL INFILLING OF DITCH/RECUT [410523] INVESTIGATED IN A 4.60 x 3.30 m slot. IN THE SLOT IT'S POSSIBLE TO OBSERVE ONLY, SUPPOSEDLY, half feature, LIMITED TO THE NORTHERN side of the ditch. The fill contained a moderate quantity of small (1-5 cm Ø) sub-ROUNDED STONES AND pebbles and occasional ~~flakes~~ chalk flakes. IT'S CONTAINED also a moderate quantity of animal bones, some POT'S SHERDS, ~~and~~ FEW fragments of BURNT clay DAUB with negative prints AND few slags NOT ATTRIBUTABLE TO A PARTICULAR PRODUCTION. IN PARTICULAR, THE FILL, CONTAINED A BRONZE BROACH (F41012) with ~~good~~ a good conditions of preservation (50% of the piece). This fill, AS THE rest of the feature, ~~is same as~~ IT WAS FORMERLY RECOGNIZED IN A SLOT IN THE WESTERN ~~area~~ AREA; THEREFORE, THIS FILL IS SAME AS (410314).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Recutting ditch investigated in a 4,60 x 3,30m slot. The ditch is running in E/W direction and in this slot it's observable only in part (supposedly half feature), limited to the northern side of the feature.

This ditch is observable in both the sections (E and W facing) and is same as [410315], formerly recognized in a western slot some meters far.

Due to the presence of a moderate quantity of iron age pot sherds inside the only fill, it's possible to date the feature at this chronology.

Stratigraphically, this cut is cutting a previous ditch [410525] and the relative fill (410522+)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

NATURAL INFILLING OF A DITCH [410525] INVESTIGATED IN A 4.60 X 3.30 SUR, LIMITED TO THE NORTHERN HALF PORTION OF THE FEATURE.

THE FILL CONTAINED FEW WHITE CHALK FLAKES AND A MODERATE QUANTITY OF STONES: THE STONES ARE IN PART SMALL AND SUBROUNDED (2-5 CM Ø) AND IN PART MEDIUM SIZE (5-25 CM Ø) WITH SUBROUNDED OR SUBIRREGULAR SHAPE. THIS SECOND GROUP OF STONES WAS MOSTLY IN THE BOTTOM OF THE FILL, AT TIMES IN RELATION WITH ~~possible~~ clay patches ~~possibly slump~~ (SLUMP FROM THE EDGE?).

THE FILL CONTAINED ALSO MANY ANIMAL BONES, FEW BURNT CLAY DAUB AND MANY IRON AGE POT SHEERDS, MANY OF THEM DECORATED.

THE FILL CONTAINED ALSO, ON THE TOP PART, A FRAGMENTED IRON OBJECT (F 41013).

THIS FILL IS SAME AS (410318) INVESTIGATED IN A SLOT IN THE WESTERN AREA.

STRATIGRAPHICALLY, THE FILL IS CUT BY A SUBSEQUENT DITCH [410523].

(any further details that may be important for understanding the context, including items marked * overleaf)

E/W RUNNING ditch, INVESTIGATED IN A 4,60 X 3,30 m SLOT, ONLY IN THE NORTHERN PORTION OF THE FEATURE. THIS DITCH, INTERPRETED AS A ENCLOSURE BITCH, IS SAME AS [410319] FORMERLY RECOGNIZED IN A WESTERN SLOT.

DATEABLE TO THE IRON AGE DUE THE ~~presence~~ ^{remarkable} presence of decorated POT sherds INSIDE THE FILL (410524).

Stratigraphically, the feature is CUTTED BY a subsequent ditch / re-cut [410523] AND, IN TURN, IS CUTTING TWO PREVIOUS DITCHES [410550] AND [410528].

NATURAL INFILLING OF DITCH [410528] INVESTIGATED IN A 4,60 X 3,30^m SLOT ONLY. PARTIALLY, FOR 20CM OF THICKNESS ~~BECAUSE~~ DUE THE STOP OF THE INVESTIGATION AT A DEPTH OF 1M.

THE FILL CONTAINED SOME SLAGS, ~~80~~ FEW BURNT CLAY DAUB, & A MODERATE QUANTITY OF ANIMAL BONES AND SOME IRON AGE POT SHERDS.

STRATIGRAPHICALLY, THE FILL IS CUT BY TWO SUCCEEDING DITCHES: [410550] AND [410525].

THE FILL IS SAME AS (410544) RECORDED IN A NEAR SLOT IN THE EASTERN SIDE AND ALSO SAME AS (410321) RECORDED IN A SLOT IN THE WESTERN SIDE SOME METERS FAR.

IN THE FILL IT WAS FOUND A FRAGMENTED CLAY BRICK [F41016].

DITCH INVESTIGATED IN A 4,60 X 3,30 m SLOT ONLY IN PART, FOR 20 cm of Thickness, due the stop of the investigation at a depth of 1 m.
The ditch, largely TRUNCATED by subsequent features ~~to~~ [410525] [410550] observable in the bottom of the slot AND, SAME AS ONE OF THE SUCCEEDING FEATURES [410550], IS COMING IN THE SLOT FROM NE, (RUNNING NE/SW) AND HERE TURNS AND GOES IN W DIRECTION (RUNNING E/W).
For the presence of Iron Age POT in the fill (410527) is possible to date the feature TO THIS PERIOD.

THE CUT IS SAME AS [410545] INVESTIGATED IN A NEARBY SLOT IN THE EASTERN SIDE AND SAME AS [410324] RECORDED IN A SLOT IN THE WESTERN SIDE AND SOME METERS FAR.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NATURAL INFILLING OF A RING DITCH [410530] INVESTIGATED IN A 4.60X3.30M SLOT AND OBSERVABLE ONLY IN A SMALL PORTION IN THE NORTH EASTERN CORNER OF THE SLOT.

THE FILL CONTAINED A SMALL QUANTITY OF WHITE CHALK FLAKES AND SMALL SUBIRREGULAR STONES (2-4cm). DUE THE SMALL PORTION OF FILL INVESTIGATED, IT WAS NOT POSSIBLE TO FIND ARCHAEOLOGICAL REMAINS.

THE FILL, AS THE FEATURE, IS CUTTED BY A SUCCEEDING DITCH [410550] RUNNING NE-SW.

THE FILL IS SAME AS (410537) RECORDED IN A NEAR SLOT IN THE EASTERN SIDE OF THE SLOT.

Refer to context ?

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NW-SE RUNNING DITCH INVESTIGATED IN A 4,60 x 3,30m SLOT AND observable only in a small portion of the feature (AT APPROX 0,60 x 0,50m) IN THE NORTHEASTERN CORNER OF THE SLOT.

THE DITCH IS SAME AS [410538] RECORDED IN A NEAR SLOT IN THE EASTERN SIDE. ~~FOR THE~~ THIS SET OF INFORMATION IS POSSIBLE TO DESCRIBE THIS FEATURE AS A RING DITCH WITH ONE TERMINUS IN THE NEARBY SLOT.

STRATIGRAPHICALLY, THE DITCH IS CUTTED BY A SUCCEEDING DITCH [410550] RUNNING PERPENDICULAR IN NE/SW DIRECTION.

DUE THE ABSENCE OF ARCHAEOLOGICAL REMAINS INSIDE THE FILL, IT IS NOT POSSIBLE TO DATE IN THIS SLOT THE FEATURE; HOWEVER, THE INFORMATION FROM THE NEAR SLOT [410538] ALLOW TO DATE THE FEATURE TO THE IRON AGE. ~~FOUR~~

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of a ditch/re-cut [410532] investigated in a ~~6x4.7m~~ 6x4.7m
 root. The fill is in part widespread in the northern side due
 roots interference.

The fill contained few small or medium (2-5 cm Ø and 8-10 cm Ø) sub
 rounded stones AND charcoal flakes. It contained also a moderate
 quantity of animal bones, pot sherds (IRON AGE ?) AND BURNT
 CLAY DAUB WITH negative prints.

The fill is the only fill of the ditch and all this feature is
 cutted in the western side of the slot by a subsequent
 ditch [410542] running NE/SW.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF DITCH RUNNING E-W IN THE SLOT - THIS DITCH IS CUTTING ANOTHER DITCH TERMINUS (OR PIT?) IN THE E SIDE [410535] AND ANOTHER DITCH [410538] - IT IS COVERING THE PIT [410547] LOCATED IN THE N SIDE -

THIS DITCH IS VISIBLE IN THE TWO SECTIONS: 41106, 41108 - IN THE W FACING SECTION (41106) THE PROFILE IS NOT VERY CLEAR BECAUSE IN THE N SIDE THE SHAPE OF THE DITCH IS NOT VERY REGULAR, PROBABLY BECAUSE OF A ROOT DISTURBANCE - IN THE E FAC SECTION (41108) THE DITCH IS CUT BY ANOTHER DITCH [410542] IN THE N-W SIDE - THE FURROW IS CUTTING THIS DITCH AND WE DON'T KNOW IF IT WILL RUN ALSO AFTER THE FURROW BUT IT IS POSSIBLE -

FILL OF DITCH OR PIT? [410535]

THE COMPOSITION OF THIS FILL IS CLAY AND THE COLOUR IS MID BROWNISH YELLOW. THERE AREN'T MANY INCLUSIONS BUT WE CAN FIND OCCA CHALK FRAGMENTS AND CHARCOALS, IRREGULARLY DISTRIBUTED, ONE ANIMAL BONE AND OCCA FRAGMENTS OF CLAY DAUB.

IT IS NOT POSSIBLE TO DATE THE FILL BECAUSE OF THE FEW AMOUNT OF MATERIAL.

CUT OF DITCH TERMINUS OR PIT - WE ARE NOT SURE ABOUT ITS SHAPE BECAUSE IS NOT POSSIBLE TO SEE IF IT'S A DITCH TERMINUS OR A PIT - THE SHAPE ON PLAN IS SUBCIRCULAR AND THE PROFILE IS VISIBLE IN THE SECTION 41106 - IT IS CUT BY THE DITCH [410532] THIS TERMINUS? IS CLOSE TO ANOTHER DITCH TERMINUS MORE IN THE W SIDE SO IT IS POSSIBLE THAT THIS TWO FEATURES ARE RELATED, SO WE CAN CONSIDER THIS MORE A TERMINUS THAN A PIT - IN THE BOTTOM OF THIS TERMINUS THERE WAS A BURNT ACTION SO IT IS POSSIBLE THAT SOMETHING HAPPENED IN THIS FEATURE - THIS FEATURE COULD RUN TOWARDS THE N-E SIDE BUT WE NEED TO OPEN THE SECTION MORE TO SEE IT -

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary NATURAL infilling of the RING-DITCH [410538] investigated in
A 6 X 4,70 M SLOT.

~~The fill contained few chalk flakes and few small (0.2-5 cm) subirregular stones. It contained also few animal bones, few burnt clay daub and some (a) pot sherds (Iron Age?).~~
The fill contained few chalk flakes and few small (0.2-5 cm) subirregular stones. It contained also few animal bones, few burnt clay daub and some (a) pot sherds (Iron Age?).

Stratigraphically, the fill, as the rem of the feature, is culled by a succeeding ditch [410532] and it is covering the primary fill of the feature (410537). The fill is also truncated in the northern side by another subsequent ditch [410542].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary NATURAL INFILLING of ring-ditch [410538] investigated in a 6x4.7m
 SLOT ^{ALONG SIDE} ~~IN DEPENDANCE~~ of one of the terminus of the feature
 The fill CONTAINED some charcoal flakes, ~~and~~ few ~~big~~ BIG STONES
 (15-25cm Ø) ~~restricted~~ RESTRICTED TO THE BOTTOM of the fill AND
 few subrounded small stones (2-5cm Ø).
 The fill CONTAINED ALSO SOME ANIMAL BONES, SOME BURNT CLAY DAUB AND
 FEW POT SHERDS (IRON AGE?).
 Stratigraphically, this fill is covered by the secondary fill of the feature (410536)
 AND TRUNCATED in the northern side by a succeeding ditch [410542].
 This fill is same as (410529) formerly recorded in a near slot in
 The western side.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

E/W RUNNING RING-DITCH INVESTIGATED IN A 6X4.70M SLOT AMONG
~~THE~~ ~~THE~~ ONE OF THE TERMINUS OF THE FEATURE.

The ditch, filled by two NATURAL INFILLINGS (410536 AND 410537) is
 cutted by two succeeding ~~features~~ features: one ditch recutting
 the ditch ~~along the same~~ ALONG THE SAME SHAPE/DIRECTION [410532]
 AND BY ANOTHER DITCH RUNNING IN NE/SW DIRECTION.

The ditch is same AS [410530] formerly recorded in a western
 SLOT nearby. ~~from the~~ With the informations from this two
 SLOTS AND FOR THE INFORMATIONS OBSERVABLE IN PLAN, IS POSSIBLE
 TO DESCRIBE THE FEATURE AS A RING DITCH RUNNING IN THIS
 SLOT NONE O LESS IN E/W DIRECTION AND TURNING IN NE DIRECTION
 IN THE SECOND SLOT (REFER TO LOCATION SKETCH IN 410533)
 FOR THE PRESENCE OF POT sherds probably IRON AGE inside the
 fills is possible To date this feature at this period.

Refer to context:

CUT OF DITCH. THE SHAPE ON PLAN ~~IS~~ SEEMS TO BE CURVILINEAR,
IT IS RUNNING N-E TOWARDS SW. IT IS CUT BY THE FURROW RUNNING
N-S - THE PROFILE IS VISIBLE IN BOTH SECTIONS 41107, 41108 -
IT IS NOT POSSIBLE TO SEE IF IT CONTINUES IN THE S BECAUSE IT IS
CUT BY THE ~~D~~ FURROW AND IT IS NOT VISIBLE IN THE OTHER SLOT
SO IT PROBABLY FINISHES BEFORE -
THIS CUT IS ON THE TOP OF THE OTHER DITCH [410542] ^{BUT} IS
~~NOT~~ POSSIBLE TO SEE IT ON PLAN IN THE N CORNER -
THE DATE COULD BE IRON AGE -

SECONDARY FILL OF DITCH [410545] - IT IS DARK BROWN AND IT IS
 VISIBLE ONLY IN THE NE SIDE OF THE DITCH BECAUSE IT IS NOT
 PRESENT IN THE E. FACING SECTION 4108 - THE INCLUSIONS ARE
 OCCA SMALL STONES WITH IRREGULAR SHAPE AND DISTRIBUTION
 IT IS VERY DIFFICULT TO DATE THIS FILL BECAUSE IT IS PROBABLY
 CUT BY THE DITCH [410542] SO WE HAVE A VERY SMALL PIECE OF
 IT IN THE SLOT
 IT COULD BE IRON AGE PERIOD? ~~BECAUSE~~ NO FINDS INSIDE

Refer to context

PRIMARY FILL OF DITCH [410545] THIS DITCH IS THE OLDEST FEATURE
IN THIS GROUP OF DITCHES AND PITS
THE SHAPE ^{OF THE FILL} IS NOT VERY VISIBLE BECAUSE IT IS CUT BY ANOTHER DITCH
ON THE TOP [410542]
THE PROFILE IS VISIBLE IN BOTH THE SW AND E FACING SECTIONS
THE INCLUSIONS ARE: OCCA SMALL AND MEDIUM STONES WITH SIZE
0.05 - 0.10 m AND SUBANGULAR SHAPE. MOD ANIMAL BONES AND
POTTERY FRAGMENTS, OCCA BURNT CLAY DAUB WITH NEGATIVE PRINTS
OCCA SLAG.
THE DATE COULD BE IRON AGE PERIOD?

NATURAL IN FILLING OF A SHALLOW PIT [410547] ~~WHICH~~ TOTALLY INVESTIGATED INSIDE THE SLOT.

The fill was covered by a succeeding FEATURE [410532] that running beside this pit but it's ALSO spread on the northern side by rooting.

The fill contained some small subrounded stones (2-5 cm Ø), several animal bones, few pot sherds (iron age?) AND several burnt clay DAUB. IN general, this fill APPEARED AS A CONCENTRATION OF BURNT CLAY DAUB INSIDE A black soil filling the shallow depression / pit cutted IN the NATURAL SOIL.

Refer to context

Shallow pit Totally investigated inside a big slot. filled by only one fill (410546) rich in burnt clay and animal bones.

Stratigraphically, this pit is cutted in the NATURAL SOIL (410503) AND is ~~covered~~ filled by one fill; All the feature is covered by a succeeding ditch to [410532] that in this area is in part spread by roots ACTION.

For the presence of ~~pottery~~ PROBABLE IRON AGE POT SHERDS, IS POSSIBLE TO DATE THE FEATURE AT THIS PERIOD.

For the position of the feature inside the slot, IT'S NOT POSSIBLE TO OBSERVE IT IN THE SECTION BUT IS POSSIBLE TO REFER TO THE GENERAL PLAN IN CONTEXT SHEETS (410533) AND (410536)

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ALSO IF ~~IT~~ IT IS NOT POSSIBLE TO ESTABLISH ANY PHYSICAL RELATION BETWEEN THE TWO FEATURES, IT'S INTERESTING TO REORDER THE PRESENCE NEAR THIS PIT TO ANOTHER FEATURE REAL SIMILAR FOR SHAPE AND FILL [410549]

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of a shallow pit totally investigated
due the position inside a big slot.

The fill contained some small subangular or subrounded stones
(2-6 cm Ø), some animal bones, some Iron Age pot sherds and
several burnt clay daub.

The fill, as the feature, is cutted in the northwestern side
by a subsequent ditch [410542] running NE/SW.

In general the fill appeared as a concentration of burnt
clay daub inside a dark soil, filling the shallow pit
(or depression) cutted in the natural soil.

Refer to context

SHALLOW PIT TOTALLY INVESTIGATE DUE THE CENTRAL POSITION
INSIDE A BIG SLOT. FILLED BY ONLY ONE FILL (410548) NICH IN
BURNT CLAY DAUB.

The cut of this feature is lifted in The north western side
by a succeeding ditch [410542] RUNNING NE/SW.

It IS DATABLE TO THE IRON AGE DUE THE PRESENCE OF POT SHERDS
INSIDE THE FILL.

THE POSITION OF THE FEATURE IN THE SLOT DON'T PERMIT TO
REORDER IT IN ANY SECTION, BUT ITS POSSIBLE TO REFER
TO THE GENERAL PLAN IN 410533 AND 410536.

MOREOVER, ALSO IF IT IS NOT POSSIBLE TO ESTABLISH ANY PHYSICAL
RELATION BETWEEN THE TWO FEATURE, IT'S INTERESTING TO REORDER THE
PRESENCE, NEAR THIS PIT, TO ANOTHER FEATURE REAL SIMILAR FOR SHAPE

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Mid Greyish brown ~~Silt~~ Silty Clay fill of ditch terminating at top of another ditch.

Small natural stones spread evenly throughout the fill with no discernible pattern.

Small animal bone fragments sparsely with no pattern and some burnt.

Iron age pot shards found with no pattern in location.

Excavated in very hot conditions.

Refer to context F4105527

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF SMALL CURVILINEAR DITCH [410559] COMPOSED OF
A DARK YELLOWISH BROWN CLAYEY SILT MATERIAL.

THIS FILL CONTAINED A SMALL AMOUNT OF SUB-ROUNDED AND ROUNDED
STONES AS WELL AS A SMALL AMOUNT OF CHALK.

A SMALL AMOUNT OF POTTERY SHEDS WERE PRESENT IN THIS FILL. THESE
SEEM TO SUGGEST THIS FILL DATES TO THE LATER PART OF THE IRON
AGE.

CUT OF CURVE LINEAR DITCH WHICH RUNS IN A NE-SW ALIGNMENT
ALONG SIDE A & POSSIBLE ANIMAL BURROW.

THIS DITCH APPEARS TO BE A POSSIBLE ENCLOSURE RELATED
TO ONE OF THE IRON AGE RING DITCHES.

THIS SECTION OF THE DITCH IS FILLED BY (410558) WHICH
CONTAINED A SMALL NUMBER OF POT SHEARDS WHICH LIKELY DATE
TO THE LATE IRON AGE PERIOD. ~~WAS RECOVERED~~

THIS CUT ~~IS~~ APPEARS TO BE THE SAME AS [410567] AND [410609].

THIRD FILL OF DITCH [410565] COMPOSED OF A BLUEISH BROWN
SELTY CLAY MATERIAL.

THIS FILL CONTAINED ONLY VERY SMALL ROUNDED STONES AND NO CHALK
UNLIKE THE FILL LOCATED ABOVE.

NO FINDS WERE RECOVERED FROM THIS FILL HOWEVER THE
FINDS RECOVERED FROM FILL (410563) LOCATED DIRECTLY ABOVE
THIS FILL WOULD SUGGEST IT DATES TO THE LATER IRON AGE
PERIOD OR EARLIER.

* FEATURE NOT FULLY EXCAVATED DUE TO WEATHER CONDITIONS CAUSING
UNSAFE CONDITIONS.

CUT OF RING DITCH WHICH FORMS THE A POSSIBLE ENCLOSURE.
FOR ANIMALS.

THIS FEATURE APPEARS TO JOIN WITH DITCH [410566], HOWEVER
DUE TO THE WAY THE AREA WAS STRIPPED BEFORE EXCAVATION
BEGAN THE RELATIONSHIP BETWEEN THESE TWO FEATURES IS NOT
VISIBLE; THOUGH THE VISIBLE SECTION APPEARS TO SUGGEST THAT DITCH
[410566] CUTS THIS DITCH AND POSSIBLY BECOMES ONE OF THE RENTS
* SEEN IN OTHER SLOTS POSITIONED IN OTHER PARTS OF THIS DITCH.

~~THE DITCH WAS A LOCATED IN THE~~ THIS FEATURE DID NOT PRODUCE
MUCH FUNDS HOWEVER THE POTTERY SHERDS RECOVERED APPEAR TO
SUGGEST THIS FEATURE DATES FROM SOME TIME AROUND THE
LATER PART OF THE IRON AGE PERIOD.

~~THE~~ FILL OF OF DITCH [410562], COMPOSED OF A YELLOWISH BROWN SILTY CLAY MATERIAL.

A NUMBER OF SMALL TO MEDIUM SIZED, & ROUNDED AND SUB-ROUNDED STONES WERE PRESENT IN THIS FILL, AS WELL AS OCCASIONAL CHALK STONES.

ONLY A SMALL NUMBER OF FINDS WERE RECOVERED FROM THIS FILL INCLUDING A COUPLE OF SHERDS OF LATE IRON AGE POTTERY.

Refer to context

CUT OF ~~DITCH~~ CURVILINEAR DITCH WHICH RUNS IN A NE-SW ALIGNMENT

THIS DITCH APPEARS TO BE POSSIBLY ASSOCIATED WITH A RING-DITCH [410565]. ~~WHEN~~ IT IS POSSIBLE THIS DITCH JOINS WITH THE RING DITCH, ~~HOWEVER~~ BECOMING ONE OF THE RE-CUTS THAT CAN BE SEEN IN OTHER SLOTS ~~AND~~ DUG INTO THE RING DITCH.

THE POTTERY SHERDS RECOVERED FROM FILL (410566) LOCATED IN THIS FEATURE APPEAR TO SUGGEST THAT IT DATES TO THE LATER PART OF THE IRON AGE PERIOD.

THIS DITCH IS LIKELY THE SAME AS [410559] AND [410609]

* FILL OF PIT [L10622]. A SEALING LAYER THAT EXTENDS OVER AND OUTSIDE OF THE PIT. IT CONTAINED A FAIR AMOUNT OF ~~STONE~~^{IRON AGE} POTTERY AND LARGE TO SMALL PIECES OF ANIMAL RIB, LEG, VERTIBRAE AND SKULL. THE STONE INCLUSIONS ARE MEDIUM TO LARGE SUBROUNDED AND SUBANGULAR STONES, (3cm-15cm). SOME CHALK PIECES AND FLECKS OF CHARCOAL PRESENT BUT ONLY IN SMALL QUANTITIES. THIS FILL IS IN AN AREA OF A POSSIBLE SPRING, AND PIT [L10622] MAY BE TO COLLECT THE WATER FROM THIS, SO FILL COVERS AREA THAT FLOODED IN WET WEATHER FROM THE PIT. PROBABLY A DELIBERATE BACKFILL LAYER. CUT BY FURROW [L10597] SOME FINDS FROM THIS COULD HAVE MIXED IN.

* NOT REALLY A FILL OF THE PIT BUT IS DIRECTLY RELATED TO THE END OF ITS USE AND ITS BACKFILL WITH THIS MATERIAL.

Refer to context (L10596)

CUT OF CURVELENEAR DITCH WHICH RUNS IN A SW-NE ALIGNMENT UNTIL THE ~~ENCLOSURE~~ ~~WHICH IS LOCATED~~ IT TURNS TO A NE-SW, NW-SE ALIGNMENT

THIS CUT DITCH APPEARS TO BE A POSSIBLE ENCLOSURE LIKELY RELATED TO ONE OF THE IRON AGE RING DITCHES.

THIS SECTION OF THE DITCH IS FILLED BY (410608) WHICH CONTAINED A SMALL NUMBER OF POT SHEERDS WHICH LIKELY DATE TO THE LATE IRON AGE

THIS FEATURE APPEARS TO BE THE SAME AS [410563] AND [410559] AND [410690]

CUT OF DITCH, NOT FULLY EXCAVATED AND FULL PROFILE NOT SEEN: AN IRON AGE BOUNDARY/ENCLOSURE DITCH POSSIBLY FOR A SETTLEMENT. ~~FROM~~ FROM PORTION EXCAVATED SHALLOW FLATISH STEP THEN A MODERATE SLOPE AND AN OTHER STEP WITH A GENTLE SLOPE TO A MODERATE SLOPE DOWN TO EXTENT EXCAVATED. CUT BY DITCH [L10625] ON EASTERN SIDE OF PORTION EXCAVATED SO TOP OF CUT LOST. ALSO CUT BY PIT [L10622]. THIS MEANS THE RELATIONSHIP WITH DITCH [L10627] IS LOST WHICH WAS THE POINT OF THIS SLOT. THE LARGE STEP AT THE TOP OF THE CUT ^(L10618) COULD BE DUE TO THE PRESENCE OF A BANK, FILLED BY REDEPOSITED AND WEATHERED NATURAL AND TWO SILTING/WEATHERING FILLS (L10600) AND (L10599) SHOWING THE PRESENCE OF STANDING WATER IN THE INSTANCE OF (L10600). SAME AS [L1024].

FILL OF PIT [410622]. FILL FORMED BY SLATING. FINDS OF POTTERY OF IRONAGE DATE, FINDS OF LEG AND OTHER LONG BONES FOUND FROM ANIMALS AS WELL AS SOME MANDIBLES. A LOT OF WATER SEEMS TO HAVE GONE INTO THIS PIT TO FORM SUCH AN UNIFORM LAYER, SAME AS (410621) JUST SEPARATED BY DITCH [410625] WHICH CUTS THROUGH THIS FILL. PIT IT IS CONTAINED WITHIN MAY HAVE BEEN TO COLLECT WATER FOR SETTLEMENT IN THE AREA.

THE FILL IS MID GREENISH GREY, THE ~~CLAY~~ FILL ALSO SMELT OF DECAYING MATTER SO DEFINITELY A WEATHERING/SILTING FILL.

* THOUGH LITTLE EVIDENCE OF STANDING WATER AS NO MANGANESE OR IRON RANNING, THE COLOUR COULD SUGGEST ALGAE FILLED WATER FORMED THIS FILL.

CLAYEY/GRAVELLY ~~AND~~ LOWEST FILL OF POSSIBLE PIT [410622]. THE MOST NOTABLE FEATURE OF THIS FILL IS THE DENSITY OF COBBLE-SIZED (0.10 - 0.20m DIAMETER) STONES VARYING IN SHAPE - SOME ROUNDED; OTHERS ~~PARALLEL~~ FLAT (AMORPHOUS) LINING THE BASE, OFTEN LODGED INTO THE UNDERLYING BLUE CLAY NATURAL. DESPITE THEIR FREQUENCY, THESE ARE NOT THOUGHT TO BE INTENTIONALLY PLACED - POSSIBLY THE RESULT OF A NATURAL SPRING SILTING UP AND LATER BEING ~~AND~~ CUT INTO TO MAKE A PIT. FILL IS A MID GREY COLOUR MOTTLED WITH YELLOW. OCCASIONAL FAUNAL REMAINS WERE GENERALLY FRAGMENTED AND VERY BRITTLE. OCCASIONAL POT SHARDS APPEARED BROADLY IRON AGE IN DATE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

UPPER FILL OF [410622], PROBABLY THE SAME FILL AS (410619) - RECORDED AS SEPARATE BECAUSE DITCH [410625] CUTS THROUGH THEM - WITH A SIMILAR COMPACTION, ^(FIRM) COLOUR (MID GREY MOTTLED YELLOW) AND COMPOSITION ~~TO [410619]~~ (CLAY WITH ~~DETAILED~~ SOME GRAVEL) TO (410619). ~~SOMEWHERE~~ ~~WAS~~ COMPACTED TO LOWEST FILL OF PIT [410622], THIS FILL HAS RELATIVELY FEW STONE INCLUSIONS WHICH FURTHERMORE ARE GENERALLY SMALLER (< 0.10m DIAMETER) THAN THOSE Lining THE BASE OF THE FEATURE. GIVEN THE SIMILARITY IN THE FILL'S COLOUR TO ~~PIT [410622]~~ THE LOWEST FILL (410620) AND ITS HIGH CLAY CONTENT, IT IS PROBABLY BEST INTERPRETED AS NATURAL SILTING UP.

SOME OF THE MODERATELY FREQUENT FAUNAL REMAINS WERE INTACT BONES, ALTHOUGH SOMEWHAT BRITTLE. OCCASIONAL POT HAD BRUINAGE IRON AGE APPEARANCE.

CUT OF POSSIBLE PIT WHICH APPEARS TO HAVE FAIRLY STEEP SIDES AND POSSIBLY A RELATIVELY FLAT BASE (HOWEVER, THIS HAS BEEN DIFFICULT TO DETERMINE BECAUSE OF THE LINING OF COBBLES ~~OR~~ LODGED INTO WHAT IS THOUGHT TO BE THE UNDERLYING BLUE CLAY NATURAL, AND THE FACT THAT THE 1m DEPTH LIMIT HAD ALREADY BEEN EXCEEDED SO THE TRUE PROFILE OF THE BASE COULDN'T BE ESTABLISHED WITH CONFIDENCE). THE PROFILE OF THE PIT VISIBLE IN THE SLOT MIGHT SUGGEST A BROADLY CIRCULAR SHAPE, BUT THIS ISN'T EVIDENT ON THE SURFACE, POSSIBLY OBSERVED BY A ~~VERY~~ CAPPING FILL (410598). THE LINING OF COBBLES/GRAVEL, PARTICULARLY IN THE ~~VERY~~ PIT'S LOWEST FILL (410620), MIGHT SUGGEST THAT THIS PIT WAS CUT INTO A NATURAL SPRING THAT HAD SILTED UP, (ALSO SUGGESTED BY THE AMORPHOUS ~~AND~~ PROFILE OF THE SLOT, REDEPOSITED NATURAL NOT CORRESPONDING CLEARLY TO ANY CUTS, ETC.). THIS PIT APPEARS TO CUT 2 DITCHES, ONE RUNNING N-S INTO THE SLOT [410617], THE OTHER RUNNING ~~IN~~ BROADLY E-W [410627]. THE PIT IS ITSELF CUT BY A MORE RECENT CURVILINEAR DITCH RUNNING NW-SE THROUGH THE SLOT.

THE OCCASIONAL POT SHARDS RECOVERED FROM THE FILLS OF THIS PIT SUGGEST POSSIBLE IRON AGE CONSTRUCTION.

IT IS ALSO POSSIBLE THAT THIS CUT WAS A WELL.

Refer to context ~~(410620)~~ (410625)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

DARK SILTY CLAY FILL OF CURVILINEAR DITCH [410625] RUNNING NW-SE THROUGH SLOT. STONE INCLUSIONS ARE OCCASIONAL, RANDOMLY DISTRIBUTED IN FILL AND VARIABLE IN SIZE/SHAPE (0.05 - 0.20m DIAMETER, GENERALLY ANGULAR). RELATIVELY LOW OCCURRENCE OF CHARCOAL, SO DARK COLOUR OF FILL COULD BE ATTRIBUTED TO MANUAL BACKFILL. ~~BONE~~ RECOVERED FAUNAL REMAINS ~~WERE~~ GENERALLY CONSISTED OF LARGER BONE FRAGMENTS/INTACT SMALLER BONES. SOME OF THE RECOVERED POT SHARDS EXHIBITED ~~ROMAN~~ ROMAN PERIOD CHARACTERISTICS, POSSIBLY SUGGESTING LATE IRON AGE /EARLY ROMAN DATE.

FILL IS VERY SIMILAR IN COLOUR/COMPACTNESS/COMPOSITION TO A POSSIBLE CAPPING FILL (410598), MAKING HARD TO SEE THE TOP OF ~~THE~~ (410623)'S PARENT CUT [410625].

Refer to context [410620] [410625]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

LOWER FILL OF CURVILINEAR DITCH # [410625], SIMILAR IN CONTOUR/COMPACTION TO OVERLYING FILL (410623) BUT DISTINGUISHED BY THE PRESENCE OF REDEPOSITED CLAY NATURAL IN PLACES AND ALSO BY GREATER FREQUENCY OF COBBLE-SIZED STONES (0.05-0.10m DIAMETER, LESS ANGULAR IN SHAPE THAN THE STONES IN THE OVERLYING FILL) CONCENTRATED ALONG THE BASE OF THE FILL/FEATURE. IN TERMS OF FAUNAL REMAINS, MOST/ALL OF A POSSIBLE COW SKULL ~~WAS~~ WAS RECOVERED IN ADDITION TO SOME OTHER BONE FRAGMENTS. PBT FRAGMENTS WERE OCCASIONAL, BROADLY ~~WAS~~ APPEARING IRON AGE IN DATE GIVEN THE DARK COLOUR OF THE FILL, DELIBERATE BACKFILL PROVIDES A PLAUSIBLE INTERPRETATION.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

CUT OF CURVILINEAR DITCH RUNNING NW-SE THROUGH THE SLOT, TURNING ~~PHASE~~ ~~THE~~ SOUTHWARDS SOUTH OF THE SLOT (THE ~~REVERSE~~ TRAJECTORY OF THE DITCH NORTH OF THE SLOT ISN'T CLEAR.) THE PROFILE CHANGES NOTICEABLY WITHIN THE SLOT, WITH THE DITCH BEING RELATIVELY SHALLOW WITH MODERATE SIDES IN THE N-FACING SECTION (< 0.40m DEEP), BUT BECOMING MUCH DEEPER (AT LEAST 1.18m) ~~AND~~ WITH MUCH STEEPER SIDES (NEAR VERTICAL ALONG THE DITCH'S EASTERN EDGE), MORE SLOPING ALONG ITS WESTERN EDGE) IN THE SOUTH-FACING SECTION. THE BASE GENERALLY APPEARS FLAT IN BOTH SECTIONS, ALTHOUGH IT IS CUT INTO 2 DIFFERENT NATURALS AT EITHER END (AND IN THE S-FACING SECTION, THE LINING OF LARGE COBBLES AND 7m DEPTH LIMIT MAKE IT DIFFICULT TO DETERMINE THE BASE PROFILE WITH CONFIDENCE). THE SIMILARITY OF THE TOP FILL (410623) TO AN APPARENT CAPPING FILL (410598) MAKE IT DIFFICULT TO DETERMINE THE TOP OF THE CUT (I.E. WHETHER IT CUTS THROUGH THIS CAPPING FILL OR ~~IS~~ IS COVERED BY IT). IF THE CUT AND ITS FILLS ARE MORE RECENT THAN (410598) - WHICH IS OUR INTERPRETATION, - THEN IT IS THE MOST RECENT FEATURE IN THIS SLOT EXCEPT FOR A FURROW [410597] WHICH TRUNCATES THE TOP OF IT. FINDS FROM THE DITCH'S FILLS SUGGEST A LIKELY IRON AGE DATE, WITH SOME ~~BY~~ POT SHARDS IN ITS UPPER FILL PERHAPS SUGGESTING THAT IT WAS STILL OPEN IN THE LATE IRON AGE / EARLY ROMAN PERIOD.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF DITCH RUNNING E-W THROUGH SLOT, TRUNCATED ON THE WEST END OF THE SLOT BY PIT [410622]. THE SLOT HAD BEEN OPENED TO INVESTIGATE RELATIONSHIP BETWEEN ~~THIS~~ THIS DITCH AND [410617], HOWEVER THE PIT OBSCURES THIS RELATIONSHIP. (410626) HAS HIGH FREQUENCY OF GRAVEL, ~~AND~~ PEBBLES ($\leq 0.05m$ DIAMETER) AND LARGER COBBLES (0.10-0.20m DIAMETER, VARYING IN SHAPE, SOME SMOOTHED, OTHERS MORE ANGULAR). MOST OF THESE INCLUSIONS ARE FOUND TOWARDS THE BASE OF THE FILL (MANY COBBLES ARE LODGED INTO THE UNDERLYING GREY OR BLUE CLAY NATURAL).

THE FILL IS MID GREYISH BROWN MOTLED WITH ORANGE. THE CLAY CONTENT AND UNING OF COBBLES ALONG THE BASE SUGGESTS THAT THIS FILL MIGHT BE THE RESULT OF NATURAL SILTING UP - IT IS POSSIBLE THAT THERE WAS A NATURAL SINKING IN THIS AREA WHICH SILTED UP (ACCOUNTING FOR THE COBBLES/ PEBBLES LODGED INTO THE NATURAL) AND WAS SUBSEQUENTLY ~~BEING~~ CUT INTO.

MODERATE FAUNAL REMAINS WERE OFTEN LARGE BUT BRITTLE BONE FRAGMENTS (INCLUDING A SMALL NUMBER OF ~~NO~~ MANDIBLES STUCK IN THE SECTIONS). MODERATE POTTERY FINDS INCLUDE SOME PIECES WITH COMBED DECORATION (SUGGESTING IRON AGE) - MOST LOOKS BROADLY IRON AGE. SOME INDUSTRIAL WASTE (IRON SLAG) WAS RECOVERED FROM THE LOWER PART OF THIS FILL TOWARDS THE CENTRE OF THE S-FACING SECTION, WHERE THE DITCH IS AT ITS DEEPEST.

POSSIBLE CUT OF DITCH RUNNING E-W THROUGH SLOT. THE PROFILE IS OBSCURED BY THE FACT THAT ONLY HALF OF THIS DITCH WAS EXCAVATED, BUT IT SEEMS IRREGULAR - THE ~~THE~~ SOUTHERN EDGE (LOCATED WITHIN SLOT) IS NOT CLEARLY DEFINED, AND THE BASE IS SLOPING, GETTING DEEPER FROM THE EAST TO WEST END OF THE SLOT BEFORE BEING TRUNCATED BY PIT [410622].

THE BASE IS LINED WITH PEBBLES / LARGE COBBLES, MANY LODGED INTO THE UNDERLYING BLUE / GREY CLAY NATURAL. IT IS POSSIBLE THAT ~~THE~~ THIS MAY HAVE BEEN THE BANK OF A NATURAL SPRING WHICH SILTED UP AND WAS LATER CUT INTO, WITH THE SLOPING ~~BASE~~ BASE PROFILE POSSIBLY REFLECTING HOW ITS CONSTRUCTORS FOLLOWED THE NATURAL WHEN CUTTING THE DITCH IN THIS AREA (I.E. THE SILTED-UP AREAS BEING SOFTER / EASIER TO DIG).

IT IS POSSIBLE THAT THIS IS THE OUTER EDGE OF A ~~WELL-LAID~~ CURVILINEAR DITCH WHICH CONTINUES TO THE NORTHEAST, CORRESPONDING TO [410565].

FINDS FROM FILL ~~PEBB~~ (410626) SUGGEST IRON AGE DATE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Gravelly clayey silt dark brownish grey fill of ditch, most likely natural infilling.
 * very small gravel stone spread throughout the fill with slight concentration
 towards the bottom.
 Fill composition and stone assemblage suggests it is the result of natural
 infilling, a drainage ditch silting up.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410637) is a compact, dark, silty clay natural infilling.

The inclusions there were very occasional, in the case of stones and chalk, and moderate regarding bones and pottery. The stones were natural flint, above all, with small sizes. ~~The same~~

In respect of animal bones, we only found fragments, ~~less~~ apart from a completed phalange. The pottery was in general different fragments of black vessel, except for three or four reddish fragments.

Regarding to the age, It should be Roman, due to the artifacts found in it. ~~and by its situation was another roman feature~~

This context could be the same as (410740) but we can't ensure that because the ~~possible~~ potential relationship has been destroyed by context [410642], the newest feature in the slot.

Refer to context (410637)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410638) is a natural infilling composed of a compact, orangeish brown, silty clay sediment. The inclusions were formed by natural flint and chalk, both with small and tiny sizes.

In respect of archaeological remains we didn't find anything. Regarding the chronology, we can suppose it may be roman due to context (410637) is roman, but we can ensure it.

Context [410642] cuts our context (410638).

Refer to context (410637)

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410642] is a cut of ditch which crosses the site in a N-E-SW direction.

The ditch is composed by two fills, one (410638), without archaeological remains, and (410637) where some pieces of pottery could suggest us it is a ~~roman~~ ^{roman} feature.

It may be the same context as [410741], due to on plan both ditches seem to be connected. The problem with that the ~~re~~ ^a potential relationship has been cut by context [410642], which is the newest context in the slot.

Regarding chronology, this ditch could be roman due to the archaeology remains found into it.

Refer to context [410642]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

4100625 to 4100636

THIS IS THE TOP FILL OF DITCH [410642]
FORMED BY NATURAL INFILLING. THIS FILL IS DARK
GREYISH BROWN SILTY CLAY WITH MOD CHALK, OCCA
STONES & OCCA CHARCOAL.

THIS FILL GOES FROM THE ~~WEST~~^{EAST} SIDE OF OUR SLOT TO
THE WEST APPEARING IN BOTH OPPOSITE SECTIONS - ON
THE EAST FACING SECTION THIS FILL APPEARS A LOT
WIDER THAN ON THE WEST FAC SECTION SINCE THE
DITCH [410642] TURNS APPEAR IN A SIDE VIEW IN
SECTION.

ARCHAEOLOGICAL FINDS INCLUDE A MEDIUM AMOUNT OF
A. BONES FRAGMENTS, AND A MEDIUM AMOUNT OF POT
MAINLY ROMAN.

4100 625 to 4100636.

Context (410643) is a compact, dark grey, silty clay natural infilling. The inclusions were an occasional amount of stones, composed of natural, small size flint in general, with some exceptions. Also we recognize some pieces of sandstones and pebbles. The chalk was moderate. We can highlight a line of chalk with more concentration of chalk on the north facing section as we can see on the drawing number 41133.

Regarding archaeological remains a moderate quantity of animal bone were unearthed. The pottery was also moderate where we can emphasize a high range of ~~colors~~, color, decoration and quality. We have also found a piece of metal.

~~Aspects~~ Respect of the age ~~or~~ the pottery can indicate us that the context is a roman layer but it is just a previous hypothesis.

*

Refer to context (410643) (410740) and (410637).

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please have a look context ~~[410642]~~ (410740) and (410637), where you can find the rest of the context.

* This context has been cut by ^{also} [410642] ^[410741] and by an animal burrow.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410644) is a natural infilling composed of a compact, ~~dark~~ brownish grey and silty clay sediment. This context is one of the six context of [410647]. It was full of inclusion. ~~As an~~ A frequent quantity of stones, mainly natural flint, small and medium size, and chalk.

Regarding archaeological remain we ~~note~~ unearthed an occasional amount of pottery and a ~~frag~~ moderate frequency of animal bones. The pottery is generally a bad quality, greyish-blackish fragments. Also we collected some piece of reddish pottery. Due to those finds we could suggest that this context may be late iron age or early roman, without ensure any one of both.

This context was ~~so~~ cut by [410642], one of the newest feature of the slot, which is roman.

Refer to context

This form is incomplete if fields marked with * are empty. Please turn over for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410645) is a natural infilling composed of a by a compact mid greyish brown, silty clay sediment.

The inclusions were stones and chalk, the former were flint and sandstone, and the latter was more abundant and well spread along the context. In general the sizes were small, less a some big stones.

In respect of the archaeological remains we have not ~~seen~~ recognised any of them. The bottom of this feature, the context [410647] was very poor in archaeological stuff. One of the explanation about the absent of finds in this context is the difficulty to separate context (410645) and (410669). All the stuff recover from both context are in (410669).

Regarding the age it may be Iron Age, due to the pottery found in context (410669).

Also This context has been cut by [410642]

Refer to context (410637) (410643)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410646) is a compact, mid greyish brown, silty clay natural infilling. The inclusion weren't frequent, indeed we at only record an occasional amount of stones and chalk. The stones, again, were natural flint mainly. Both, the stones and at chalk were small sizes.

In respect of archaeological remains, we didn't find any of them.

Regarding chronology, we suppose it could be an iron age level due to it is beneath context (410645) and (410669) which have been dated as Iron Age, late Iron Age.

* We can ensure if this context is the last one of the feature because we have reached the limit of excavation. So we don't know if context (410646) is over the cut or over another fill. What we know for sure is it was cut by context [410642]

Refer to context (410637)

[410647] is the cut for a ditch running E-W through our slot. This feature has not been ^{fully} excavated. ~~into~~ ~~base~~. The slot runs through the middle of this ditch therefore full profile can't be seen. Also, excavation stopped before reaching the base as this slot main function was to observe relationships between features. On the west facing section the north side has been cut by another ditch [410642] coming from the same direction - therefore most of the side cut is not visible. On the east fac section the side cut is pretty much complete, apart from the bottom which wasn't excavated. There's 7 fills have been attributed to this cut.

Refer to context

(410643) → N FAC SECTION

(410740) → E FAC SECTION

~~410647~~

(410642) → SLOT PLAN

(410746) → LOCATION PLAN

SKETCHES

(location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

* We can ensure context (410646) and (410670) are over the context

[410647] because we didn't reach the bottom in all the feature, and we don't know if there is another context between those fills and the cut.

* Update: Context [410647] is the same as [410839] [410627] [410123] [410565] [410294] [410061].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary fill of Gully. (Feature was 100% excavated and finds in this fill assigned this number, Quantity of finds no sure found in this slot). Contained Black Iron age pot mostly, although also contained some later ~~to~~ next Iron age pot. Also contained burnt clay, and a shired animal bone assemblage (pig, sheep/goat + possibly deer).

Stones: Flint gravel, 0-3cm Sub Angular.

MODERATELY COMPACT NATURAL INFILLING OF THE PARENT CONTEXT [410656]. ITS COLOUR AND ITS COMPOSITION ARE IN THIS WAY DUE TO THE CONTACT OF THIS FILL WITH THE SURFACE AND ITS ORGANIC FEATURES. THE ONLY INCLUSIONS THAT WE CAN RECORD ARE SMALL STONES WITH DIFFERENT KINDS OF SHARPS, OCCASIONAL CHALK AND A MODERATE PRESENCE OF ANIMAL BONES. ^{ALMOST ALL} THESE BONES BELONG TO MEDIUM AND SMALL ANIMALS BUT WE HAVE RECORDED TOOTH AND JAWS OF MEDIUM AND BIG ANIMALS LIKE A PIG. THESE ORGANIC REMAINS GIVE TO THIS FILL SOME OF THE FEATURES OF THE COLOUR OF THIS CONTEXT. THIS CONTEXT FILLS A GULLY. WE CAN'T DATE THIS GULLY DUE TO THE ABSENCE OF POTTERY OR OTHER DATABLE REMAINS.

Refer to context [410656]

GULLY WITH THE NUMBER CONTEXT [410656] FILLED BY THE NATURAL INFILLING (410655). THIS CUT HAS A LINEAR SHAPE, E-W ORIENTATION AND GENTLE SIDES. ITS BASE IS A LITTLE CONCAVE BUT IS ALMOST FLAT BECAUSE IS NOT SO DEEP. WE DON'T KNOW MORE INFORMATION ABOUT ITS LENGTH BECAUSE IT WOULD BE ~~NEED~~ ^{USEFUL} ~~NECESSA~~ CLEAN THE AREA TO SEE ITS DIMENSIONS TO THE EAST. LOOKS LIKE THAT WE HAVE ITS TERMINUS IN THIS SLOT (WE ONLY HAVE 0.70 m OF IT IN THE 1.9 m WIDTH OF THE SLOT) AND IT IS NOT ^{VISIBLE} IN THE OTHER SECTION. MAY BE THE FURROW CUTS ~~ITS~~ ^{THE} PRESENCE OF THIS GULLY. WE CAN'T DATE THIS GULLY DUE TO THE ABSENCE OF POTTERY OR OTHER DATABLE REMAINS BUT IS OLDER THAN THE FURROW AND IT'S MODERN THAN THE STONES LAYER.

DELIBERATE DEPOSIT OF STONES INVESTIGATED IN 10'50m slot THAT EXTENDS FROM E TO W IN THE NORTH SIDE OF THE SLOT, PROBABLY TRUNCATED BY AN LATER GULLY [410656] IN THE NE CORNER, AND BY A MODERN FALLOW.

THE CHARACTERS OF THE STONES ARE DIFFERENT, ANY KIND OF PERSPECTIVE AND DIMENSIONS AND SHAPES HAVE BEEN INVESTIGATED, THE BIGGEST ONE IS A ROUND STONE OF 0'23m x 0'18m.

THE SHAPE OF THE DEPOSIT IS 3'30m x 1'90m

THE USEFULNESS IS STILL FOR + KNOW. The use of this is still as yet unknown, THE LAYER EXTENDS TO THE WEST.

See plan hand drawn or section

MODERATELY COMPACT NATURAL INFILLING OF THE PARENT CONTEXT [410660]. THIS CONTEXT FILLS THE CUT [410660] THAT IS A POST HOLE. WE CAN SEE THE DIFFERENCE BETWEEN THE CONTEXT (410661) AND THIS ONE IN THEIR COLOURS IN THIS FILL THE BROWN COLOUR IS WITH A STRONGER PRESENCE AND THE GREY AND ORANGE IN A SECONDARY WAY. IN THE DRAWING (041120) AND THE PHOTO PHOTOS WE CAN SEE BETTER THIS DIFFERENCE. THE ONLY INCLUSIONS THAT WE HAVE RECORDED ARE THE OCCASIONAL PRESENCE OF SMALL STONES AND CHALK. WE CAN'T DATE THIS FILL BECAUSE WE HAVEN'T RECORDED ANY POTTERY OR OTHER DATABLE REMAINS, BUT LOOKS LIKE EARLY THAN THE FURROW THAT HAS NO PRESENCE IN THIS EAST FACING SECTION.

Refer to context [410660]

MODERATELY COMPACT NATURAL INFILLING OF THE PARENT CONTEXT [410665]. THIS FILL BELONGS TO THE ENCLOSURE [410665]. ITS PREDOMINANT COLOUR IS BLACK DUE TO THE FREQUENT PRESENCE OF ORGANIC REMAINS LIKE ANIMAL BONES AND SOME PLANT REMAINS LIKE ROOTS. THE THICKNESS OF THIS FILL IS BIGGER IN THE RECORDED E FACING SECTION (D41120) THAN W FACING SECTION POSSIBLY BECAUSE THE FURROW IS CUTTING TOO MUCH THIS FILL IN W FACING SECTION. WE HAVE RECORDED A LOT OF ANIMAL BONES OF MEDIUM AND BIG ANIMALS LIKE SHEEPS, PIGS AND COWS WITH SOME RIBS AND JAWS THAT WOULD BE INTERESTING TO STUDY IN THE LABORATORY. THE STONES ARE MEDIUM SIZES AND IT IS MODERATE THE PRESENCE OF CHALK. THE POTTERY IS MODERATE FREQUENTLY. WE HAVE FOUND ALMOST ALL IRON AGE REMAINS SO WE CAN DATE THIS FILL IN THIS CHRONOLOGY.

*THIS FILL HAS ALSO ORANGESH FEATURES IN ITS COLOUR.

THIS FILL LIKE (410667) ARE SIMILAR TO THE FILL (410236) OF THE CUT [410237]

Refer to context [410665]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

LOOSE NATURAL INFILLING OF THE PARENT CONTEXT [410665]. THIS FILL BELONGS TO THE ENCLOSURE [410696]. ITS PREDOMINANT COLOUR IS BLACK DUE TO THE FREQUENT PRESENCE OF ORGANIC REMAINS LIKE ANIMAL BONES AND CHARCOAL. BECAUSE OF THAT WE HAVE TAKEN SAMPLES OF THIS FILL (4 BUCKETS 5% S 41043). IN THE LEFT SIDE THE WATER TABLE APPEARS AT 0'85 m MAY BE FOR THE A CLOSER SPRING WATER OR SOMETHING LIKE THAT BECAUSE THE REST OF THE SITE IS SO DRY. WE DIDN'T FINISH TO DIG THIS FILL IN THE CENTER OF THE SLOT BECAUSE WE ARRIVED TO 1m DEEP. THE COMPACTION AND THE PRESENCE OF CHARCOAL ARE THE BIGGER DIFFERENCE WITH THE LATER FILL (410661) WE REGISTERED WITH A WORKING SHOT (4100477) THE PRESENCE OF SOME BONES FROM A COW OR HORSE. FREQUENT PRESENCE OF DIFFERENT KIND OF ANIMALS AND A MODERATE PRESENCE OF POTTERY, ALMOST ALL FROM AN IRON AGE CHRONOLOGY. THANKS TO THESE TWO FILLS WE CAN DATE THIS DITCH/ENCLOSURE IRON AGE. THIS FILL LIKE (410661) ARE SIMILAR TO THE FILL (410236) OF THE CUT [410237]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

MODERATELY COMPACT NATURAL INFILLING OF THE PARENT CONTEXT [410655]. ITS COLOUR, AND ITS COMPOSITION, ARE DIFFERENT FROM THE FILL (410662) AND ONLY DIFFERENT IN COLOUR WITH THE FILL (410661). THIS FILL WE CAN SEE IN THE RECORDED SECTION W/ FACING (D41121) SO WE THINK THAT IS GOING THINNER UNTIL DISAPPEAR BEFORE THE W FACING SECTION. THIS FILL LIKE (410653) FROM THE FURROW ARE TRUNCATED BY THE PIPE LINE, THIS FILL HAS INCLUSIONS OF SMALL STONES WITH DIFFERENT KINDS OF SHARPS, OCCASIONAL CHALK, MODERATE PRESENCE OF ANIMAL BONES AND OCCASIONAL PRESENCE OF POTTERY. THIS POTTERY LOOKS LIKE FROM AN IRON AGE CHRONOLOGY ACCORDING TO THE REST OF THE FILLS OF THIS PARENT CONTEXT [410665] THIS COLOUR OF THIS SILTY CLAY FILL IS GREY BUT ALSO BROWNISH, ORANGEISH AND GREENISH, A LITTLE BIT SIMILAR WITH THIS FEATURE OF THE FILL (410664).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410669) is ~~as probably as~~ a strange episode in this slot ~~that~~ ^{which} probably it will be resolved when the next slot in the area will be opened. Same as (410670). Anyway we have tried to describe and interpretate it as well as we can. This context is a compact, mid greyish brown, silty clay natural infilling with not many inclusions, just some occasional ~~fl~~ stones like natural flint and sandstone, normally with a small sizes, and chalk.

Regarding archaeological remains we do only found some pieces of pottery, ~~not~~ probably Iron Age. Due to those finds we can say that this context may be late Iron Age.

Update: We have already opened a new slot close to this context but we didn't find anything similar in composition or location. So it is still quite different in respect of the other fills in the slot.

Refer to context |

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please have a look contexts (410741) and (410643).

Thanks.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410670) ~~is one of the~~ is and (410669) are quite peculiar and we don't know exactly how they were found. Probably with the next slot which will be opened we can know better where they come from or which ditch they are related with. Anyway we have tried to understand as better as we could it.

(410670) is a gravelly sand, loose, light yellowish brown natural infilling with plenty of inclusions, stones like tiny fragments of flint, sandstone and pebble, and ~~also~~ chalk.

We didn't find any archaeological remain.

It is the most peculiar context in the slot.

We can't know what context is underneath it because we reached the limit of ~~excavation~~ excavation.

Regarding the age, probably it is Iron Age due to the pot found in context (410669).

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please, have a look context (410740) and (410643)

* update: we have already opened a new slot close to this context, but we didn't find a similar fill in it. So, regarding the composition and the location, it is still quite different from the rest of the fills in the slot.

this black and moderated compact fill, was
so sandy with many small stones in it
(≤ 0.05 m most of them). It also have
chalk frequent.

This fill is cutted by the gurrew [410676]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

this moderated compact, mid brown and clayed
fill is the second one we found in the
main cut we have in this slot:

We found lot of chalk and small stones
($\leq 0.05m$). We think is natural infilling
because of the disuse.

NATURAL INFILLING OF ~~gully~~ gully [410684] INVESTIGATED IN A
2.20 X 3 m slot.

The feature is present only in the SOUTHERN side of the slot.

The fill CONTAINED few small (0.02 - 0.05 m Ø) irregular stones
AND some animal bones; in particular a concentration of bones
FROM the same animal is observable in the SE FAC section
(probably a ~~skull~~ skull).

SE/NW RUNNING GULLY, INVESTIGATED IN A 2.20 X 3 m SLOT. THE FEATURE RUNNING LINEAR IN THE SOUTHERN SIDE OF THE SLOT. THE GULLY IS FILLED BY ONLY ONE NATURAL INFILLING THAT CONTAINED ONLY FEW ANIMAL BONES. DUE THIS IT'S NOT POSSIBLE TO DATE THE FEATURE.

The gully is cutting a previous ring ditch running in the same direction.

The base of the gully is complex, probably due the presence of roots disturbance in the ~~SE/NW~~ NW side, AS RECORDED DURING THE EXCAVATION.

THIS FEATURE SEEMS A LOCAL RE-cut OF THE OLDER RING-DITCH, AS THE RE-cut, & FORMERLY RECORDED IN A NEAR SLOT ([410532] recutting [410538]). BUT IT IS NOT POSSIBLE TO ESTABLISH A DIRECT RELATION BETWEEN THE FEATURES DUE THE PRESENCE OF A MASSIVE TRUNCATION BY A DEEP DITCH RUNNING PERPENDICULAR TO THIS GULLY AND FOR THE DIFFERENT FILLS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Deliberate backfill of the ring-ditch [410687], covering the natural infilling (410686). This fill contained few small subangular stones (0.02-0.05m ϕ) and few medium size sub rounded stones (0.10-0.15m ϕ). It contained also, inside a general silty-clay soil several patches of clay ~~and~~, gravel and chalk flakes. This ~~and~~ composition is the reason to consider the fill as a deliberate backfill, probably in relation with the excavation operation related to a nearby deep ditch [410545] [410542]. The fill contained also few burnt clay daub, some animal bones and some pot sherds (probably iron age).

The fill, as the rest of the feature, is cutted by a succeeding gully [410684].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary NATURAL INFILLING of ~~ring~~ ditch [410687], investigated in a 3x2,20 m slot. This fill is covered by a probably deliberate BACKFILL (410685).

The fill CONTAINED FEW medium size STONES (0,06 - 0,15 m Ø) with SUBROUNDED SHAPE AND SOME CHARCOAL FLAKES.

The fill CONTAINED ALSO FEW ANIMAL BONES, FEW BURNT CLAY DAUB AND ONLY A POT SHERD.

The fill is cutted, as the rest of the feature by a succeeding gully running in the same direction [410684].

This fill seems a slump from the NATURAL edge of the ditch.

NW-SE RUNNING RING DITCH INVESTIGATED IN A 3x220m SLOT.
The Ring ditch in this slot is more or less linear and
starting to turn in northern direction.
The ~~area~~ feature is cutted by a succeeding gully
[410684] and filled by ~~the~~ one NATURAL infilling (410686) and
A ~~probably~~ deliberate back fill (410685).

This ring ditch is same as [410530] AND [410538] FORMERLY
RECORDED IN TWO NEAR SLOTS IN THE SOUTHWESTERN side.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

BOTTOM FILL OF CURVILINEAR DITCH [410690], COMPOSED OF A MID YELLOWISH BROWN SILTY CLAY MATERIAL.

THIS FILL CONTAINED A EVEN SPREAD OF SMALL ROUNDED AND SUB-ROUNDED STONES, HOWEVER A NUMBER OF MEDIUM SIZED BURNT SANDSTONES WERE FOUND NEAR THE BOTTOM OF THIS FILL. THE SPREAD APPEARS TO BE THE RESULT OF A DUMPING EVENT RATHER THAN A DELIBERATE DEPOSITION.

A MEDIUM SIZED PIECE OF QUARTZ WAS ALSO FOUND IN THIS FILL. THE QUARTZ WAS UNWORKED, HOWEVER IT IS NOT NATURAL TO THIS AREA OF BRITAIN.

FINDS IN THIS FILL ENCLUDED A NUMBER OF MEDIUM TO AND LARGE MAMMAL BONES AND A NUMBER OF POTTERY SHEARDS. THESE SHEARDS APPEAR TO DATE TO SOMETIME IN THE LATE IRON AGE PERIOD.

Dark grey Sh brown clay fill of N-S aligned ditch, excavated in very wet conditions. A moderate amount of natural stones were spread evenly throughout the fill, with no visible pattern, size or shape.

Fragmentary animal bone present, mainly small mammal, with no pattern visible in location, species, size or shape.

Amalgams and charcoal both primarily located at the bottom of the fill, no pattern.

Refer to context

linear ditch cut affected at S end on W side by natural rooting. Excavated in very hot conditions.

Ditch continues Swards about 4 metres before terminating, and proceeds Nwards about 2-3 metres before joining/truncating/being truncated by a larger ditch.

~~Exc~~ Recorded in very hot and dry conditions

Refer to context

NE-SW RUNNING DITCH RECUT WITH 4 MODERATE SIDES AND A CONCAVE BASE. THE DEPTH OF THIS RECUT IS MORE THAN 1M BUT IT IS NOT FULL EXCAVATED BECAUSE WE ARRIVED UNTIL 1M AND THE WATER TABLE CONDITIONS. THE FEATURES OF THE CUT (LIKE THE BASE AND THE SIDES) ARE SIMILAR TO THE ORIGINAL ENCLOSURE ^{MAY BE} BECAUSE OF ~~THAT~~ ^{INTENTION OF THE} THE CONSTRUCTION PROCESS. THE FILLS OF THIS RECUT ARE SO DIFFERENT FROM ~~THE~~ ^{FILL FROM} THE ENCLOSURE THE FIRST CUT [410665], ARE DARKER AND THE COMPOSITION AND THE COLOURS ARE SO DIFFERENT AS WELL. THE OLDER FILL OF THIS RECUT (410662) IS SO DARK AND PLENTY OF CHARCOAL, AT THE SAMETIME THE FILL OF THE FIRST DITCH [410665] IS COMPLETELY DIFFERENT IN ITS FEATURES.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clay soil, of mid brownish grey colour and moderately compact. It has a maximum length of 2.15 m in this slot and a maximum thickness of 0.22 m. It has occasional inclusions of stones, with a maximum size of 5 cm, chalk and charcoal. It is the natural infilling of the ditch 410698, that after was culled by the ditch 410706. This fill and 410699 are the oldest natural infillings of the slot.

There are frequent animal bones and very few fragments of pottery.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cur with linear shape, with moderate sloping sides and concave base. In this slot it has a length of 2'15 m, a width of 0'40 m and a depth of 0'22 m. Its orientation is NW-SE. It is a ditch whose natural infilling is 410697. It is culled in its part SE by the ditch 410706. Probably it is the same ditch that 410751, but in the middle they are culled by a gully. This ditch and the ditch 410700 are the oldest ditches of the slot.

cul with curvilinear shape, with moderate sloping sides and flat base. It has a maximum length of 1'40 m in this slot, a width of 0'60 m and a maximum depth of 0'26 m. It is part of a ring ditch, whose natural infilling is 410699. It is the same ditch that 410530, 410538 and 410687, all parts of the ring ditch. In this slot, this ditch is culled in its part NW by the ditch 410706.
SECTION - 410701, 410521, 410697
PLANT - 410702
SITUATION - 410704

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

GENERAL DESCRIPTION OF THE SLOT

In this slot, we have, in the part W, two ditch, one in the N, 410698, and other in the S, 410700, that they are the oldest. 410698, with orientation NW-SE, has the natural infilling 410697, and maybe the same ditch that 410751, with a furrow in the middle. 410700 is part of a ring ditch and its natural infilling is 410699. It is the same ditch that 410530, 410538 and 410687. Both are culled in the E by the ditch 410706, with orientation NE-SW and it is the same that 410545 and 410472.

This ditch is filled by the natural infilling 410705, that after was culled by the pit 410704. The natural infilling of this pit is 410521, where a pig bones deposit and a small pig skull found. ~~Over the ditch and 410705~~ The fill 410703 is over the fills 410521 and 410705. It is natural infilling of the ditch 410706 also, and it cover the most of the ditch. After, this natural infilling was culled by the ditch 410702, the most modern of this slot. Here we would have the terminus of the ditch, so it only is in the NE ~~section~~ facing section. The natural infilling of this ditch is 410701.

Iron-age and roman pottery, and animal bones found in all the fills of this slot.

ADDITIONAL INFORMATION.

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clay soil, of dark greyish black colour and moderately compact. It has a maximum thickness of 0'32 m and a maximum width of 0'70 m. It has a few stones and moderate inclusions of chalk and charcoal.

It is the natural infilling of the ditch 410702, and it's the most modern fill of the slot. Some fragments of bones and iron age pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut with linear shape, with moderate sloping sides and concave base. It has a maximum depth of 0'32 m, and a width of 0'70 m. We don't know the length because on the top didn't look, and after to dig, it's only seen in one section. Its orientation is NE-SW.

It is a ditch whose natural infilling is 410701. This ditch is a rect that cuts the gill 410703 and the ditch 410706, and it is the same that 410540. It is the terminus of the ditch, so this ditch only is in the NE facing section of the slot.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clay soil, of light orangeish grey colour and moderately compact. It has a maximum thickness of 0.50 m, and a maximum width of 1.66 m. It has moderate inclusions of stones, frequent chalk and occasional charcoal.

It is the most modern natural infilling of the ditch 410706, and it is over the pit 410704. This fill is cutted in its part SW by the ditch 410702.

Some animal bones and iron age and roman pottery found. This fill covers the most of the ditch 410706.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, of light brownish grey colour and moderately compact. It has a maximum thickness of 0'42m. It has a few small stones, moderate inclusions of chalk and occasional pieces of charcoal.

It is the older natural infilling of the ditch 410706. After it was cut by the pit 410704, dividing it in two, so the maximum length of the fill in this slot is the 1'34m in the SW part, with a width of 1'50m. After, the pit and this fill were covered by the fill 410703.

Frequent animal bones and iron age and roman pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cur with linear shape, with moderate sloping sides and ~~concave~~ concave base, with NE-SW orientation. In this slot, it has a maximum length of 3 m, 1'66 m of width and 0'84 m of depth.

It is a ditch whose natural infillings are 410705 and 410703. This ditch cuts to the ditches 410698 and 410700, and after was cut by the pit 410204 and the ditch 410701. It is the same ditch that 410545 and 410472.

NATURAL INFILLING OF A ENCLOSURE [410Z10] E-W DIRECTION, INVESTIGATED IN A 2x2 m SLOT. THE FILL PROBABLY IS THE MOST RECENT IN THE FEATURE. THE FILL HAD OCCASIONAL PRESENCE OF STONES (MEDIUM AND BIG STONES POLLING STONES). THE FILL HAD MODERATE PRESENCE OF CHALK TOO. THE FILL WAS VERY ORGANIC ~~WHT~~ WITH FREQUENT PRESENCE OF CHARCOAL.

WE FOUND ROMAN POT ~~AND~~ AND FREQUENT PRESENCE OF ANIMAL BONES (BIG SIZE, HORSE AND COW).

WE FOUND AN INTERESTING IRON PIECE (RECTANGULAR) BUT WE DON'T KNOW WHAT IS IT AT FIRST IMPRESSION (PROBABLY ROMAN IRON DECORATION TOOL).

THE FILL IS THE SAME AS (410599) INVESTIGATED IN A NEAR SLOT
UPDATE: 26/6/17 → I DO A SECOND INTERPRETATION, I REALIZE
THIS FILL IS SAME AS (410708) → GO TO THIS CONTEXT SHEET
FOR MORE INFORMATION.

Refer to context (410708) [410710] [410718] (consider:

NATURAL INFILLING OF A PIT [410715], INVESTIGATED IN A 2x2 m SLOT. THE FILL IS THE OLDEST ONE OF THE FEATURE.

THE FILL HAD OCCASIONAL PRESENCE OF STONES (POLYGONAL SMALL STONES AND BIG ROLLING STONES) AND MODERATE PRESENCE OF CHARCOAL.

WE FOUND IRON AGE POT AND MODERATE PRESENCE OF ANIMAL BONES (SMALL SIZE, PROBABLY LAMB).

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

N-S RUNNING DITCH INVESTIGATED IN A 2x2m SLOT. THE DITCH IS CUTTED BY A POSTERIOR PIT [410720] IN THE MIDDLE OF THE SLOT. THE DITCH WAS FILLED JUST BY A ONE NATURAL INFILLING (410721) THAT CONTAINED IRON AGE POT SHERDS AND MODERATE PRESENCE OF ANIMAL BONES (BIG AND SMALL SIZE). THIS FEATURE IS THE SAME AS [410772] INVESTIGATED IN THE SAME SLOT BUT CUTTED COMPLETELY BY [410720]. WE CAN'T KNOW THE COMPLET DIMENSIONS OF THIS FEATURE BECAUSE ~~IT~~ CONTINUOUS OUTSIDE OF THE SLOT. THIS FEATURE IS THE SAME AS [410690] INVESTIGATED IN A NEAR SLOT

Associated single fill of [410727]. Only fill of [410727]
 Orange/grey fill Occasional chalk inclusions.
 Occasional finds of pot. Quite compact soil which
 was difficult to handle. Also due to the dry,
 warm weather it was very susceptible to
 cracking. ~~Various~~ Moderate small to medium
 angular stone inclusions. Frequent animal bone. Occasio-
 nal pot.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Upper fill of [410728]. Dark brown/black fill. Moderately compact. But easier to remove than lower fill (410736). Moderate pot, bone and chalk inclusions. Occasional charcoal inclusions with occasional large stone inclusions. Frequent small to medium angular stone inclusions. Composition of soil, silty clay, was easily hardened by the sun which made excavation difficult.

PRIMARY FILL OF PIT [410734] - THE COLOUR IS MID ORANGISH BROWN
 MOTTLED WITH LIGHT GREENISH GREY, THE COMPOSITION IS CLAY
 IT WAS FORMED BY A NATURAL INFILLING.
 PRESENCE OF STONES AND GRAVEL ON THE BOTTOM OF THE
 FILL - THE STONES ARE SMALL AND WITH IRREGULAR SHAPE.
 THERE IS OCCA POTTERY - THE DATE COULD BE IRON AGE BUT
 IS DIFFICULT TO SAY BECAUSE OF THE FEW AMOUNT OF FINDS

Refer to context (410732)

(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill of large E-w ditch, yellowish grey Silty Clay
 Natural Stones to the fill are small and medium and randomly placed no signs
 of working.
 Animal fragmentary bones recovered, no pattern ^{SPUR}, bone, size or shape. NO
 signs of working.

Refer to context [410739]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410741] is a cut of ditch which runs in a w-e direction. It was formed by only one fill which one we have dated as Roman period although we collected them some pieces of pot that seems Iron Age. Probably is a ~~the~~ very early roman ~~fe~~ feature.

This context could be the same as [410639], but we are not sure, due to the potential relationship has been cut by context [410642].

Context [410639] is cutting contexts. (410643) and (410647)

Refer to context [410642]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

THIS FILL REPRESENTS A ~~B~~ LENSE OF CHALK THAT LIES BETWEEN (410640) & (410641). IN SECTION IT FORMS A CLEAR LINE. IT CONSISTS OF MAINLY ~~CHALK~~ CHALK & SMALL SUB-ANGULAR STONES APPROX 2cm.

THIS FILL WAS ONLY IDENTIFIED IN SECTION, ~~AS~~ AS IT'S A THIN LINE OF 10cm DEPTH, SO NO ARCHAEOLOGICAL FINDS HAVE BEEN ATTRIBUTED TO THIS CONTEXT.

EVEN THOUGH WE THINK IT'S PART OF DITCH [410642] THIS FILL ~~DOES~~ ONLY APPEARS ON THE EAST FAC SECTION OF OUR SLOT, ~~AND DOES NOT APPEAR~~

THIS CUT IS THOUGHT TO BE ~~THE~~ ~~CUT~~ THE ENCLOSURE DITCH. EVEN THOUGH THE SECTION (EAST X SOUTH FAC, D# 41133) WASN'T VERY CLEAR IT IS THOUGHT THAT DITCH [410642] CUTS INTO THIS DITCH ENCLOSURE.

THIS SLOT WAS DUG TO ESTABLISH RELATIONSHIPS THEREFORE THE BASE OF THIS FEATURE WAS NOT REACHED.

SIDES OF THIS CUT APPEAR TO BE MODERATELY SLOPPING AND 4 ~~OF~~ CORRESPONDING FILLS WERE IDENTIFIED.

ONE OF THE ISSUES WE HAD INTERPRETING THE SECTION IS THAT THE FEATURES ARE SIDEWAYS IN SECTIONS AND THEREFORE FILLS APPEAR ELONGATED AND DISTORTED. OUR SLOT SEEMS TO ONLY ~~REACH~~ JUST ABOUT CLIP THE ~~END~~ ENCLOSURE DITCH.

NATURAL INFILLING OF RECT. GULLY ~~(411007)~~ [411007] INVESTIGATED
IN A ~~1x1m~~ 1x1m SLOT ADJACENT^{TO} THE TERMINUS OF
THE FEATURE.

THE FILL CONTAINED FEW SMALL SUBANGULAR STONES (0,02-0,05m) AND
SOME CHARCOAL FLAKES. IT CONTAINED ALSO A MODERATE
QUANTITY OF ANIMAL BONES AND FEW IRON AGE POT SHERDS.

THE FILL, AS THE REMAINDER OF THE FEATURE, IS TRUNCATED BY A
MODERN PIPE LINE.

THIS FILL IS SOME AS (410531) AND (410812) ~~ALREADY~~ ^{FORMERLY} RECORDED
IN TWO SLOTS NEAR THE TERMINUS, IN THE SOUTH WESTERN SIDE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Terminus of Ring gully investigated in a 1x1 m slot. ~~It~~ It is filled by only one ~~for~~ natural infilling (410749). The gully is recut by a succeeding gully (411007) and part of his fill is cutted also by a modern pipeline. For the iron age pot sherds founded in the fill, it's possible to date the feature to this period. The ring gully is same as (410535) and (410813) formerly recorded in two SW near slots. From the set of information from this slots is possible to describe all the shape of this ring gully, from the ~~the~~ NE terminus (410750) until the SW terminus (410535) (previously recorded as a possible pit). This gully is also related with a near other ring gully (410538) that continued the ring structure in the same orientation (refer to the relationships sketch in 410749)

Cut of large curvilinear ditch. At the place that this section was dug the cut was aligned c. E/W and was at the interface of ~~the~~ 5 other cuts (see sketch). ~~It was truncated~~ it appears to have truncated a linear gully to N [410756] and a curvilinear ditch to S [410762] but the relationships were not conclusive, particularly to the latter feature which was not revealed in the section (pottery may shed more light on the relationships). The cut only contained two principle fills - basal = (410752), upper = (410753), both of which included pottery sherds (prob. Iron Age) and animal bone, in addition to slag + heat-affected stones. The upper fill (410753) also included 3 unidentifiable iron objects.

Refer to context 410752

Basal fill of large ditch cut [410751]. This fill was a combination of colluvial material washed down the sides of the ditch, and naturally-formed silty clay (the ~~edge~~ ditch was cut into clay at the base and silty/sandy, gravelly material at the top). The fill included occasional small, gravelly stones, in addition to occasional charcoal flecks, a moderate amount of pottery sherds (prob. Iron Age) and frequent animal bones. At the upper levels of this fill, towards the W end of the excavated area, was a small deposit of slag, burnt stone and charcoal (S41053) - there ~~was~~ were also several pieces of fired clay/daub in the fill. It is possible that the remnants of a nearby kiln were discarded into the ditch before it completely filled. This fill was truncated by a feature [410754] at the W end.

Refer to context 410751

Upper fill of large ditch cut [410751], comprising naturally-formed silty clay. The fill contained a large amount of animal bone and pottery sherds (prob. Iron Age but a few sherds of thick, crude hand-made sherds that are poss. Bronze Age), particularly towards the top of the fill. The fill also included occasional small-medium sized stones, flecks of charcoal + chalk, and pockets of heat-affected stone. There was also a small pocket of slag and occasional pieces of fired clay/daub. Similar industrial waste + daub were recovered from the ~~to~~ basal fill of the ditch and may represent discarded material from a nearby kiln. Three unidentified iron objects were also recovered from this fill - two of which 41017 + 41025 from very near the top   so may be intrusive (trample cut?)

cut of possible pit, ^{post-hole} or ditch re-cut. This feature was not identified during excavation but ~~was~~ was visible when the section face was cleaned. It cuts through the basal fill (410752) of the large ditch [410751] but was only apparent in the E. Facing Section (not in the W. Facing Section). If it does represent the re-cutting of the ditch it should be visible in both sections, so it may be a more localised feature, such as a pit. If this is the case, then it was dug into the lower fill of the ditch, which seems unlikely. It may even represent the remains of a post-hole. Its shape in plan is unknown. It only contained a single fill (410755).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of poss. pit/post-hole/re-cut [410754] - probably a result of natural infilling. This greyish brown silty clay included a moderate amount of charcoal/charcoal flecks and included a small amount of ~~etc~~ pottery sherds - the sherds were all similar and may be from a single vessel; they were well-fired and 'soot' coated, handmade ~~etc~~ fabric of poss. Iron Age date. The fill included occasional, small gravelly stones. ~~the stones~~ While similar in composition to ~~the~~ upper fill of the ditch (410753), there were no heat-affected stones, daub, or slag in this fill.

Refer to context | 410754

Single Fill of wilinear gully [410756]. This fill included a small amount of small stones and occasional charcoal flecks. A small quantity of pottery sherds was recovered from the fill, in addition to occasional animal bones (only a small portion of the gully was excavated, principally to establish its relationship with the large ditch [410751] that truncated it). The gully has since been 100% excavated and samples were taken. Very rich charcoal fill. Silty clay, black fill. Degraded pot found and put in sample buckets. Occasional flecks of chalk.

cut of probable pit - this feature was not visible in plan, pre-excavation but showed up clearly in the section face. ~~and~~ Also, ~~the~~ the lower Western extremity was partially preserved and revealed on excavation (see sketch below). Extrapolating from the physical remnants and its form in the section face would suggest that it was originally sub-circular in plan with a diameter of approx. 1m. The 'pit' contained only one fill (410761) which included frequent animal bone + occasional pottery sherds. ~~After the relationship between the pit and the large adjacent ditch [410751] The pit truncated all three fills of a curvilinear ditch [410762] that appears to have terminated just N of it - the pit was truncated to S by a linear gully [410758]~~ (see sheet 410758 for section drawing)

Cut of curvilinear ditch containing 3 fills. The relationship Slot excavated did not extend across the width of the ditch but showed a section along part of its length. The lower part of the ditch was ~~revealed~~ revealed to the N and this suggests that it terminated here (see sketch). Its relationship with the larger ditch to N [410751] could not be established in the section but having excavated both features it is felt that the larger ditch [410751] truncates it (this may be confirmed through the pottery recovered from both features). It is truncated by a E/W aligned gully [410758] and by a pit [410760]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Basal fill of curvilinear ditch [410762] comprising a combination of colluvial material from the ditch edges and naturally formed silty clay. orangey flecks in the fill are potentially iron-pan. The fill included occasional small-medium sized stones and charcoal flecks, in addition to a small quantity of animal bone and pottery sherds (prob. Iron Age) - the fill was truncated by a pit [410760] + gully [410758] and it is possible that some cross-contamination occurred between the fills of ~~the~~ features.

(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary fill of curvilinear ditch [410762]. This fill comprised a thin band of silty clay, probably a result of natural infilling. The fill contained no finds or animal bone. This fill was truncated by a pit [410760].

Refer to context 410763

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

upper fill (of 3 fills) of curvilinear ditch cut [410762]. This fill probably represents natural infilling and consists of silty clay. It included occasional small-medium sized stones and charcoal flecks, in addition to a few sherds of pottery (prob. Iron Age) and animal bones. It should be noted that this fill was truncated by a pit [410760] and a gully [410758] and ~~so~~ cross-contamination between these features is a real possibility.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, of mid greenish grey colour and moderately compact, with a maximum thickness of 0.16m. It has occasional inclusions of chalk and charcoal. There are a few small stones.

It is the natural infilling of the ditch 410447, and it is very similar to the gill 410404. During the digging and in the section, any cut that divides it hasn't been seen. Maybe they are the same gill and the ditches 410446 and 410447 are contemporary. Other possibility would be that 410447 isn't a ditch, and maybe 410766 it is the soil erosion mixed with the gill.

We don't know if there was some materials, because during the excavation we can't distinguish between this gill and 410404.

FILL OF DITCH [410768] - IT WAS FORMED BY A NATURAL INFILLING THE FILL IN THIS TERMINUS IS VERY SHALLOW SO IT WAS DIFFICULT TO UNDERSTAND THE SHAPE, BUT IT WAS FULL OF FINDS AND IT WAS DARK AND ORGANIC WITH CHARCOAL FLECKS SO I TOOK 2 BUCKETS OF SAMPLE - THE INCLUSIONS ARE: OCCA SMALL STONES WITH IRREGULAR SHAPE AND DISTRIBUTION, SIZE 0.02-0.05m. OCCA CHALK FRAGMENTS AND ANIMAL BONES, AND OCCA POT FRAGMENTS. THERE WERE SOME PIECES OF BURNT CLAY -

THE POT WAS A FEW AMOUNT SO IS DIFFICULT TO DATE THE DITCH BUT IT IS THE SAME OF THE FILL (410814) SO I CAN SAY THAT IT COULD BE IRON AGE PERIOD -

THIS IS THE CUT FOR A PIT DISCOVERED
WHILST DIGGING A DITCH. THE PIT WAS LOCATED
TOWARDS THE EAST SIDE OF OUR SLOT. IT'S
HARD TO KNOW FOR CERTAIN THE SEQUENCE OF
EVENTS, BUT WE ASSUME IS MORE LIKELY
THAT A PIT WAS THERE BEFORE, AND DITCH
[410642] CUT INTO IT.

THIS IS A SMALL PIT, WITH STEEP SIDES.
1 ANIMAL RIB WAS FOUND IN IT.

Refer to context | 410642

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a post hole. this feature was so close to a ditch which was ~~working~~ digging before []

We thought it was cover for a big pit but ~~one~~ finally it's just a tree and many roots ~~under~~.

This posthole was so small with just 0'07m of depth, N-S orientation, with concave base.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

this pit is moderated compact, grey brownish and cleyed fill. was formed by natural infilling

It has small stones into it ($\leq 0.05m$ most of them). We also found manganese and chalk occasionally. And thanks of bones the animal bones fragments and the pottery we found, we can ~~say~~ speak about date iron age or early roman as period date of use.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, of reddish black colour and loose compaction. It has some small stones (2, 3 cm), occasional chalk and a few charcoal. It has a thickness of 0.12 m.

It is the natural infilling of the post-hole 410781. Mixed with the fill, there are some small fragments of fired clay from the sides. In the middle, the fill is more clear, while in the sides it's some mixed with the ~~clay~~ natural clay and the fired clay.

No materials found,

In its part W, it looks affected by roots.

Refer to context 410781

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with circular shape ^{and} vertical sides. The base is a few sloping in direction W. It has a maximum depth of 0'12 m and a diameter of 0'43 m.

It is a post-hole whose natural infilling is 410780. In this post-hole, we can see clearly burning remains in the sides, with fragments of reddish fired clay.

Very near, we have a small pit [410668] with similar remains in the sides.

Refer to context 410780

FILL OF POSSIBLE RING DITCH [410784] COMPOSED OF A DARK GREYISH BROWN SILTY CLAY WHICH IS LIKELY THE RESULT OF NATURAL INFILL.

A NUMBER OF LARGE STONES WERE PRESENT IN THE TERMINUS OF THIS RING DITCH, SOME OF WHICH WERE ALSO BURNT. THIS COULD SUGGEST THIS SMALL DITCH WAS POSSIBLY ~~NOT~~ ASSOCIATED WITH A HABITATION AREA.

A SIZEABLE ASSEMBLAGE OF BOTH ANIMAL BONES AND POTTERY SHERDS WAS RECOVERED FROM THIS FEATURE ~~WHEN~~ WHEN THE SLOT SITE IS CONSIDERED. ANIMAL BONES BELONGED MAINLY TO MEDIUM AND LARGE SIZED MAMMALS. POTTERY SHERDS APPEAR TO DATE TO BETWEEN THE MED TO LATER IRON AGE. A SMALL PIECE OF CLAY WAS ALSO RECOVERED FROM THIS FEATURE, THIS PIECE APPEARS TO BE WORKED AND COULD POSSIBLY BE A PIECE OF JEWELRY OR WEIGHT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF RING DITCH. WHICH COULD POSSIBLY HAS FORMED PART OF A ROUND HOUSE OR SMALL ENCLOSURE.

THE CUT HAS BEEN ~~SEVERE~~ SEVERELY ERODED BY ROOTING ACTIVITY FROM A LATER TREE WHICH GREW ALONG SIDE THE LATER, LARGER DITCH [410665].

DITCH [410665] CUTS THIS FEATURE.

FINDS RECOVERED FROM THIS FEATURE APPEAR TO SUGGEST THAT IT DATES FROM SOMETIME BETWEEN THE MID AND LATER IRON AGE, HOWEVER DUE TO ROOTING ACTIVITY IT IS POSSIBLE THAT SOME OF THE MATERIAL RECOVERED ORIGINALLY BELONGS TO DITCH [410665]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF A FAIRLY NARROW/SHALLOW DITCH, WITH A MID-DARK GREY COLOUR POSSIBLY ATTRIBUTABLE TO MODERATE CHARCOAL INCLUSIONS. FILL CONTAINS OCCASIONAL SMALL SPECKS OF CHALK, AND ANGULAR PEBBLE-SIZED STONES (≤ 0.05 m DIAMETER) SCATTERED THROUGHOUT. OCCASIONAL FAUNAL REMAINS GENERALLY BELONG TO SMALLER ANIMALS AND ARE VARIED IN ~~PRE~~ DEGREE OF PRESERVATION (MOST, BUT NOT ALL, ARE FRAGMENTED, SOME APPEAR POSSIBLY BURNED). MODERATE POT SHARDS APPEAR IRON AGE IN DATE

~~BASE~~ POSSIBLY NATURAL INFILLING, BASED ON THE FILL GRADUALLY BECOMING MORE CLAYEY TOWARDS THE BASE, ~~FROM~~ WHICH WOULD SUGGEST NATURAL SILTING-UP.

Refer to context [410796]

CUT OF A SHALLOW & NARROW, ~~BRIDG~~ BRIDGELY LINEAR DITCH RUNNING SE-NW (ALTHOUGH SEEMINGLY TURNING MORE ~~WEST~~ TOWARDS THE WEST BEYOND THE SE-FACING SECTION OF THIS SLOT, ~~HOWEVER~~ ITS TRAJECTORY IN THIS DIRECTION IS UNCLEAR ~~BE~~ OWING TO TRUNCATION BY A LAND DRAIN, FURROW, AND POSSIBLY ALSO A NUMBER OF FEATURES WITHIN 2m WEST OF THE SLOT).

THE BASE OF THE CUT IS CONCAVE AND THE SIDES MODERATELY SLOPING, ALTHOUGH THERE IS SOME ~~UNEVENNESS~~ UNEVENNESS TO BOTH THE BASE AND SIDES OWING TO AN ~~INCONSISTENT~~ INCONSISTENT NATURAL (CLAY IN SOME PLACES, GRAVELLY/SANDY IN OTHERS).

POT FROM THE FILL OF THIS DITCH APPEARS ~~BRIDG~~ IRON AGE IN DATE.

Refer to context (410795)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

SKETCH LOCATION PLAN OF DITCH [410796]

[410698] MIGHT BE RELATED TO [410796], BUT THIS CAN'T BE SAID WITH CONFIDENCE.

POSSIBLE LAND DRAIN, WHICH ALONG WITH THE FURROW AND POSSIBLY ALSO N-S ORIENTED DITCHES SUCH AS [410706], OBSCURES THE RELATIONSHIPS BETWEEN [410796], [410809], [410807] & [410811].

013

This is the cut of a post hole with lot of roots into it.

We only can see west area clearly but east area was modified by a tree or simple roots after the date of use. We found lot of stones, ($\leq 0.15m$ most of them) making a ~~some~~ circular shape. Our interpretation is that it's the rest of the stones which they use to ~~a~~ padding the post hole. But in the other side we didn't find any rest of relevant material because of the roots.

this posthole could be the post of an entrance of a little circular house.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the fill of a post hole. It was moderately compact, grey and brownish fill.

We found lot of stones (big ones $\leq 0.15m$ doing the shape of the hole and small ones $\leq 0.05m$ into it), also chalk and many ~~per~~ small pieces of pottery (darkish ~~probably~~ black color suggest iron age date of use). We also found animal bones fragment and burn clay. (CBM)

I think I have to highlight we found frequent charcoal into this fill ~~to~~ probably because of the tree or the roots (we took sample 41055)

FILL OF PIT [410803] COMPOSED OF A MED YELLOWISH BROWN SILTY CLAY WHICH WAS LIKELY FORMED BY THE NATURAL INFILLING OF THE FEATURE.

A EVEN SPREAD OF SMALL SUB-ROUNDED AND SUB-ANGULAR STONES WAS PRESENT IN THIS FILL AS WELL AS A SMALL AMOUNT OF CHALK STONES.

A SMALL AMOUNT OF ANIMAL BONES AND POTTERY SHERDS WERE RECOVERED FROM THIS FILL. THE ANIMAL BONE ASSEMBLAGE RECOVERED BELONGS PRIMARILY TO MEDIUM SIZED MAMMALS WITH A COUPLE OF SMALL SIZE SPECIES ALSO POSSIBLY BEING REPRESENTED. POTTERY SHERDS RECOVERED APPEAR TO PRIMARILY DATE TO THE EARLY TO MED IRON AGE PERIOD.

FILL OF PIT [410803] COMPOSED OF A LIGHT YELLOWISH BROWN SILTY CLAY WHICH IS THE RESULT OF NATURAL INFILLING OF THE FEATURE AFTER ITS DISUSE.

THIS FILL ~~IS~~ IS QUITE SMALL IN SIZE, IT CONTAINS ALMOST NO TRACES OF INCLUSIONS OTHER THAN A FEW SMALL ROUNDED STONES.

IT IS POSSIBLE THIS FILL IS THE RESULT OF THE NATURAL MATERIAL FROM THE PIT BEING PUSHED BACK IN. ~~ANOTHER~~

NO FINDS WERE RECOVERED FROM THIS FILL HOWEVER DUE TO THOSE RECOVERED FROM THE FILL ABOVE WE KNOW THIS FILL DATES AT LEAST FROM SOMETIME BETWEEN THE EARLY AND ~~LA~~ MID IRON AGE.

CUT OF PIT LOCATED WITHIN THE IRON AGE RING
ENCLOSED AND POSSIBLY ASSOCIATED WITH SOME
SMALL RING DITCHES WHICH COULD BE INTERPRETED AS
HABITATION FEATURES.

SOME PARTS OF THE CUT OF THIS FEATURE HAVE BEEN
ERODED BY ROOTING ACTIVITY PRESENT IN THE AREA.

FINDS RECOVERED FROM THIS FEATURE ENCLUDED BOTH
ANIMAL REMAINS AND POTTERY SHERDS. THE ANIMAL REMAINS
RECOVERED BELONGED PRIMARILY TO MEDIUM SIZED AN MAMMAL
POTTERY SHERDS RECOVERED SEEM TO DATE THIS FEATURE TO
SOME TIME BETWEEN THE EARLY AND MID IRON AGE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Evidence of stone packing near bottom of posthole to aid in stability. Charcoal found amongst the small stones used for packing. Small chunks of degraded pottery found near packing stones but fell apart when an effort ^{was made} to put them in a hinds bag. As a result, they were placed in the sample bucket. 1 large piece of pot found. Black/brown clay fill. Quite compact. Large stone inclusions found in base of posthole.

CUT OF DITCH RUNNING N-S IN THE SLOT BUT CONTINUING MORE SOUTH WITH A SW DIRECTION -

WE CAN SEE BOTH THE TERMINUS MORE IN THE N SIDE [410750] AND IN THE SOUTH [410535] - THE SHAPE ON PLAN IS CURVILINEAR AND THE PROFILE IS NOT CLEAR BECAUSE IN THE S FACING SECTION THE SIDE IS DISTURBED BY A ROOT AND IN THE N FAC SECTION IT IS CUTTING THE DITCH [410817] -

IT IS RUNNING PARALLEL TO THE DITCH [410815], LOCATED IN THE W SIDE, AND PERPENDICULAR TO THE DITCH [410817] -

THE DATE COULD BE IRON AGE PERIOD -

THE BIG AMOUNT OF ANIMAL BONES IN BOTH THE FILLS IS SIGNIFICANT -

*And [41078].

Refer to context (410812) [410813]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

PRIMARY FILL OF DITCH [410815] IT WAS FORMED BY A NATURAL INFILLING EVEN IF IT IS QUITE DARK FOR THE PRESENCE OF MOD CHARCOALS - IT IS THE SAME AS THE FILL (410767) IN THE DITCH TERMINUS [410768] I SAMPLED THE FILL (410967) (S# 41056) SO I DIDN'T FOR THIS FILL -

THE INCLUSIONS ARE: OCCA SMALL STONES WITH IRREGULAR SHAPE AND DISTRIBUTION, SIZE 0.02-0.04 CM. MOD CHARCOAL PLECKS - MOD ANIMAL BONE AND OCCA POT FRAGMENTS.

FOR THE FEW AMOUNT OF POTTERY IS VERY DIFFICULT TO DATE THE DITCH BUT IT COULD BE IRON AGE PERIOD -

Refer to context (410812)
(410813)

CUT OF DITCH RUNNING E-W BUT CURVING TOWARDS N AND NE
IN THE EAST SIDE -
IT IS CUT BY THE OTHER TWO DITCHES : [410813] [410815] -
IN THE W SIDE OF THE FEATURE IS NOT VERY CLEAR ON PLAN PROBABLY
BECAUSE IT WAS VERY SHALLOW -
IT IS MORE CLEAR IN THE SE SIDE - THE PROFILE IS NOT COMPLETELY
VISIBLE BECAUSE THE SLOT ~~IS~~ CUTS IT IN THE MIDDLE SO I CAN
SEE ONLY THE PROFILE OF THE LENGTH -
THIS IS THE OLDEST DITCH AMONG THIS GROUP , SO IT COULD BE
DA IRON AGE PERIOD -

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary fill of GADitch [410822].
Contained some red mid Iron age pottery, Animal
long bone fragments and slag. A mixed
deposition of domestic + industrial waste.

Stores: Flint gravel, 0-4m, sub Anglian.

Refer to context (610818)

CUT OF SMALL POST HOLE FILLED BY (410824), LOCATED
WITHIN A LARGE IRON AGE *RINGED ENCLOSURE.

THE CUT OF THIS POSTHOLE HAS BEEN HEAVILY DISTURBED
BY ROOTING ACTIVITY WHICH IS CONCENTRATED IN THE AREA

THIS POST HOLE APPEARS TO BE THE ONLY ONE IN CLOSE
PROXIMITY HOWEVER IT IS POSSIBLE IT IS RELATED TO
THE POSSIBLE RING GULLY / ROUNDHOUSE GULLY LOCATED IN
VERY CLOSE PROXIMITY. [410841]

NO FINDS WERE RECOVERED FROM THIS FEATURE HOWEVER
IT IS LIKELY TO DATE TO THE MED TO LATE IRON AGE
PERIOD JUST AS THE ~~TRAD~~ RING GULLY AND RING DITCH
LOCATED NEARBY.

FILL OF DITCH [410833]. SOME IRON AGE POTTERY FOUND ALONG WITH SOME ANIMAL
JAWS AND RIBS ETC OF VARYING SIZES OF ANIMAL. ONLY FILL OF THE DITCH.
FILL PROBABLY BACK FILL OVER AN EXTENDED PERIOD OF TIME. MOST LIKELY A
BOUNDARY DITCH, ONE OF MANY ON SITE. LATEST DITCH AND FILL IN THE SECTION.
STONES ARE MEDIUM TO LARGE OCCASIONALLY (5-12 CM) AND MODERATE AMOUNT
SMALL (1-5 CM) ALL SUB-ROUNDED AND SUB-ANGULAR WITH SMALL BITES OF CHALK
EVENLY DISTRIBUTED.

FILL OF DITCH [410830]. FINDS OF ANIMAL LONG BONE AND JAW ALONG WITH A FEW SHERDS OF DEGRADED POTTERY. FILL FORMED BY SILTING SO HAS IRON PAN FLECKS FROM STANDING WATER WITHIN THE FILL. STONES OF SMALL TO MEDIUM SIZE (1CM-5CM) AND SUB ROUNDED SHAPE. SOME FLECKS OF CHARCOAL BUT VERY RARE. PART OF A POSSIBLE BOUNDARY DITCH.

Refer to context (410828)

FILL OF DITCH [410832]. DITCH WAS ONE OF THE ENCLOSURE DITCHES AROUND SITE AS A WHOLE. FILL FORMED BY NATURAL INFILLING AS IT RESEMBLES THE NATURAL INCOLOUR STONES OF SMALL TO MEDIUM SUBANGULAR SHAPES (1CM-8CM). ONE ANIMAL TOOTH RECOVERED AND A FEW PIECES OF DEGRADED POTTERY, POSSIBLY WASHED IN. PROBABLY IRON AGE IN DATE. CUT BY LATER DITCH [410833] AND PROBABLY DITCH [410830].

A SMALL COILED THUMB COPPER RING WAS ALSO RECOVERED FROM THIS FILL. THE RING APPEARS TO DATE TO THE LATER IRON AGE, LIKELY FROM THE TRANSITIONAL PERIOD BETWEEN IRON AGE AND ROMAN OCCUPATION OF THE AREA.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410836) is a loose, dark blackish grey colour with some brownish-sparkles, and silt clayey silt natural infilling. It is the first of two contexts which compose context [410837]. The inclusions were almost absent, just a few pieces of natural flint with small sizes: 1-5 cm, and some chunks of chalk. In respect of archaeological remains, we have joined them with the finds which came from context (410896). Because during the excavation process we couldn't identify the differences between both. Anyway, considering the finds of (410896) and the black deposit over the feature, this context (410897) might be roman, early roman.

Update: With this update I'm trying to put in relationship all the fill similar fills along all the ring ditch: (410661), (410617), (410040), (410236)

Those fill numbers came from the western part of the site. On the eastern, the ring ditch looks like evolve different, appearing a big fill brown-grey and just only one black fill, whose number are: (410677), (410522), (410273) and (410314)

Refer to context (410897)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please have a look context (410897).

Thanks.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410838) is a compact, mid brownish grey and silty clay natural infilling. This fill had ~~had~~ an occasional amount of stones and chalk, all of them with small sizes. The stones were mainly natural flint. It is the most frequent inclusion on the site.

Regarding archaeological remains this context didn't yield any piece of pot or fragment of bone. With this ~~absent~~ absence of finds, it is difficult to know what date the context is. The ~~context~~ upper context was an Iron Age or Early Roman, so probably (410838) is the same or older (late Iron Age). It is cut by [410895].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410839] is a cut of an enclosure ditch, one of the main feature of the site. It is composed by two fills (410838) and (410893). It has a curvilinear shape although in the slot is W-E. This enclosure ditch is the oldest feature of the slot and it is cut by [410895]. It is probably late Iron Age or Roman, due to the finds found in context [410895].

Update: Context [410839] is the same context as: [410061], [410294], [410123], [410565], [410647], [410627]

Refer to context [410837]

SKETCHES

FILL OF POSSIBLE RING GULLY OR ROUNDHOUSE GULLY ~~INTERPRETATION~~
[410841] COMPOSED OF A MID GREYISH BROWN SILTY CLAY MATERIAL LIKELY FORMED BY THE NATURAL INFILLING OF THE FEATURE AFTER ITS DESSUE.

A SMALL AMOUNT OF SMALL SUB-ROUNDED AND ROUNDED STONES, EVENLY DISTRIBUTED ALONG THE FILL. & A SMALL AMOUNT OF SMALL CHALK STONES AND CHARCOAL.

A SMALL ASSEMBLY OF ANIMAL BONES WAS RECOVERED FROM THIS FILL. THE ANIMAL BONES RECOVERED BELONGED PRIMARILY TO MEDIUM AND LARGE MAMMAL SPECIES. A SMALL NUMBER OF POTTERY SHEARDS WAS ALSO RECOVERED FROM THIS FILL, THESE SHEARDS APPEAR TO DATE TO BETWEEN THE MED AND LATE IRON AGE PERIOD.

CUT OF POSSIBLE RING GULLY OR ROUNDHOUSE GULLY WHICH IS FILLED BY (410840)

THE CUT OF THIS GULLY HAS BEEN HEAVILY TRUNCATED BY ROOTING ACTIVITY FROM THE TREES THAT WOULD HAVE BEEN PRESENT IN THIS AREA.

THIS FEATURE IS THE SAME AS [410835] AND [410836]

IT IS POSSIBLE THAT THIS FEATURE RELATES TO POST HOLE [410825] AS THESE COULD HAVE ~~BEEN~~ BEEN PART OF A POSSIBLE ROUND HOUSE STRUCTURE

THE POTTERY SHERDS RECOVERED FROM THIS FEATURE'S FILL APPEAR TO POINT TOWARDS A MID TO LATE IRON AGE DATE.

This cut is a ditch ~~with~~ which is cutting by the big ditch we found in this slot.

With a curvilinear W-E orientation this ditch is the oldest we have. We found lot of materials, so we know is from an Iron age date of use.

But we can't know exactly how deep is it because we stop digging on 1m

We think is the same as [410319] excavated before.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

this is the fill of the first ditch we found.
this ditch was cutting by the newest one
[410682].

We can't say how deep and how long was it
because we just see a corner of it. Quite
difficult to interpretated.

We found lot of material so we can speak
of Iron age as date of use.

It was a gray clay so was so compact with
the water table at less than 1 m

we found also lot of chalk and charcoal

this is the last fill of the ditch 410842.

It is ~~as~~ dark grey, ^{close to} ~~even as~~ black and sandy.

We found lot of stones into it but we can see the different between this fill and the recent fill (looser and even ~~more~~ darker).

But this one has lot of chalk and even manganese occasionally.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of posthole^{sub} Circular cut quite a deep cut for the width of the posthole. Very steep sides, vertical in some places. Base is curved upwards towards the west and curved downwards towards the North. Postholes seem to be concentrated in one area, close to another feature which yielded much pottery. Could be associated.

Refer to context 410848

FILL OF DITCH [410860] - IT WAS FORMED BY A NATURAL INFILLING -
BECAUSE OF THE PRESENCE OF MOD CHARCOALS, I TOOK 2 BUKETS
OF SAMPLES (S# 41061) -
THE FILL IS VERY SHALLOW AND IT WAS PROBABLY DISTURBED BY
A ROOT IN THE BOTTOM -
THE INCLUSIONS ARE: OCCA SMALL AND MEDIUM STONES WITH
ROUNDED SHAPE AND IRREGULAR SHAPE AND DISTRIBUTION
SIZE 0.02-0.06 cm - OCCA CHALK FRAGMENTS AND MOD CHARCOAL
FLECKS - THERE IS PRESENCE OF OCCA ANIMAL BONES AND
POT FRAGMENTS - IT IS DIFFICULT TO DATE IT FOR THE FEW AMOUNT
OF MATERIAL, BUT IF IT IS THE SAME AS (410816) IT COULD BE
IRON AGE PERIOD -

Refer to context (410859)

CUT OF DITCH RUNNING N-S IN THE SLOT BUT CURVING TOWARDS EAS MORE IN THE SOUTH SIDE - THE PROFILE IS DIFFICULT TO SEE BECAUSE IT IS VERY SHALLOW AND IT IS DISTURBED BY A ROOT IN THE BOTTOM - THE SIDES SEEMS TO BE GENTLE SLOPING AND THE BASE IS CONCAVE.

THIS DITCH IS NOT VISIBLE IN THE N SIDE BUT IT COULD BE IN RELATIONSHIP WITH ~~ONE OF THE BIG~~ ENCLOSURE

IN THE SOUTH SIDE IT IS CUT BY OTHER 2 DITCHES [410813] [410815] - THE DATE COULD BE IRON AGE PERIOD -

Refer to context

[410859]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of silty clay soil, of mid greyish brown colour and moderately compact. It has a maximum thickness of 0.50 m. It has occasional inclusions of small stones (2-3 cm) and charcoal, and moderate inclusions of chalk.

It is the most modern natural infilling of the ditch 411132, and after, it was cut ~~by~~ by the ditches 411128, 411126, 411123. Animal bones and pottery found. We have found a worked bone with perforation, and decorated with a small circle in a corner.

* Later investigations showed this cut was the SE terminus of a kiln - See Sheets for cut 411089.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

LARGE, poss. pit, ^{KILN} SE terminus excavated - extent to NW unclear at present but appears to be truncated by a ditch/gully [410591]. The SE terminus is rounded and almost abuts (and possibly respects) a large E/W aligned ditch [410751]. A heavily truncated curvilinear gully to E [410756] is possibly the remnants of a round-house - if so it would place the pit ~~within~~ internally within it. ~~Although~~ The W edge of the pit truncates an irregular depression - but this appears to have been the result of root action [410878]. The pit ~~was~~ contained 5 fills - a significant amount of heat-affected stone, charcoal + heated clay/clamb was recovered, in addition to animal bone + occasional pottery sherds. Some of this burning activity may have occurred in-situ.

Refer to context 410873

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill appears to be a colluvial layer deposited against the upper, W edge of a large pit [410872]. If so, it forms the initial, naturally occurring fill of the pit. It consists of moderately compact clay mixed with a high concentration of small, gravelly stones (c. 50%) and medium-sized stones (10%). It is similar in content to the natural subsoil that the pit is cut into, and may in fact be natural rather than a fill. The fill was sterile, containing no finds, charcoal or animal bones.

Refer to context 410872

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This fill consisted of a layer of clay, moderately rich in charcoal (flecks + small lumps). It contained a moderate amount of animal bone and occasional heat-affected stone, in addition to some pieces of burnt clay/claub. While this fill may be partially a result of natural infilling it also appears to ~~have~~ represent ~~the~~ deliberate back-filling (i.e. material swept into the pit or discarded here).

* a thin layer (411090) is above it, but this is essentially the same, but dried out + trampled on.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill forms the upper layer of a large pit [410872]*. It consisted of compact silty clay and contained moderate quantities of charcoal, burnt stones and fired clay/daub, in addition to a moderate amount of animal bone and occasional pottery sherds. It was initially thought to have been a kiln or hearth and it is possible that burning occurred in-situ. The fired clay/daub appeared to form a partial lining to the pit but it is now felt that, rather than having been deliberately placed, ~~the~~ clay already present in the pit was heated - alternatively, burnt clay (as well as heat-affected stone, pottery + animal bones) was deposited from elsewhere (presumably nearby) into the pit. Similar material (and slag) ~~was~~ was recovered from the nearby ditch [410751] (see sketch on sheet 410872)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Irregular depression beside (w) a large pit [410872]. This depression was irregular in shape and shallow. It was completely sterile and was probably created by natural processes (ie - root action?). The depression was truncated by the pit [410872].

Refer to context 410872

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

CUT OF CORVELENEAR DITCH WHICH APPEARS TO BE PART OF A POSSIBLE RING DITCH.

THE CUT OF THIS FEATURE HAS BEEN TRUNCATED BY A MODERN FALLOW WHICH HAS REMOVED PART OF THE TOP OF THE CUT.

THIS FEATURE IS THE SAME AS [410796] AND [410912]

THE FINDS RECOVERED FROM TELL (410882) SEEM TO SUGGEST THAT THIS FEATURE DATES TO SOME TIME IN THE LATER IRON AGE.

IT ALSO APPEARS THAT THIS FEATURE IS RELATED TO THE KEEPING OF DOMESTICATED ANIMALS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF ~~WATER~~^{CURVELENER} DITCH WHICH COULD POSSIBLY BE PART OF A RING ~~WATER~~ GULLY OR A ROUNDHOUSE GULLY.

THE CUT OF THIS GULLY HAS BEEN HEAVILY TRUNCATED BY ROOTING ACTIVITY, AS WELL AS BY A MODERN FALLOW WHICH HAS LIKELY REMOVED PART OF THE FEATURE.

THIS FEATURE IS THE SAME AS [410835] AND [410841]

IT IS POSSIBLE THAT THIS FEATURE RELATES TO POST HOLE [410825] AS THESE COULD HAVE BEEN PART OF A POSSIBLE ROUNDHOUSE STRUCTURE.

NO FINDS WERE RECOVERED FROM THE FILL WITHIN THIS CUT, HOWEVER FINDS FOUND IN OTHER PARTS OF THE FEATURE WOULD SUGGEST IT DATES FROM SOMETIME IN THE MED TO LATE IRON AGE PERIOD.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a gully that comes running from the ~~south-east~~ north-west. We have seen this gully in other two slots [410398] [410413]. We can see that this gully cuts [410391] [410313] ditch both in plan and in section (DUG# 41151). However we aren't able to see the relationship between this gully and the pit of this slot because the contact area is located near the surface and the dry conditions have destroyed the section.

Refer to context } 410887

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a ditch that is coming from the ~~south-east~~^{north-west}. We cannot define this fill properly in this slot because we can see it in a small corner, however, we have seen this fill in two other slots and the material found lets us think that it's an iron age feature. This fill contains very small stones and chalk nodules.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of of a pit. At the beginin when we opened this slot, we thought that we were going to find ~~one~~ the big ditch that runs with the big ring ditch in this area. Finally we have seen that the edge of This big ditch is a bit further and we cannot see it in this slot. Attending to that and looking at the shape of the natural it seems more like a pit.

As we have sayed when we have spoken about the gully [410888] we aren't able to see the relationship between this pit and the gully.

Refer to context

410887 410888

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410839) is a compact, mottled brownish grey and silty clay natural infilling, with a moderate quantity of chalk as inclusion. It is well spread along the context. It was very difficult to ~~understand~~ identify the differences between this context and the natural, they are very similar. It is cut by [410895]. Regarding archaeological remains we found only one jaw, probably of a deer. In respect of the chronology it is difficult to know it but it cut could be Early to late iron age or early Roman.

Refer to context (410838)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Context ~~[410895]~~ (410894) is a compact, mid grey and silty clay natural infilling. At the moment it is the only fill in this ditch. The inclusions were diverse, from stones to animal bones, including chalk, industrial waste, pottery and lithic tool. The stones were moderate, especially the natural flint, and some pieces of sandstone. The chalk was occasional. In relation to archaeological remains, the most frequent were the animal bone, within which we have highlighted a goat horn, some fragment of long bones, and a couple of jaws. On the other hand, the pot was few, but it is a good quality grey ware. We are not sure if it is roman or late Iron age. Also, we have collected a flint flake and a big chunk of slag.

This context has been cut by [410837] and it is the same as context (410929).

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please, have a look context (410896)

Thanks.

Update: This ditch is coming from the north part of the site, beneath the black fills of the ring ditch until both take different ways on the area where we can find the relationship between the ring ditch and the enclosure. In this point, the contexts (410894) and [410895] continuous straight, ~~the~~ south direction, meanwhile context (410836) (410896) and [410837], the ring ditch, ~~cont~~ turn to the west. So the context similar as (410894), which are beneath the ring ditch, are: (410042) and (410238). Emanate from the separation between the ditch and the ring ditch could be: one of the fills of context [410617].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410895] is a cut of a ditch which is found at the moment by only one fill. Its shape is curvilinear but in one slot it is running N-S. It is the second oldest ditch in the slot, cutting context [410839] and cut by [410837]. The chronology regarding the archaeological remains found in its unique fill ~~it~~ could indicate us that it is late Iron Age or early Roman period.

Context [410895] is the same as [410930].

In respect of the base, we don't know 100% how was it, because we reached the limit of excavation.

Refer to context [410837]

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410896) is a loose, black and clayey silt natural infilling. This fill is the second in context [410837], being visible in three of four section in the slot. The inclusions were more abundant than in the upper context. We have recorded an occasional amount of stone, especially natural flint, with small and medium sizes. The chalk was ~~at~~ occasional ~~as well~~ too, as well as the charcoal and the fired clay. Those latter are present at the bottom of the context specially. In respect of archaeological remains, we found ~~an~~ a moderate quantity of animal bones and pottery. Regarding animal bones, we highlight diverse fragment of long bones and some jaws. In relation to pottery, ~~those~~ these ~~pieces are more~~ ~~good~~ have a higher quality. The colours are ~~usually~~ usually grey and orangeish red. Between them we can find chunks of rim, body and base. ~~Studying~~ Studying these remains we can suggest this context could be early roman period. It is ~~at the same context as~~ as context (410922) *

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410897) is a loose, dark blackish grey, clayey silt spread deposit which is over all the slot and adjacent areas. The inclusions in it were occasional in every aspects. The stones were formed by flint and some sandstone, whose size was small generally. Regarding archaeological remains, we collected an occasional amount of ~~pot~~ pot fragments and animal bones. The pottery was different fragments of black and orangeish red pottery, probably from coming from an early roman period. The bones are mainly fragment of long bones, a vertebra and two carnivorous teeth.

This black deposit is cut by [410899], a furrow, and is the same as (410926)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410898) is a moderately compact, mid orangeish brown and silty clayey silt - natural infilling. This furrow is a narrow feature but very wide, where we have found many archaeological remains. The inclusions were occasional in chalk and stones, the ~~best~~ latter were natural flint and some sandstone, with ~~most~~ medium - small sizes.

Regarding archaeological remains we sorted pot, animal bones, human bone, lithic industry, industrial waste and metal.

The human remain is a fragment of maxilla with two molars. The industrial wastes are formed by two slags. The lithic industry is only a ~~flat~~ flake, without any retouch. The metal object is a big fragment of iron handle or another object similar. In respect of animal bones, they are the most frequent of this slot, most of them fragments. The pottery was a mix of different fragment, black and orangeish red pot. That mix is due to all those fragment came from a second deposition in the furrow.

It is very difficult to know exactly the age of the ~~slot~~ feature based on these archaeological remain. *

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410899] is furrow cut which running in a N-S direction, with a linear shape. This furrow is over around 80% of the slot, so it is a wide but narrow feature. Please have a look the sketch further down and the drawing n: 41153 to understand better the situation furrow's situation. Context [410899] is cutting contexts [410897] and [410926] which are a black spread deposit over all the area surrounding the slot. Regarding the age, it is a modern feature but with archaeological remains inside in side from Iron Age and Roman period.

Same context as [410592]

NATURAL INFILLING OF A RINGDITCH [410902] E DIRECTION, INVESTIGATED IN A 2x3 m SLOT. THE FILL WAS VERY ORGANIC WITH FREQUENT PRESENCE OF CHARCOAL AND ANIMAL BONES (PIG, COW AND HORSE), BECAUSE THAT WE TOOK A SAMPLE [S41068] OF THE FILL. THE FILL HAD OCCASIONAL PRESENCE OF STONES (BIG ROLLING STONES), MOSTLY IN THE BOTTOM OF THE FILL, AND OCCASIONAL PRESENCE OF FIRED CLAY. WE FOUND MODERATE PRESENCE OF EARLY ROMAN POT THAT WE CAN USE AS INDICATOR OF THE CHRONOLOGY FOR THIS FEATURE.

Refer to context [410901] [410902]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This cut has a very undulating base, no clear shape in plan, and its edges vary from flat to moderate slope. It is therefore interpreted as being the result of rooting.

Refer to context (410784)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

The fill contained various sizes of stone, up to 10-12cm across. These stones varied in shape from rounded to subangular, and may relate to the features nearby, where these stones have been interpreted as a ~~surface~~ surface of sorts. The finds include burnt clay, pottery, and flint remains (mostly medium sized mammal). Speckles of charcoal and chalk were also present.

Refer to context 410784/410808

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of ring ditch Terminal, rich brownish black Silty clay.
 Animal bones, mainly fragmentary with several teeth included.
 Small-medium regularities of bone shape and type.
 No pattern to bone or bone location, size or type.
 Excavated in best conditions.
 Affected by rooting.
 A lot of animal bone, mainly fragmentary with several teeth and
 one piece of burnt bone.
 One very large, slightly burnt piece of bone/stave in the fill.

NATURAL INFILLING OF A DITCH [410916] THAT IS THE NEWEST CONTEXT OF THE SLOT THAT WE HAVE DIGGED. ITS COMPACTION AND COMPOSITION ARE IN THIS WAY DUE TO ITS CONTACT WITH THE SURFACE AND THE DIFFERENT FEATURES OF THE SUBSOIL. AT THE SAME TIME THE FEATURES OF THE NATURAL IN THE EDGES INFLUENCE THIS NATURAL INFILLING. WE RECORDED IN THIS FILL OCCASIONAL SMALL STONES OF SHAPES, CHALK AND CHARCOAL. WE ALSO HAVE RECORDED OCCASIONAL INCLUSIONS OF SMALL AND MEDIUM ^{SIZE OF} ANIMAL BONES AND BRON AGE PIECES OF POTTERY. BECAUSE OF THAT WE CAN DATE THIS PARENT CONTEXT [410916] IN AN IRON AGE CHRONOLOGY LIKE ALL THE DIFFERENT CONTEXTS OF THIS SLOT. ~~THIS DITCH IS CUTTING~~

NATURAL INFILLING OF A RECUT OF A DITCH [410919] THAT IS THE NEWEST FILL OF THE PARENT CONTEXT. THIS FILL HAS A COMPACT COMPACTION DUE TO ITS CONTACT WITH THE SURFACE AND THE COLOURS ARE SIMILAR ^{TO} ~~THE~~ THE OTHER FILLS OF THIS DITCH. IN THIS FILL WE HAVE RECORDED A MODERATE PRESENCE OF BIG AND MEDIUM STONES WITH DIFFERENT SHAPES BUT SOME OF THEM HAVE PLANE BASES. IN THE DRAWING D41158 WE CAN SEE SOME PART OF THIS CONCENTRATION BUT THERE ARE MORE IN THE MIDDLE OF THE SLOTS WITH AN EXTENSION OF 1'70 x 1'40 m BUT ~~DOES NOT~~ ^{NOT} LOOKS LIKE A STRUCTURE OR A DELIVERATED DEPOSIT. WE HAVE RECORDED OCCASIONAL INCLUSIONS OF CHARCOAL BUT NOT TOO MUCH LIKE IN THE OLDER FILL OF THIS DITCH (410918). IN THIS FILL WE HAVE RECORDED FREQUENT INCLUSIONS OF ANIMAL BONES ^{MEDIUM AND} (FOOTH, JAWS...) AND EARLY ROMAN AND IRON AGE POTTERY. WE IDENTIFY THIS FILL SAME AS THE FILL (410661) OF THE PARENT CONTEXT [410696]. * DECORATED PIECES OF IRON AGE POTTERY.

NATURAL INFILLING OF A RECUT OF A DITCH [410919] THAT IS THE OLDEST FILL OF THIS PARENT CONTEXT. THIS FILL IS LOOSE AND ITS COLOUR IS DARK ^{THE COMPACTION OF} BROWNISH LIKE THE FILL (410662) OF THE PARENT CONTEXT [410696] AND HAS A LOT OF CHARCOAL INCLUSIONS, BECAUSE OF THAT WE TOOK SAMPLES OF THIS FILL BEFORE WE KNOW PRETTY SURE IF WE ARE SPEAKING ABOUT IF THIS IS THE SAME CONTEXT OF THE PREVIOUS SLOT THAT WE HAVE DIGGER. ALSO WE HAVE OCCASIONAL INCLUSIONS OF CHALK AND MEDIUM AND BIG STONES, THIS FILL IS SO DIFFERENT IN THE COMPACTION WITH THE OTHER FILLS OF THIS PARENT CONTEXT [410919] AND THE PREVIOUS DITCH WITH DARKER FILLS [410922], BUT HAS OTHER FEATURES IN COMMON MORE DIFFERENTS WITH THE PARENT CONTEXT [410924] WE HAVE RECORDED IRON AGE POTTERY AND ANIMAL BONES AND SAWS OF DIFFERENT KINDS OF ANIMALS ^{MEDIUM}.

This image shows a full page of dot grid paper. It features a uniform grid of small dots across the entire surface. A solid vertical line runs down the left side, creating a margin. A solid horizontal line runs across the top, defining a header area. The paper appears to be from a notebook or a specialized stationery pad. There are some minor dark specks and faint smudges scattered across the page, likely due to the scanning process or the age of the paper.

CUT OF A N/S RUNNING DITCH INVESTIGATED IN 3'20 x 2'70 - slot
TRUNCATED SUBSEQUENTLY BY A DITCH ON THE NORTH SIDE OF
THE EAST SECTION [410916] AND BY ANOTHER DITCH [410919]
THIS CUT HAS BEEN IDENTIFIED IN THE NEAREST SLOT
DRAWN D# 41120, SAME AS [410696]
THIS CONTEXT IS CUTTING THE PARENT CONTEXT [410924] WHERE WE HAVE
FILLS SO DIFFERENT IF WE COMPARE WITH THE FILLS BELONGS TO THIS CUT [410922]
AS WE HAVE PREVIOUSLY IN THE NEAREST SLOT OF THE PARENT CONTEXT [410696].
THE SIDES OF THIS CUT ARE DIFFERENT, AT THE SAME TIME THAT ON THE
RIGHT ARE A LITTLE BIT MORE GENTLY, ON THE LEFT (OF THE SECTION DRAWN) ARE
MORE MODERATE. THE WIDTH OF THIS CONTEXT ARE SMALLER THAN [410696]
MAY BE BECAUSE IN THE OTHER SLOT THE DITCH IS TURNING AND IN THESE
CASES THE WIDTH IS BIGGER AND HERE NOT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

EAST-WEST ORIENTATION OF A ENCLOSURE WITH A LINEAR SHAPE IN THE PART OF THIS CUT RECORDED IN THIS SLOT IT IS THE OLDEST CONTEXT OF THIS SLOT, IS CUTTING THE NATURAL AND IS CUT BY CONTEXT [410922]. THIS CUT HAS A CONCAVE BASE AND ITS SIDES ARE STEEP ON THE SOUTH EDGE AND MODERATE ON THE RIGHT NORTH EDGE (D41158). IF WE COMPARE WITH THE OTHER SLOTS THAT HAVE BEEN INVESTIGATED TO UNDERSTAND THIS ENCLOSURE THE DEPTH IN THIS IS MORE THAN THE REST OF THEM. WE HAVE TAKEN SAMPLES OF THE TWO FILLS BELONGS TO THIS CONTEXT ~~[410924]~~ (410923) AND (410962). WE DIDN'T KNOW PRETTY SURE THE ORIGINAL WIDTH OF THE ENCLOSURE BECAUSE ON THE NORTH SIDE OF THE RECORDED SECTION THE ORIGINAL ENT [410924] IS CUTTING BY [410922] ^{CLOSE TO}. OF THE SOUTH SIDE WE HAVE RECORDED (IN THE DRAWING D41158) AN INTERESTING DEGRADED PIECE OF POTTERY OF AN IRON AGE CHRONOLOGY. SAME AS [410965].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410926) is a loose, dark blackish grey and clayey silt spread deposit which is over all the plot and adjacent areas. The inclusions were occasional, with few stones, usually natural flint with small and medium sizes. The chalk was also occasional and well spread along all the deposit. Regarding archaeological remains we bagged less material than in context (410897) which are the same context. We only found four fragments of bones, animal bones, and one piece of pot, a reddish to grey fragment. Taking account of this for chunk of pottery and the archaeological remains found in context (410897) we can suggest that this deposit could be early roman, mainly, due to the reddish pottery.

~~Update:~~ ~~Update:~~ Context (410926) is also similar to (410662) (410918) (410011) (410041) and (410736).

Refer to context (410898)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410922) is a loose, black, silt clayey silt natural infilling. The inclusions were an occasional quantity of stones, natural flint with small sizes. The archaeological remains were absent. This context is the same as (410896). In respect of the age, we didn't have any remains that can help us, but we know that context (410896) is a early roman feature probably.

Update: Context (410926) is as similar as (410662) (410918) (410041) (410047) and (410236).

Refer to context 410898

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410928] is the cut of a ring ditch. Probably this is the most important feature together with other like big enclosure. In this slot, the ring ditch has a NE-SW direction. Same as context [410837], its fill has a composition very organic, with a black color. It is cutting context [410930]. Chronologically It should be a roman feature, due to the archaeological remains found in the fills of [410837]. We don't know the shape of the base because the slot was set up over one side of the ring ditch, over the edge, ~~one~~ in stead of over the central part of it.

Update: This cut is similar as [410696] [410919] [410048] [410678] [410237] [410315] [410267] and [410523]

Refer to context [410837]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (410929) is a compact, mid grey and silty clay natural infilling. At the moment is the only fill in this ditch. The inclusions were formed by stones and chalk, both with small and tiny sizes.

The stones were natural flint. We didn't find any archaeological remains, but taking account of this feature is the same as [410895]* we can suggest that context (410929) is a late Iron age or early Roman period. We can ensure ~~any period~~ of one of them.

This context was cut by [410928].

Refer to context (410898)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please have a look context (410898).

* Update: This ditch is coming from the north part of the site, underneath the black fills of the ring ditch until both take different ways on the area where we can find the relationship between the ring ditch and the enclosure. ~~For this point~~ In this point the contexts (410894) and [410895] continuous straight, at south direction, meanwhile context (410836) (410896) and [410832], the ring ditch, turn to the west. So the contexts similar as (410898) are (410042) and (410238). From the separation between the ring ditch and the ditch could be: one of the fills of context [410617]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [410930] is a cut of a furrow, which is formed by one fill (410928). This ditch has a curvilinear shape, but in this slot it is running NE-SW. In respect of the shape of the bottom, we don't know it for sure because we had to stop at the limit of excavation without reach at the base. This context is cut by [410928 410928].

It is the same context as [410895]. Regarding the age, we didn't unearth any archaeological find, but we can use the objects found in (410894) to say that it could be a woman, early woman, or late Iron Age feature.

SKETCHES

Refer to context [410837]

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Please have a look context [410837].

Thanks.

* Update: please, have a look the update of context [410929] to understand better the situation of the slot. Also, could be useful the drawing number # 041153.

Context [410930] is the same as [410039] and [410241] and could be [410617] as well.

Very heavily rooted cut of Ring gully terminus, heavily truncated by farrowh and
Test excavation trench.

Possibly just a rooting of a hedgerow, but nearby gullies are also heavily rooted
and the heavy truncation of this feature and the overall shape is unclear.

Not Surveyed

CLAYEY FILL OF ONE OF THE ~~MORE~~ MOST RECENT FEATURES IDENTIFIED IN THIS SLOT (MOST PROBABLY A NW-SE ORIENTED DITCH WHICH IS SEEN IN A SLOT ~ 3m TO THE NW, SEE [410809]). FILL CONSISTED OF SOME REDEPOSITED CUMPS OF CLAY, SIMILAR TO THE FILL OF AN UNDERLYING CUT, (410937), BUT ^{*}DISTINGUISHED FROM ~~THIS~~ THIS FILL BASED ON ITS COMPOSITION (HIGHER CLAY CONTENT). MODERATE STONE INCLUSIONS WERE MOSTLY PEBBLE-SIZED ($\leq 0.05m$ DIAMETER) AND EITHER SMOOTHED OR SUBANGULAR IN SHAPE, RANDOMLY DISTRIBUTED THROUGH FILL. ^{*}THERE WERE ALSO MORE GRAVELLY INCLUSIONS. ^{*}ALTHOUGH SOME POSSIBLY LINING THE BASE OF THE CUT. FAUNAL REMAINS ATTRIBUTED TO THIS FILL GENERALLY ~~WERE~~ BELONGED TO SMALLER ANIMALS AND DISPLAYED VARYING DEGREES OF PRESERVATION (SOME ~~PRESENTLY~~ FRAGMENTED, OTHERS RELATIVELY INTACT INCLUDING PHALANXES, ^{TEETH} SOME WITH SIGNS OF BURNING). POT ATTRIBUTED TO THIS FILL WAS VARIED, BUT SOME SHARDS APPEARED LATE IRON AGE / EARLY ROMAN IN CHARACTER (INCLUDING FINER ~~PIECES~~ PIECES, SHARDS WITH TRACES OF ~~WHEEL~~ WHEEL MANUFACTURE). HOWEVER, DUE TO THE ~~THE~~ SUPERFICIAL SIMILARITY BETWEEN FILLS NEAR THIS SECTION AND A DISTURBANCE BY A ~~BA~~ SUBSTANTIAL ANIMAL BURROW, NOT ALL FINDS ATTRIBUTED TO THIS FILL CAN ~~BE~~ CONFIDENTLY BE SAID TO BELONG TO ~~THE~~ (410935). SOME PIECES OF IRON SLAG WERE ALSO ATTRIBUTED TO THIS FILL. ~~WERE~~ INTERPRETED AS NATURAL INFILLING IN THE ABSENCE OF CLEAR EVIDENCE OF DELIBERATE BACKFILL.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF ONE OF THE UNDERMOST FEATURES IDENTIFIED IN THIS SLOT, MOST LIKELY A NW-SE ORIENTED LINEAR DITCH WHICH IS VISIBLE CONTINUING IN A SLOT ~3m TO THE NW (BASED ON SIMILAR PROFILE AND COMPOSITION OF FILL ³), SEE [410809]. SIDES ARE MODERATELY SLOPING AND BASE IS CONCAVE. THIS CUT IS NOT VISIBLE IN THE NW-FACING SECTION OF THE SLOT, AND IT WAS OBSERVED THAT ITS FILL (410935) CHANGED TO A DARKER ~~SEA~~ SILTIER FILL, ~~8~~ MOST LIKELY (410943), ~~ADDED~~ LESS THAN 1m FROM THE SE-FACING SECTION. IT WAS DIFFICULT ~~TO~~ TO ASCERTAIN WHETHER [410936] WAS BEING CUT BY ~~THE~~ ^A NW TERMINUS OF [410944], OR WHETHER THIS ~~WAS~~ LATTER CUT WAS BEING TRUNCATED BY A SE TERMINUS OF [410936], PARTLY BECAUSE OF THE PRESENCE OF AN ANIMAL BURROW (FILLED WITH DRY GRASS, SOME PIECES OF PLASTIC WASTE, ETC.) IN THIS AREA OF THE SLOT, & ~0.10m BELOW THE SURFACE. THE RELATIONSHIP BETWEEN [410936] & [410944] IS THUS UNCLEAR.

THIS BIODURBATION ALSO MAKES IT DIFFICULT TO ~~ESTIMATE~~ ESTIMATE A DATE FOR [410936], SINCE FINDS ATTRIBUTED TO ITS FILL (410935) ARE LIKELY MIXED WITH THOSE FROM OTHER FILLS. HOWEVER, THERE WERE SOME POT CHORDS THAT APPEARED LATE IRON AGE / EARLY ROMAN-BRITISH IN CHARACTER.

Refer to context [410935]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

SILTIER FILL OF A ~~NEW~~ NW-SE ORIENTED ~~WINDWATER~~ DITCH [410938], WHICH IS BROADLY MID-GREY IN COLOUR BUT MOTTLED ~~WITH~~ YELLOW AND WITH GREATER ~~OVERALL~~ FREQUENCY OF REDEPOSITED CLAY CLUMPS THAN ~~PREVIOUS~~ (410935) - THE FILL OF AN OVERLYING FEATURE WHICH OTHERWISE SUPERFICIALLY APPEARS ~~DIFFERENT~~ SIMILAR TO (410937). MODERATE STONE INCLUSIONS ~~WERE~~ PEBBLE-SIZED ($\leq 0.05m$) AND VARIABLE IN SHAPE (GENERALLY MORE ANGULAR), DISTRIBUTED RANDOMLY THROUGH FILL. ~~BASED ON THE~~ ~~SIMILARITY OF~~ THIS FILL CAN PROBABLY BE IDENTIFIED AS BEING THE SAME AS (410945) SEEN IN THE NW-FACING SECTION, BASED ON THE SIMILARITY OF THE COLOUR/COMPOSITION, AND ALSO ON THE SIMILARITY OF THE PROFILE OF THE ~~PREVIOUS~~ PARENT CUT OF EACH OF THESE FILLS.

BASED ON THE SUPERFICIAL SIMILARITY OF THIS FILL TO OVERLYING FILL (410935), THERE ARE LIKELY TO BE FINDS ATTRIBUTED TO (410935) WHICH TRULY BELONG TO (410937). A PROFILE SLOT HAS BEEN OPENED ~3m NW OF THIS SLOT, SO FINDS ATTRIBUTED TO THE FILL OF [410811] MIGHT PROVIDE AN INDICATION OF THIS FEATURE'S AGE. FINDS FROM (410945) MIGHT SUGGEST IRON AGE.

FILL INTERPRETED AS THE RESULT OF NATURAL SILTING UP ~~DOWN~~ DUE TO LACK OF EVIDENCE THAT IT IS DELIBERATE BACKFILL.

Refer to context (410935) [410938]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

CUT OF CURVILINEAR DITCH ORIENTED NW-SE, WHICH RUNS THROUGH ENTIRE (CORRESPONDING TO [410946] IN NW-FACING SECTION) AND IS ALSO OBSERVED IN A SLOT ~3M TO THE NW AS [410811]. THE CUT HAS MODERATELY-SLOPING SIDES WHICH BECAME VERY STEEP NEAR THE BASE, FORMING AN 'ANKLE-BREAKER'-TYPE PROFILE. THIS CAN BE OBSERVED IN BOTH SECTIONS, ALTHOUGH THE BASE IS MORE SLOPING IN THE SE-FACING SECTION (POSSIBLY BECAUSE WHERE IT SLOPES DOWNWARDS THE DITCH IS CUTTING INTO THE FILL OF AN OLDER DITCH [410940], RATHER THAN INTO THE TOUGHER NATURAL CLAY), WHEREAS IT IS FLAT IN THE NW-FACING SECTION. THE PROFILE OF THE CUT CLOSER TO THE SURFACE IS HARDER TO IDENTIFY, EITHER DUE TO TRUNCATION BY LATER FEATURES (E.G. [410936]) OR BECAUSE THE GROUND NEAR THE SURFACE HAS DRIED TO THE EXTENT THAT CUTS/FILLS CAN'T EASILY BE DISTINGUISHED.

[410938] IS ONE OF THE EARLIEST CUTS IN THIS SLOT, ALTHOUGH IT DOES TRUNCATE ONE EARLIER FEATURE [410940], AN APPARENT DITCH TERMINUS. FINDS FROM THE FILL OF [410938] HAVE LIKELY BEEN INCORRECTLY ATTRIBUTED TO OVERLYING FILL (410935), AS THESE FILLS WERE INITIALLY DIFFICULT TO DISTINGUISH. TO THE SOUTHEAST OF THE SLOT, THE TRAJECTORY OF THIS DITCH IS OBSERVED BY A FURROW* TO THE NORTHWEST, THE DITCH APPEARS TO GET DEEPER AND CUTS INTO A LARGE N-S ORIENTED DITCH [410984], POSSIBLY INTENDED AS A FEEDER CHANNEL TO DRAIN WATER (ETC.) AWAY FROM ONE PART OF THE SITE INTO AN OLDER OPEN DITCH.

* BUT APPEARS TO BE TURNING SOUTHWARDS

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

BROWN SILTY FILL OF OLDEST FEATURE IN THIS SLOT, WHICH IS ONLY OBSERVED IN THE SE-FACING SECTION. MODERATE FREQUENCY OF PEBBLE-SIZED STONES (≤ 0.05 m DIAMETER, SUBANGULAR) SCATTERED THROUGH FILL. OCCASIONAL FAUNAL REMAINS ARE SMALL/FRAGMENTED, POT SHARDS ALSO VERY OCCASIONAL, BUT SEEM QUITE COARSE AND COULD BE ATTRIBUTED TO IRON AGE.

~~410932~~ (410939) PROBABLY THE RESULT OF NATURAL INFILLING BASED ON PAUCITY OF ARTEFACTUAL MATERIAL AND ON FILL COMPOSITION/COLOR.

Refer to context [(4108935)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF POSSIBLE ~~SE~~ SE OR E TERMINUS OF A PREVIOUSLY UNIDENTIFIED DITCH, BASED ON THE SHAPE OF THE CUT WHICH RESEMBLES A TERMINUS THAT HAS SUBSEQUENTLY ~~BEEN~~ BEEN TRUNCATED (IN THIS CASE BY [410938].) THIS TERMINUS APPEARS TO LIE ~1.15m FROM THE SE-FACING SECTION. AS YET, ~~BE~~ ~~THE~~ THE TRAJECTORY OF THIS DITCH ISN'T KNOWN. ~~THE~~ THE OCCASIONAL POT SHARDS RECOVERED FROM ITS FILL MIGHT SUGGEST AN IRON AGE DATE OF CONSTRUCTION/DISUSE.

THE ~~TO~~ TOTAL WIDTH AND THE SHAPE OF THE CUT ARE HARD TO DESCRIBE ACCURATELY BECAUSE OF THE DEGREE TO WHICH THIS TERMINUS HAS BEEN TRUNCATED (IT APPEARS TO BE ~~THE~~ THE OLDEST FEATURE IN THIS SLOT), BUT ITS ~~WIDENING~~ SURVIVING NORTHERN EDGE AND BASE SUGGEST MODERATELY-SLOPING SIDES AND A CONCAVE BASE.

CLAYEY FILL OF A SHALLOW ^{DITCH} GULLY [410942], SLIGHTLY MOTTLED WITH ORANGE. ~~BECAUSE~~ STONE INCLUSIONS WERE MODERATE IN FREQUENCY, SCATTERED THROUGH FILL, AND CONSISTED OF SMALLISH COBBLES (0.05-0.10m DIAMETER), SOME ROUNDED/SMOOTH, OTHERS MORE SUBANGULAR. BONE RECOVERED FROM (410941) GENERALLY ~~WAS~~ ^{WAS} FRAGMENTED (OCCASIONALLY BURNED) REMAINS OF SMALLER FAUNA, THOUGH A PARTIAL HUMAN MOLAR OR PREMOLAR WAS ALSO RECOVERED (F41033). ANOTHER ~~RECORDED~~ RECORDED FIND WAS A POSSIBLE ~~PRELIMINARY~~ MEDIAL FRAGMENT OF A FLINT BLADE (F41039). POT SHARDS FROM THIS FILL SHOWED SOME LATE IRON AGE / ROMAN-BRITISH CHARACTERISTICS, A NUMBER OF PIECES SHOWING EVIDENCE OF WHEEL MANUFACTURE. THIS WOULD CORRESPOND TO THE OBSERVATION THAT THIS GULLY IS ONE OF THE TWO MOST RECENT FEATURES IN THE SLOT. ~~CONSIDERATION~~ THIS FILL HAS BEEN INTERPRETED AS NATURAL ~~INFLUENCE~~ SILTING UP OF THE GULLY IN THE ABSENCE OF CLEAR EVIDENCE FOR DELIBERATE BACKFILL.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF SHALLOW GULLY ORIENTED BROADLY ^{DITCH/} ~~SW~~ NW-SE THROUGH THE SLOT. THIS GULLY IS QUITE SHALLOW, WITH A RELATIVELY FLAT BASE AND SIDES THAT ARE RELATIVELY STEEP UNTIL THE GULLY INTERACTS WITH THE OTHER FEATURES IN THE SLOT, AFTER WHICH THE GULLY BECOMES A LITTLE WIDER AND ITS NORTHERN EDGE MORE ~~SHALLOW~~ GENTLY-SLOPING (LIKELY BECAUSE AT THIS POINT THE GULLY IS CUTTING INTO THE SOFTER FILLS OF EARLIER FEATURES, AND NOT INTO THE NATURAL CLAY). THE GULLY IS THE MOST RECENT FEATURE VISIBLE IN THE NW-FACING SECTION, AND ONE OF THE TWO MOST RECENT IN THE ENTIRE SLOT (THERE IS NO DISCERNABLE RELATIONSHIP WITH THE OTHER RECENT FEATURE, [410936], IN THE SLOT). POT SHARDS RECOVERED FROM THE FILL HAVE LATE IRON AGE / ROMAN - BRITISH CHARACTERISTICS (E.G. GROOVES ON INNER SURFACE SUGGESTING MANUFACTURE USING A WHEEL). ITS ^{SOUTH} ~~WEST~~ EASTWARD TRAJECTORY BEYOND THE NW-FACING SECTION ~~IS NOT CLEAR~~ (I.E. AFTER IT HAS CUT [410944] & [410946] ISN'T CLEAR, OBSCURED ~~PARTLY~~ BY A NEARBY N-S ORIENTED FURROW. ITS ^{NORTHWESTWARD} ~~WESTWARD~~ TRAJECTORY ALSO ISN'T ENTIRELY CLEAR (THIS AREA NEEDS FURTHER CLEANING). ~~ALTHOUGH IT IS POSSIBLE THAT THE GULLY CURVES TO THE NW AND CORRESPONDS WITH [410937] - THIS WOULD NEED TO BE ESTABLISHED MORE CLEARLY.~~ BIOHERBATION (ROOTING &/OR BURROWING) ~~IS~~ IS EVIDENT IN SOME PLACES ALONG THE GULLY'S EDGES, WHICH HAS CONTRIBUTED TO THE GULLY'S EXCAVATED SHAPE.

FAUNAL REMAINS RECOVERED WERE VARIABLY PRESERVED, SOME RELATIVELY INTACT (INCLUDING PHALANXES), OTHERS FRAGMENTED, SOME WITH SIGNS OF BURNING. ~~THE~~ RECOVERED POT SHARDS HAD CERTAIN CHARACTERISTICS SUGGESTING LATE IRON AGE / EARLY ROMAN-BRITISH (E.G. ONE PIECE APPEARS GLAZED, SOME HAVE GROOVES ON INNER SURFACE SUGGESTING MANUFACTURE WITH A WHEEL). NATURAL SILTING-UP COULD PROVIDE PARSIMONIOUS INTERPRETATION, ALTHOUGH RELATIVE LOOSENESS OF FILL COULD ALSO SUPPORT DELIBERATE BACKFILL INTERPRETATION.

POSSIBLE RECUT OF OLDER DITCH [410946], ALTHOUGH THIS INTERPRETATION IS BASED MAINLY ON HOW THE SHAPE OF THIS CUT ^{IN SECTION} MATCHES THE PROFILE OF [410946], I.E. MODERATELY-SLOPING SIDES WITH AN 'ANKLERBREAKER'-TYPE PROFILE ALONG THE BASE. IN TERMS OF TRAJECTORY, IT IS DIFFICULT TO SEE ITS SE TRAJECTORY BECAUSE OF THE DRIED UP GROUND SURFACE AND A NEARBY N-S ORIENTED FURROW. IN TERMS OF NW TRAJECTORY, ~~THE~~ [410944] SEEMS TO EXTEND JUST OVER 1m INTO THE SLOT FROM THE NW-FACING SECTION BEFORE IT EITHER TERMINATES, OR IS TRUNCATED BY THE TERMINUS OF [410936] - THE TRUE RELATIONSHIP BETWEEN [410944] & [410936] COULDN'T BE DETERMINED IN PART BECAUSE OF THE POSITIONING OF THE SLOT (WHICH HADN'T FACTORED IN THE POSSIBLE PRESENCE OF SUCH A RECUT) BUT ALSO BECAUSE OF THE PRESENCE OF A LARGE ANIMAL BURROW IN THIS AREA OF THE SLOT ~0.10m BELOW THE SURFACE. WHILE THIS CUT IS MORE RECENT THAN [410946], IT IS ITSELF TRUNCATED ALONG ITS ~~SW~~ SOUTHWESTERN EDGE BY GULLY [410942] - THIS TRUNCATION PARTLY ~~OBSCURES~~ OBSCURING THE TOTAL PROFILE OF THE CUT IN SECTION. FINDS FROM THE FILL OF [410944] ARE INDICATIVE OF A LATE IRON AGE / EARLY ROMANO-BRITISH ~~IRON~~ DATE.

ALL OF OLDEST FEATURE VISIBLE IN NW-FACING SECTION [410946]. THIS ^{FILL} ~~BEARS~~ BEARS SOME RESEMBLANCE TO (410937), PARTICULARLY IN TERMS OF THE PRESENCE OF CLUMPS OF REDEPOSITED CLAY, THE GREY COLOUR MOTTLED WITH YELLOW, ETC. IT IS FELT THAT THESE ~~ARE~~ ARE PROBABLY THE SAME FILL OF A DITCH WHICH CAN BE OBSERVED RUNNING THROUGH THIS SLOT AND ^{IS} VISIBLE IN BOTH SECTIONS.

MODERATELY FREQUENT STONE INCLUSIONS ARE PEBBLE-SIZED ($\leq 0.05m$ DIAMETER) AND GENERALLY ANGULAR, DISTRIBUTED RANDOMLY THROUGH FILL.

OCCASIONAL POT SHARDS ARE NOT PARTICULARLY DIAGNOSTIC BUT SEEM QUITE COARSE AND MIGHT SUGGEST IRON AGE DATE.

FILL INTERPRETED AS THE RESULT OF NATURAL SILTING UP IN THE ABSENCE OF CLEAR EVIDENCE THAT IT IS DELIBERATE BACKFILL.

CUT OF SLIGHTLY CURVILINEAR DITCH ORIENTED BROADLY NW-SE THROUGH THE SLOT (INTERPRETED HERE AS BEING THE SAME CUT AS [410938] VISIBLE IN THE SE-FACING SECTION). THIS DITCH MOST LIKELY CORRESPONDS TO [410811], TO THE NW, HOWEVER ITS TRAJECTORY TO THE SE IS HARDER TO DISCERN IN LARGE PART DUE TO A N-S ORIENTED FURROW. [410946] IS THE OLDEST ^{CUT} ~~BEARING~~ IN THE NW-FACING SECTION, SUBSEQUENTLY TRUNCATED BY A POSSIBLE RECUT [410944] WHICH IN TURN IS CUT BY A GULLY. [410942]. AS WITH [410938], ~~FROM~~ WHAT REMAINS VISIBLE OF THIS CUT SUGGEST AT LEAST ONE MODERATELY-SLOPING EDGE WHICH BECOMES A MUCH STEEPER 'ANKLEBREAKER' ALONG ITS BASE, WITH THE BASE ITSELF BEING FLAT.

FINDS FROM THE FILL MIGHT SUGGEST IRON AGE DATE.

CLOSER TO THE ~~SEEN~~ NORTHWEST-FACING SECTION, THE CUT APPEARS TO TURN INCREASINGLY ~~TO~~ TOWARDS ~~THE~~ THE SOUTH.

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF A CURVILINEAR DITCH RUNNING WITH A NE-SW DIRECTION
 IN THE SLOT I CAN SEE THAT IT IS CURVING TOWARDS THE S-W SIDE
 AND IT IS CONTINUING TOWARDS SOUTH -
 THIS DITCH IS DISTURBED BY A LAND DRAIN IN THE EAST SIDE
 AND IT IS CUTTING ANOTHER DITCH [410950] THAT IS RUNNING
 N-S IN ITS EAST SIDE, MORE SOUTH OF THE DRAIN LINE
 THE PROFILE OF THIS DITCH IS VISIBLE IN THE SECTIONS 41161
 AND 41162 - THE SIDES ARE NOT VERY CLEAR BECAUSE IT IS
 TURNING INSIDE THE SLOT -
 THE DATE COULD BE IRON AGE PERIOD -

Refer to context, (410947) [410950]
 (410949)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a curvilinear ditch running N-S and then continuing towards E in the south side. It is the same as [410817] and [410860] -

It was difficult to see it in the slot because in this area it is very shallow and it is cut by the ditch [410948] that is curving towards SW -

The profile is more visible in the section 4161 because in the DWN# 4162 there is only a little corner of the ditch in the north facing section -

The period could be Iron Age -

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Brownish grey fill of pit or shallow ditch truncated by a larger curvilinear ditch.

Fragmentary animal bone present throughout the fill evenly distributed. Small-medium natural stones scattered throughout the fill evenly, mainly with no pattern visible in placement - 1 sheep.

Excavated in sunny conditions.

Most likely a dumpsite.

Refer to context [410954]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This linear ditch has N-S orientation, moderated steep side and concave base. ~~Well~~ Even we just have 1m ~~dee~~ of depth because we stopped when it ~~is~~ is not safe.

We decided to open this slot to see ~~if~~ how deep it was and even how the shape is because in this area, the ditch was cover by a furrow.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This linear cut is a ditch which is cutting the oldest one 410955. It has two different fills (410959) and (410960). At the same time this ditch was cutting by ~~the~~ [410961].

This cut is has moderated sloping sides and concave base even ~~was~~ if we don't know how it was on the west area because it is cutting by 410961.

We have to highlight the fact of many ~~deposits~~ chalk on the east side of which is making the ~~shape~~ concave shape of the base.

This tiny fill was moderated compact, grey and brownish so similar to 410959 but with a clear difference. As the small stones (here most of them are $\leq 0.05m$) even it has lot of chalk we didn't find any relevant materials.

This fill was cutting by 410963 and 410961 but both are cutting by the furrow so is impossible see the relation.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This cut could be the last one before the furrow but we can't confirm this theory because we don't have the relationship with the other cut which is on the top of the slot.

We can see that is cutting 410955 and 410958 and even that is cutting by 410965 which is the medieval furrow.

We didn't find any ~~new~~ material into it so we can't speak about a date of use. But if we use 410956 as reference, this cut could be late Iron age or early ~~roman~~ roman.

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of ditch [410962] investigated in a
a relationship slot (2.50 x 2m) made for see the
relation between different features

The fill contains moderate small stones (-3cm) with
sub-rounded shape and occasional medium stones
(3-5cm) with sub-angular shape

~~The fill also contains~~

No artefacts were recovered in this feature but
due to the pottery found in closer the oldest
level, probably could be early roman.

The fill is cutted by a modern furrow [410965]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a recent quiet easy to identify see because is the darker fill we found in this slot and the concave base is so clear.

It has N-S orientation like the rest of the pit we have here.

It's just 0'23m of depth and 0'6m of width. with moderated sloping sides

It was cutting by the gully so could be the most recent ditch we have. But the materials ~~are~~ we ~~are~~ can say it was early roman.

this cut is ^{the} medieval cut of a furrow.
I cutting the top of most a half of the
big ditch we have (more than 1'2 m width).

~~It has~~ With a N-S orientation have moderated
sloping sides and concave base.

We don't have anything relevant to say
about this ditch.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of gully [410955] investigated in a slot (2.50 x 2 m) made for see the relationship between different features.

The fill contains frequent stones (~~some~~ with different ~~sizes~~ size between 1 and 10 cm with sub rounded and sub angular shape). It also contains frequent chert with small size.

The objects found on it are occasional animal bones or and occasional pottery. Because of it is a gully, this feature is modern.

NATURAL INFILLING OF THE ENCLOSURE [410924] THAT IS THE PRIMARY FILL OF THIS PARENT CONTEXT AND THE SLOT AS WELL. IT HAS SOME FEATURES SIMILARS WITH THE POSTERIOR FILL (410923) LIKE THE COMPOSITION AND THE COMPACTION BUT THE GLOUR IS CLOSER TO THE NATURAL. WE ONLY HAVE DIGGED THIS FILL AFTER THE AMPLUATION OF THE SLOT UNDER 1 METER DEEP. WE HAVE RECORDED SMALL STONES OF DIFFERENT SHAPES AND A MODERATE PRESENCE OF CHARCOAL INCLUSIONS THAT WE HAVE TAKEN WITH THE NUMBER 541073. WE HAVE RECORDED ALSO OCCASIONAL INCLUSIONS OF IRON AGE POTTERY AND BONES. THE THICKNESS OF THIS FILL IS 0'36 M. AND GIVES US INFORMATION ABOUT THE OLDER CHRONOLOGY OF THIS PARENT CONTEXT [410924] SAME [410665]

FILL OF PIT [410970] COMPOSED OF A MODERATELY COMPACT GREYISH BROWN SILTY CLAY MATERIAL WHICH IS LIKELY THE RESULT OF NATURAL INFILLING AFTER THE FEATURES DISSUE.

A SMALL NUMBER OF SUB-ROUNDED STONES WAS SPREAD OUT ~~THROUGHOUT~~ THROUGHOUT THIS FILL WITH THE HIGHEST CONCENTRATION BEING ON THE NORTH SIDE NEAR THE ROOTING ACTIVITY. A SMALL NUMBER OF CHALK STONES WAS PRESENT IN THIS FILL.

A SMALL ASSEMBLY OF ANIMAL BONES WAS PRESENT IN THIS FILL BELONGING PRIMARILY TO MEDIUM AND LARGE SIZED ~~MAMMALS~~ DOMESTICATED MAMMALS.

TWO P SHERDS OF LOW QUALITY POTTERY WAS ALSO FOUND IN THIS FILL, BOTH OF WHICH APPEAR TO DATE TO THE MED IRON AGE.

CUT OF PIT LOCATED WITHIN THE IRON AGE RING ENCLOSURE AND POSSIBLY ASSOCIATED WITH SOME SMALL RING DETACHES WHICH COULD BE INTERPRETED AS HABITATION FEATURES.

THE NORTHERN PART OF THE CUT OF THIS PIT HAS BEEN PARTLY DESTROYED BY ROOTING ACTIVITY WHICH IS PRESENT IN THIS AREA.

THE FINDS RECOVERED FROM THIS FEATURE ARE COMPRISED PRIMARILY OF A SMALL ANIMAL BONE ASSEMBLY. THIS ASSEMBLY IS COMPOSED OF A MIXTURE OF MEDIUM AND LARGE DOMESTICATES INCLUDING PIG, COW AND SHEEP/GOAT REMAINS. THESE ANIMAL REMAINS WOULD SUGGEST THIS PIT WAS ^{POSSIBLY} USED ~~AS A~~ FOR THE DISPOSAL OF REMAINS OF LOCALLY GROWN DOMESTICATES OR POSSIBLY AS A FEEDING/WATERING HOLE FOR THESE ANIMALS BEING KEPT WITHIN THE ENCLOSURE. 4 SHELDS OF ^{MED-LATE} ~~IRON~~ IRON AGE POTTERY WERE ALSO RECOVERED.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is the fill of the ringgully that surrounds the stony layer we have given two different numbers to this fill just to indicate the different compaction of the fill in the area where the ring gully is cutting a ditch. However, all the gully has one only fill. It's a moderately compact fill and has a dark colour.

The charcoal flakes were very common and also medium size stones (both rounded and angular) that in my opinion belong to the stone layer.

We have also found some animal bones and pieces of pottery. I think that we can date this feature at the beginning of the roman age, because there was pottery with speed wheel marks but in general it's still a very rude.

We also found some small pieces of CBM.

This is the cut of the ring gully that surrounds the stone layer. In some parts of the edges of this gully we found some bioturbations but in general has a very clear shape even before excavate it. As we can see in both plans (4206 and 41192) and in the sketch (410971) in the northern part of this gully we have like two small terminus with natural in the middle. I think that this gully ~~may~~ might contain a kind of flexible structure fixed at this point, ~~where~~ ^{with} maybe ~~so~~ two stakes. It's curious also that we found a post hole in the same N-S axis.

In my opinion we are speaking about a small rounded house used for an specific task like storing.

Cut of linear feature that runs N-S. Cuts pit [410977],
 possibly this could possibly be robbing. Feature
 could represent a heeler line, the pit was
 just consisted of a large amount of gravel as if introduced
 by robbing. Date unknown

THIS IS A CUT OF A PIT WITH STEEP SIDES AND CONCAVE BASE. IT IS 32 CM DEEP AND IT IS CUTTING A DITCH [410997].

THIS FEATURE HAS BEEN STUDIED IN A SLOT OF DIMENSIONS 2'10 m x 1'20 m IN WHICH WE FIND THREE DITCHES

THIS IS THE ONLY FILL OF A BIG BIT
STONES, BONES, CHARCOAL AND A LOT OF BLACK POT
(PROBABLY IRON AGE) HAVE BEEN FOUND IN THIS
FEATURE.

IN THE TOP OF THIS FILL WAS INSTALLED THE
LAND DRAIN.

WHEN I WAS CLEANING THE SURFACE WE
FOUND A FLINT BLADE (F 41036) AND ONE PIECE
OF IRON (F 41036) PROBABLY A NAIL.

FILL OF POT (410993) WHICH IS LOCATED WITHIN PIT [410994] COMPOSED OF A DARK GREYISH BROWN SILTY CLAY MATERIAL WHICH IS LIKELY THE RESULT OF A DELIBERATE BACKFILL OF THE FEATURE DURING ITS USE HOWEVER THIS IS HARD TO DETERMINE FOR SURE.

A SMALL AMOUNT OF SMALL SIZED ROUNDED STONES WERE PRESENT IN THIS FEATURE AS WELL AS A SMALL AMOUNT OF CHALK STONES. A ~~LARGE~~ ^{MEDIUM} CONCENTRATION OF CHARCOAL WAS ALSO PRESENT IN THIS FILL.

THE FINDS RECOVERED FROM THIS FILL WERE ARE COMPRISED SOLELY BY A SMALL NUMBER OF ANIMAL REMAINS. THOSE REMAINS BELONG PRIMARILY TO MEDIUM AND LARGE DOMESTICATED MAMMALS, MORE SPECIFICALLY PIG AND COW, AND ARE LIKELY REMAINS OF ANIMAL KEPT FOR BUTCHERY. POTTERY FOUND IN THIS FILL BELONGS TO (410993).

FILL OF PIT [410994] COMPOSED OF A ALMOST COMPLETE
LATE IRON AGE STORAGE POT PLACED WITHIN THE PIT.

THIS POT APPEARS TO HAVE BEEN ~~PLACED~~ PLACED WITHIN A PURASLY
DUG PIT WHICH WOULD HAVE ALLOWED IT TO REMAIN COOL AND
STORE ~~POTTERY~~ OBJECTS MORE ~~EFFICIENTLY~~ EFFECTIVELY.

THE POT IS ~~HANDMADE~~ DECORATED WITH COMB/INCISED LINES WHICH
ARE NICELY PRESERVED IN THE REM THAT WAS RECOVERED.

IT IS POSSIBLE THE POT WAS PRODUCED LOCALLY IN THE AREA
SURROUNDING THE ENCLOSURE AS EVIDENCE OF ~~AREA~~ POTTERY QUILN'S
~~ARE~~ HAS BEEN FOUND CLOSE TO THE LOCATION WHERE THIS POT
WAS BURIED.

CUT OF PIT LOCATED WITHIN DITCH [410696]

THIS PIT APPEARS TO HAVE BEEN CUT TO HOUSE A MEDIUM SIZED STORAGE POT (410993) AND IS LIKELY TO BE RELATED TO THE OCCUPATION FEATURES THAT APPEAR TO BE PRESENT IN THIS AREA OF THE IRON AGE RING ENCLOSURE.

IT IS LIKELY THE PIT WAS DUG IN THIS LOCATION DUE TO THE PRESENCE OF AN EARLIER DITCH [410696] IN THIS AREA. DIGGING THE PIT IN THIS LOCATION WOULD HAVE BEEN MUCH EASIER DUE TO THE LESS COMPACT NATURE OF THE DITCH'S FILLS WHEN COMPARED TO THE NATURAL GEOLOGY OF THE AREA.

THE STORAGE POT FOUND WITHIN THIS PIT WOULD SUGGEST THAT IT DATES TO SOME TIME BETWEEN THE MID AND LATE IRON AGE PERIOD.

FILL OF GULLY [410996]. GULLY CUT BY THE DITCHES THAT ENCLOSE THE SITE
 N.E., [410617] [410241] [410237]. GULLY HAD SMALL SUBANGULAR STONES (1-5cm)*
 AND ONE PIECE OF ANIMAL PELVIS *IT AS WELL AS A FEW PIECES OF POTTERY AND
 A POSSIBLE QUERNSTONE FRAGMENT. PROBABLY A DRAINAGE GULLY BUT NOT ENOUGH
 SURVIVES TO BE SURE. FILL FORMED BY DUMPING AS STONE QUACKY FRAG AND BONG WOULD NOT HAVE
 * AND SEVERAL LARGE SUBROUND STONES (8cm-12cm). WASHED IN.

CUT OF GULLY, ONE FILL, POSSIBLY IRON AGE. CUT BY LATER ENCLOSURE DITCHES [H0617] [H0241] [H0237]. SAME AS DITCH [H0556]. PROBABLY A DRAINAGE GULLY. USE UNKNOWN REALLY DUE TO NOT MUCH OF IT SURVIVING. SHAPE A LITTLE UNEVEN BUT ON THE WHOLE A MODERATE SLOPED CONCAVE LEADING TO A CONCAVE BASE.

Refer to context (410995)

THIS IS A CUT OF A DITCH THAT RUNS FROM
EAST TO WEST AND IS CUTTING THROUGH TWO
PITS [410982] [410980] AND THE LAND DRAIN.
IT IS CUTTING ANOTHER DITCH [410983] THAT
GOES IN THE SAME DIRECTION BUT IS DEEPER.

NATURAL INFILLING OF A RINGDITCH [410999] E DIRECTION, INVESTIGATED IN A 1x1m SLOT. THE FILL HAD MODERATE PRESENCE OF STONES (BIG AND MEDIUM SIZE ROLLING STONES) AND CHALK. THE FILL HAD OCCASIONAL PRESENCE OF CHARCOAL AND FIRED CLAY AS WELL. WE FOUND OCCASIONAL REMAINS OF ANIMAL BONES AND EARLY ROMAN POT SHERDS THAT WE CAN USE AS INDICATOR OF THE CHRONOLOGY FOR THIS FEATURE. WE FOUND OCCASIONAL REMAINS OF SLAG AS WELL. THIS FILL IS THE SAME AS (41090D)(411034) (411040) INVESTIGATED IN 3 NEARS SLOTS.

Refer to context (410901) [4109 99]

E-W RUNNING DITCH INVESTIGATED IN A 1X1m SLOT. THE RING DITCH IS CUTTING A PREVIOUS GULLY [410002] RUNNING NE DIRECTION. THE RING DITCH WAS FILLED BY ONE NATURAL INFILLING (410998) THAT CONTAINED ANIMAL BONES AND EARLY ROMAN POT THAT WE CAN USE AS INDICATOR OF THE CHRONOLOGY FOR THIS FEATURE. THIS FEATURE IS THE SAME AS [410902] [411035] [411041] INVESTIGATED IN 3 NEARS SLOTS.

Refer to context: (410901) (410998)
